Thursday, May 9 (legislative day of Wednesday, April 24), 1940

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article, interesting and informative, by the pen of General Johnson, newspaper columnist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION

(By Hugh S. Johnson)

Nut adventurers are beginning to plan to win the nutty offer of $1,000,000 by Samuel Harden Church, president of the Carnegie Institute, for the capture and delivery of Adolf Hitler unharmed to the League of Nations for trial for "his crimes against the peace and dignity of the world."

The offer and the efforts to win the reward are too trivial for comment. But as an index of war hysteria it is not trivial—especially when a member of the House Foreign Affairs Committee says that the offer expressed "feelings that probably are shared by 99 percent of the American people."

Most of us are convinced that Hitler is a heel, but how many believe in an American subsidy of international kidnaping? What is proposed here across national boundaries is exactly what, in the so-called Lindbergh law, we made punishable by death if conducted across State lines.

It is attempted to be vindicated by moral indignation. That is the sentiment advanced to justify lynchings. It is a violation of international law. We also have American laws which prohibit recruiting or filibustering against any power with which we are at peace. Filibustering and soldiering-of-fortune are at least aboveboard and in some sense heroic. This ridiculous attempt at subornation of kidnaping reaches down into the Dillinger underworld to adopt tactics of gangsterism condemned by Federal statutes and those of every State. That is the lawless American proposal being broadcast across the world without a word of rebuke from any official source.

"Hang the Kaiser and make Germany pay for the war." That was the slogan either tacitly adopted or permitted to go unchallenged in England and France as a statement of war objectives sufficiently simple for popular digestion. Every statesman knew that neither was possible, but it was good war diet. It returned to haunt them at the Versailles Peace Conference. Riding roughshod over American objections, they made an impossible war-breeding peace. It was forced by one reason among several, that they were politicians and did not dare wholly to repudiate what they had permitted the public to believe. Without infamy they could no more have hung the Kaiser than Abraham Lincoln could have hung Jeff Davis. Yet their action in suffering such a sentiment in the war years is partly responsible for the curse that has come upon all countries today.

Also because of that sentiment—seeking the kind of notoriety that is promised to be fabulously rewarded in this Church-Hitler fantasy—ex-Senator (now ex-convict) Luke Lea, of Tennessee, actually attempted to kidnap the Kaiser and came close to doing it. It gave the head of every Allied and associated power goose pimples. As Mr. Lincoln hinted about Jefferson Davis, Lea's attempted delivery of the Kaiser to "democracy" would have proved to be a pineapple.

Unlike Jeff Davis, who could have been charged with treason, there was no law of God or man under which the Kaiser could have been tried—much less executed. Terrible, inhuman, and destructive as have been the acts of Adolf, the discredited and almost nonexistent League of Nations has no jurisdiction, sanction, equity, or law under which to bring him to trial—much less to sentence him. Certainly no American has an excuse to kidnap him or to procure his snatching.

Flushed with his increasing success and power, Napoleon Bonaparte, who was not particularly bloodthirsty except in battle, did exactly what is suggested here but with more justification in law. He crossed the borders of France, kidnaped the French Duke of Enghien, tried him as a traitor, and had him executed. At St. Helena he seemed to agree with the verdict of many of his critics, that it was a principal blunder of his career. It shocked the conscience of the world. Mr. Church's absurdity is trivial, but any sucker American approval of it is dangerous.

Reward Offered by Samuel Harden Church

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 3, 1940

Mr. LYNCH. Mr. Speaker, I have listened with close attention to the very long debate, first on the Barden amendments, other amendments thereto, and again to the Norton amendments and the amendments thereto, and at the conclusion I am clearly convinced that there are two schools of economic thought in this House. The one school believes in high wages that will give to the worker the necessities and some of the comforts of life; the other school of thought considers labor as a chattel to be purchased in the open market at the lowest available price. The first school would put a floor under wages, so that whether or not the labor market was glutted the worker would still receive a minimum wage of 30 cents an hour, for labor that is employed in the flow of interstate commerce; the second school would rip the bottom from the wage scale and let the wages of these various types of labor, for which exemptions are sought, sink to the low level of 5, 10, and 20 cents an hour.

I personally cannot subscribe to the philosophy of the second school of thought. I am firmly of the opinion that every worker is entitled to a living wage and that industry, whether it be manufacture, agriculture, or whatever is under the duty and obligation to pay a living wage. There is no more justification for the exemption from the benefits of this law of the workers in canneries and processing plants than there is for the exemption of the workers in cotton mills and shoe factories. After long hours of debate the only justification for exempting the labor in canneries and processing plants is (1) because of their location in agricultural districts and (2) the increased cost to the farmers. With respect to the first reason for exemption—namely, because of their location in agricultural districts, let me ask are workers in agricultural districts not to be looked upon as humans? Are they not to be given a decent wage as well as their city neighbors? Does their nearness to the soil deprive them of their natural right to receive a wage sufficient to buy for them and their families the necessities and some of the comforts of life? Let me say that cheap labor never brought prosperity. Cheap labor has not brought prosperity to China, Japan, or those other foreign countries with substandards of living. It will never bring prosperity to the American farmer and the sooner that fact is recognized the better off both farmer and laborer will be.

The farmer is in business; he is a producer of raw materials for which he must find a market. Even in a country as large as this, and as wealthy, if you take a million and a half or two million people from among the potential purchasers of automobiles, by reducing their earning capacity, you could seriously affect the automobile industry, and similarly, if you affect the earning capacity of the same number of people, in agricultural districts, you not only affect the

farmer's market, but you affect business in those districts generally.

With respect to the second reason given to justify the scuttling of the wage-hour law in agricultural districts, it is claimed that the present law increases the cost to the farmer. This debate has been suspiciously free from any facts to warrant such a conclusion. The only specific instance that I heard was the case cited by the distinguished gentleman from New York [Mr. WADSWORTH], who stated that it used to cost the farmer in his district 5 cents per bushel to clean beans and now it costs 7 cents per bushel. The inference that the wage and hour law is the cause of the increased cost is clear, but the fact has not been proven. The gentleman failed to state whether these plants were paying substandard wages when they were charging 5 cents per bushel. Although no facts have been given to support the contention, assuming that the Wage and Hour Act did cause this 40-percent increased cost to the farmer for cleaning beans, then the conclusion is irresistible that this increased cost either reflects a 40-percent increase in wages to the workers, bringing them from a substandard wage up to 30 cents an hour, or it is reflected in overtime. If the reflection is in the former, I am glad of the result; if it is in the latter, the remedy is to spread employment. But the chances are, it is neither of the two but just the old case of a chiseling canner making use of the Wage and Hour Act to increase his own profits at the expense of the farmer.

In conclusion let me state that the advocates of these amendments certainly have not satisfied me that the wage and hour law, as it now stands, works any hardship on the farmer, as a class; they have given no evidence that any increased cost is passed to the farmer, and not to the ultimate consumer; they have cited no loss of profits to the canners and processors, and last of all, there seems to be just as many canners and processors in business now as there were before this act, and all are apparently doing very well.

German Consul—Fifth Columns

EXTENSION OF REMARKS
OF
HON. JAMES SECCOMBE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1940

LETTER FROM HARRY FREASE

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by one of my constituents to Hon. Cordell Hull, Secretary of State:

CANTON, OHIO, *May 7, 1940.*

GERMAN CONSUL—FIFTH COLUMNS

Hon. CORDELL HULL,
Secretary of State, Washington, D. C.

MY DEAR MR. SECRETARY: I am wondering if the advice given by the German consul, Karl Kapp, to "more than 1,000 persons at a cultural program organized by the consulate at German central farm" in Cleveland on Sunday, May 5, as reported in the first page of the Cleveland Plain Dealer of Monday morning, May 6, 1940, a copy of which is enclosed herewith, does not place the German consul in a similar position to that occupied by Baron Sackville West, the British Minister to the United States in October 1888, when, as I well remember, his recall was asked for, and, in default of a prompt compliance with the request, the Department of State sent him his passport.

The German consul may not be as important an officer as a Minister, but as the actual and active representative of a foreign government in commercial affairs he would seem to come under the same rule of restraint when he voluntarily advises his people that "the plutocratic nations must follow" the Nazis' lead.

It is true that the advice is not given as a matter of party politics but is given as a matter of international interference which may be more pernicious than a party matter, especially in view of the address of Rabbi A. H. Silver at Cleveland on "Trojan Horses" and "Fifth Columns" on the same day, as reported in the first page of the second section of the same newspaper, a copy of which is also enclosed herewith.

If this matter should not be primarily for the attention of the State Department, Dr. Silver's reference to "Trojan horses" and "fifth columns" would seem to be a matter for the Department of Justice; and if so, I would be glad to have you refer the enclosures to that Department and oblige,

Yours very sincerely,

HARRY FREASE.

Are We Going To Amend the Wage-Hour Law?

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, almost from the beginning of this Nation Congress has come in for no small amount of criticism whether just or unjust. The entire membership of the Congress is held accountable by public opinion for the actions of the majority of its Members. There have been times when the criticism levied against Congress has been wantonly unjust; but there have been times when it was merited in fullest measure. The latter occasion is amply demonstrated by the action of this body last week in regard to amending the wage and hour law. It will take a long time to live down our conduct in throwing up our hands and admitting that we were unable to legislate intelligently upon this highly important subject. Stampeded by political and sectional interests the people of this Nation beheld the House of Representatives in utter chaos, finally admitting defeat and pursuing a course that can only be interpreted as a refusal to amend a law that everyone including the men we expect to administer it know to be odiously unjust in certain instances. The people of this Nation are not deceived by the futility of our performance last week. What confidence can you expect the people to place in us when we admit our inability to legislate with calmness and deliberation?

We make much over what ought to be done to preserve and rekindle the spirit of democracy in this country but what the House has just done with the wage and hour amendments is exactly the sort of thing that destroys public confidence in our capacity to do the job expected of us. It is action of this character that has caused too many people in this country to look beyond the Congress and to one or two individuals for leadership. It is such action that gives rise to belief in a false doctrine that leads people to forget that this Government is built on principles and not on men.

I am unwilling to believe that any man or woman in this House contends that the present wage and hour law is perfect or that it even approximates perfection. The men whom we have asked to administer this creature of ours have admitted its many imperfections and have besought our help in providing the solution, by adopting mild, reasonable, curative, and clarifying amendments to this law, so that it can be carried out to achieve the great goal it was designed to accomplish in a fair and just manner. It was our duty, our solemn obligation to do this and we failed.

Unquestionably there are people here and elsewhere who do not believe in this type of legislation. Some are conscientious in that belief and I have long suspected that others have a different reason. But the majority of us here, irrespective of party, believe in the wage and hour law, and we intend to see that all attempts to wreck it are repelled and defeated. No legitimate reason can be advanced for scuttling this law by providing exemptions for millions of factory and mill workers and by rescinding the prohibition against child labor. The wage and hour law stands as a monument to progressive legislation.

However, that certainly does not mean that our eyes should be closed and our ears deaf to the demand for intelligent and restrained amendment of this law which, in operation, has brought forth injustices that we did not perceive when it was first passed.

We make speeches here and elsewhere—and we will probably make a few more than the average this year—expressing our deep concern and our benign affection for the small-business men and the farmers of this Nation. We refer to them as the "backbone of democracy" and the hope of the future, and that sort of thing. Yet by our failure to grasp the possible effect of our actions in passing the wage and hour law, and now by our refusal to correct the mistakes we made, we have tapped the very lifeblood of the farmers and small-business men of this country.

The unavoidable, the inevitable, effect of this law as it now stands, and, standing, must be administered, is to drive the small-business man and farmer out of business and make the big fellow bigger and more powerful than ever.

It was very ably and amply pointed out here by distinguished Members of this body that the enforcement of the present law is wrecking farmers in certain sections of this country and farmers who produce certain types of crops. It was clearly and unmistakably shown that certain farm products must be processed—not for sale to the general public—but before the farmer himself can sell them on the market. There are little plants all over the country in farming communities employing a mere handful of people engaged in rendering this service, which is absolutely essential to the farmer before he can market his products. Here we have a law which, among other things, contains such phrases as "area of production," which the Administrator admits he is unable to understand, and which no Member of this House ventured to explain. By enforcing this law against these little processors who render a service that is indispensable to the farmer we are taking away all the profit that the farmer expected to get for his toil and his crops. These processors have been forced to charge more for their services under this law, and thus the farmer's margin of profit is wiped out. In other instances these little processors have gone out of business and the farmer is left to the mercy of the big processors and milling companies in the large cities. In either case his profit is wiped out.

When the plight of the farmer is thus rendered precarious we have painted before us here in eloquent words his terrible predicament. Thereupon we raid the Federal Treasury and award such things as parity payments and other cash payments for which there is little, if any, sound basis. The farmers of this Nation do not want charity; all they want is a chance to make their own way. The present wage and hour law as it affects these people is perpetrating a rank injustice upon the farmers and the small-business men in these communities.

There is another situation that gives rise to the same disastrous consequences to a different type of farmer—the man who produces cattle.

The present wage and hour law as it is enforced against packing houses and stockyards is causing no end of grief for the cattle farmers. Anybody who has ever lived on a farm, or who, not living on a farm, has taken the trouble to acquaint himself with the farmer's problems before ramming a law down his neck, knows that cattle shipped in to a packer may range in number from a dozen to 10,000 on any 1 day. The packer and the farmer have no way of knowing just how many cattle will be on hand on any single day. But under the present law only a certain number of hours can be worked in this branch of the packing industry. After that if too many cattle arrived that day, they must be held over and fed at the farmer's expense. Anybody who will take the trouble to find out knows that the price of feed for these cattle at the market is many times higher than on the farm. That all comes out of the farmer's pocket, and, in addition, the shrinkage in weight of the cattle thus held is likewise the farmer's loss. Anyone of ordinary intelligence can see that the operation of this law in cases of this kind is working hardship and inviting utter ruin for the farmer.

When we sought to amend the law by eliminating this calamitous requirement of the present act, false cries were raised here to the effect that we sought to eliminate all the workers in the packing industry from the provisions of the wage and hour law; that we were trying to break down the Wagner Act; that we were reestablishing child labor, and so on. Yet these able statesmen attempted to justify their opposition to this highly necessary amendment by taking the floor to advise us that they voted for every farm parity payment and supported every farm appropriation bill. That is no answer at all. All you are doing in such instances is taking money from all of the people and giving it to the farmers who are only some of the people, to make up for an injustice that would never have existed if we had the proper knowledge of the effect of this law which we now refuse to correct.

After a week of wrangling, or debate, if that word appeals more, so many amendments were attached to this law that had the bill been adopted the wage and hour law would have been but an empty shell and a hollow mockery. We did what common sense demanded—we recommitted everything. It was the only thing to do at that point if we were to have any wage and hour law left. But while there is time, I ask you, why cannot the Labor Committee profit by the spectacle it beheld here, and taking into consideration the urgent necessity for restrained, reasonable amendment of this law, report out a bill that will be acceptable and one that can be acted upon before adjournment, so that this law can operate with justice and fairness? Let us get this law into a shape that will enable it to help people get jobs, and not go along as we do now inflicting irreparable injury upon thousands of farmers and small-business men.

Trojan Horses

EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

ADDRESS BY RABBI SILVER

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Rabbi Silver, which appeared in the Cleveland Plain Dealer for May 6, 1940:

[From the Cleveland Plain Dealer of May 6, 1940]

SILVER WARNS UNITED STATES OF NAZI "HORSES"—URGES COUNTER-ESPIONAGE, WAR ON "FIFTH COLUMNS"

The wholesale treason which betrayed Norway into the hands of a ruthless invader should be a warning to the people of America that Trojan horses are possible here as well as in Norway, said Rabbi A. H. Silver in an address entitled "Trojan Horses" at the temple yesterday morning.

"It is therefore needful for us and for democracy everywhere to begin to anticipate and attack these 'fifth columns,' to develop counterespionage, to become more worldly wise and more cunning in dealing with Nazi and Fascist groups," said Dr. Silver.

"The story of how a free and unsuspecting people and its Government and King were helplessly handed over to the invader shocked the peoples of the world, and yet there should have been no occasion for surprise. It was common knowledge that Nazi agents were at work, sending 'fifth columns' into every country, and the negligence of governments in dealing with these movements can only be explained as a left-over from the policy of appeasement.

SEEK WORLD HEGEMONY

"The Nazis have never attempted to cover up their real intention to subjugate Europe. They are out to give the German race, which

they conceive to be the superior race and therefore most fit to rule, the hegemony over the whole world. They plan to gear the whole life of Germany, with its population of 80,000,000, for the one supreme effort, the exclusive pursuit of power.

"They bore from within, these Nazis, and they have a new technique which has been tremendously successful. Espionage is not new. What is new is the setting up of political parties and factions to stir up trouble, to disrupt the spiritual unity of a country, and to undermine its morale.

"The anti-Communist propaganda of the Nazis was a Trojan horse by which they got themselves into power in Germany. They posed as the saviors of the country from the Bolsheviki. Actually the followers of Hitler were not concerned with communism, but with the political control of the state.

SALVED GERMANY'S FEELINGS

"Anti-Semitism was another Trojan horse. It was welcome salve for the hurt feelings of Germany. It gave the people a welcome compensatory myth, exploited by the Nazis to overthrow the German Republic and gain control of the country.

"In this country anti-Semitism is chiefly a political weapon, used by organizations receiving instructions from abroad as a means of keeping aid to the Allies at a minimum. So also is the kind of propaganda which speaks for social justice, but which really has the motive of introducing the Fascist corporate state.

"The saying, 'Eternal vigilance is the price of liberty,' was never truer than it is today. Norway, Poland, Austria have been successive victims of neglect of vigilance. Let us not repeat their fatal mistake at this time in the greatest democracy of the earth."

Transportation Act of 1940

EXTENSION OF REMARKS
OF
HON. PIUS L. SCHWERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1940

LETTER FROM W. E. MALONEY

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks, I wish to include a letter I have received from Mr. W. E. Maloney, secretary, the Corn Exchange, Buffalo, N. Y., outlining in detail the detrimental effects that title II of the proposed Transportation Act of 1940 will have on the United States wheat growers, the United States manufacturers of flour, and the United States transportation agencies:

THE CORN EXCHANGE,
BUFFALO, N. Y., *May 8, 1940.*

TRANSPORTATION ACT OF 1940—TITLE 2—REGULATION OF WATER CARRIERS IN INTERSTATE AND FOREIGN COMMERCE—PART III

Hon. PIUS L. SCHWERT,
House Office Building, Washington, D. C.

DEAR SIR: We desire to direct your attention to the effect of the proposed Regulatory Act when applied to transportation of grain and grain products moving by water on the Great Lakes, the New York State Barge Canal, and the St. Lawrence route.

GREAT LAKES-ST. LAWRENCE RIVER ROUTE

There are no provisions in the act regulating the transportation of any commodity from a United States or Canadian port on the Great Lakes to a place outside the United States when routed and handled direct to the foreign port via the St. Lawrence River route (sec. 302 (i) (3), p. 31).

To illustrate, grain in bulk, also flour in packages, may be forwarded from such ports as Buffalo, Toledo, Chicago, Duluth, Fort William, and Port Arthur, Ontario, via direct all-water route through the St. Lawrence River to Montreal, the transportation of which would not be subject to this act.

GREAT LAKES-NEW YORK STATE BARGE CANAL ROUTE

Interstate commerce, including grain in bulk, flour in packages, and other grain products in packages from United States ports on the Great Lakes by water through the New York State Barge Canal to New York for export, would be subject to regulations as provided in the act (sec. 302 (i) (1), p. 20).

Grain in bulk, flour in packages, and other grain products in packages from Canadian ports on the Great Lakes such as Fort William, Port Arthur, Port Colborne, Ontario, via water, Great Lakes and New York Barge Canal handled direct to the port of New York would be exempt from any regulatory provisions of the act (sec. 302 (i) 3B, p. 31).

EXEMPTIONS

It is provided in section 303, page 31, that under certain conditions carriers handling commodities in bulk may be exempt from the provisions of part 3.

CONCLUSIONS

From the foregoing, it will be readily seen that United States grown wheat may be transported in bulk freighters on the Great Lakes from Chicago or Duluth to a Canadian port such as Port Colborne, Ontario, and at that point manufactured into flour and forwarded direct through the New York State Barge Canal to New York or through the St. Lawrence River route to Montreal, and no part of the entire transportation would be subject to regulation.

United States grown wheat brought down the Lakes from Chicago or Duluth to Buffalo and manufactured into flour, the flour would be subject to the act when exported via the New York State Barge Canal, Buffalo to the port of New York. The flour, however, would be free of regulation if it should move from Buffalo to Montreal via the St. Lawrence River route.

Canadian grown wheat from Fort William and Port Arthur, Ontario, to Port Colborne, Ontario, or to Buffalo, N. Y., manufactured into flour for export; the flour from the Canadian mill at Port Colborne can move down the New York State Barge Canal free of any regulation whereas the flour manufactured at Buffalo moving down the New York State Barge Canal would be subject to regulation.

The above brief outline clearly indicates that the proposed legislation will be detrimental to the United States wheat grower and to the United States manufacturer of flour. It will leave the Canadian wheat grower and the Canadian manufacturer of flour entirely free of regulation whether he uses Canadian ports for exportation or United States ports for exportation. In our opinion, the proposed regulation would be detrimental to not only the United States farmer, flour manufacturer, and labor, but likewise to the United States transportation agencies for the reason that our products in moving to the foreign markets would obviously move over the unregulated transportation agencies of the Canadian routes.

Very respectfully yours,

W. E. MALONEY, *Secretary.*

The Relief Problem

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1940

RADIO ADDRESS BY HON. THOMAS A. JENKINS, OF OHIO

Mr. JENKINS of Ohio. Mr. Speaker, under leave heretofore given, I hereby extend my remarks in the RECORD by printing the remarks made by me on May 8 over the radio and dealing with the question of relief, as follows:

Ladies and gentlemen of the air, every fair-minded person will admit that our country is confronted with many serious problems. Problems of war and peace transcend all others. The questions of the relative powers of Congress, the courts, and the Chief Executive are also important. Especially when executives everywhere are taking the ascendency and the courts are relegated to positions of subservience, and the legislative branches are molded to suit the dictator. The colossal national debt is also a serious matter and strongly portends disaster. Unemployment by reason of its persistency demands consideration. Heretofore depressions have not persisted against the inherent economic strength of our country for more than a year or two, but 11,000,000 men out of work over a period of 8 years is a serious situation. The fact that there are probably 4,000,000 young men in our country between the ages of 18 and 25 who have never had a steady job of any kind may be the nucleus of a serious problem. With the return of confidence and consequent prosperity which the country expects after a change of administration, following the fall elections, it is reasonable to expect that some of these serious questions will be solved.

There is one problem that has grown to serious proportions in the last few years that promises to continue regardless of the return of prosperity. It is the problem of public relief. So long as Nature in her wisdom has created all men different, mentally and physically, we are bound to have the fortunate and unfortunate with us always and also the capable and incapable. So long as the complexities of life and business continue there is bound at all times to be a percentage of unemployed that will need attention.

It is to this subject of public relief that I hope to devote the remainder of my time.

The American people are more charitable now than they have ever been and they are perfectly willing to take care of those who are unfortunate, whether because of economic conditions or physical incompetence. I think that my audience will also agree that out of the complexities of modern life, with its hazards and dangers, the American people are developing a greater dependence on governmental agencies. In March 1933 there were five and one-half million cases on relief. In March 1939 there were more than 8,000,000 on relief. In this same period the cost of relief increased more than 232 percent. There is danger in this tendency of our people to seek Government aid. Public agencies must therefore organize themselves to render public relief in a scientific manner. We should not, in this great country, return to the system when some unfortunates lived almost from garbage cans. And never should we continue a system saturated with politics and dishonest favoritism. We must take the relief directly to those entitled to it with a minimum of expense and without duress or humiliation to the recipient.

It will call for the most sympathetic consideration on the part of the eleemosynary institutions and for the most serious consideration of those in authority in the States and in the Nation.

Already the subject is claiming attention in legislative halls. Fiscal authorities of the States and Nation are worried about it.

The major question at this time is: Shall the Federal Government be the prime factor in public relief or shall the States and local authorities be given that responsibility? The people are demanding a decision and they expect a proper decision.

It would be very interesting to know how the majority of the recipients of relief feel about this proposed change. It is safe to say that their Americanism will cause them to resent political pressure. It is safe to say that they do not like the regimentation to which they are subjected. No doubt, they rebel in their hearts at the prospect of never being able to extricate themselves from the relief army. Let us hope that the administration of relief may never be carried on under military appearances. Rather should it be under circumstances in which the recipient will be made to feel that his personal welfare is the uppermost purpose of those administering the relief.

This matter is bound to come to an issue and the people may have to decide it by their ballots. Already both the great political parties are taking their positions. The new dealers will stand by the present policy. The Republicans will likely demand that relief be placed in the hands of the State and local authorities.

The New Deal party has been very appropriately named. They have found the principles of the Democratic Party to be too old. Strikingly is this true when we consider the New Deal's insistence upon concentrating the administration of relief at the National Capital. The New Dealers are demanding that the most intimate interests of the people—food and shelter—shall be controlled by the Federal Government with little regard for local authorities. On the other hand, the old Republican Party, commonly referred to as the party of a strong central government, will be found advocating taking this very personal matter of making one's living out of the hands of the Federal Government and placing it in the hands of the State and local authorities.

It is interesting to follow the course of the development of this Nation-wide activity that we now call relief. Successively, we have had the F. E. R. A. (Federal Emergency Relief Administration); C. W. A. (Civil Works Administration); P. W. A. (Public Works Administration); and W. P. A. (Works Progress Administration). These alphabetical changes indicate repeated failure of methods.

Before the days of the depression, the Federal Government did not participate in any regular relief activities. It was considered that Congress under the Constitution could not appropriate for public relief public funds collected through taxation. The Government did, on rare occasions, appropriate money in cases of great public calamities. But formerly disasters were handled by the Red Cross which operated entirely from money raised by private donations. But when the depression descended it became evident that the problems would demand the cooperative actions of all State and local agencies. President Hoover, adhering to the traditions of our country that the physical need of the people is a matter for the attention of the State and local authorities, proceeded to coordinate the State and local agencies. He established the President's Emergency Council Organization and did an excellent job in coordinating local resources. He maintained that the people should be encouraged to take cooperative action and to appreciate that it was their duty to meet the problems of the depression. He also insisted that the State and local governments should dedicate themselves to utilizing their full resources in the battle against unemployment and similar problems.

President Hoover did not close the door against direct aid from the Federal Government, but maintained that the Government should do nothing to break down the sense of responsibility of individual generosity and mutual self-help. He maintained that if the time should come that the voluntary agencies of the country, together with the local and State governments, were unable to find resources with which to prevent hunger and suffering in the country, he would ask that the aid of every resource of the Federal Government be thrown into the battle to protect the people from want.

The Republican administration did not extend any free direct financial relief. Neither has the New Deal done much of that, if any. Direct relief has been averted by a system of loans known as grants-in-aid to the States. Without regard to party affiliations, it has been quite generally and tenaciously held that we should adhere to our traditional policy of refraining from direct financial aid by the Federal Government. In 1931 it was proposed in Congress that the Government appropriate money to the Red Cross to be used for direct relief, but this agency refused to accept direct public donation because of its policy to receive donations only from private individuals. Even had the Red Cross agreed to accept direct public donation it is not likely that the Congress would have voted it. Then it was that Congress took the first steps toward extending Government aid in the fight against the depression. An act was passed giving to the Red Cross 40,000,000 bushels of wheat. This wheat was to be ground into flour for those in need. I think that the first bill introduced for the distribution of this wheat was a bill introduced by me on December 8, 1931.

It must not be forgotten that by the election of 1930 the control of the House passed to the Democrats, and the Senate, while nominally Republican, was effectively Democratic. In spite of this fact, Mr. Hoover was able to mobilize all the resources of the States and local agencies. He succeeded in having Congress enact legislation setting up the Reconstruction Finance Corporation and the Federal Home Loan Bank. The New Deal has been glad to lean on both of these great Republican institutions. The R. F. C. early in its existence loaned $300,000,000 to the States by way of grants-in-aid.

Thus, it will be seen that when the New Deal administration came into power a relief program had been set up and was functioning well.

But the New Deal, with characteristic profligacy, proceeded to put much "ballyhoo" into the administration of relief. Uncle Sam soon became Santa Claus. Even the shallowest New Dealer has more depth of character than to deny the presence of pernicious politics in almost every phase of the present relief program.

The important question, though, is, What are we going to do about it? This is not an easy question to answer. If we turn relief over to the State and local communities, we cannot expect them to assume the total burden. These local agencies will have to be impressed with the importance of the task, but must be supported in any honest effort that they make. I have been thinking that a system of grants-in-aid, with some restrictions similar to the restrictions provided in old-age pension and dependent-children programs and some of the restrictions in the financial program for aid to the States for road construction, might be effective. For instance, suppose grants were made on a matching basis of 60 or 65 percent from the Federal Government and 35 or 40 percent from the State. Then suppose we provided that large municipalities, say, of a population of 500,000 or more should be considered as separate units but in conjunction with the State. Then suppose, by way of illustration, we considered three definite factors that would control the amounts to be paid by the Federal Government to the States and municipalities:

(1) Population would be a 50-percent factor.

(2) The unemployment load would be a 25-percent factor.

(3) And the difference in the cost of living would be a 25-percent factor.

If we believe that this intimate personal matter of assisting the people to secure their daily bread can be better done by the agency nearer the people than by the big, ponderous, far-away Federal Government, there is no reason why we cannot find a way by which these close-up agencies can do it. A sensible, well-administered program would encourage those who can make their own way to attempt to do it. When the people understand that relief is for those who cannot work and cannot get work and is not for loafers and racketeers they will loyally support such a program because it will appeal to their sense of justice.

The appropriation bill for next year's relief is now being considered in Congress. From all indications a strenuous battle is to be waged. There is a strong sentiment among the Democrats that the administration of relief should be decentralized from Washington and more power given to the States. This is the nearly unanimous position of the Republicans. That the President is plainly worried about the whole situation is evidenced by his recent message to Congress in which he abandons his dominating "must" attitude and assumes an attitude of supplication. He appreciates that his extravagant wastefulness has caught up with him. He appreciates that he has driven the country past the legal debt limit of $45,000,000,000. He has made an almost unheard-of request of Congress. Usually appropriations are made by the year and not by the month. He is asking for $975,000,000 for relief and is begging permission to spend it in the first 8 months of the fiscal year, beginning July 1. He evidently is not expecting to be Chief Executive after January 20, 1941, but he wants to be well supplied with relief money between the 1st of July and the November election. This unusual action of the President is practically an admission that the New Deal system of handling relief is a failure and that his principal concern now is to be provided with ample money to carry through while he yet holds the position of Chief Executive.

Purchase of Surplus Farm Commodities

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1940

Mr. REED of New York. Mr. Speaker, we have before us a proposal to appropriate $85,000,000 to purchase surplus farm commodities. I assume that the alleged purpose of this appropriation is to sustain, if not to raise, the domestic price of farm products; but, in the light of experience, will it do so?

The farmers are the victims of two conflicting administration policies. What are these senseless policies? The administration takes $30,479,112 and purchases surplus farm commodities. So far so good. Then what?

The same administration at the same time imports $92,298,000 of the same competitive products. Now, then, I ask in all candor does such a program make sense? Does it in reality help our farmers, or does the benefit, if there is any, accrue to the foreign producer? My tomato growers know that when the Government buys 20,741,815 pounds of fresh tomatoes for $465,259 and at the same time imports 120,692,000 pounds, valued at $2,633,000, they come out at the little end of the horn.

The conflicting policies to which I have referred do not furnish a cure for low prices, but, instead, tend to drive the domestic price down to the foreign low-cost production level. If the price were to be forced up, the foreign importer would still be the chief beneficiary.

I insert as a part of my remarks official figures taken from the Federal Surplus Commodities Corporation for the fiscal years 1938 and 1939 in support of my statement. It must be remembered, too, that the American farmer does not receive from the Government the full market price for his surplus commodities. The foreigner, however, sells his products in our markets at full price. The foreign producer has had the best of it under every piece of legislation enacted by the New Deal. Mr. Speaker, I insert a table for the information of those who may be interested in the subject under discussion:

Purchase of selected agricultural commodities by the Federal Surplus Commodities Corporation, and imports of those commodities, fiscal years 1938–39

Commodity	Quantity purchased	Amount spent	Imports	
			Quantity	Value
Apples, fresh.....bushels	6,180,847	$4,978,816	52,000	$90,000
Beets.....pounds	17,858,256	149,383	1,000	[1]
Cabbage.....do	152,706,155	1,562,503	339,000	8,000
Carrots.....do	7,612,950	72,379	270,000	3,000
Cauliflower.....do	793,576	17,968	39,000	1,000
Celery.....do	20,391,300	381,384	96,000	3,000
Cheese.....do	3,445,530	478,211	110,167,000	23,584,000
Eggs.....dozen	11,319,300	2,255,659	551,000	106,000
Fish.....pounds	3,677,398	262,966	658,345,000	60,259,000
Grapefruit.....do	188,441,360	2,524,313	12,753,000	155,000
Grapes.....do	15,830,826	[2] 319,489	711,000	1,050,000
Milk, fluid.....gallons	18,440,847	4,229,949	22,000	5,000
Peas:				
Canned.....cases	864,192	[3] 1,427,780	1,610,000	165,000
Dried.....pounds	6,000,000	122,813	4,616,000	183,000
Fresh.....do	77,940	2,808	4,582,000	223,000
Potatoes, white.....bushels	6,579,548	[4] 4,286,457	1,697,100	1,444,000
Raisins.....pounds	50,199,000	2,137,251	825,000	92,000

Proposed Amendments to H. R. 6971

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1940

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following statement explaining two amendments which I propose to introduce to H. R. 6971, a bill to amend the Federal Home Loan Bank Act, Home Owners' Loan Act of 1933, title IV of the National Housing Act, and for other purposes, when the bill is considered by the House.

So many inquiries have come to me about two short amendments which I expect to propose to H. R. 6971, affecting building and loan associations, that for convenience I insert the proposed amendments in the RECORD.

The first proposed amendment would require the Federal Home Loan Bank Board to determine whether or not State examination of insured State associations is an adequate examination and, if so, to accept it without the expense of a duplicate Federal examination. The Federal Board would have full power to determine that any State examinations are inadequate and to conduct its own examination where necessary. This amendment will be proposed to provide further protection to our State associations against unnecessary and duplicate trouble and expense. The amendment is as follows:

To section 5, subsection (b), page 5, line 25, add the following additional language:

"The Board is authorized to accept, in whole or in part, reports of examinations and audits made by public accountants or public supervisory authorities to the extent that such reports will serve the purposes of the Board. Reports of audits and examinations made by public accountants and public supervisory authorities and made available to the Board by the associations examined shall be considered, and if determined by the Board to be adequate and reliable, such associations shall not be charged for duplicate auditing or examination for the same period."

The second and more important of these amendments simply assures State building and loan associations and their members the same tax treatment we accord to Federal associations. The statute already prohibits the State from taxing the Federals more than State associations. Our local State associations are more interested in this question than in any other phase of this proposed legislation. The Federal Home Loan Bank Board has approved this amendment in a letter to the committee and states that it has been submitted to the Bureau of the Budget and the Board is informed that there is no objection.

The tax equalization amendment is as follows:

Amend H. R. 6971 by the insertion of a new section between original sections 8 and 9, page 15, line 17, to be numbered 9, and renumber sections 9 to 17, inclusive, seriatim as 10 to 18, inclusive, the new section to read as follows:

"SEC. 9. Subsection (h) of section 5 of Home Owners' Loan Act of 1933, as amended, is amended by adding at the end thereof the following:

"'Any exemption from taxation by the United States now or hereafter provided applicable to Federal savings and loan associations or the shares thereof or the income therefrom shall likewise apply to any building and loan, savings and loan, homestead association, and cooperative bank organized under the laws of any State, Territory, dependency, or possession of the United States, or the District of Columbia, and to the shares, deposits, and certificates of indebtedness issued by such associations and to the income derived therefrom.'"

To further indicate the necessity to equalize taxes on these savings, I include an extract from the record of the hearings on this measure before the House Banking and Currency Committee May 10, 1939, pages 196–197, as follows:

The taxation of savers in Federal savings and loan associations by the Federal Government and the permission to State, county, municipal, or local taxing authorities to impose taxes not greater

than that imposed on other similar local mutual or cooperative thrift and home-financing institutions is found in section 5 (h) of the Home Owners' Loan Act of 1933.

The investors in Federal savings and loan associations and the investors in State-chartered savings, building and loan associations, and cooperative banks are treated identically as far as taxation by the Federal Government is concerned, with one exception: The earnings to savings members in Federal savings and loan associations are not subject to normal income taxes, as is the case with State-chartered building and loan associations.

The question is raised as to what other or similar investments controlled or created by Federal statutes are accorded similar treatment as regards normal taxes as that accorded to investors in Federal savings and loan associations.

The income from the following is not subject to normal income tax:

United States savings bonds, 2.9 percent.
Postal Savings deposits, 2 percent.
Postal Savings bonds, 2 and 2½ percent.
Credit Union shares, 3 to 6 percent.
Federal Savings and Loan Association shares, 3 to 3½ percent.
Federal Housing Administration debentures, 2¾ and 3 percent.
National Mortgage Association obligations, 1⅝ percent.
Federal Farm Mortgage Corporation bonds, 1¼ to 3¼ percent.
United States Housing Authority obligations.
Treasury notes, Treasury bonds, 2 to 4 percent.
R. F. C. notes, seven-eighths and 1½ percent.
Federal Deposit Insurance Corporation, Treasury notes, 2 percent.
Federal Savings and Loan Insurance Corporation obligations.
Federal Home Loan Bank bonds and debentures, 1 to 2 percent.
Commodity Credit Corporation notes, three-fourths percent.
Federal Intermediate Credit Bank bonds and stock.
National Farm Loan Association bonds and stock.

Life-insurance payments on death and annuities, up to 3 percent of aggregate premiums or consideration; also, dividends on unmatured and paid-up policies.

Obligations of State, Territory, or any political subdivision thereof.

The basic reason for the treatment accorded savings members in local cooperative thrift and home-financing institutions has been the social service which they render in facilitating and encouraging home ownership. The Government has for many years given special encouragement to cooperatives of all types and has put them in a somewhat different category as regards Federal taxes from other business and industrial enterprises. The position has been taken, and rightly so, that local organizations of a cooperative character, which have as their further purpose the encouragement of thrift, should be assisted to a greater degree than private enterprises whose profits are not widely distributed as in the mutual organizations. It is generally true that governments abroad have traditionally given tax preferences to cooperative organizations in the fields of banking, agricultural credit, consumer purchases, and thrift and home financing. This type of support has been justified because of the mutual and democratic character of these associations and their primary purpose of providing an accumulation of local funds which could be loaned at reasonable rates in the development of sound community enterprises.

The financing of small-home ownership has always been considered a particularly worth-while social activity. Limited tax exemption, such as is requested in this amendment, serves the purpose of encouraging the flow of savings into useful community activity at little expense to the Government. The exemption from normal income tax of dividends on building and loan shares appears especially justified in view of the fact that all of the savings funds in these institutions are employed in the financing of small urban homes, which homes bear a heavy burden of taxation.

The internal-revenue authorities have ruled that where State-chartered building and loan associations are reorganized to form Federal savings and loan associations, the earnings of the associations credited to the shareholders before such reorganization are subject to normal tax and surtax, but the earnings credited subsequent to the reorganization are subject only to surtax. (See I. T. 3050, 1937–1 CB 57.) The same situation prevails when a State-chartered institution converts to a Federal savings and loan association.

The present law, which is section 5 (h) of Home Owners' Loan Act of 1933, as amended, with proposed amendment added:

"(h) Such associations, including their franchises, capital, reserves, and surplus, and their loans and income, shall be exempt from all taxation now or hereafter imposed by the United States (except the taxes imposed by sections 1410 and 1600 of the Internal Revenue Code with respect to wages paid after December 31, 1939, for employment after such date), and all shares of such associations shall be exempt both as to their value and the income therefrom from all taxation (except surtaxes, estate, inheritance, and gift taxes) now or hereafter imposed by the United States; and no State, Territorial, county, municipal, or local taxing authority shall impose any tax on such associations or their franchise, capital, reserves, surplus, loans, or income greater than that imposed by such authority on other similar local mutual or cooperative thrift and home financing institutions. Any exemption from taxation by the United States now or hereafter provided applicable to Federal savings and loan associations or the shares thereof or the income therefrom shall likewise apply to any building and loan, savings and loan, homestead association, and cooperative bank organized under the laws of any State, Territory, dependency, or possession of the United States or the District of Columbia, and to the shares, deposits, and certificates of indebtedness issued by such associations and to the income derived therefrom."

F. H. A. Insuring Operations in Louisiana

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

REPORT BY THE FEDERAL HOUSING ADMINISTRATION

Mr. MILLS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following table:

Volume of Federal Housing Authority insuring operations, by counties, in the State of Louisiana

[Net cumulative totals through Dec. 31, 1939]

County	Title I. Property improvement loans insured		Title II. Small-home mortgages accepted for insurance		Total	
	Number	Amount	Number	Amount	Number	Amount
Acadia	194	$72,459.84	58	$201,380	252	$273,839.84
Allen	101	46,437.97	2	6,200	103	52,637.97
Ascension	80	34,965.21	12	41,060	92	76,025.21

A Farmer's Wife Speaks Her Mind

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1940

LETTER FROM VERNA ALLAN VALLEAU

Mr. HOFFMAN. Mr. Speaker, there are in Congress, as well as elsewhere, some who believe that prosperity can be brought about by the passage of a law. There is a continuous drive for an ever increase in hourly wages. Accompanying that drive is a demand for shorter hours. No one can criticize the desire of everyone to improve his condition, either by increasing the amount which he can earn or lessening the hours of employment; but it is quite evident that, if wages increase and hours of labor are shortened, production will be less and the cost of manufactured products must go higher. There is little, if any, justice in demanding that the factory worker be paid as the Secretary of Labor has now fixed the price in the steel industry 62½ cents an hour for common labor on Government contracts, while the farmer, the worker in smaller industries, so far has been forced to be content with a fraction of that amount.

If the cost of the farmer's plow, or his binder, because of high wages paid in the steel industry and the manufacturing plants, is forced ever higher, how can he with his income fixed by low prices received for the things he grows and must sell if he would purchase, buy the products of the factory?

If industrial wages go up, so too must the price of farm products. With the unions' demand for ever higher wages, do they intend to force the farmer, farm laborer, into servitude—a form of slavery?

If the law of supply and demand is not to regulate wages, but is to regulate the price of farm products, how long will it be before the wages of the industrial laborer, fixed by the law at a level which is artificially higher when compared with the price received by the farmer for his labor, create a condition where the farmer, and he is industry's best customer, can no longer buy?

A farmer's wife who lives in the Fourth Congressional District of Michigan has an idea, which it would be well for some of us to read and understand. I present her letter, received April 28:

APRIL 25, 1940.

CLARE E. HOFFMAN,
House of Representatives, Washington, D. C.

DEAR MR. HOFFMAN: I just heard over the radio that Congress is considering wage and hour legislation. I live on a dairy farm at State Roads crossing between Saugatuck and East Saugatuck. Before becoming a farmer's wife I graduated from college and was a high-school principal, so I've seen life from several viewpoints. Through my home, for the past 15 years, has passed a stream of economic derelicts. From them I've gleaned some facts about industrial conditions.

High hourly wages are of no benefit to a workingman if they last only a few weeks or for a few years of his life. In order to pay high hourly wages companies pick only the best men for the best years of their lives and then, although they might be glad to get work at lower wages, they are denied employment if conditions like the laying up of the Graham & Mortine boats throw them out of work.

What really counts is the total family income. A family with the father getting $100 a month, and two adolescents making $25 each is in a much better economic condition than a family where the father gets $50 a week, and child-labor laws keep the children begging for change and speeding in the family car. To deprive young people of the chance to learn the value of money by earning their own allowance is a great educational crime. Where three people earn, sickness, shutting down the factory, seasonal lay-offs are not such a family catastrophe. In any attempt to improve the conditions of the workers, a man's whole life must be considered, and not a few short years when he might be able to earn $8 to $12 a day.

Yours truly,

VERNA ALLAN VALLEAU.

Minnesota Indians in Need

EXTENSION OF REMARKS
OF
HON. R. T. BUCKLER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

LETTER FROM BEMIDJI, MINN., ATTORNEY

Mr. BUCKLER of Minnesota. Mr. Speaker, under leave to extend my remarks, I include herewith a letter I have received from Mr. Arnold C. Forbes, an attorney of Bemidji, Minn., in my Congressional District, the Ninth, of Minnesota, concerning the distressed conditions of the Red Lake Band of Chippewa Indians on the Red Lake Indian Reservation of Minnesota.

On Monday when my bill, H. R. 8369, the Red Lake per capita payment bill, came up for consideration on the floor of the House, the gentleman from Michigan, Representative WOLCOTT, objected to its passage. After reading the letter from Mr. Forbes, I do not think that the gentleman from Michigan [Mr. WOLCOTT] will want to take the responsibility of holding up the small payments of $12.50, out of their own tribal funds, to these distressed, starving, and hard-pressed Indians.

The letter from Mr. Forbes follows:

BEMIDJI, MINN., *May 1, 1940.*

Hon. R. T. BUCKLER,
Member of Congress, Washington, D. C.

DEAR MR. BUCKLER: The Indians from Ponemah claim that they are in dire circumstances. They claim that they have had no Indian payment this year; that there is no road work for them to do until July 1; that commercial fishing does not start until June 20; that the wood and cedar cutting has been stopped on the reservation; and that cordwood can only be sold at the Indian agency for $1 per cord, which makes it unprofitable. They claim that there are only 40 men out of some 300 on the Ponemah side of the reservation that are employed in C. C. C. camps and W. P. A. projects. They claim that white men are working on these projects, and that the Indian trucks are unemployed. They further say that the prices of groceries on the reservation are exorbitant and that they are unable to get to Bemidji to purchase supplies. They claim that a can of sardines which costs 14 cents in the Bemidji stores costs 36 cents on the reservation, and that other articles are about in proportion.

They tell me that the Indian families are in very dire need and are living upon fish and recently have been shooting a few ducks as the flight north commences. I have no reason to disbelieve these stories, as I am well and personally acquainted with a great many Indians on the reservation. They are indeed worthy of your sympathy and interest. They complain mostly because they are not given opportunities to work. W. P. A. projects have been closed down until none of them are able to support their families. I realize that all of these problems have difficult solutions, but I do not believe that it is necessary that they actually go in want. Even surplus commodities seem to be distributed to them grudgingly.

All of this they have asked me to communicate with you in hopes that something might be done. I am sending a copy of this letter to John Collier, Commissioner of Indian Affairs, and I am sure that there is a real basis for these complaints.

I think that a personal investigation should be made by you which would have no connection with the Indian offices and agencies on the reservation. The complaints come so often that one is forced to believe there is considerable suffering among the Indians.

If you will designate someone to be your personal investigator I will be very glad to take him onto the reservation and to interview families with him. I am convinced that conditions are not very good.

Respectfully,

ARNOLD C. FORBES.

Middle Western Farmers, Beware of Promises From Eastern Politicians

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

Mr. HARRINGTON. Mr. Speaker, it is reported that a politician from a big eastern city, while in the Middle West recently making off-the-record public addresses, promised a complete halt on the imports of all agricultural products, should he be elected President. That sort of a promise might be expected from a city politician during a campaign year, but very few intelligent middle western farmers will be taken in by such easy political-campaign promises. Such promises have apparently been made on the assumption that all agricultural imports are injuring American farmers. This Presidential aspirant evidently did not know that the Departments of Commerce and Agriculture classify as agricultural such imports as tea, bananas, silk, coffee, rubber, cocoa, and other tropical products. These products make up the largest share of the imports of agricultural items, and American farmers consume but do not produce them.

Apparently politicians have found some fertile ground in Iowa and other Midwestern States, because the prices of hogs are lower than they were a year ago. It is as easy as it is untruthful to lay any and all adverse agricultural conditions on so-called agricultural imports.

That has long been an old Republican custom. Of course, the insignificant imports of pork products, amounting in 1939 to less than one-tenth of our pork exports, and to less than one one-hundredth of United States hog slaughter under Federal inspection, has had nothing whatever to do with the current hog prices. A recent bulletin (Foreign Crops and Markets, April 27, 1940) from the Department of Agriculture states:

> United States imports of hams, shoulders, and bacon came largely (73 percent) from Poland during 1933–39. Hence, it is not surprising to find imports of this group of products cut 81 percent during the first 6 months of the war as compared with a year earlier. The effect on the United States market has been negligible, however, since these imports were never, even at their highest, more than a drop in the bucket of domestic pork consumption.

The current situation with respect to hog prices arises from two far-reaching but unrelated causes. First, and by far the most important (as shown by the attached table), was the increased slaughter during the last year; the Department of Agriculture has been forecasting the inevitable results of increased numbers of hogs and large corn crops. Second, due to the necessity of importing war materials, European purchases of pork products from the United States have not been maintained during the first 6 months of the European war. In this connection I may say that the very situation which I was afraid would arise as a result of the repeal of the arms embargo has taken place and affected the price of hogs. Back in October 1939, shortly after I returned from Europe and when I was opposing the repeal of the arms embargo, I took occasion to say:

> Here is a strictly selfish thought: England and France have about $7,000,000,000 in gold to spend on the war. They can't get credit over here, so most of the cash will come to the United States. Under present law we can't sell them arms and munitions and airplanes so their American purchases are limited to raw materials and food—wheat, corn, and hogs. Lift the embargo and this money will be diverted to munitions. We in the Middle West have no munitions to sell. But we do have wheat, corn, and hogs. Do we want a market for munitions or pork?

Well, we are selling those countries plenty of munitions and airplanes but not enough pork products to suit me. This lack of export markets has a very important bearing upon the price of hogs at the present time. Pork products are, as is well known, on an export basis and the slackening up of foreign markets is far more influential on the price situation than are a few pounds of pork which come largely from Canada. Methods of enlarging export markets are the things which the eastern politicians ought to promise Iowa farmers. Thes off-the-record promises to embargo agricultural imports go beyond the traditional G. O. P. theory of equalizing the cost of production at home and abroad. They even "out-Smoot" Mr. Smoot. It is easy, and more effective politically, to promise absolute embargoes on everything; to make good on those promises, of course, would be another matter.

The eventual pay-off of those promises would result in retaliations by foreign countries and possibly make the conditions in Iowa worse than they were under the Hawley-Smoot Act.

I want to remind the hog raisers of Iowa that their income increased during 1936 to 1938, under trade agreements, over the Hawley-Smoot days of 1931 to 1933, by more than $200,000,000. The disastrous experience of the Hawley-Smoot Act is being gradually corrected by trade agreements through which many concessions on pork products have been obtained. Despite the adverse effect of wartime controls, these concessions are helping to support and maintain foreign markets for the products of Iowa hogs.

The attached table, in addition to the above-quoted excerpt from the Department of Agriculture, indicates how ill-founded are the suggested threats of injury caused by imports of pork, and shows the importance of pork exports.

Imports, exports, and production of pork (excluding lard) and percent imports are of production, 1937–39 and January-February 1940

	(1) Total imports of pork and pork products [1]	(2) Pork production under United States inspection (excluding lard)	Percent imports are of production	(3) Total exports of pork and pork products
	Pounds	*Pounds*	*Percent*	*Pounds*
1937	75,078,504	4,215,634,000	1.80	210,028,889
1938	52,283,748	4,828,140,000	1.08	312,566,743
1939	40,877,808	5,491,587,000	.74	421,105,312
January 1940	677,682	690,254,480	.10	57,968,962
February 1940	524,566	548,105,526	.09	54,420,206

[1] Imports for consumption: Includes lard, fresh pork, pork, pickled or salted, and hams, shoulders, and bacon, but largely high priced canned hams.

Department of Commerce; 1939 and January and February 1940 from Monthly Summaries of Foreign Commerce, U. S. Department of Commerce. Column 2, 1937 and 1938 from U. S. Department of Agriculture publication, Livestock, Meats, and Wool Market Statistics and Related Data, 1938; 1939 and January and February 1940 from unpublished data of U. S. Department of Agriculture.

Rev. Floyd J. Seaman

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

TRIBUTE BY FLORA J. SEAMAN

Mr. VOORHIS of California. Mr. Speaker, I consider it a real honor to be able to include with my remarks the following memorial on Rev. Floyd J. Seaman, of Los Angeles, written by his wife. Reverend Seaman was one of those rare people

whose very presence was always an inspiration to all who knew or came in contact with him.

IN MEMORIAM

"I never looked into his face but that I wanted to be a better man." Thus spoke a youth in a former parish, when told of the transition of Floyd Seaman.

These words possibly express the influence of this nobleman of God as no other words could do. He was indeed a "Stephen with the shining face."

Day by day, among men, his face radiated joy and hearty good will; he met men with a hearty greeting and a warm fellowship in his voice and manner; there was something tonic and heartening in his very presence. In the pulpit on Sundays, when under the inspiration of his passionate ideals, his face became luminous, and the very radiance of God rested on his brow.

His manner toward men was never familiar nor condescending; he was straightforward, direct, but always, no matter what condition or faith, he met men as God's children; he saw the best in them; believed the best of them. Men instinctively heightened in self-respect in their association with him.

Floyd Seaman was born in a farmhouse that still stands in northern Kansas, the son of Isaac and Nancy Owen Seaman, pioneers from New York. He loved the wide open spaces and the glory of nature about him. He early had a sense of being a child of God; and in his early boyhood, his mind was cast in the spirit of devotion through his mother's influence. The traditions of a Methodist minister grandfather, and the Revolutionary heroes of his ancestry, tended to set afire ideals and longings for a distinctive service to his country and his God.

He went in youth to Baker University for his academic training as well as his college work. He earned his own way courageously and industriously, and earnestly pursued the studies that were offered in language and literature and oratory. He had a passion for books and knowledge, and thrilled to the inspirational teaching of these teachers with rare ability and insight into the meaning of life and literature. Great moral issues and ethical standards were a tonic part of the training at this Kansas college.

He was well trained in the use of the marvellously beautiful voice that he had been gifted with; and he won outstanding oratorical contests.

With the passionate eagerness for knowledge came the ability to transmit in logical and acceptable form—even to translate new ideas into terms of everyday thought and language.

He went with a group of brilliant Baker students to Drew University for the sake of the highest training for the ministry. The influence of those years under master minds and hearts was ever an inspiration. A Browning Club was a special delight—and significance.

His first pastorate then was as assistant to Dr. Charles McFarland, whose gentleness and courage, and fine abilities won his undying admiration. It was while with him that a great civic reform was undertaken in the city of Topeka, and he watched the leadership of Dr. McFarland, who stood steadfast for principle even when his life was threatened.

He was married to his college sweetheart in 1900 and in 1903 his only son, Harvard Lake Seaman, was born. In 1905 he came to California for the sake of his wife's health, and was assigned to Glendora in the fall of 1906.

He lost his wife in 1912 and in 1914 was married to Flora Jones, of Glendora, daughter of Mr. and Mrs. John A. Jones.

Like Lincoln, he seems early to have had a sympathy for the oppressed and the working groups. Rauschenbush was of great inspiration to him and Washington Gladden, and during the interim in his ministry, in a period devoted to his wife's health, he studied widely on the problems of social justice and then formulated definite and passionate principles of what he thought Christianity implied in relation to our present problems. This he believed meant a new social order founded on justice and the welfare of the lowliest and the neediest and this he believed was included in the ideals of the coming of God's kingdom on earth.

He whose heart was eminently a heart of love believed that Christ came to reveal God as our Father, a Father of infinite love and goodness, whose will was good will for His children; and he preached constantly the theme of the goodness of God and His love to men, and the utter need for a disciple of Jesus to love his fellow men. "The greatest thing in the world," he once said in his pulpit, "is to bring the love of God into human hearts."

By the same token he felt that we should reverence all men, even the lowliest; indeed, he held that "true religion begets a reverence toward all of life."

He believed fervently in humanity, in justice, and right for every man; above all, he believed in men—that if only they could know the truth they would live the truth.

He felt that Christ's teachings were the answer to our problems, spiritual and temporal, and utter responsibility lay on the minister to proclaim the truth.

It was probably not only his hearty good spirits and his illimitable good will, but his understanding heart that made him tolerant and free of condemnation of his fellow men. His own heart was pure and his motives and thoughts were invariably and completely above the littlenesses of thought; but he never preached at men, he did not condemn; and yet, in the presence of those who had admittedly done wrong, while never condoning, he lifted them to a higher perspective by the very idealism of his own attitudes and thought.

It was his habit to fling himself ardently into whatever field he had been assigned, and to preach with all the power in him to help folks and give them the best he had.

He was especially happy in his work in the Crescent Heights Church, in West Hollywood. He was minister there at the time when Hollywood with all its vibrant enthusiasm was getting well under way as a center of the great motion-picture industry. The Bowl project was just being launched, and the Pilgrimage play, and the community sings. He shared in the civic interest and joined with the civic leaders to the extent of his opportunities. He planned for and built the church that was to be a spiritual center for that lovely residence district. His plans called for features that meant progress and service for the community and the church.

From there he was sent to Tucson, where the magnificence of the desert and the almost Old World border town gave fresh interest and inspiration. He shared actively in the university interests, was active in the Kiwanis and the Hiram Clubs and with a choir that gave a background of distinctive music, he did some of his greatest preaching and came to be known as the greatest orator of the Southwest. Yet here his ministry was a ministry of compassion and constant devotion to the health seekers of that city. From thence he went to Mission Hills in San Diego.

In the spring of 1930, while pastor at Garden Grove, his beloved alma mater conferred on him the honorary degree of doctor of divinity. He gave the baccalaureate address on that occasion.

In June 1932 he was appointed to Grace Church, Los Angeles.

The great east side, with all its cosmopolitan life, its evidences of former prominence in the history of the city, its new relationships because of its present foreign population, were at once a challenge to him. Always he had adapted himself and his ministry to the character of his environment. He deliberately set about to know and to understand the people with whom he was associated.

The great depression was on, and suffering and need such as he had never seen were all about him. He went through a special crisis in his own soul and decided, come what may and cost what might be, he would speak the truth to the people and teach the social gospel—the way of the Kingdom of God. He would throw open the doors of the church to the people.

This led to the establishment of the fellowship forum, which brought speakers of distinction, men of knowledge and authority, to the people of the community; it gave opportunity for utterance and expression to people who were downcast and troubled or even resentful over the tragic conditions that beset them.

He established adult classes which were carried on on popular subjects for some winters and which finally developed into a people's institute, with special courses for workers. This had the sponsorship of noted educators from the various colleges and universities about the city; men gave their names because they believed in Floyd Seaman and his principles.

He loved the youth who gathered in the social center—rejoiced in their joyous activities. They were all a part of the Grace Church family—and they returned his love in fine enthusiasm.

He published this paper, the Messenger, with its announcements of the events about the church and with its brief editorials that constantly pleaded the cause of a better world or gave assurance to those troubled and in doubt.

Great civic causes enlisted his support, and constantly he was called on to contribute his gifts of speech to meetings in behalf of some cause, or to plead the cause of some minority group before the city agencies.

He was appointed to the post of health commissioner by the mayor, but declined because of personal reasons. Part of his greatest ministry was the personal conferences. These brought an enrichment through close personal experiences, though all to often his sympathies were deeply stirred by the suffering of these visitors.

He shared his resources without stint and lived the simplest sort of an existence, and because of the steady need and pressure and the urgency of things, failed to take proper rest or recreation. Like St. Paul, he literally "poured himself out" for his fellow man. He gloried in doing so, for he was in his own medium when he was consciously doing for others and helping to make this old world a better place to live.

When the persecutions of the Jews in Germany began to cast horror across the waters, he espoused their cause with especial sympathy; for he had come to understand and admire the idealism, the energy, the intellect, and the warmth of personality he found among his fellow citizens of Hebrew birth; and one of the most satisfying experiences of his life was at that moment when, after the horrible pogroms of the post-Munich crisis, in the great East Side demonstration, he spoke in the Breed Street Synagogue and in the vast outdoor meeting in their behalf. He was "the suffering servant"—identified with those who suffered, and he poured his heart out in love and pity.

His own health was affected, not only by the steady pressure of work without proper vacation, but by an auto accident en route to Sacramento, where he was to have spoken for the newly formed People's Legislative Conference, a movement of the people to influence legislation in behalf of popular welfare.

That his work at Grace Church should have come to an end was a deep grief to him; he met it bravely and uncomplainingly, but he seemed to sense that his lifework was accomplished.

Nevertheless he accepted the assignment to Echo Park; he entered the work joyously and with enthusiasm; he loved the people, and their response was enthusiastic and encouraging. All seemed well until the shock of his heart attack. From this he seemed to be recovering and was about the home for the month of February, when complications set in and he became seriously ill. He passed on to the Life Triumphant April 15 at the Queen of the Angels Hospital.

He was so vibrant, so hearty, so full of joyousness, that it cannot seem that he is gone; certainly we know that his spirit still lives with fresh joy and blessedness.

He had an eager desire for knowledge and truth; a progressive and open mind; he devotedly loved his books and great music and the beauty of nature; he loved his fellow men, and his dear ones were most blessed in his devotion. Patient, kindly, generous, hopeful, with malice and resentments toward none, he took the teachings of his Master literally, and especially in the last eventful dedication to the Kingdom lived up to what he thought Jesus would do. Each day was committed to God; each day he asked for guidance and direction. His last weeks were especially beautiful, for he blessed all who ministered to him and poured out love on his dear ones.

If he were to leave behind a message for those who knew and loved him, I think it would be something like this: "Have faith in God, and in the triumph of righteousness, no matter how dark the clouds become. God is your Father, and He loves you and all men—trust Him. Do not fail to be true to your highest—and carry on. Love your fellow men and work for a better world and keep the peace."

As his wife, who had the precious privilege of life together with him for 26 years, I am deeply grateful to a gracious God who let me live so close to his inmost heart. We joyously shared together books, music, friends, the out of doors; our tastes in literature and recreation, our ideals, and our perspectives were correspondent and complete. His life was a benediction for which I can humbly thank my God. I only ask for grace to carry on in His spirit and love.

"'Tis human fortune's happiest height to be
A spirit melodious, lucid, poised, and whole:
Second in order of felicity,
I hold it, to have walked with such a soul."

FLORA J. SEAMAN.

The Domestic Sugar Industry

EXTENSION OF REMARKS

OF

HON. ROBERT L. MOUTON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

LETTER FROM JOHN M. CAFFERY, JR.

Mr. MOUTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter received from a constituent and prominent young attorney of Franklin, La.—Mr. John M. Caffery, Jr.—giving his views with reference to the situation confronting our domestic sugar-producing industry, as follows:

FRANKLIN, LA., *March 3, 1940.*

Hon. ROBERT L. MOUTON,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN MOUTON: Before Congress there is now pending a bill affecting one of the oldest industries in the country. The domestic-sugar industry dates back over 200 years. This rather small and little known industry is also one of the most important, and one of the reasons is that, as demonstrated by the last war, it is now recognized that the United States cannot engage in any international conflict without finding herself confronted with a shortage of sugar. One example of this was the difficulty during the last war in securing enough ocean-going bottoms to transport sugar the 6,000 miles from one of our principal sources of supply, the Philippine Islands.

Our sugar policy is therefore bound up to a greater or lesser extent with our military policy. President Coolidge, in June 1925, after a United States tariff report on sugar, stated:

"* * * It is important that as a Nation we should be independent as far as we may of overseas imports of food. * * * The interest of the consumer will be in the long run served only by the ample supply of the product. * * *

"The farmer is entitled to share along with the manufacturer direct benefits of our national policy of protecting domestic industry."

Recently there has been increasing criticism of the sugar industry, particularly on the part of persons high in administration circles. Typical of these are statements by the Secretary of State that the tariff on sugar was costing the consumers millions of dollars. And again by the Secretary of Agriculture to the effect that there never should have been a stalk of sugarcane planted in this country. Aside from other equities the Secretary perhaps does not realize the citizens of this country are supposed to be able to pursue the enjoyment of property freely and without restraint and protected by their Government, so long as they operate fairly and squarely. Possibly the Secretary does not feel that it is the duty of his office to promote and protect the domestic interest, regardless of how he feels personally.

From 1900 to 1930 the price of raw sugar ranged from a low of 4 cents to a high of approximately 12 cents per pound, with an average price during those years of almost 6 cents. From 1930 to 1936 the price ranged from 2.9 cents to a high of 3.5 cents per pound.

It is therefore apparent that since 1900 the price has declined about 50 percent, and for the years 1920 to 1925, where the average price was 7½ cents per pound, the decline in price is more striking. Now, with the exception of the war period, the margin of profit and loss to the domestic planter was approximately 10 percent profit to 75 percent loss. This is illustrated by the fact that in the parish of St. Mary in Louisiana there were 16 operators in the business 25 years ago; today there are only 4 of them left. Some of these places went under, some changed hands, and others were just abandoned. Today there are 69 sugar houses in Louisiana, and in addition there are some twenty-odd lying idle in various stages of disrepair. The machinery used in making sugar is expensive and highly specialized, and cannot be converted to any other use but the making of sugar.

The domestic industry faces three hazards. The first is the terrific foreign competition, mainly from Cuba; the second is the almost total lack of knowledge about the sugar industry on the part of the consumer or the general public; and the third, and most disheartening to the industry, is the antagonism displayed toward it by the present administration.

The domestic industry has been termed a high-cost business, and it is pointed out and urged by some that the United States should allow this industry to die out or even force it out and secure its sugar supply from the cheaper source.

The sugar industry points out, however, that there are not many industries that would not be susceptible to supplanting in this manner by cheap foreign competition. In addition, what would the thousands do who are dependent on the industry for a living and whose lands are good for nothing else? Then there is the reason why sugar is made cheaper in Cuba.

Labor costs represent over 50 percent of the cost of production, and in this country and in Puerto Rico employees' wages and hours are regulated by the Secretary of Agriculture and the Wage and Hour Administration. These are administrated strictly, and the penalty for violations is great. The writer knows of one instance where a Louisiana planter is about to lose the total of his benefit payment because he hired a young boy who misrepresented his age.

The minimum wage to daily employees is $1.50 per day. In addition those who desire can secure housing free, and these plantation units generally maintain livestock and gardens whose produce is doled out free at intervals. There is a devotion shown by the workers for their employers in this industry that probably has few parallels in this country.

In Cuba the average wage is as low as 25 cents per day and under conditions akin to the peon situation in Mexico. The domestic industry cannot help but feel that it is unjustly treated when it is forced to pay a high wage to make its product and then forced to compete with foreign sweatshops for its own home market. As ordinary American citizens, members of the industry believe that a knowledge of the situation need only be shown to the consumer.

The lack of knowledge on the part of the consumer has played into the hands of the refiners, both American and foreign. The American refiners are located mainly along the eastern seaboard in Philadelphia, Baltimore, and in San Francisco. It is their business to buy raw sugar from the grower-processor, refine it, and place it on the market for sale to the consumer. The cheaper it can be bought from the grower the larger the profit. The methods these refiners used in playing the domestic industry against the foreign industry are best illustrated by the fact that they have been brought into court more than once and have sustained unfavorable decisions, one resulting in a refund of millions of dollars to the domestic raw-sugar makers.

It is these refiners, small in number and possessing almost unlimited financial resources, who are responsible more than anyone else for causing the distaste generally found among consumers for the domestic-sugar planter.

By the use of leaflets and handbills placed in the packaged sugar for retail stores, the housewife was for a number of years propagandized to the effect that this sugar was costing her several times too much and that she should demand some action from her Congressmen. These tactics could not fail to have some effect, but imagine the feelings of an industry that was on its back, suffering from diseased cane, a fluctuating and uncertain price, and struggling to continue in the face of a ruinous foreign competition. The consumer, then, was alined with the foreign sweatshop employer.

In 1933 came a ray of hope. The Roosevelt administration flashed across the sky like a comet in a blaze of light, and with great fire and fanfare began condemning these practices of child labor and sweatshop conditions. Some of these reforms were passed, and a number of industries were freed of these conditions. The sugar industry waited patiently. It is still waiting but less hopeful.

The Secretary of State, a free trader, seems determined that all foreigners who desire shall profit at the expense of the American businessman. To that end he proceeded to conclude, on his own volition, trade treaty after trade treaty. In addition he has actively opposed, both behind the scenes and before committees and meetings, any legislation that would favor the American sugar planter over foreign interests. It seemed to the domestic people as if being American was a detriment when it came to making a living in America.

The Secretary of Agriculture, as stated at the outset, is on record as opposed to the domestic industry. There is a unit in the Department called the Sugar Section and in it there is not a man who has had any practical connection with the industry.

When the present war broke out and the price of sugar edged forward (not the retail price but the price of raws) one-fourth of a cent per pound, the President made a great noise about war profiteering and suspended the quota on sugar, thus flooding the market. The writer cannot recall any other commodity that was interfered with. He, in addition, threatened to lift the tariff if it went forward any more. Cuba, incidentally, pays only a part of the tariff; and no one else who would be subject to it ships in any appreciable amount of sugar.

At the outset of the present administration the public was exhorted in the name of patriotism and fairness not to buy products or those services that were made possible by the use of such oppressing conditions. Yet this same administration has seen fit to favor, and suggest that the domestic industry be supplanted by an industry built on those very evils.

The domestic industry is an old one. It is old in years, old in land, and old in machinery. It has never shown the financial vitality that marked the growth of its competitors. The fact that as an industry it has never been able to employ the more up-to-date and more efficient machinery and materials employed by its foreign competitors, who in reality are backed by certain New York banks, is one of the elements that make its cost of production higher. There is little doubt that had it had that backing, together with the protection of its own Government, which should be its due, particularly during periods of difficulty in the past with an unadapted cane, the industry would now have been able to compete without any protection of any sort, even in the face of the great wage differential. The industry believes it is entitled to the support of its Government and the good will of its own people.

Very truly yours,

JOHN M. CAFFERY, Jr.

The Fantastic Story of How the American People Have Given Billions of Dollars as Gifts to Foreign Gold Producers

---

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

Mr. AUGUST H. ANDRESEN. Mr. Speaker, if I may have your attention for a few moments, I will relate one of the most astounding and fantastic true stories ever written on the pages of history. The legendary fable of King Midas and his golden touch will always be a fairy tale. But when you get the true significance of the expensive legerdemain practiced upon the American people by New Deal monetary wizards in the handling of your money, you will begin to wonder how and why it was all planned that way.

I mentioned King Midas, and, therefore, my story will be about gold—the New Deal's gold and monetary policy. The last chapter of this fallacious and expensive experiment is still to be written.

BRAIN TRUSTERS PLAY WITH MONETARY SYSTEM

Seven long years ago, when the New Deal began its "brain trust" program to remake the United States and its people, two distinguished professors, Drs. Warren and Sprague, conceived a new theory on money. They urged that if their ideas could be put into operation as an experiment with our monetary system, the practical working of the plan would revive our export market, raise farm prices, restore agricultural prosperity, and put millions of unemployed back to work. In other words, we would be out of the depression. President Roosevelt took over the idea, and the program went into operation—authority having been granted by Congress in early 1934, with little or no consideration, and surely without much of any understanding.

At the beginning of the monetary experiment it was stated that only five or six persons in this country and England understood the workings of money. This may be correct, but I doubt very much if even they knew anything about money, excepting the having and spending of it. All of these monetary experts have long since been erased from the picture. But the program still goes on, as it now appears that we have a wild bear by the tail. If we let go, the bear will bite, and so we hang on to a policy which may be real expensive and disastrous before the experiment is finished.

MONETARY EXPERIMENT UNROLLS

In January of 1934, we had around $4,000,000,000 in gold in this country. The historic value of gold throughout the world and in the United States was $20.67 per ounce. Our supply of gold was about 30 percent of the world's stock of this metal. Before June 1 of 1940, the Treasury will have over $19,000,000,000 in gold, which represents approximately 70 percent of the entire world supply. The law states that the Government has title to this gold, but Treasury records show that the Federal Reserve System has a mortgage on it for more than $17,000,000,000.

The authority demanded and secured by President Roosevelt in 1934, from a rubber-stamp Congress, to carry out the new monetary program, gave the President the power to fix the value of our American dollar, which power under the Constitution is solely vested in Congress, and the further authority to buy foreign gold and silver at a price set by him. He fixed the value of the dollar at 59 cents, and raised the price of all foreign gold, and newly mined gold produced in this country, from $20.67 to $35 an ounce. This action resulted in the payment by the United States Treasury of a premium on foreign gold of $14.33 an ounce, which represents an increase in value of 69 percent. A further result of the President's act definitely fixed the world price of gold at $35 an ounce, as it could always be sold at that price to the United States Treasury.

AMERICANS PENALIZED

In order to prevent any American citizen from receiving the benefit of the increase in the price of gold, the law contained a criminal section requiring every American citizen to turn in his gold to the Treasury at the old price of $20.67 instead of $35 an ounce, or else there would be prosecution with a penitentiary sentence and a heavy fine.

Should you possess a $20 gold piece, which contains about 1 ounce of gold, ask your local banker how much it is worth in legal tender. He will tell you $20. This same $20 gold piece when possessed by a resident of any foreign country will bring $34.33 when sold to the United States Treasury.

GOLD PROGRAM FIXES WORLD PRICE

I realize that there may be some confusion in the minds of many as to the practical working of our foreign-gold policy. Therefore I will give an illustration, using wheat, which is grown in nearly every country in the world, as the commodity instead of gold. We will say that the world price of wheat is $1 per bushel. What do you think would happen if the United States Treasury fixed the price on all foreign wheat at $1.69 per bushel and offered to take delivery?

Of course, the answer is simple. The world price on wheat would go to $1.69 a bushel, less cost of transportation, to the United States.

Every foreign farmer would double and treble his production of wheat, and the price would remain fixed at $1.69 as long as our Government continued to buy at the fixed price. If the Treasury dropped the price—the world price on wheat would go down, and, if the Treasury stopped buying, there would be chaos in the world. The price would go down to meet the law of supply and demand, and we would possess billions of bushels of wheat at little or no value.

This is just what has happened with gold prices and gold production, and as long as we offer to buy the world's supply of gold, the price will remain at the figure set by the President.

When Mr. Roosevelt boosted the price to be paid for foreign gold from $20.67 to $35 an ounce, the world price went to $35, less cost of transportation to the United States, and it has remained at that figure for more than 6 years. Production of gold has doubled and trebled in most gold-producing countries. Mine owners are working their properties day and night—7 days a week—in order to get the gold out of the ground for sale to Uncle Sam, or should we say Uncle Santa Claus, at a premium of $14.33 an average. We buy it, pay the $35 per ounce, and then bury it in the ground down in Kentucky. From earth to earth, can properly apply here because the gold is not used.

For more than 6 years foreign gold has been poured into our Treasury, coming by boat, train, and plane. We purchased billions—to be exact, $11,300,000,000 worth—from

Russia, Japan, Italy, England, France, and every other country in the world. Just about enough to pay the debt of $14,000,000,000 still due our country from the days of the World War, 22 years ago.

AMERICAN GENEROSITY

Now we come to the astounding and fantastic part of the gold program. American citizens were forced to take $20.67 an ounce for their old gold, which included gold coins and gold certificates, while the Treasury insisted upon paying foreign gold producers $35 an ounce, or a premium of $14.33. Thus far we have paid foreign gold producers premiums totaling nearly $4,500,000,000. In my opinion, this represents an outright gift from the American people to foreign individuals and governments, who are not entitled to our generosity.

If we stop buying gold or reduce the price, a world-wide economic collapse will occur, and our large gold holdings may be of little or no value as a medium of international exchange or for any other purpose. In view of the disastrous possibilities, the Secretary of the Treasury definitely states that we must continue buying foreign gold at $35 an ounce.

RUSSIA, JAPAN, AND HITLER ARE BENEFICIARIES OF NEW DEAL POLICIES

Communistic Russia has produced over a billion dollars in gold during the past 6 years by the use of convict and exile labor at a cost of approximately $10 an ounce. The American policy of fixing the world price of gold at $35 an ounce made it possible for the Russian Government to make hundreds of millions of dollars on their gold production. Large quantities of Russian gold were sold directly and indirectly to the United States Treasury.

During the same 6-year period Japan has sold us directly $580,000,000 in gold, and we paid them a profit of approximately $230,000,000 on the transaction. The Japanese Government used the money they received from the Treasury largely for the purchase of war supplies and raw materials to carry on the aggression against friendly China and in the building of a large navy, which some American admirals claim will some day be used against our country.

In his mad lust for conquest, Hitler stole hundreds of millions of dollars in gold from the small democracies of Europe. The New Deal's offer to buy all foreign gold at $35 per ounce made it possible for Hitler to secure the full benefit of the inflated price fixed by the President.

CONGRESS MUST RECAPTURE MONETARY POWERS

A few days ago Mr. Morgenthau, the Secretary of the Treasury, delivered a speech on the subject of gold. In speaking about the American dollar, he said that the United States has the soundest money in the world. I thoroughly agree with him, as I am convinced that no country in the world possesses as sound money as the United States. The people of our country have faith in the soundness of our American dollar, but why should they be called upon to give away their dollars to foreign mine owners and governments, who have no interest whatsoever in their domestic welfare?

I feel that you will agree with me that the foreign-gold policy of the New Deal has utterly failed in purpose. It did not restore our export market, except for materials of war. It did not raise farm prices or create work for millions of unemployed American citizens. Official records disclose that farm exports have diminished to the lowest point in history. Foreign beneficiaries of our gold policy piled up over $9,000,000,000 in bank deposits and security investments in this country instead of buying surpluses which we desired to sell for export.

The scheme failed because we did not insist that foreign sellers of gold spend the money we gave them for American farm and manufactured products. New Deal leaders in Congress defeated my attempt to write such a provision into the law. If gold buying is to continue, we should require foreign beneficiaries to buy our products from farm and factory—otherwise no premium should be paid on foreign gold.

To continue our present policy of giving billions of dollars as gifts to foreign owners of gold mines is beyond all rhyme or reason as a part of our good-neighbor policy.

Our job should be to first take care of American citizens—adequately prepare our national defense, solve our domestic problems, and remain firm in our conviction to keep out of the horrible war in Europe.

Some New Deal leaders propose that we use our gold to rebuild Europe after the war. We tried that once. Others propose that we buy cheaply produced farm and manufactured products from foreign countries and pay for them with gold. Such a policy would stagnate American agriculture and industry. Either suggestion would leave our country "holding the bag."

We no doubt have a wild bear by the tail. The New Deal monetary wizards who got us into this desperate situation cannot solve the problem.

Congress should immediately stop this fantastic and expensive experiment—recapture its constitutional authority to fix the value of money and begin legislating for the future welfare of America.

Seven long years in the role of a world-wide Santa Claus is enough. Let us stop now before it is too late.

Foreign gold purchased by U. S. Treasury Jan. 1, 1934, to Jan. 1, 1940

[The first column shows amount paid (at $35 per ounce) by Treasury to foreign sellers of gold. The second column shows the gift or premium from our Treasury to foreign gold dealers, being the difference between $20.67 per ounce and $35 per ounce]

Foreign gold sold to U. S. came from these countries	Total amount paid by U. S. Treasury	Amount of gift from U. S. Treasury to foreign gold dealers
United Kingdom	$4,916,352,000	$1,966,540,000
France	1,839,360,000	735,744,000
Belgium	283,775,000	113,510,000
Netherlands	903,667,000	361,466,000
Sweden	88,869,000	35,547,000
Switzerland	163,683,000	65,473,000
Canada	1,065,392,000	426,156,000
Mexico	192,467,000	76,986,000
Colombia	91,947,000	36,778,000
Philippine Islands	137,829,000	55,131,000
Australia	175,932,000	70,372,000
South Africa	23,529,000	9,411,000
Japan	580,813,000	232,325,000
British India	347,857,000	139,142,000
All other countries	319,405,000	127,762,000
Total	11,120,820,000	4,448,328,000

WHEN THE WAR ENDS—THEN WHAT?

When the war in Europe comes to an end, and millions of men now engaged in war return to productive employment in foreign agriculture and industry, our troubles in the United States will be magnified beyond present comprehension. Depreciated foreign currencies and the fact that our country will possess nearly all of the world's gold will make the United States the dumping ground for cheaply produced farm and manufactured products from all corners of the earth. Our export market, which now consists largely of war materials, will diminish to the vanishing point, and cheap foreign competition in all lines will bring serious distress to our country.

We can, in part, protect our future domestic economy by legislation, but not before the Chief Executive and Congress learn that our first duty is to protect the welfare of our fellow Americans.

The following United States Treasury statement discloses that foreign governments still owe the American people the sum of $14,605,031,504.70 from loans made by President Wilson during the Democratic administration of 20 years ago.

Debtor countries

[Total indebtedness (payments on principal deducted)]

Armenia	$23,901,391.74
Belgium	457,552,820.78
Czechoslovakia	165,788,588.45
Estonia	21,321,017.05
Finland	8,142,890.21
France	4,200,332,646.54

Philippine National Volunteers for Complete Independence in 1946

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

Mr. STEFAN. Mr. Speaker, in spite of the unrest in Europe and in the Far East, and occasional statements that there should be a restudy of the Philippine independence question, I wish the membership of this House to know that, so far as the 100,000 members of the Philippine National Volunteers are concerned, they are opposed to any restudy of the Tydings-McDuffie Act, and are ready to assume their responsibility as free people on and after July 4, 1946.

For your information, I would like you to know that the Philippine National Volunteers are composed of men up to 45 years of age who take an oath of allegiance to the Philippine Islands and the United States and swear to uphold the Constitution of our country. In their membership we find men in all walks of life, located in every section of the Philippine Islands, who are highly appreciative of the benefits they have received at the hands of the United States of America.

I know that my colleagues will be interested to know that the chief of staff of the National Volunteers of the Philippines is Maj. Gen. Francisco Delgado, who was recently one of our colleagues, and served ably among us as the Resident Commissioner from the Philippine Islands. The sentiment of this organization is ably stated in the recent annual message of President Panfilo Laconico, who was elected for the eighth consecutive term, to carry on the work of these patriots in the Philippine Islands. By leave given me, I quote from part of Lieutenant General Laconico's annual message, delivered before a large attendance of delegates at the tenth annual convention of the National Volunteers, held on February 25, at the general headquarters of the organization at Manila, P. I.:

Before I proceed to acquaint you with the various details of our activities during the fiscal year which had just closed, I wish to call your attention to the need of revitalizing ourselves and renewing our fervor in order to meet a new challenge which it is our misfortune to confront. I wish to make reference, gentlemen, to the acceptation by certain elements of our people who are willing to forfeit our right to ultimate freedom in favor of uncertainty. Such willingness is, in part, based upon certain flimsy, unreal, and groundless hope inspired, allegedly, by the uncertainty of world conditions and by the inability of our forces to repel foreign aggressions if and when such an aggression comes.

On this point, gentlemen, I cannot but be emphatic with respect to our stand.

The Philippine National Volunteers was conceived and founded 9 years ago upon the assumption and on the firm determination of our people of attaining the independence of our country. Our determination has not abated even for a single iota. We have modified and adjusted our requirements and personal efforts toward the attainment of the goal which our leaders and our people have so reverently set for our country. We have, since the inauguration of the new regime, laid down our own program based on independence in 1946 and have geared ourselves to the preparation of those tasks incident to the inauguration of independent nationhood. Thus far, there has been no reason for us to change or alter our plans. We should be ready for independence and should cherish that day when we may call ourselves ultimately free. Freedom is the richest heritage which America has given us; freedom is the richest prize which liberty-loving Americans have awarded us. Let us sanctify, revere, and cherish this heritage because nothing else in the world can be more valuable or more lasting.

* * * * * * *

ON THE INDEPENDENCE QUESTION

On more than one occasion in the past, I have made full reiteration of the stand of the National Volunteers of the Philippines on the question of Philippine independence. As independence is already an accomplished fact, and as the Tydings-McDuffie law has been ratified by the Filipinos, it is the sense of the Philippine National Volunteers to pursue that course leading to the eventual grant of independence upon the termination of the current transition period.

It is an exaggeration to say that as Volunteers we are looked upon as leaders of thought and citizenship in our respective communities. For this reason, our stand on the subject of ultimate freedom should be unreserved and outspoken. Our stand on the subject serves to bear no little amount of influence to those who look upon us for guidance and inspiration. I have said this before and I am saying it again: Let us help create here a people conscious of their obligations as citizens of a free country. * * * Confronted as we are with a new dispensation in our national life, it is saddening to note that we have not as yet been prompted to a full realization of our situation. * * * As Volunteers I call upon you to help in making our people realize that we are citizens of a country about to be free, that by virtue of certain covenants and enactments between our country and that of America, we are entrusted with new responsibilities. Four hundred years of association with foreign powers has poisoned our minds and has given us the feeling of subservience which all peoples of a subjected country feel.

As leaders along the lines of citizenship, or at least as belonging to a group striving to be model citizens, we should keep faith with our respective trusts and should meet our obligations accordingly. Let us assume our new responsibilities with faith and courage. The country exacts of us the fulfillment of certain duties and obligations. Let us meet them. Let us pay our taxes; let us cooperate with the administration in the orderly process of preparing our country for national security. Let us dedicate ourselves to the rigorous compliance of those activities and labors which the constitution and bylaws of the Philippine National Volunteers had set for us to follow.

We have sworn ourselves to a duty which exacts of us the ultimate in sacrifices and discipline. I beseech you, gentlemen, to remain true to your respective oaths. Ours is a military organization, and in such a body discipline is the watchword, and discipline is our primary requirement. Let us learn to follow the leaders, to obey commands from them, and to follow instructions accordingly.

Mr. Speaker, General Laconico, in this statement, tells us how the mass of people in these islands feels about independence. I hope when complete freedom comes to those people the powerful governments of the world will join together and make those islands neutral and guarantee to them freedom and liberty forever.

Can the Wagner Act Be Made To Work?

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

ADDRESS BY HON. HOWARD W. SMITH, OF VIRGINIA

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of my colleague from Virginia, Hon. HOWARD W. SMITH:

I don't know but that the answer I am supposed to give might better come from some other source, the question being, Can the Wagner Act be made to work? I think the Wagner Act can be made to work, and I am going to tell you how and why as briefly as I can. I want to say that I recognize that all of you are hard-headed, common-sense businessmen, and I am not here to give you any display of oratory, because that is not along my line, but I am going to seek to tell you what I know. If you are then convinced that the things that should be done are what I believe should be done, those of us who are fighting this battle here in Washington might have your assistance and cooperation.

I think that the businessmen of this country as a first step must make up their minds that collective bargaining—which is the thing that the Wagner Act protects—is a thing that is here to stay. Whether you like it or not, it is one of those conditions in a rapidly changing business world that you must make up your minds to get along with.

PURPOSES OF WAGNER ACT

The Wagner Act as it was originally enacted—and, I submit, as it was intended by Congress—had a twofold purpose. One was to declare by law the right of employees to bargain with their employers collectively through representatives of their own choosing. The second object of that law was to fairly, honestly, and impartially furnish the machinery for the protection and enforcement of that right of collective bargaining. Now that is all the Wagner Act was ever intended to do, according to its sponsors at the time it was enacted. The things that you and I quarrel about are the things that I submit Congress never intended and the sponsors of the bill never intended.

NEED FOR IMPARTIAL ADMINISTRATION

To make the Wagner Act work there are two things that must be accomplished. To make any law work in this country satisfactorily, there has to be a fair, honest, and impartial administration of that law. That is No. 1. As a corollary to that, you have to make the American people very confident of the fact that it is working in a fair, honest, and impartial way.

Whatever might be the facts, if the country is sold on the idea that one of our laws, whether it is the Wagner Act or some other act, is not working fairly and honestly with all the people with whom it deals, then you have destroyed public confidence in that act and before it can be made to work satisfactorily, whatever the facts may be, that public confidence must be restored. To restore that public confidence there must be an impartial administration of the law and then on top of that there must be amendments to the law to correct the evils which are almost unanimously conceded.

We must not only have a fair and impartial administration of the act, but we must have those needed amendments to the act that will reassure the public that the things that have happened in the past cannot, under any administration, happen in the future. So we have proposed certain amendments that those who think the Labor Act is some sort of sacred cow that must not be touched, proclaimed as intended to destroy and emasculate the Wagner Act. Such is not the case; and my few remarks this afternoon are going to be devoted to telling you what those important amendments are and why we offered them and why they should be adopted. In some instances, I am going to tell you the sources from which they came, and I am going to start out with the so-called free-speech amendment.

PRESERVATION OF FREE SPEECH

The so-called free-speech amendment is that amendment which would reaffirm the right of free speech in this country. As it is now, as you know, if a man should happen to remark to one of his employees that if he had a son he would not advise him to join a union, that is an unfair labor practice; it has been so held by the Board. The American Federation of Labor became the victim of that ruling just as the employers did, and so the American Federation of Labor proposed an amendment to lift that ban and permit the employer to discuss with his employees any subject that might be of mutual interest.

What did our committee do in destroying this act through such an amendment? We took word for word the amendment adopted and proposed and introduced by the American Federation of Labor, and offered it to the Congress as the solution of that difficulty. If we are to be indicted on that ground for attempting to destroy the Wagner Act, then we must be indicted jointly with the American Federation of Labor. I think the American Federation of Labor has been here many, many years protecting the rights of the American working man when some of these folks who now declare themselves to be its champions were walking around in swaddling clothes.

There is just one thing we didn't adopt, though, in the American Federation of Labor amendment to free speech. We thought the American Federation of Labor perhaps went further than Congress ought to go, and so we actually modified Mr. William Green's amendment and wouldn't go as far in our committee report as Mr. William Green and the American Federation of Labor proposed to go and have advocated going before three committees of the Congress of the United States. That is how we sought to destroy the act with the free speech amendment. Now I will pass on to another.

UNITS FOR COLLECTIVE BARGAINING

The unit of representation. I am not sure that all of you folks are familiar with that subject, but under the act this Board has the arbitrary and complete power to determine what shall be the collective bargaining unit in which the employees shall vote in any election. In other words, they may say that one factory shall be the whole unit and the employees shall elect representatives from that factory. But the Board can also say that we will take this factory in Indiana, this one in Virginia, and this one in Minnesota, and we will throw them all in together and make one unit and the employees in all these plants will all have to vote in the same election. Now that has caused untold trouble. It is probably one of the most disputed questions about the whole act.

What did we do about that? A gentleman, Dean Lloyd Garrison, a very fine man and the chairman of the old Labor Board under the N. R. A., and he knows his stuff, came before our committee and said that that situation was bad and that it needed a remedy. He sat there before our committee and stated the amendment which he, probably the best friend of the Labor Board, undoubtedly one of the best friends of organized labor, and one of the best friends of the Wagner Act, thought was the thing to accomplish it. That amendment was this: Whenever a dispute arose as to what should constitute the appropriate bargaining unit, instead of the Labor Board getting into the middle of it and being partial to one side or the other, that subject should be withdrawn from the jurisdiction of the Board until those labor unions had settled that quarrel among themselves and put the settlement in writing. That was the suggestion offered by Dean Lloyd Garrison, the chairman of the old Labor Board.

Our committee in its frantic efforts, as the other folks say, to destroy the National Labor Relations Act, adopted Dean Lloyd Garrison's amendment. If we are to be indicted for seeking to destroy the Labor Act, then we must be jointly indicted with Dean Lloyd Garrison, the best friend that the Labor Board ever had.

OTHER POSSIBLE AMENDMENTS

I mention these things to you, gentlemen because of the fact that this propaganda started as soon as our amendments were offered that we were seeking to destroy the rights of organized labor. Well, the fact is that it wouldn't have made any difference what amendments we had offered, the same cry would have gone up. We could have offered some amendments that would have had equally good authority that we did not offer. For instance, take the Railway Labor Act, that the labor folks say works fine. We could have offered an amendment that the Wagner Act do away with the closed shop. If we had done that, we would have followed the National Railway Labor Act, which prohibits the closed shop.

We could have put in an amendment which would have prevented mass picketing and such. If we had done that, we would have been following the English law that some of our men on Capitol Hill tell us works so satisfactorily and so fine. But we didn't do those things. What we sought to do was to reach the worst part of this act as quickly as possible and offer those amendments which we thought a fair Congress would put through.

EXCLUSION FOR WILLFUL VIOLENCE

I will mention another one. We put in an amendment which would prohibit the Board from arbitrarily requiring an employer to reinstate an employee who, in the course of a labor dispute, has engaged in willful violence. There is the biggest row about that you ever heard. Some of these fellows think that is a terrible thing to do; they think that the Board should be permitted to reinstate a man who had been guilty of willful violence, such as a sit-down strike. Let's see what was our authority for that.

The Labor Board in the Fansteel case ordered the employer to reinstate a number of people who had been discharged because they had actually with violence seized and taken possession of the plant of that company by means of a sit-down strike. They ordered those men reinstated. That case went to the Supreme Court of the United States, and the Supreme Court of the United States reversed the Board and said that the Board had no power and no right and no authority to reinstate men who had engaged in violence and had unlawfully seized their employer's property.

So we put in an amendment to cover that, and the reason we did it was that immediately after that decision of the Supreme Court the Labor Board, in another case then pending in the circuit court, in the face of that decision, sought to get that circuit court to order the reinstatement of men who had been fired for indulging in a sit-down strike.

If we sought in our amendments to destroy the National Labor Relations Act and if we must be indicted for doing so, then we must be jointly indicted with the Supreme Court of the United States whose opinion suggested to us the amendment which we offered.

BOARD'S POWERS OVER BARGAINING UNIT

This perhaps does not interest you so much as it does the laboring man, but do you know that under this unit of representation that I was talking about a while ago, if the Labor Board decides, as it did decide in the Longshoremen's case on the Pacific coast, that instead of having one factory in a unit the whole west coast should be the unit of representation, that there was no appeal from that decision to any court?

I will illustrate what happened in the Longshoremen's case. There were A. F. of L. unions up and down the west coast, unions of longshoremen that had been there from time immemorial, almost; they had operated for years, they had built up their reserves, they had members as devoted to their own A. F. of L. union as you are to your lodge, and the Board decided that all of the west coast must be thrown into one unit of representation and everybody on the west coast who was a longshoreman should vote on what union should be selected.

Well, the result was that there were more C. I. O.'s than there were A. F. of L.'s, and so the C. I. O. was certified as the bargaining agent for the whole west coast. A gentleman who is probably known by reputation to all of you, one Mr. Harry Bridges, operates that C. I. O. union on the west coast.

That decision destroyed the right of bargaining of the American Federation of Labor unions all up and down the west coast. That case was taken to the Supreme Court of the United States, and the Supreme Court said that, although that decision had struck at the very heart of those unions and that although that decision had destroyed valuable property rights and personal rights, there was no appeal under this act to the courts. So we sought to remedy that obvious defect by putting in an amendment providing that they should have an appeal to the courts.

I don't care to argue with anybody who will maintain the position that any American citizen who has been aggrieved should not have the right to appeal to the courts of this land.

ELIMINATION OF ECONOMIC DIVISION

We offered another amendment that stirred up a great deal of strife, and that was to abolish what is known as the economic division of the Board, headed by Dr. David J. Saposs. I won't undertake to go into the details of that this afternoon, but will merely say to you that the act itself originally provided that there should be no economists employed by this Board where the data could be obtained from the Department of Labor, and we were informed by the Department of Labor that, if given proper time, they could furnish any statistics that they were asked for. Notwithstanding that, this Board built up an economic division that cost the Government about $73,000 a year. We recommended

its abolition, and as authority for that I will say that in the last few weeks the House of Representatives by a vote of something over 2 to 1 sustained this committee on that by entirely obliterating the appropriation for next year for that division of the National Labor Relations Board.

SEGREGATION OF POWERS

We offered another amendment, and I think the best authority for that is the good, sound common sense of the American people, and that was an amendment which would separate the prosecuting functions of this Board from its judicial functions. You gentlemen know just in the nature of things, from good, sound, common horse sense, that the same man who investigates a case and who goes into court and prosecutes the case can't then impartially try the case and decide it. That just isn't human nature. But under this act as it is now constituted, the same agency which investigate in the first instance, which prosecutes in the second instance, and which finds guilty in the final analysis is all one and the same. I am willing to leave that just to the plain, common sense of anybody that there never ought to be any such law as would permit that, and that the defense is made to that: "Why pick out this agency and do it?" The answer is that my function was dealing with this agency, not the other Government agencies. If I had my way, I wouldn't let any agency confuse the three constitutional functions of legislative, executive, and judicial authority.

PROPOSALS FOR REORGANIZATION OF LABOR BOARD

I am coming back to this question of a fair and impartial tribunal. There are two suggestions before the House of Representatives. One is to take the present Board and keep it where it is and to add two new members. Now that subject hasn't been debated on the floor of the House of Representatives, and I am a little curious to know what is going to be the excuse and the reason and the justification for such an amendment on the part of those gentlemen and ladies who claim that there oughtn't to be any amendments to the Labor Act and that everything is just hunky-dory like it is. If that is true, they ought not to add any to the present members of the Board. All they ought to do is go down and pin a medal on the present members of the Board.

I have been living with this subject for nearly a year now, and I expect I know pretty nearly as much about it as most folks up there on the Hill, and I just don't think that Board can ever be restored to public confidence in the United States so that there may be cooperation between employer and employee in making the Wagner Act work. Until you do restore public confidence, it never will work as it should. So our amendment, as opposed to the amendment offered by the lady from New Jersey, I believe, provides for a new Board. All we do is to say that a new Board is created, and what that means in practical effect is that the President may, if he sees fit, appoint these same three members to the Board, and if they can run the Senate gantlet of confirmation, then I say more power to them, let them go ahead. We don't cut them out entirely; they have still got their chance to be reappointed and to be confirmed.

RESTRICTION ON RIGHT TO HIRE

I am just going to mention one incident in closing, as to why I think there ought to be a new Board. Understand me, ladies and gentlemen, that I have no personal feelings in this matter at all. I never knew anybody connected with that Board until I began this investigation, and all I hope to do is to lend some small contribution toward making this thing operate so that it will not be a continual blackjack over the head of the business of this country.

I want to mention one incident which, to my mind, makes imperative at least the opportunity for the selection of a new Board. Some of you have probably heard of the Waumbec Mills case. It is now pending in the circuit court of appeals for enforcement by the Board. Two men applied for employment with the Waumbec Mills. They were in need of a number of men, and there were a large number who applied for employment. It so happened that two of these men said that they belonged to a union, and there was some conversation about it concerning which there was a good deal of conflict of evidence, but the fact remains that they did not get a job. They were never for one moment on the pay roll of that corporation.

Two years later this Board enters an order which, strange as it may seem, ordered that corporation to reinstate these two men who had never been instated in their employment for a minute in their lives. And they didn't stop there. They further said that they had been engaged in an unfair labor practice because they hadn't hired these two men when they first applied for appointment, and so they ordered this company—believe it or not—not only to reinstate the two men who had never been instated but to pay them back wages ever since the day they applied for a job. And that, ladies and gentlemen, was a unanimous opinion of that Board.

I don't think that business in this country will ever have the confidence in a board that rendered such a decision. Not only that, but in the last 2 weeks there has been rendered a decision of similar character where a company had been formed after an old company went out of business. Remember, this is a new company, with entirely new personnel and new interests and new capital, and many of the old employees applied for reinstatement. Among them were 42 members of the C. I. O. It seems there were about two hundred and some members who were not reemployed for some reason or another.

The other day the Board entered a decision stating that the company had discriminated against these men who had never been on its pay roll because it did not hire them, somebody else got the job. And so in that case it was ordered by the Board that 42 men who had never been instated should be reinstated. It was further ordered that they be paid their wages during the time that they were idle, from the time that they first made application for employment and didn't get it.

IMPORTANCE OF AMENDMENT PROGRAM

Now, gentlemen, all you have to do if you want to know what is going to happen to this country is just look down that road as far as you can see in the light of those two decisions and see what can happen to business in this country and see what can happen to the institution of private capital in this country if this Board can order you to pay from 1 to 10 years' back wages for people that you had never fired because you didn't hire them. I should like you businessmen to think about that case, because when you go back home I want you, if you agree with me, as far as you can to help me put through some honest and fair amendments to this law.

Federal Housing Operations in Oregon

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

REPORT OF THE FEDERAL HOUSING ADMINISTRATION

Mr. ANGELL. Mr. Speaker, I ask unanimous consent to extend and revise my remarks by including therein a report by the Federal Housing Administration, showing the volume of F. H. A. insuring operations, by counties, in the State of Oregon, through December 1, 1939. The report is as follows:

Value of Federal Housing Administration insuring operations, by counties, in the State of Oregon (net cumulative totals through Dec. 31, 1939)

County	Title I. Property Improvement Loans Insured		Title II. Small Home Mortgages Accepted for Insurance		Total	
	Number	Amount	Number	Amount	Number	Amount
Baker	323	$117,758.60	24	$68,800	347	$186,558.60
Benton	487	144,906.30	75	289,000	562	433,906.30

Capt. Louis Cukela—Marine—A Man's Man

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

ARTICLE BY FRANK H. RENTFROW

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks, I present an editorial from the Washington Evening Star of April 28, 1940. Having had 2 years of service with the United States Marine Corps during the World War, and as a captain in the Marine Reserve Corps, it gives me much pleasure to insert in the RECORD this tribute to Capt. Louis Cukela:

[From the Washington Star of April 28, 1940]

MARINES TO LOSE LOUIS CUKELA, MOST DECORATED OFFICER, THROUGH HIS RETIREMENT

(By Frank H. Rentfrow)

The United States Marine Corps is losing a great warrior. A man whose fighting heart carried him from the enlisted ranks to the bars of a captain. One who wears on his breast the Medaille Militaire, the Legion of Honor, the French Croix de Guerre with three palms, the Italian Croix de Guerre, five battle clasps on his Victory Medal, and many lesser recognitions. But above these decorations, at his throat, he is privileged to wear this country's highest award—not one but two Congressional Medals of Honor; and Capt. Louis Cukela, United States Marine Corps, has, since the retirement of Gen. Smedley Butler, remained the only person in active service entitled to wear two such medals. In the entire history of our country only 17 men have won two Medals of Honor. Louis Cukela nearly broke all records when he was recommended for still another, but the award was disapproved.

Captain Cukela is not unknown to Washingtonians. He served with the marine guard at the navy yard for 2 years; his glittering medals, his 6 feet of military figure commanding favorable attention on the frequent occasions when the marines paraded down Pennsylvania Avenue. Now he will be seen no more, for the romantic, fictionlike warrior sheaths his sword in retirement—the sword that has carried him into many distant lands on great adventures.

Louis Cukela was born in Split, Serbia, on May 1, 1888, and early in his youth took up the profession of arms in his own country. In 1916 we find him serving as a corporal with the Thirteenth United States Infantry in the Philippine Islands.

Those were grim days of horror for the Allies. Tiny Serbia, ever the butt of warring nations, was being smashed to pieces. The Austrians had struck time and again, only to be flung back across the frontier. Then the combined forces of the Central Powers ripped their way in, tore the Serbian defenses up by the roots and trampled them under foot. The tiny, resolute army was scattered, and Louis Cukela's father was held prisoner in the fort of Maribor.

In his far-away Philippine station Corporal Cukela read a pathetic appeal from home. "We are fighting," it said briefly. "Where are you?" The young corporal didn't hesitate. He bought his way out of the Army and was soon aboard the steamship *Thomas*, bound for the States.

CONSIDERED CANADA

His first intention was to enlist in the Canadian service, but by now it was apparent to everyone that the United States would soon be in the conflict. "The first to fight!" slogan of a Marine Corps recruiting poster caught his eye, and shortly thereafter Louis Cukela, erstwhile corporal in the Thirteenth Infantry, was trying to explain to an officious first sergeant of marines that the "N. C. U. S. A." on his service record signified "naturalized citizen" instead of "not citizen of the United States," as was interpreted by the recruiter.

On June 26, 1917, one Louis Cukela, with the globe and anchor emblem of the Marine Corps transfixed in his campaign hat, debarked with the other leathernecks at St. Nazaire, France.

The days rolled by in a rapid cycle of training periods. On March 18 the outfit moved into a quiet sector just south of Verdun. Before a month had passed, Sergeant Cukela was cited and awarded a Croix de Guerre by the French; and cited in divisional orders by the commanding general of the Second Division, A. E. F.

On May 27 some 40 divisions of German soldiery torrented down from the north and rolled like a tidal wave toward the Marne. The French defenses were swept aside, as a rotten breakwater goes with the flood. Frenzied poilus scurried back, leaving a small and persecuted rear guard to die at the bridgeheads.

The Second Division of the American Army was hurriedly assembled at what was supposed to have been a rest area. In camions and on foot they raced toward the front. There was no time to be lost. The enemy was coming fast. Thirty-five kilometers in three days.

The Marines were flung into a tangled forest known as Belleau Wood. Nearly a month later, when they came out again, those who did, the woods were theirs; eternally theirs, for the grateful French had renamed the field Bois de la Brigade de Marine.

Louis Cukela led his platoon through those woods, their bayonets flashing. His individual fearlessness was recognized, and Sergeant Cukela was recommended for the Congressional Medal of Honor; but it was not forthcoming—this time.

ON THE MARCH AGAIN

On July 9, their mission accomplished, the marines were withdrawn, a well-mauled outfit. A week later they were on the march again, Soissons. Long after the bloody horrors of Belleau Wood are forgotten, the survivors of Soissons will remember that fight.

The marines moved out of their billets on the evening of July 16, converged at the rendezvous, and presently the entire brigade, battalion by battalion, was marching down the broad, white highway.

Sgt. Louis Cukela was close to the head of the column. His dark eyes, protected by the ramparts of high, weather-beaten cheeks, glinted like cold gun metal. He knew they were marching to battle, for he had interpreted all the little, intricate signs that indicated another engagement.

Cukela's hobnails drummed out the cadence on the hard-surfaced road. Presently the column came to a line of waiting camions. The pack-ladened marines climbed into the vehicles. Soon they were lurching along like some hideous, disjointed reptile. Cukela sat beside a wizened Annamite driver, silent and thoughtful as they snaked their way through lonely, shattered villages and passed French columns moving wearily in the same direction. Darkness fell. Under the red face of the moon the cavalcade rolled onward.

Dawn came, and still they rumbled forward. The sun was directly overhead when at last they halted. The dust-powdered leathernecks debarked and marched off, hungry and thirsty.

Once more Cukela felt the road under his feet. It was a good road, rolling like a white ribbon toward heavy woods in the distance. Clouds pressed down suddenly and it began to rain, a fetid, sultry shower. Then the marines reached the woods. It was shiveringly damp. Cukela's trained mind realized something gigantic was happening, for the woods concealed a network of roads, crowded with horses, guns, infantry, and even sullen, clanging tanks.

At 6 o'clock they pulled to the side of the road and rested until darkness changed definable figures into shapeless distortions of jumbled silhouettes. Then they were on the march again. It grew miserably dark. Cukela breasted the rain and watched the lightning play against the black sky.

Finally the rain stopped. Dawn came and the sky looked like greasy, fat bacon with a few red streaks of lean running though it. The marines had the road to themselves now, for the artillery had gone into position some distance back, and the other units had disappeared to transact their own grim business.

They halted in the woods and Sergeant Cukela transmitted the order to his platoon. The men stripped to combat packs and then went on again in the face of the reddening dawn.

HALTED BY BARBED WIRE

Barbed wire halted the advance and they cut their way through it. The woods were beginning to thin out before the company commander made the signal everyone was waiting for. Cukela circled his arms, and then extended them out from his sides. His platoon obediently deployed as skirmishers, as taught on the fields of Parris Island and Quantico. They were part of the Sixty-sixth Company, holding the extreme right of the line.

With an abrupt roar the batteries in the rear opened up, drenching the German lines in a torrent of shell fire. Cukela and his marines leaned close up against the barrage. You lose men that way from friendly fire, but not so many as when you hang back and give the enemy a chance to recover before you are on them. The American gunners stopped firing and the German artillery began. But most of the big stuff passed over the marines, ripping into the cannoneers in retaliation.

As the friendly barrage lifted the marines suddenly realized they were confronted by the cold stuttering of Maxim guns. Then rifle fire began whipping into the advancing skirmishers. Cukela shouted a warning and pointed to a saffron mist of mustard gas curling up. Here and there men were falling. The rest continued, slowly, casually.

Step by step they advanced, engulfing the German outposts like some leisurely, incomprehensibly large monster. The hostile lines dinned furiously.

Then abruptly the thread of sanity snapped. One of the leathernecks whose granddad had charged with Pickett, shrieked the rebel yell—the battle cry that half a century before had resounded through the Virginian hills. Other marines echoed the cry and swept forward in a mad assault. All the training of Parris Island and Quantico vanished with that scream. It was each man for himself now. They clawed forward, stabbing their way to the Boche rifle pits. Their only thought was to close in, hand-to-hand. Machine guns and rifles splattered death among them.

The Sixty-sixth Company panted forward. With them went Louis Cukela biting savagely into the leather strap of his helmet, his eyes narrowed to brilliant points. Suddenly his platoon halted, the foremost melting away under a spray of machine-gun fire. The rest wavered.

Louis Cukela, flat on the ground, peered intently ahead. His keen eyes searched for faint, tell-tale wisps of steam. He got to his knees.

"I know where they are. Come on, some of you birds, let's get 'em!"

ONE CHANCE IN THOUSAND

It seemed impossible to move in that enfiladed area. It was suicide. There was only one chance in a thousand! But that was all the fighting sergeant asked.

Stealthily he slid forward. Two of his men started with him, but they died within the first few feet. Cukela went on alone.

He couldn't see the hostile guns now, but he could hear them and he crawled toward the sound, with bullets clattering about him. He struggled forward an inch at a time, restraining a desire to leap to his feet and surge ahead in one wild dash.

Then abruptly he saw them: Three nests, the center one well forward, the flanking two echeloned back for mutual protection. The flaming muzzles of eight machine guns snarled from the emplacements.

Carefully the big marine worked closer. Time and again the hostile guns disappeared, only to show up once more in some rift in the underbrush. Pulling his body along by his elbows, Cukela circled around, coming up on the flank of the first gun. Now a new and deadly menace presented itself. Bullets from his own platoon snarled about his ears. Off in the distance German snipers observed his movements and tried desperately to kill him. Closer and closer he wormed his way toward the unsuspecting gunners. Only a few feet separated them now. Any further movement must surely be detected.

For a moment Cukela lay studying the situation. Then he pulled the pin on a grenade and tossed it, not into the pit, but well to one side. As he expected them to do, the Germans swiveled their guns away from him to point toward the explosion. He leaped to his feet and sprang toward the pit. They saw him.

Before they could move he was upon them, his bayonet licking in and out like a serpent's tongue. A gunner fired his pistol full in the marine's face—and missed. The steel-shod rifle swept forward. Such fury could not be withstood. The survivors fled to the other emplacements and opened fire with insane rage. Cukela wiped the sweat from his eyes. There was still much work to be done.

He gathered a couple of German grenades from the pit and hopped out to complete his job. A stream of bullets blazed forth, and Cukela moved straight forward into the face of fire. Now he was close enough. In quick succession he threw the bombs, and before the gunners recovered from the blasts, Cukela's bayonet was at their throats. Those who lived flung up their hands in eager surrender. Then Cukela's platoon came up and stamped out the other nest.

The sergeant and his platoon, a much leaner, smaller platoon, toiled on through the woods to the day's objective. The brigade suffered some 3,000 casualties that day, and Cukela's men furnished their share.

OBTAINED RELIEF

The night of the 19th saw the relief of what was left of the marines. They tottered out across the fields they had bought with their blood. And with them went Louis Cukela, content with the knowledge that he had performed his task well. How well, he was to learn later at Coblenz, when generals, colonels, majors, and marine were being decorated for various deeds of valor. Louis Cukela was at the right of the line, second to none in position of honor. He stood at rigid attention while they hung about his neck not one, but two, Congressional Medals of Honor. One was awarded by the Army, the other by the Navy. Only five men have ever received this decoration from both services, and only three of those men ever lived to wear them.

There was still plenty of fighting to be done. There was bloody work in the Marbache sector in August; the St. Mihiel offensive a month later; then Blanc Mont in the Champagne, and the Meuse Argonne affair which ended hostilities. Throughout these engagements went Cukela, piling up traditions of reckless courage, distinguishing himself about the rest in an outfit where courage was a collective quality. The marines dwindled, were hacked to pieces, until only a corporal's guard of the original regiments was left. Most of Cukela's pals were gone; but he remained. They took his sergeant's chevrons and gave him the bars of a lieutenant to replace them.

Nearly a quarter of a century has passed since Sgt. Louis Cukela got into that nest of German machine gunners and cleaned them out with bombs and bayonet. But what adventures those intervening years have brought him; Nicaragua, Haiti, San Domingo, and China. Turbulent years of jungle warfares—and more medals.

Well and faithfully has he served his adopted country. Now he stands on the threshold of retirement, the most highly decorated marine of his day. In generations to come many a young leatherneck will preface his story with "Once there was a marine named Louis Cukela * * *."

Eggs—A Surplus Commodity?

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

Mr. BRADLEY of Michigan. Mr. Speaker, this afternoon in a spirit of abundance, rather than in the spirit of economy, and common sense, with which we started this session, and with which we originally passed the agricultural appropriation bill, we considered and voted on a few more parts of the conference report. In that same spirit of abundance we agreed to the Senate's increase of a mere eighty-five millions to the fund for disposal of surplus commodities.

Now, Mr. Speaker, being a new Member, I was unable to secure time from the conferees in charge of the debate to discuss this expenditure on the floor. However, I would be remiss if I did not again call all Members' attention to at least one flagrant misuse of these funds which we again, in a sprit of wastefulness, voted this afternoon.

Bear in mind, Mr. Speaker, that there is already an unexpended balance for surplus commodities of over $101,000,000. That is why this House, in a more sensible spirit, in the original consideration of this appropriation, refused the Budget request for an additional $72,000,000 for surplus. The ever-generous Senate went the Budget thirteen millions more, and today, with economy flown out of the window, we turned down an effort to at least grant what the Budget requested and save the taxpayers a few millions.

Mr. Speaker, if the House or Senate cannot use some discretion in curtailing some of our expenditures, let us at least hope that the officials in the Surplus Commodities Corporation will exhibit a bit more common sense than now seems to be the case in at least part of my own district.

A few days ago I received a letter from one of my constituents enclosing an article from the Escanaba Daily Press of last Friday, May 3, 1940, both of which I include in my remarks at this point:

[From the Escanaba Press of May 3, 1940]

EGG SURPLUS IS REPORTED—DELTA COUNTY FARMERS GET ONLY 13 CENTS PER DOZEN

An oversupply of eggs in Delta County and vicinity is being reported by rural storekeepers and farmers, who express the belief that the recent shipment of a carload of eggs here by the Federal Surplus Commodities Corporation is mainly responsible.

Farmers are able to get only 13 cents per dozen for their eggs now, a figure which is considered to be less than the cost of production. Incidentally, the Chicago market price is 17 cents.

Virtually every country store has from 10 to 50 cases of surplus eggs in the back room one wholesale grocery salesman reported. Sales of eggs to consumers, the stores report, have taken a sharp drop of late.

Some relief clients have received more eggs than they could use on their tables and have sold the surplus at reduced prices to neighbors. The chief complaint is directed against the Federal Surplus Commodities Corporation's policy of buying storage eggs elsewhere instead of buying them from farmers in the locality where they are being distributed. Under the food-stamp plan, this situation would be corrected for relief clients would be getting eggs produced by poultry farms in the district, it was pointed out.

RAPID RIVER, MICH., *May 4, 1940.*

FRED BRADLEY,

Member of Congress, Eleventh District of Michigan, Washington, D. C.

DEAR SIR: I enclose a clipping from yesterdays issue of a local newspaper.

I wrote you about a year ago that W. P. A. and relief clients had run me out of the hog business. For years I had sold baby pigs in this territory, until this class of people began selling pigs from flocks fed on surplus commodities at prices I could not match, because I had to buy shipped-in grain for my hogs.

So I quit the hog business with only a little holler (the one I sent you), and relied more on poultry as a means of keeping my head just above water. With egg mash at $2.65 per hundred, and scratch feed at $2 per hundred, and eggs at 20 cents a dozen, I wasn't getting much of anywhere, but I tried to paddle along. I sold nearly 50 percent of the eggs to residents around here and took the rest to the farmers' store at Trenary.

Somewhere near a month ago I noticed that no one was calling for eggs. I thought nothing much of it at the time and it ran on and on and I began to wonder. Then one day a little boy came for eggs whose mother had been a steady customer. I gave him the eggs and counted out his change and was surprised when he said, "Ruth sells eggs cheaper than you do."

Ruth happens to be my first cousin, and I pondered this statement for some time. I knew Ruth had a few chickens, but not many more than enough to supply their own needs, and I knew that her husband worked on W. P. A., and that they received quantities of surplus commodities, but still I couldn't understand. Then one day another one of my W. P. A. neighbors, whose family receives huge quantities of the surplus stuff and who also has a few hens, told me how well she's doing with the egg business. They'd paid up a bill with eggs. Still I didn't see the light. Lately in every store I go I see quantities of brown eggs. Brown

eggs are and have always been rather rare up here as most everyone raised white leghorns. (I wish I knew if it is brown eggs that the Surplus Commodities Corporation is bombarding this locality with.)

Then this piece came out in the paper, and you can draw your own conclusions as I've drawn mine.

How we can be expected to buy grain from the Grain Belt to feed our hens and compete with prices of eggs that have been given free, or eggs that have been produced by feeding surplus food (the women tell me they do that 'cause "the stuff isn't good") is more than I can figure out.

Surplus Commodities also killed our potato market, and I now realize that my economic condition is nearing the hopeless stage, and this letter is being written something after the manner of a person who realizes he is soon to drown and places a note in a bottle, which, if found, may serve to tell why and where the body went down. I know very little about the food-stamp plan, but hardly think it will be anything that will help those of us who are Uncle Sam's stepchildren. I don't think we have to go to Denmark to find something rotten.

I am,

Very truly,

JACOB A. RITTER.

Mr. Speaker, I admire the obvious sincerity of that letter. Do you not think it is about time that we give heed to where we are heading in this great Nation? At least it is time, as Mr. Ritter ably puts it, that we let the world know "why, when, and where his body went down" in this perfectly asinine, inexcusable, unforgivable "sea of absurd wastefulness."

Mr. Speaker, is it not about time that we give some thought and at least spend some time looking toward the relief of another "forgotten man"—he who is sincerely trying, by all the ideals and spirit that made us great, to make for himself and his family an honest living? Oh, you tried to hold us on the floor until late tonight—for what, so that we could in short debate, in a further spirit of "pressure, wastefulness, and demagoguery," agree to throw away another hundred or more millions. Not to debate it on its merit, but just crush it through by sheer force. And what had we on the docket for tomorrow—two juicy bills to throw away more millions in subsidies for two world's fairs, in order that our friends the public might come and marvel at the wonders of the New Deal.

No, Mr. Speaker, when we had stayed on the floor for 8 hours, had previously spent 4 hours more in our office, and the chief purpose after the 8 hours is to forget the "forgotten man"—the worker, the man who has to pay the bill—that we can gather a few more votes in the coming election from those we can further subsidize by shipping surplus eggs from the South to Delta County, Mich., in order that Mr. Ritter and others living there may have a surplus which I suppose you will then want to ship South to create a further surplus there, then it is no wonder that the House rebels. Let us use some more sense before we throw more millions, yes a few more hundreds of millions. Where are we heading?

Let us at least give Mr. Ritter, and millions more like him, at least a fair chance, at least an even break. Let his kind drown and America drowns with him.

A Revitalized Congress

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

Mr. KILDAY. Mr. Speaker, as the Seventy-sixth Congress draws to a close I believe it to be proper to review some of its actions. As it convened we knew that it would be remembered in the history of the United States because it marked the one hundred and fiftieth anniversary of the existence of the American Congress. After it had been in session for a time word began to spread through the country that it would be memorable for other reasons. To my way of thinking, our forefathers found the ideal system of Government when they settled upon the division of the powers of government into three coordinate branches, the legislative, the executive, and the judicial. It was their plan that each of these branches should function and be active within its own sphere. For almost 150 years this Nation proceeded upon that theory and in the exact observance of it. In this manner this Nation grew big, strong, rich, and powerful.

SURRENDER OF LEGISLATIVE POWER TO THE EXECUTIVE

Unfortunately, in the two Congresses preceding the Seventy-sixth Congress, an idea gained headway, based upon a mistaken idea of party loyalty or loyalty to the Executive as head of the party in power, that Members of Congress should vote in accordance with the desires of the executive branch of the Government. Such a system was contrary to the very fundamental principles upon which our Government of division of powers was founded, and in the observance of which we became great. It eliminated any necessity for a legislative branch of Government. It reduced the Congress to nothing more than a rubber stamp to carry forward the idea of the Executive.

REASSERTION OF POWER BY CONGRESS

Shortly after our sessions as the Seventy-sixth Congress began the Nation knew that the false idea of government had disappeared; that Congress was no longer a matter of form, a rubber stamp or a useless arm of government. The Congress had recaptured for itself and for the people of the Nation, now living and to come in the generations yet to be, the dignity and power intended by the founding fathers and necessary to the greatness of the Nation. Mr. Speaker, no matter what pathway fate may have in store for me, let me here, in the Congress of my Nation, state that my proudest boast will be that I was a Member of the Congress which reasserted and recaptured the powers belonging to Congress and swung once and for all from the path followed by European nations, where the destruction of a free and uncontrolled legislative body was the first step in establishing dictatorship, back to the clear road and the high road of traditional Americanism. I am truly glad that our Democratic Party was responsible for this awakening.

WE WILL KEEP OUT OF WAR

Within every American heart today is the hope that this Nation will not become involved in the holocaust of war which envelops Europe. Every father and mother in this land prays daily that the bitter cup of war will not be drunk by their sons. American youth is still the patriotic lifeblood of America, ready to die in her defense if such should be necessary. It is the duty of each of us seated here to give our every thought to the preservation of the peace of our land and to the protection of our youth. Let all occasions of war be avoided; let every waking hour on our part be devoted to foreseeing and to avoiding incidents which might prove irritating. We must, we can, and we will keep this Nation out of war.

NATIONAL DEFENSE

We have no desire to enter upon a war of aggression. The American people will never permit their Nation to engage in a war of aggression. Indeed, this Congress possesses under the Constitution only the power "to provide for the common defense." That this defense should be adequate, all but those who have no interest in our American plan of government agree. As a member of the Committee on Military Affairs, it has been my privilege to have an active part in the formulation of the legislation looking to the expansion of our defense. This expansion was the proper and prudent thing to do because of changed conditions in Europe. It provided for the modernizing of our fighting force in accordance with modern implements and modern weapons produced by armies elsewhere. This Nation has no need for a large standing army. Its men are fully capable of springing to arms and becoming soldiers with a minimum of instruction from professional soldiers. Therefore we must have the arms to which they are to spring and enough professional soldiers to train such a citizen army. The patriotism of the manhood of this country is such, Mr. Speaker, that a call for volunteers issued by any President of the United States to protect our Nation will immediately produce just as many men as he may call. When the American reports for duty,

he possesses a qualification of a soldier which Europeans can never acquire—he is a rifleman and a deadly rifleman. He has been familiar with rifles from the day his proud father bought him an air rifle, and he has progressed through the stages of the .22 target rifle on.

MUNITIONS AND IMPLEMENTS OF WAR FOR DEFENSE

While the American man will come quickly in the event of need and come impelled by patriotism, the inanimate implements which he must possess to make him an effective soldier do not come through patriotic impulse. Rifles, cannon, airplanes, field equipment, tanks, ammunition, and all other matériel must be available for him—available because such items are not manufactured in quantities in time of peace and the factories of the Nation are not tooled and died to start immediate production in quantities in time of war. Therefore sufficient must be on hand to equip our Army until such time as they can be produced. This is the most important phase of our present national-defense program. Another phase is sufficient established Army posts and flying training fields and trained soldiers to train the citizen. Our program provides for these elements.

FLYING TRAINING

Our Air Corps was long neglected. Aviators cannot be made overnight. Fighting aviators, trained to fly day or night with good visibility or none at all, must be especially trained. Our program of expansion of the Air Corps will give us an adequate force of trained flyers for emergency and trained personnel for instruction. In my district we now have permanent improvements under construction at air fields for which the following sums have been appropriated by Congress: Kelly Field, $4,008,800; Duncan Field, $2,003,415; and Brooks Field, $709,000; a total of $6,721,215—money appropriated to secure American peace, through preparedness, in a world at war. Present plans call for the expenditure of an additional $5,387,375 at Kelly Field. This program continues San Antonio as the Nation's No. 1 military center.

STRATEGIC AND CRITICAL RAW MATERIALS

In the event of war and an abnormal consumption of many materials, together with interruption of ocean transportation, this Nation will find itself in vital need of many materials necessary in the manufacture of munitions and for the needs of the population of the country, as well as the needs of the Army. We produce in this country practically no manganese, without which steel cannot be manufactured. The same is true of tungsten, chromium, tin, rubber, and even such daily needs as quinine and coffee, to mention only a few. Profiting by our experiences in the World War, we have provided for a stock pile of these materials at a total cost of $100,000,000 over a period of 4 years. These materials will be retained on hand against the necessity for their use, which we all pray will never arrive.

VETERANS

And speaking of the day that we hope never comes, we must remember that we have with us those who answered the call when sorely needed the last time. The least a nation can be expected to do is to provide for the wounded, the shattered, the sick, the disabled who have come to her defense in time of need. This Seventy-sixth Congress, struggling to economize on expenditures, has not been guilty of doing so at the expense of the veterans. We have:

Restored benefits to bedridden veterans previously classified as misconduct cases.

Granted pensions to the widows and orphans of veterans who die from non-service-connected causes, who were suffering from 10-percent service-connected disabilities, provided the income of the widow was less than a certain amount.

Increased the pensions of widows and orphans of veterans previously entitled thereto.

Provided transportation and subsistence of all persons going to veterans' facilities.

H. R. 9000, giving pensions to all widows and orphans, is now pending and a petition to discharge the Rules Committee has been signed.

In addition, the Veterans' Administration, because of the activity of Congress, has revised its regulations so as to grant compensation to non-service-connected cases of less than 100 percent disability.

Let me say, Mr. Speaker, that I have no more pleasant duty than to handle promptly the requests for assistance which come to me from the veterans of my district. No matter what may be the press of business in my office, the request for information or assistance from the veterans receives immediate and personal attention. Ample compensation for prompt and personal service comes to me when I am able to secure justice for them or to hurry action upon their claims.

RETIRED PERSONNEL OF THE REGULAR SERVICE

Not all of the Members of this body have the pleasure which is mine in having within my district a large number of men who have served their Nation in times of peace and war, have served the allotted time on regular duty and then retired from active duty to retired status as members of the Regular Army and Navy. This is an excellent body of men, the kind of men who are men and who are tried and true. In the far-flung spaces of continental United States, in the Arctic wastes of Alaska to Puerto Rico, in Hawaii, Panama, and the Philippines has their service extended. In times of peace to the civilian population war has raged for these old soldiers. In the dark of night on the Mexican border have they fought border raiders; in the tropical jungles of the Philippines they have bushwacked with the Bolos; the Boxer Rebellion in China saw their courage. There was no peace for them ofttimes when others enjoyed its blessings. Not many are interested in their welfare, for politically they are not sufficient in number to make themselves heard and felt. It is my privilege to know them, and to know them is to respect them. I claim the privilege of making their cause mine.

CIVIL SERVICE

Mr. Speaker, many render lip service to the civil-service system of the United States. Rarely, indeed, will any candidate for public office state anything other than his absolute love and admiration for the merit system over the spoils system. Whether the office be national, State, or municipal, let me tell you that the indelible mark of the demagog and insincere politician is the one who seeks to wreck established civil service or disregard its provisions. I am proud to state, and I have never missed an opportunity to make known the fact, that I was once a civil-service employee of the Government of the United States. All that I have and all that I am is due to the fact that I was once a civil-service employee. I know their problems and their woes. That I may be of service to them is my constant desire. This Nation committed itself to the principle of civil service 57 years ago. Naturally we would expect all of its employees to be now under civil service. As a matter of fact, fully one-third are not included within the provisions of civil-service law. The entire service should be classified and for the same duty to the Government, the same pay should be given, no matter where that service is rendered. This House adopted H. R. 960 which will extend civil service to all of our civil employees and extend the Classification Act of 1923 to the field service. It is a source of pride to me to know that I had a part in passing that legislation. Still more remains to be done, proper recognition of the poorest paid in the Postal Service, recognition of long and faithful service, courts of appeal to which employees may take their cases for proper action and impartial decision. I look forward to a part in these undertakings.

OLD-AGE PENSIONS

There should be adequate old-age pensions in this country. On the other hand, there is no need to promise to any deserving old person in this country any amount of pension which can remain only a promise and can never be paid. When the Seventy-sixth Congress opened, the maximum pension which could be paid under the Social Security Act was $30, one-half by the State and the other in aid from the Federal Government. This Congress has liberalized that provision by providing that the Federal Government will match any amount provided by the State to the extent of $40 per month. This provision of Federal law is automatic.

Payment of the maximum amount depends entirely upon the action of the State.

LABOR LEGISLATION

That labor has the right to organize and collectively bargain is well established in this country. This Congress will support and protect that right. It is most unfortunate that the Labor Act has been prevented from operating satisfactorily because of unfair, partisan, and biased members of the National Labor Relations Board who have represented one branch of organized labor only—the C. I. O. Judicially administered and properly organized, it would have had a chance to really establish labor in its rights under the laws of this country by fair and honest treatment of employer and employee alike. Let us not, Mr. Speaker, condemn labor because an unfortunate labor board membership, in seeking to establish a John L. Lewis dictatorship of American labor, has brought condemnation upon itself from all right-thinking people, including legitimate organized labor. Let us so amend the law as to create a board fair, impartial, and judicial in its treatment of employer, employee and all factions of labor. To fail to do so is to create a two-edged sword that may cut the head from employer and employee alike and destroy all of the achievements for labor that have been gained by every true labor leader from Samuel Gompers to William Green.

JUDICIAL REVIEW OF ADMINISTRATIVE ACTS

Under the American plan of government the final resort for redress of grievances is always the courts. The Government of our Nation has become so complex that many administrative agencies have been created to carry out the functions of government. There are nearly 1,000,000 civil employees of the executive branch of the Government and only 1 of them is elected by the people—the President. He alone must return to the electorate to give account of his stewardship. In this maze of organizations we lost sight of our fundamental principle of resort to courts, thereby bringing down upon these agencies much abuse and distrust. Likewise we turned the agencies aloose with not even the restraint of review of their actions, a tremendous temptation to abuse power. Is it strange that agencies such as the Civil Aeronautics Authority, in whose laws the right to appeal to the courts is included, are the most efficient and highly respected agencies in our Government? It is not strange, it is but natural. True also, the right to appeal has never been exercised by a person having business before the Civil Aeronautics Authority, and seldom has it ever been exercised in any other agency where it exists. Smoke screens to the contrary notwithstanding, the Walter-Logan bill is but the protection and continuance of the American system and is not designed to, and will not, cripple any agency of government. Judicial review must be reestablished as the only restraint and safeguard against the spawning and fostering of the insolent tyranny of the bureaucrat—a tyranny that comes only when power is unbridled and unchecked.

UN-AMERICAN ACTIVITIES

No American can view the happenings in Europe and still pretend that there is no need for alarm in this country. One constitutional government after another has fallen and the power of government has been seized by dictators. Mr. Speaker, I cannot too strongly condemn those half-hearted Americans who have condemned one foreign ideology and either praised the other or failed to condemn it. In most cases these are the individuals who have openly associated with known Communists and have worked with them in the accomplishment of so-called liberal objectives. They seek to beg the question by contending that it is not against the law to associate with Communists or that they will not be contaminated by such association. Let us not forget that this association with known advocates of a system of government which destroys the family, all religion, moral standards, and everything which you and I hold dear, gives to such nefarious scoundrels a prestige and position which enables them to carry on their undertaking to destroy America. The civil liberties guaranteed by our Constitution must not be used as a shield to protect or defend those who advocate a form of government which would destroy every vestige of civil liberties. If the Government of the United States was so weak and obnoxious as to be unable to defend herself and the liberties which she guarantees to her people from such vultures, you and I would not love her as we do. All right-thinking men hail the accomplishments of the Dies committee for investigation of un-American activities. Proof of the characters of the attackers of this committee was produced when they turned upon J. Edgar Hoover immediately upon his assumption of the investigation of espionage. How similar are the attacks upon Mr. Hoover to those made upon the gentleman from Texas [Mr. DIES]. Mr. Hoover has investigated only espionage cases and has been condemned. The conclusion is inevitable that such is exactly what the gentleman from Texas [Mr. DIES] has done. We must listen no longer to the "parlor pinks" who will justify, countenance, and condone, in the name of civil liberty, the activities of public enemies who should supplant every human liberty with the terrorism of the Ogpu or the barbarism of the Gestapo.

TAXES

The only source of employment for the people of America is private industry. To the extent that industry is prosperous will labor be prosperous. I have long contended that we have heaped restrictions upon the free expansion and operation of industry and burdened it down with taxes until it has been unable to provide work for our unemployed. This Congress has taken a forward step in removing from the shoulders of business some of this burden. We have prevented the increase of old-age-insurance tax to 1½ percent, freezing it at 1 percent, saving employer and employee $275,000,000 in 1940 and other social-security tax benefits totaling $580,000,000 in 1940, and for the 3-year period a total of $1,710,000,000. Likewise we have removed the undistributed-profits tax and other business-irritant taxes. This is but a step in the right direction—much more remains to be done.

HOUSING

Slum elimination goes hand in hand with the eradication of crime, the reduction of disease, and the promotion of public health. In my district alone one project is nearing completion which will provide 932 units and costing $3,588,000. Three more are now in the midst of preparation and soon the land will be bought and construction begun to provide an additional 2,554 units with a Federal allocation of $9,125,000.

AGRICULTURE

The basic occupation of this Nation, or any other nation, is the tilling of the soil. Agriculture has faced one of the most difficult situations in the Nation. While a majority of my constituents live in the city, I realize that the Nation can never be prosperous until the farmers are prosperous. Therefore I have given close and intimate study to all of the problems of the farmer. I am one of the few Members representing city districts who has supported all measures having for their purpose the solution of the farm problem. It is a source of pride to me that leading farm organizations and livestock associations have formally endorsed my position on matters affecting these great industries.

CONCLUSION

Mr. Speaker, as we now contemplate the closing of this third and last session of this Congress, I am glad to have had this opportunity to review what we have done here. Contemplating this brief synopsis of our activities, I am left with the thought that much has been accomplished. Particularly am I proud to say that this Congress has gone a long way toward restoring the Government of this Nation to the people to whom it belongs. In this respect it is a vast improvement over the two which immediately preceded it. We look forward to still greater accomplishments in Congresses yet to come. This revitalized Congress will prevent the undertaking of new projects involving the expenditure of large sums and the accumulation of vast public debt. Expenses of government must and will be curtailed and business must and will be reassured, with resulting employment for our people.

The Seventy-seventh Congress will convene at a time that will try the souls of men. It will meet surrounded by circumstances and events, so momentous, so tremendous, so perilous, that the destiny of democratic civilization may well be hanging in the balance. The unchained forces of brute barbarism, thundering behind the fiery-mouthed dogs of war,

will still be raging across continents over the sea. Among the waves, and the winds, and the storm of hate, we must keep stable, we must keep calm, we must love peace. We must keep our powder dry. The poverty, the need, the suffering of our aged or unemployed must be ministered unto. But, emergency programs and projects must not be expanded into gigantic, permanent government machines that stifle the recovery and expansion of private business and private industry, and permanently remove the citizen from reabsorption into private employment and individual enterprise. Government work projects must be restricted, not expanded. We must spend less, not more. Taxes must be lowered, not raised. Business must be stimulated and encouraged, not restricted and punished.

The brutish, pagan foreign "isms" will still be striking their fangs at our veins—seeking to inject the venom that destroys the sanctity of the home, the Church of God, and the liberties of men in the poison of hell-born hate. We must be ever on guard to unmask the agents of dictators, however fair and disarming the veil in which they may be disguised, for eternal vigilance is still the price of liberty. We must be jealous of power that is unchecked and unrestrained. We must be fearful of added restrictions or encroachments upon the liberties of the individual, for ours is the task in a crumbling world of maintaining an island of sanity where right and reason rule, and men are free. We can only approach that task as Americans have always approached crisis and testing time before—in reverence for God and with love of country.

Private Utilities Pay Tremendous Taxes

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ARTICLE FROM THE MILWAUKEE JOURNAL

Mr. THILL. Mr. Speaker, we often hear the cry of leading exponents of Government ownership of utilities, that private utilities are overcharging and gouging the public. In support of their statements they cite the lower service charges of Government-owned enterprises as compared with private industry. But often they fail to mention the fact that no taxes are paid by the Government projects while the private utilities are subject to a tremendous tax burden.

Those who advocate Government ownership are loud in proclaiming that water power is one of the natural resources of our country, and therefore it should belong to the Government. But similar arguments with as little logic might apply to other natural resources, such as the forests, mountains, minerals, and air. Yet you do not hear these advocates urging that the Government seize the atmosphere around this country, or tax the air we breathe.

The following news article appeared in the Milwaukee Journal of March 14, 1940, and it presents a good picture of the taxes paid by utilities.

[From the Milwaukee Journal of March 14, 1940]

TAXES TAKE A HUGE SLICE OF MONTHLY ELECTRIC BILL—SAME IS TRUE OF CONSUMERS' PAYMENT FOR GAS, PHONE, TRANSPORT UTILITIES, AND ALWAYS GOING UP

Now is the time when taxpayers are digging down deep to pay their income taxes. What most of them don't realize is the amount they pay in hidden utility taxes year in and year out. It works like this:

Every time a patron of the electric company pays a monthly bill for light or power, 20.23 percent of that bill goes for taxes and public expense.

The taxes on the average bill of the Wisconsin Telephone Co. represent 55 cents a month, 12 times a year, an increase of 20 cents within the last 12 years.

The 1939 tax cost per customer of the Milwaukee Gas Co. was $4.25, or about 35 cents a month.

Buried in every public-service bill is a maze of taxes and public expenses, much of which have been put on in recent years.

CONSUMER PAYS ALL

In every instance the patron pays in full.

The tax bill paid by 25 electric, gas, and affiliated transportation companies in Wisconsin reached $12,906,000 in 1939, an increase of $1,587,000 compared to 1938, and with many companies this represented from 19 to 22 percent of gross revenues. In contrast to this tax bill of almost thirteen million, the total annual pay roll for 12,131 people aggregated $21,574,000.

These taxes represent only those that can be dug out of the books and not the hidden assessments that are involved all the way from the coal mines in taxes on transportation and appliances. All of these also are paid by the consumer. It is pay or go without the service.

WHERE ELECTRIC BILL GOES

Look at the taxes in an electric bill.

In the last year total operating revenues of the company in the greater Milwaukee district were $20,851,951.57.

On the other side of the ledger stands $4,219,049 as taxes and money paid to the growing list of public agencies and bureaus—State and Federal. In other words, from every dollar taken in from consumers, 20.23 cents goes for taxes and other governmental expenses.

Have a look at how this tax bill measures up to other expenses. The total pay roll for 2,254 employees, including executive salaries, is $4,709,000. Taxes are 90 percent of the wages and salaries.

There are 217,262 residential users of electric power, representing more than half of the total number of patrons. They pay $6,860,000, or only $2,641,000 more than the taxes.

The taxes come within $120,000 of the total bill of $4,339,000 paid by 28,407 consumers in the classification of small commercial companies, such as stores and moderate industrial users of power.

Based on 1939 operations, here is how taxes and public agency costs show up in an electric bill, the first column being the kilowatt-hour consumption:

Consumption	Net bill	Taxes in bill
25	$1.41	$0.29
50	2.23	.45
75	2.79	.56
100	3.35	.68
150	4.35	.88
200	5.35	1.08
250	6.23	1.26

The distribution of taxes and regulatory expense charged to operating costs and all included in the bills of the utility follows:

Federal taxes:	
Capital-stock taxes (United States)	$55,500.00
Electrical-energy tax	348,455.41
Unemployment insurance	10,172.25
Old-age retirement benefits	31,480.82
Federal income tax	830,900.00
State taxes (Wisconsin):	
Unemployment compensation	32,238.19
Ad valorem tax	2,720,132.27
State income tax	75,000.00
Automobile and truck license and fees	8,723.18
State taxes (New York): Unemployment compensation	337.48
Local taxes: Real estate	3,615.00
Subtotal	4,116,554.60
Regulatory Commission expenses:	
Public Service Commission of Wisconsin	96,013.45
Federal Power Commission	740.85
Securities and Exchange Commission	3,857.50
Federal Trade Commission	574.10
United States Bureau of Labor	3.09
United States War Department	95.91
Bureau of Internal Revenue: United States social-security tax	885.82
Industrial Commission	323.68
Subtotal	102,494.40
Grand total	4,219,049.00

Of this total Uncle Sam took $1,276,508, the State of Wisconsin $479,376, and Milwaukee governmental units, with considerable of the payment to the State returning to the city, county, and townships, took $2,360,332.

To furnish reports and figures for the different commissions now takes the full time of about 10 auditors and at times more than 20.

"It is getting so every time you turn around some bureau or agency wants another report that takes a week to a month to dig out," say the accountants.

TAXES IN GAS BILLS

In 1939 there were 184,861 people paying gas bills in the Milwaukee district.

The total of taxes carried in gas bills was $778,784.90, or 37.6 percent of the net operating income of the Milwaukee Gas Co. before public cost deductions. The average tax cost per customer was $4.25, which the consumers paid.

In the early days of State regulation, before the advent of numerous surtaxes and assessments, the taxes on utilities and railroads just about matched State expenses.

"But that was fully $40,000,000,000 ago," remarked one company executive, referring to the growing public debt and the disposition to heap on assessments.

The gas company, for instance, pays seven different direct taxes. Taxes in 1939 which were not in existence in 1928 include the Wisconsin unemployment-fund contribution; Federal excise tax on employers, and Federal old-age-benefit tax, with the total cost amounting to $32,923. Other taxes charged to prescribed expense accounts are those on gasoline, oils, automobile licenses, and regulatory commission costs, adding up to $22,220 more.

Figured down to the average revenue per 1,000 cubic feet of gas revenue, which in 1939 was 84.8 cents, taxes took 11 cents.

TAXES SURPASS NET INCOME

In this company holders of both preferred and common stock received $455,000, as compared to the taxes of $778,784. The annual statement shows taxes and public costs were $213,000 higher than the net income before preferred dividends.

In the last 10 years the relations of taxes to operating revenue follow:

Year	Operating revenue	Taxes	Percent taxes are of revenue
1929	$7,233,802.49	$900,154.35	12.44
1930	7,284,567.64	918,138.43	12.60

[1] Total operating revenue on a consolidated company basis for entire year 1939: Milwaukee Gas Light Co., Wauwatosa Gas Co., West Allis Gas Co., Lakeshore Gas Co., Wisconsin Eastern Gas Co.

Now the telephone bill.

Taxes of the Wisconsin Telephone Co. in 1938 were $2,175,555, as compared to $1,350,842 in 1928. The taxes of 1928, that represented approximately 26 percent of the net operating income in 10 years, had increased to 44.5 percent of the net income.

For 1939 the total taxes will amount to about 14.5 percent of the total operating expenses.

Executives of public-service companies poring over tax reports say that the end is not in sight.

"As a matter of fact many electrical companies pay as high as 25 percent of their total revenues as taxes and public-agency costs," said one electric-company official. "Realizing that most governmental units are far from a cash basis, but piling up public debt that must eventually be paid, there may come a time when 30 percent or more of a bill will be taxes if the disposition to pile on additional loads keeps up. Rates have been reduced but the taxes still go higher."

The most hopeful news to the utility executives is a ruling from the New York Public Service Commission:

"Practically every investigation by this commission into the accounts and practices of various operating utilities in New York during recent years discloses that the predominant cause of increased costs of service is the enormous growth of taxes which these utilities must pay. Since these increased taxes are reflected in rates charged to consumers, the public must bear the increased costs."

Merchant Marine as Part of National Defense

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

Mr. DWORSHAK. Mr. Speaker, when the House passed, on May 6, under suspension of the rules, House Joint Resolution 519, suspending section 510 (g) of the Merchant Marine Act of 1936, during the present European war, unusual authority was delegated to the Maritime Commission to dispose of more than 100 ships. According to Chairman E. S. Land, "these vessels have been classified as being of sufficient military or commercial value to warrant their preservation for possible use in case of a commercial or national emergency."

This authorized disposal may appear to be advisable in view of the abnormal wartime demand for bottoms, but I desire to direct the attention of the House to recent developments of a crucial nature involving our merchant marine and undermining our national defense.

The declaration of policy in the Merchant Marine Act of 1936 declares "it is necessary for the national defense and development of its foreign and domestic commerce that the United States shall have a merchant marine (a) sufficient to carry its domestic water-borne commerce and a substantial portion of the water-borne export and import foreign commerce of the United States; (b) capable of serving as a naval and military auxiliary in time of war or national emergency; (c) owned and operated under the United States flag by citizens of the United States; and (d) composed of the best-equipped, safest, and most suitable types of vessels."

Huge sums have been appropriated by Congress for construction-differential subsidies, as well as operating-differential subsidies to make possible the employment of American crews. In times of national stress or emergency it is essential that our merchant marine be maintained at a high rate of efficiency to justify these vast peacetime public expenditures in cooperation with private groups.

At the special session of the Seventy-sixth Congress the neutrality legislation enacted provided that when the President shall have issued a proclamation he shall define combat areas, and "thereafter it shall be unlawful, except under such rules and regulations as may be prescribed, for any citizen of the United States or any American vessel to proceed into or through any such combat area."

Within 4 days after adjournment of the special session developments took place reflecting the desire of American shipping interests to circumvent the provisions of the act designed to minimize travel of their vessels in combat areas. On November 7, 1939, the United States Lines made a proposal to transfer nine ships to Panamanian registry in order to continue European trade through danger zones. However, Secretary of State Hull immediately announced his opposition to this plan, informing the Maritime Commission that this proposal would impair the integrity of the Neutrality Act just enacted. The Secretary explained that he was extremely desirous of preserving the absolute integrity of the act so there would not be any appearance of the Government taking any course that might undermine the policies therein formulated. If this transfer of registry were approved, the ships would fly the Panama flag and not be subject to the Neutrality Act's restrictions.

It is interesting to observe subsequent developments, obviously despite the previously expressed disapproval of Secretary Hull and his efforts to preserve the neutrality of this country. A report from the Maritime Commission for the period of October 26, 1938, to October 25, 1939, shows that 88 vessels, tugs, barges, yachts, and tankers, with a total gross tonnage of 229,026, were approved by it for transfer to alien ownership or registry. This included 15 oil tankers transferred to Panamanian registry by the Standard Oil Co. of New Jersey during September 1939.

A similar report from the Maritime Commission for the period of October 26, 1939, to April 30, 1940, approximately 6 months, indicates that 160 vessels with a gross tonnage of 586,758 were approved for transfer. In other words, almost twice as many sales and transfers were made to foreign registry in 6 months as in the preceding year.

It is significant that 82 of the 160 vessels approved by the Commission for transfer in this 6-month period went to Great Britain, Canada, and France. Thus, although Secretary Hull opposed transferring American ships to neutral countries, 82 have been transferred to belligerent countries. Of the total 160, there are included 40 vessels which have been subsidized at some time by the United States Government.

In December 1939 the United States Lines, of New York, is listed as having sold eight vessels to the North Atlantic Transport Co., of Oslo, Norway, for Norwegian registry, while 2 months later the United States Lines, as owner, is listed as

having sold the same eight ships to the Societe Maritime Anversoise, a Belgian corporation, for Belgian registry. What does Secretary Hull now think about such manipulation?

Members of Congress who delegated extreme emergent powers to the Maritime Commission, as well as American taxpayers who have subsidized the construction of our merchant marine as an auxiliary to national defense, should have access to such information. Therefore, I am having inserted here the report of the Maritime Commission for the period of October 26, 1939, to April 30, 1940:

Statement of U. S. Maritime Commission showing vessels approved for transfer to foreign ownership and/or registry Oct. 26, 1939, to Apr. 30, 1940, inclusive

LEGEND

[Conditions under which approval of transfer to foreign ownership and/or registry was granted by United States Maritime Commission]

A—Commodities on first outward voyage from a United States port restricted.
B—Trade restrictions—Trade with United States ports restricted for given number of years.
C—To be scrapped.
D—That there shall not be any liens or encumbrances on record against said vessel in the customhouse at its last United States home port when the outstanding marine document is surrendered.
E—Redocumentation of vessel under United States registry upon request.
F—Vendee will agree not to sell vessel without prior approval of U. S. Maritime Commission; vendee will agree to conform to conference rates and practices when operating vessel in competition with United States services; vendee will agree to sell or charter vessel to United States on same terms and conditions upon which any American-flag vessel could be requisitioned for purchase.
G—Whaling equipment to be removed and vessel converted into a tanker.
H—Repairs to be performed in United States shipyards.

NOTE.—Bond required of vendor and/or vendee under all of the above conditions with the exception of "D" to secure performance of any conditions imposed by Commission.

*Transfer only—Ownership retained in American company, therefore subject to provisions of sec. 902, Merchant Marine Act 1936, as amended.
[2] Proceeds of sale to be used for new construction.
[3] Sale canceled.
[4] Foreign built.

NOTE.—In the case of most of the cargo vessels approved recently for sale by the Commission to belligerent governments, assurances have been received that such vessels will not be employed for belligerent purposes and also that such vessels will be used principally in trade between United States ports and foreign ports. The latter assurance was for the benefit of American shippers.

Discussion at the Forum of the Judge's Gavel, Yale School of Law

EXTENSION OF REMARKS

OF

HON. ALBERT E. AUSTIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ADDRESS BY HON. ALBERT E. AUSTIN, OF CONNECTICUT

Mr. AUSTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on May 5, 1940, as follows:

Were it understood that this discussion had to do with the possible aspirations of our present administrative head for a third term, I could not give the reasons against such a procedure in my allotted 12 minutes—it would take 12 hours.

There is here involved no question of law, for there is no legal authority against third terms for any President. Our consideration, therefore, must be along the lines of pure theory and clear reasoning. The problem before us this evening is whether this country shall change its procedure of a century and a half and decide that after the completion of the usual 8 years in office an incumbent may seek and be granted another 4-year term, and perhaps more than that.

What conditions would justify such a procedure? The only condition on a solid basis would be that in this country of 130,000,000 people there was such a dearth of material for statesmanship that the man then holding the Presidential office would be the only one mentally equipped, sufficiently experienced, and, may I say, providentially inspired, to hold this exalted office. This is nothing more or less than a confession of failure of government by the people. It is a confession that democracy fails to produce more than one man in a generation endowed with the ability to carry on the office of the Chief Executive. It is an insult to our cherished tradition that any child born here has his opportunity by personal effort and personal ambition to become the President of the United States. Again, failure of this country to proceed along ordinary processes of law and government might be offered as a justification for more than two terms. This could occur were there revolutionary tendencies that had to be curbed. It might be justified if there were a chaotic condition here in this country with factional elements prepared even by force of arms to overthrow and gain control. Then, by compromise, disturbed and disturbing elements might agree upon one man who could unify all elements and all factions. This, however, would be a transient condition and would in no way formulate a basis for continued or unending procedure by which one man would then remain in power. The history of this country shows no such occasion. The Civil War might be cited as an illustration, but that period showed no spirit of compromise. In spite of lugubrious and pessimistic opinions, there will be no crisis of such character in this country. Another justification for a third term would be a popular decision to change our form of government entirely, making of it what would then be nothing less than a one-man government. I doubt very much if opponents either here or elsewhere are yet ready to confess wholeheartedly and with good conscience that our democracy or Republic is a failure—that a century and a half of popular rule, rule by the people, has produced nothing that is worth continuing or is following out a divine destiny. Such carries with it all that we have won in the past, all that we may hope for in the future, summed up so splendidly in "life, liberty, and the pursuit of happiness." It might be wondered if the increased average of Republican sentiment since 1936 in 38 States of our Union, as shown by a recent poll, is not a popular decision, because this question is a paramount issue and the Republican stand on it is known to everyone. Can anyone say that this increase is not due in some degree to the third-term potential menace? Did the third-term issue come to ultimate appeal to a citizenry of 130,000,000 people with the exception of those guided only by selfish and personal interests, none would oppose it. The answer would not be determined by political control, caucus, convention, and primaries—it would be by referendum.

Who at this present time could demand such a change and the following out of such a procedure? Certainly no one influenced by conditions just mentioned demands it. It must be said—and I defy well-founded contradiction—that such a demand must come now and would come in the future as a result of the then existing administrative policy. Why is there talk now about a third term? What conditions are there now existent which would lead a considerable portion of our voting public even to consider a third term? The answer to this is conclusive. Let us assume that all of our present governmental policies are good policies. Mark you, I say "assume." The question then resolves itself into this—who are they who are now interested in Mr. Roosevelt's continuing in office, and who are they who in all probability would be interested 20 years from now in continuing Mr. Blank for a third term? The broad answer is this—the proponents look for personal gain or personal advantage with no time limit set. What is the situation today? So great and so excessive has been the increase in numbers of those who are supported by, dependent upon, or subsidized through, the present Administration that selfish interests are put before patriotic interests. Bring to your minds the almost innumerable bureaus, administrations, agencies, boards created in the last 7 years. They all contain voters. Bear in mind that at the present time there are nearly a million employees of the United States Government in the executive department. They all are voters. Do not lose sight of that which is so well known that many of these creations have assumed to themselves powers which belong only to the Congress to such an extent that their rulings are declared to be and to have the force of statutory law. In this must be included even certain Members of the President's Cabinet today.

Do you think it probable that the recipients of Federal grants and of Federal patronage, or those who know that their support possibly can be bought by largess, as it has been bought at times within the last 7 years—do you think that they will be overjoyed to know that the source of their power and their support would be gone if another President came to the highest office in the land? Don't you think most of them now favor a third term and would vote for it? Even certain States may be found in the column of those desiring a third term for the reason that due to Executive plans and Executive processes they have found that they are being supported in large or small part by other States in the Union more affluent. Is it not certain that a majority of the voters in such subsidized States will back the bounteous hand that supplies them from Federal funds making unnecessary an increase in their own State tax burden? In classifying those who have a personal or group interest in a third term it must not be forgotten that there is unfortunately within our midst a certain portion of our citizens who, either through direction by a foreign power or by a desire to overthrow, want a change in our system of government. They are known as subversive influences, and like it or not they are with us, and like it or not they are working and plotting day and night for this very end. They, perhaps smarter than promoters of the third-term idea, realize that therein can be found their proper method of approach to accomplish their object. Let our splendid tradition once be broken down, then those influences are on their way to victory. Just as soon as the people of this country are willing to surrender their rights and prerogatives, just at that moment these subversive influences have won what would be to date their greatest victory. It is but a few steps from that to the triumphant entry of communism or kindred ills to the White House. Mr. Roosevelt has not declared himself for a third term, so who can be accused of urging it? Those whom I have just classified are urging him to announce it and restraining him from denouncing it. Who are they thus performing? I have just named and classified them for you.

Let us suppose that a sufficient number in our country should declare by their votes a third term for any President. Are there or are there not dangerous and menacing results to such? What could happen? First, there is an important departure from our philosophy of government, our constitutional government, which has carried us in a short space of time, as time is measured, from a handful of pilgrims who landed on the Massachusetts shore to the most powerful nation on earth and, incidentally, a nation belonging to the people and not to a dictator and ruled by peace and not by force. Second, our established theory of States' rights and State sovereignty will remain only as a hallowed memory of happier days. There will be the establishment in perpetuity of a bureaucratic form of government where the laws will be made, interpreted, and executed by a group of men who have arrogated to themselves a power once belonging to you and me. It is not difficult to think the then situation out to a conclusion. If three terms are desirable, and if three terms can be effected, then why not four or five, the length of time determined only by the age and vigor of the incumbent? As the years went by this incumbent would have so fortified himself, so entrenched himself because of his subsidization that, call it by any name, a dictator is in authority. How far is it from that to the position of Louis XIV of France who so haughtily remarked, "I am the State." There was a reigning house then in France. Facetious, perhaps; but what would prevent a reigning house here in the United States of America, the oldest democracy on earth? I mentioned a while ago life, liberty, and the pursuit of happiness. We have illustrated here in this country the results of supreme power in local application. Is it necessary to mention Tammany, Pendergast, Long of Louisiana, "I am the Law" Hague? Political debauchery, the flaying of liberty, the sabotage of a people—do you or do you not want even the possibility of all this?

In the beginning I remarked that this would be a general discussion. I cannot refrain from a concrete and specific example. The conditions aforementioned may be possible but not entirely probable in this free land. A moment ago in our discussion I removed policies. Now I restore policies to the argument. Do our present Administration policies justify a third term? A continuance of such policies could be expected for the reason that in the case of those policies which have been proven by use to be damaging and dangerous there has been a continued refusal to change them. We do not object to the continuance of policies which have proved to be sound, and there have been such. The voters of the United States must bear in mind certain facts before deciding on a third term now. The political policies with which we have become famil-

far during the last 7 years, suggest the State to be supreme, suggest that a centralized government is the goal of action, that the citizens exist for the State. Every trend has been away from our long-established constitutional form of government. The economic policies are for centralization—in one instance a centralized control of business, industry, and labor. It has revealed as civic philosophy government competition with private capital and private corporate initiative to say nothing of final Government ownership of utilities. Financial policies have been built on theories, found even through centuries to be unsound and false, obstinately refusing the voice of experience. We now face financial instability to be followed inevitably by inflation or repudiation. Tax sources are becoming beautifully less each day, tax sources which are being destroyed in order to continue our debauchery of waste. Social policies have completely revolutionized our social structure. Due to them many of our citizens now believe that they must not work for themselves that the Government owes each a living. In our social environment today has intruded the question of war. Your common sense must penetrate to the real situation. War is an effective smoke screen for domestic difficulties. Tell those who argue against changing horses in the middle of the stream that they would be changing horses in the middle of a dream.

I have not discussed at length the burying of a precedent and noble tradition of our existence as a republic so well known to all. During our national life attempts have been made to secure third terms, and these attempts have been successfully defended by the electorate. Direct refusals to consider such have been made by others, and it did not take them up to within 2 months of the nominating convention to make their declaration. The statements made by a multitude who through the years have been statesmen and have thought only of our welfare that such a plan is not to be thought of, hostile and contrary to the interests of all, must be given full weight.

Summarizing in a word, the questions, and the only questions, are: Shall we throw aside our philosophy of government? Shall we destroy its structure and its strength? Shall we even endanger it by thought or deed? Shall we cease to be a sovereign people, each one free and independent? Shall there no longer be 48 States existing all for one and one for all? Shall we tolerate the insult to the intelligence and ability of our people by declaring that even in an emergency there is only 1 man in 130,000,000 able to carry on? Shall we stand back of any man who today or tomorrow may, through pomp of circumstance or pride of rank, declare "I am the State"?

Townsend Plan Urged

EXTENSION OF REMARKS
OF
HON. R. T. BUCKLER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1940

LETTER FROM MRS. P. G. PETERS, OF MOORHEAD, MINN.

Mr. BUCKLER of Minnesota. Mr. Speaker, under leave to extend my remarks, I want to include herewith a letter which I have received from an elderly woman in my district. This fine old lady appeals to me to support the Townsend plan in this session of Congress. I have assured her, as I have hundreds who have written me, that I am strongly supporting the Townsend-plan bill, H. R. 8264, introduced by the gentleman from Florida, Representative JOE HENDRICKS. I voted for the Townsend plan last session of Congress and certainly will do so again in this session if we can get the bill up for consideration. I have signed the petition to discharge the committee, and if we get a sufficient number of names, 218 being required, we will get a vote on the Townsend bill before the session closes. The communication which follows is one of the best arguments I know of for the Townsend plan. Her situation is repeated many times over throughout my own district and over the United States. Her letter follows:

MOORHEAD, MINN., *April 27, 1940.*

Hon. R. T. BUCKLER,
United States Representative in Congress, Washington, D. C.

DEAR MR. BUCKLER: Please do what you can to help the only real cause along, meaning the Townsend plan. My man is 64 years old and must earn our living, since it is all we have. After losing two homes during depression, high taxes for paved streets, and big interest on the money, we had to sell out our grocery business and live on our savings until we spend every cent. No relief at that time and no work to get. We had to burden some of my relatives to keep alive. I would to God the last few years we have left of our hard slavery life could be spent in rest. We both need medical care, but can't afford it on his wages. How nice it would be if he could have one of these young, husky street loafers to have his job. Will close.

Sincerely,

MRS. P. G. PETERS.

Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1940

LETTER FROM A. C. JEWELL, SECRETARY, CALIFORNIA STATE SHERIFFS' ASSOCIATION, AND A RESOLUTION FROM THE ASSOCIATION

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by Capt. A. C. Jewell, secretary of the California State Sheriffs' Association, and also resolution adopted by the California State Sheriffs' Association at its forty-sixth annual convention held April 27, 1940, commending the work of the Federal Bureau of Investigation.

CALIFORNIA STATE SHERIFFS ASSOCIATION,
May 3, 1940.

Hon. LELAND M. FORD,
Congressman, Sixteenth California Congressional District, Washington, D. C.

MY DEAR CONGRESSMAN: On behalf of the California State Sheriffs Association I am enclosing herewith a copy of a resolution passed by the California State Sheriffs Association at its annual convention in the city of Santa Barbara on the 27th day of April 1940.

Your support of the Federal Bureau of Investigation will be greatly appreciated by every member of the California State Sheriffs Association.

Thanking you for your interest and support, I am,

Very truly yours,

A. C. JEWELL, *Secretary.*

RESOLUTION

Whereas the Federal Bureau of Investigation was brought into being largely through the activities of the local law-enforcement officers of the country for the purpose of national suppression of kidnaping, gangsterism, and other forms of law violations beyond the jurisdiction and finances of local communities; and

Whereas the Federal Bureau of Investigation has more than justified its creation by stamping out kidnaping, extortion, and other terrorist crimes that once threatened every American home; and

Whereas the Federal Bureau of Investigation is now engaged in the important duty of suppressing espionage, sabotage, and other subversive activities throughout the country; and

Whereas these laudable activities have earned the undying hatred of both the underworld and the subversive influences of the Nation with the result that a campaign of villification is now being conducted by them against the Federal Bureau of Investigation for the obvious purpose of destroying its efficiency; and

Whereas the success of any such campaign of villification would eventually destroy all law enforcement in America: Now, therefore, be it

Resolved, That the California State Sheriffs Association, in annual convention assembled, does hereby reaffirm its unqualified faith in the integrity, efficiency, and devotion to duty of the Federal Bureau of Investigation; and be it further

Resolved, That this expression of our faith in the Federal Bureau of Investigation be communicated to the California Senators and Members of the House of Representatives, and that they be urged to use their best efforts in Congress to protect the present status and the well-deserved good name of the Federal Bureau of Investigation.

Dated at Santa Barbara, Calif., the 27th day of April 1940, at the forty-sixth annual convention, and unanimously adopted by the California State Sheriffs Association in convention assembled.

CALIFORNIA STATE SHERIFFS ASSOCIATION,
By GRAT M. HOGIN, *President.*
By A. C. JEWELL, *Secretary.*

Enriching the Youghiogheny Watershed for Future Generations

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ADDRESS BY HON. J. BUELL SNYDER AT CONFLUENCE, PA.

Mr. SNYDER. Mr. Speaker, under permission to extend my remarks in the RECORD, I desire to include the address I made at the ground-breaking exercises for the Youghiogheny Multi-Purpose Dam at Confluence, Pa., April 13, 1940, as follows:

THE HILLS OF HOME

It affords me a great deal of pleasure to be here today to greet you on this occasion. As we older grow, the scenes and activities of our early childhood are more vividly portrayed when we travel the same roads, fish in the same streams, gaze upon the same hills, and reminisce with our childhood friends of those days in recalling the country school and country church activities.

It was my privilege as a boy to see the hills around my home, from Confluence up the Casselman River, up the Laurel Hill Creek, and on parts of the Youghiogheny River, largely covered with a splendid growth of timberland, much of it virgin timber.

Then as I grew into young manhood I saw millions of the trees being cut from these hillsides, and none of them replaced. As a result, we find the hills covered to a large extent with mere shrubbery, the ground hardened by the elements to the extent that now, when we have a dashing rain and the melting of snow, it rushes down the hillside, thus eroding away the rich top soil and causing floods and destruction in the regions farther down the river.

Yes, my friends, as a boy I caught fine bass and trout in the Casselman River up by Markleton, Rockwood, but that was before the streams were polluted with factory and mine water.

It is my contention, and always has been, that we get out of life exactly what we put into it. The same holds true with reference to nature. Nature gives back to man exactly what man gives to nature. If man robs nature, nature in turn will rob man.

In the case of the Youghiogheny watershed, man took from the hills timberland to get dollars, and did not put any dollars back on the hills. Man took from the bowels of the earth minerals, coal, and other metal. Of course, he could not put these minerals back, but at the same time he took the minerals he allowed sulphur and other elements to reach our streams and thus pollute the water in all the streams making up the Youghiogheny River, with one or two exceptions.

You have heard me say on other occasions that a nation is prosperous in proportion as the tillers of the soil are prosperous. You cannot conserve the soil of a nation unless you conserve the waters of a nation. It is human nature to strive to do something worth while for our community and Nation.

I am happy in the thought that the people of the Twenty-fourth Congressional District selected me to represent them in the Halls of Congress for the last 8 years.

I appreciate very much the fact that my colleagues in Congress saw fit to place me as chairman of the committee that makes appropriations for river, harbor, and flood-control projects throughout the Nation.

It goes without saying that when my colleagues cooperated with me in getting an appropriation to build the Youghiogheny watershed dam I was grateful indeed. I was grateful because I want to see the boys and girls of the Twenty-fourth Congressional District in generations to come have facilities and opportunities to make a living, if possible in a little better way than we have today.

We cannot serve our fellow men or country in a full-orbed way unless we ever keep in mind that we must conserve our soil, conserve our forests, and conserve our streams for the men and women of the future.

It is no use to blame our forefathers for depleting our forests, polluting our streams, and partially destroying our soil. We must let bygones be bygones and has-beens be has-beens.

It is our duty in our generation to adjust our social and economic fabric so year after year we will find our community and Nation a better place in which to live.

The building of such a reservoir of water that will not only control floods but will distribute water down the Youghiogheny as far as McKeesport, enrich farm and forest in the Youghiogheny watershed, provide fishing and hunting facilities, prevent stream pollution, bring benefits to the people living in the Youghiogheny watershed estimated by the Army engineers at $500,000 each year, is one big way in which we must prepare for the future not only here in this great Youghiogheny watershed but throughout the Nation.

There would be no dust bowl in the Central West if they had not plowed down those hundreds of thousands of acres of buffalo grass in order to get a few crops of wheat and corn. While man took possibly $100,000,000 worth of crops off that acreage, it is now costing the Government 10 or 20 times that amount to stave off further destruction that is caused by dust storms.

Yes, my friends, you cannot rob Nature without Nature turning around and making you pay for it tenfold.

Being a resident of this great Youghiogheny watershed, you will be interested to know that the flood program for the Nation as prepared by the Flood Control Committee in Congress provides ample protection for the Youghiogheny watershed. My able and distinguished friend and colleague, ORVILLE ZIMMERMAN, of Missouri, is a member of that committee, and I want to say that his forceful and persistent efforts in shaping the program and getting congressional authorization for such projects as the Youghiogheny Dam were big factors in such a well-planned flood-control program.

I want to also commend Mr. W. B. Rodgers, president of the Tri-State Authority, for his assistance in bringing data and information to my committee in Washington.

Perhaps many of you do not know that since July 1, 1938, the Army engineers have been working with one, two, and three crews right here between confluence and the upper reaches of the Youghiogheny River preparing the groundwork and fundamentals for the superstructure of this dam.

In community life, if you have a splendid, energetic, well-informed, courteous, hard-working superintendent of schools and keep him on the job for a number of years, you have good schools. The same is true with your churches. The same is true with your enterprises, whether it be mill, factory, or mine. The same is true in public life. The same is true with your public officials.

From the time I was a barefoot boy in Turkeyfoot Township, I heard my elders talk about conserving the streams, and especially the Youghiogheny River.

When I went to Congress 8 years ago I aimed to do what Shakespeare said was necessary in order to accomplish a big thing. That is, "Screw your courage to the sticking place."

Well, I did that with a determination that if possible I would see to it that the Yough watershed was enriched and protected by my Government.

Thus, we are breaking ground for the second unit of this conservation—the first being the Laurel Hill Federal Park conservation.

We expect to build two and perhaps three more conservation water-controlled dams on the Youghiogheny, Casselman, or Laurel Hill Creek. We must build them within the next space of years if those who live here 50 or 100 years from now expect to have facilities to make a living.

I want to say that Col. William E. R. Covell, chief of the Pittsburgh office of the Army engineers, which takes in parts of Ohio, Pennsylvania, and West Virginia, has had sole charge of this construction work. He is not only capable and efficient but is a splendid fellow to work with. I feel honored that he stayed in his present position 1 month longer than he had intended in order that he might participate in the initial exterior construction work of the Youghiogheny Dam project.

In conclusion I wish to thank the Lions Club of Confluence and all other individuals and groups for their splendid cooperation in making this occasion a success, and I hope this fine cooperation continues.

I express the same appreciation of the cooperation and help from Somerfield, the "Cornish Arms," the Addison Band, and to Mr. Everett Will and the boys in the community bands, for their contribution to this program.

We will be inviting you back in 3 or 4 years when we dedicate this structure.

Widows' and Orphans' Pension Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

LETTER FROM SOCIAL SECURITY BOARD

Mr. MILLER. Mr. Speaker and Members of the House, in discussing the merits of H. R. 9000, a bill providing pensions for widows, orphans, and dependent parents of World War veterans, which will be considered by the House next Monday, the question has been asked as to just what benefits a widow with two minor children would be entitled under the provisions of the existing Social Security Act. I submitted a hypothetical case to the Social Security Board,

using, for example, a man of 45 years of age, who died in January of this year, leaving a widow and two minor children, and who had been paid $35 for each week of service from the time the program went into effect until the quarter in which his death occurred. I quote herewith from a letter received from the Social Security Board in reply to my inquiry:

A surviving qualified child is entitled to a monthly benefit equal to one-half of the worker's primary benefit; a qualified widow receives an amount equal to three-fourths of her husband's benefit. You mention, as an example, the case of an individual who died in January of this year and who is survived by a widow and two minor children. If this person was paid wages of $35 for each week from the time the program went into effect until the quarter in which his death occurred, or an average monthly wage of $151.67, his primary insurance benefit would be $31.07, entitling each of his children to a monthly payment of $15.53 and his widow to a monthly payment of $23.30. A child may continue to receive monthly payments until it reaches age 16, or 18 if unmarried and still attending school. The widow's benefits stop when the youngest child reaches age 16 or 18; but since the worker in this case was fully insured at the time of his death, the widow may, upon reaching age 65, again receive widow's benefits, provided she has not remarried and is otherwise qualified.

Southern Vindication

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

AN ARTICLE FROM THE WASHINGTON POST

Mr. SUMNERS of Texas. Mr. Speaker, under leave to print, I include herewith an editorial from today's issue of the Washington Post:

SOUTHERN VINDICATION

Encouraging news is reported by the Association of Southern Women for the Prevention of Lynching. For the first time since records began to be kept, in 1882, 12 consecutive months have now passed without a single lynching in any Southern State.

The ability of States and groups of States to cope with the lynching problem, without help or interference by the Federal Government, is thus emphasized. And particular credit for this constructive development belongs to the association which makes the report, and which has rendered yeoman service in making every section of the South conscious of the imperative necessity of eradicating this form of mob murder.

The announcement also reveals the highly efficient technique being used by local governments to combat mob violence. Education, radio-alarm systems, and mobile State police units have alike proved their worth in eliminating the ugliest stain on the escutcheon of southern civilization.

If the record of the last 12 months is maintained, the last vestige of excuse for the present antilynching bill will be wiped out. That measure, with its proposals for Federal penalties on State and county officials who fail to do their duty, and on the counties themselves, would provide a very dangerous invasion of local rights even if the apparent need for it were greater than is the case.

At the first appearance of the bill its partly political character was obvious; lynchings were already rapidly diminishing. In 1939 there were but three in the Nation. Yet the measure has twice passed the House, and now is on the Senate calendar. Now that lynching can at last be called nonexistent, it is difficult to see how arguments for the measure can be effectively sustained.

The significance of this editorial is that it emphasizes the demonstrated ability of the States and their communities to govern in those matters which are within their governmental capacity.

I take advantage of this opportunity to direct attention to the fact, using this antilynching thing to illustrate, that in proportion as we develop a condition of public opinion and of State and community success, which would make Federal intervention less necessary from anybody's viewpoint, there is increased the probability of the enactment of a Federal law dealing with the matter. A Federal law cannot be enacted until there shall have developed by community achievement a public opinion which, if given a little more time, would crystallize into an effective State and community policy.

When there were 231 lynchings in 1 year in this country there was not nearly the pressure for a Federal law as obtained in this country last session when a Federal antilynching law passed this House, under public pressure, by a vote of 2 to 1. This happened, although the States and their communities by their own efforts had reduced lynchings to only 3 during the preceding 12 months, 1 lynching for each 40,000,000 people. It is by this way of not thinking things through, this emotional back-seat driving, this unwillingness to await the somewhat slower but surer and more effective processes of popular government, that we are destroying the States as the responsible agencies of popular government and erecting upon their ruin a great Federal bureaucracy.

Sugar-Situation Facts as to Effects on Louisiana Sugarcane Growers, Refineries, and Consumers if Continuing Resolution, Now Pending Before the House of Representatives, Is Defeated

EXTENSION OF REMARKS

OF

HON. JOACHIM O. FERNANDEZ

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

Mr. FERNANDEZ. Mr. Speaker, in order that the people of my congressional district and Louisiana may understand all facts in connection with the present consideration of sugar legislation, I deem it my duty to take the time of the House of Representatives to offer these pertinent remarks.

POSITION OF LOUISIANA CANE GROWERS WITH REFERENCE TO CONTINUING RESOLUTION

Their position with reference to the continuing resolution is best expressed by Mr. Charles Farwell, of New Orleans, La., as follows:

We'd rather have no quota at all, and no sugar benefit payments from the Federal Government, and take our chances, than continue to try to grow sugar under a system of regulations by which we plant sugarcane in good faith and then get orders to plow it up. After paying the cost of planting and cultivating. Louisiana sugar planters were ordered by Washington to plow up 30,000 acres of growing cane, and in 1940 we were ordered to plow up 50,000 acres. We don't want to have to do that again. No quotas, no Federal benefits, and take our chances is infinitely preferable to that.

So much for the Louisiana sugarcane growers.

CONGRESSMAN FERNANDEZ'S STATEMENT BEFORE THE AGRICULTURAL COMMITTEE—FROM A REFINING STANDPOINT

In the hearing conducted by the House Agricultural Committee I filed the following statement:

Wholly aside from other questions involved in sugar bills pending before your committee, continental sugar interests should be united on one thing—that limitations on tropical refined sugar must be embodied in any legislation that may be enacted. My State is both a cane-refining and a cane-producing State. In protesting against further expansion of the tropical refining industry, I speak particularly for the refining industry in my State—one of the most important from a refining standpoint. As an incidental question, I have no doubt that the refining industry realizes that any increase in quota granted the producing interests in Louisiana will, for the most part, ultimately come to the refineries in the form of raw sugar for manufacturing into refined sugar.

In sugar legislation heretofore enacted Congress has imposed limitations on the quantities of tropical refined sugar that could come here. Although it is my own judgment that Congress was overgenerous with tropical areas, and particularly Cuba, who should be required to send here in raw form all sugar permitted her in this market, the important thing now is that further expansion of the tropical-refined sugar industry will be disastrous to the cane-sugar refineries operating in Louisiana and other States. With the expiration of the present quota law at the end of this year, Cuba will have no limitation on the amount of refined sugar she can send here. Puerto Rican and Hawaiian refined-sugar limitations expired under

the Sugar Act of 1937, on February 29, 1940, and those areas can now ship their entire quota in refined form. New legislation should limit Cuba's share in this market to raw sugar, upon which her economic structure has been built up; and should at least limit Puerto Rican and Hawaiian refined sugar to the amounts allowed them under the Sugar Act of 1937, which, incidentally, was the highest shipments in any previous year.

So much for the refining industry. I have one of the largest refineries in the country in my congressional district, employing approximately 1,000 men.

THE BENEFITS NOW ENJOYED BY THE SUGARCANE REFINERIES UNDER EXISTING LEGISLATION AND WHAT THEY STAND TO LOSE WITHOUT A CONTINUING RESOLUTION

(a) Limitation on imports of Cuban refined (direct consumption) sugar to 375,000 tons.

(b) Limitations on admission of sugar from all other foreign countries of the world, that is, Peru, Santo Domingo, Java, and so forth, which automatically limits the refined-sugar importations from these countries to small amounts:

Under the present act the total amount of raw and refined sugar which may come in from foreign countries other than Cuba in 1940 is about 26,000 tons spread out among 27 countries. Without quota limitations there is danger of large shipments of refined sugar from Latin and South American countries and other producing areas of the world which are having and may continue to have difficulties under war conditions in finding consuming markets.

(c) The embargo on imports of liquid sugar from all countries in the world except Cuba and Santo Domingo and restrictive quotas on these countries:

In the present act it is provided that only Santo Domingo and Cuba may bring in liquid sugar—7,970,558 gallons for Cuba and 830,894 gallons for Santo Domingo per annum—equivalent to approximately 40,000 tons of sugar. There is an outright embargo on importations of such sugars from all the rest of the world. Quotas were first put on Cuban liquid-sugar importations by the Secretary under a discretionary power held by him in 1936 when nearly 16,000,000 gallons came in. All the efforts of the refiners and others in the past to limit competition in the form of these liquid sugars would be largely lost if the sugar legislation lapsed.

(d) Limitations on the marketings of refined sugar processed from sugar beets:

The 1940 marketings of beet sugar are now restricted to 1,549,898 short tons, raw value, and every sugar-beet processor has a restrictive allotment. In the absence of legislation 1941 marketings would be limited only by the inventory stock of sugar-beet processors.

I have not mentioned in the above summary the limitations on importations of the Philippine refined sugar, because that is covered by other legislation, which would continue in any event. It is true that on March 1 the limitations on receipts of direct-consumption sugar from Puerto Rico and Hawaii terminated, but official spokesmen from both Puerto Rico and Hawaii have recently explained publicly that there is no likelihood of enlarged capacity for sugar refining in these areas during the next year, and the quantity of such sugar which will come in before the Congress meets again and undertakes new, permanent sugar legislation is not reported to be a significant amount.

EFFECT ON LOUISIANA SUGARCANE PRODUCERS

Since the sugar-quota system has been in effect, sugar production in Louisiana has more than doubled, increasing from an average of 187,000 tons in the period 1928–33, which preceded quota legislation, to 362,000 tons in the period 1934–39, during which such legislation was effective. In fact, the last three crops produced in my State—Louisiana—have been the largest the State has ever produced. The total income of Louisiana growers has also more than doubled, going from an average of $8,594,000 in the earlier period to about $18,000,000 in the quota period.

If a continuing resolution is not approved and no new sugar legislation is enacted, sugar quotas will expire on December 31 of this year, the excise tax on sugar will cease to be effective on May 31, 1941, and conditional payments to growers will not be made after the 1940 crop. Under a system in which domestic sugar production would be protected only by tariff, the position of independent growers would not be as favorable at any given price of sugar as their position has been under the sugar legislation which has been in effect since 1934. Although the sugar excise tax levied under existing legislation reduces the value of raw sugar in an amount equal to the tax, the lower price received by growers from processors is more than made up by the conditional payments growers receive under the act. The actual effect of the tax and payment phases of the program is to give sugarcane producers a larger share of the total income than they would otherwise receive. For example, assuming the price of raw sugar to be $3.25 per hundredweight, a grower would receive $3.15 per ton of standard of par sugarcane under the established purchase agreements in use in the territory. The imposition of an excise tax of 50 cents per hundredweight of sugar, other things being constant, would lead to a reduction in the value of raw sugar to approximately $2.75 per hundredweight, in which case the processor payment for standard sugarcane would amount to $2.50 per ton. In addition to the processor payment, however, the grower receives a conditional payment of approximately 95 cents per ton, making his total income $3.45 per ton, as contrasted with $3.15 per ton in the absence of a tax and conditional payment program. On an acre of cane yielding 22 tons the increased income to the grower would be $6.60 per acre.

Under the existing sugar program cane growers are protected through the crop-insurance feature of the program, which provides abandonment and deficiency payments for producers when a substantial portion of their crop is damaged by freeze, drought, flood, insects, or other crop hazards. In the case of a deficiency in harvested acreage below the yield which would normally be expected, growers are assured conditional payments on at least 80 percent of their normal yield. In cases where acreage is abandoned prior to harvest, the insurance payment is made on one-third of the normal yield per acre. In 1937, in Louisiana, approximately 21,000 acres of sugarcane were abandoned because of freeze damage, and the yield of sugar from the acreage harvested was in many cases deficient. Abandonment and deficiency payments in Louisiana that year under the sugar program amounted to approximately $200,000. Since freezing weather is one of the major hazards facing Louisiana sugarcane producers, the crop-insurance feature of existing sugar legislation is a very important consideration.

There are approximately 12,000 farms in my State—Louisiana—on which sugarcane is grown for sugar. On over 60 percent of these farms the acreage of sugarcane harvested for sugar does not exceed 10 acres. Under the present sugar programs these small growers have not been required to make any acreage adjustments to qualify for payments. Adjustments have been required on the part of larger growers because production of sugar has exceeded quota and reserve requirements. It is conceivable that if no sugar legislation is enacted to replace that now in effect there will be an immediate expansion of sugarcane plantings not only in Louisiana but also in Florida, where the production of sugarcane enjoys several natural advantages over the sugarcane production in Louisiana. It is impossible to measure the consequences of such an expansion of sugar production in the mainland cane-sugar area. If, as in 1934, when the protective tariff on sugar was at its highest point in almost 50 years, sugar prices should fall to extremely low levels, it is probable that the industry would again be forced to consider the adoption of protective measures more effective than the tariff. Each producing area would undoubtedly be forced to make sacrifices, as has been the case since 1934, and any further expansion of acreage in the mainland cane area would aggravate the resulting problem of adjustment.

On the other hand, there is no doubt that for certain classes of producers in Louisiana it would be to their advantage at the moment to have no legislation so that they might increase their acreages or, in the case of new large growers, enter the field of cane growing. Undoubtedly there are owners of land who would like to be able to derive an income from

cane growing on such land, and even old growers in many cases may have additional land they would like to turn to sugarcane.

EFFECT ON CONSUMERS

If there is no sugar legislation at the present session of the Congress, consumers would, of course, benefit by the increased competition by the sellers of sugar that would result from the removal of all quotas and marketing allotments, including quota restrictions on importations of foreign sugar. However, in view of the change in tariff rates which would ensue and the developments which may arise in the world markets, it is impossible to judge the trend of prices in the absence of the existing sugar program.

I again repeat, Mr. Speaker, my only purpose in taking the time of the House of Representatives on this question at this time is to inform my people of all facts I have secured on this most important industry in my State.

F. D. R. Postpones St. Lawrence Seaway Negotiations With Canada on Account of Presidential Election

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ARTICLE FROM BUFFALO EVENING NEWS

Mr. HARTER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news item from the Buffalo Evening News of May 9, 1940. This news item emanates from Ottawa, Canada, and presumably would not have been printed, had the information not come from someone of high authority in the Canadian Government. For obvious reasons, the item does not carry the name of the informant, but this interesting story reads as follows:

[From the Buffalo (N. Y.) Evening News of May 9, 1940]

SEAWAY NEGOTIATIONS HELD UP UNTIL ELECTION—OTTAWA HEARS ROOSEVELT ASKED FOR A SUSPENSION

OTTAWA, May 9.—President Franklin D. Roosevelt and Prime Minister W. L. Mackenzie King have agreed to postpone further negotiations on the St. Lawrence seaway project until the Presidential elections are over in November, it was learned today in most authoritative sources.

High quarters say that suspension of the discussions was at the request of President Roosevelt. The heads of the two Governments, it was learned, conferred on the proposal during Mr. King's visit to Warm Springs and Washington 10 days ago.

The feeling here is that Mr. Roosevelt decided, because of the opposition to the plan in several parts of the United States, it would be inadvisable to open the door for the subject during the coming American election campaign.

Spokesmen say the Canadian Government was ready to pursue negotiations along the lines of the draft agreement submitted by United States Secretary of State, Cordell Hull, but the suspension request was agreed to with the understanding discussions would be resumed late this year.

It is interesting to note that Prime Minister King is reported to have made the agreement with President Roosevelt while the Prime Minister was paying his "social call" at the Little White House in Georgia. The Canadian authority stated that the Canadian Government is ready to pursue negotiations, but an understanding was reached that "discussions would be resumed late this year." I confess that optimism had run away with me; I thought the President might have seen the error of his ways not only from an economic angle, which is inimical to the interests of the people of our country, but even more important from the point of view of maintaining our neutrality. I know the time is short before Congress will adjourn, but I again call to the attention of my colleague the chairman of the Committee on Foreign Affairs, that House Concurrent Resolution 48, which I introduced on February 20, 1940, is still reposing peacefully in the pigeonholes of his committee. Day-to-day events indicate just how necessary it is for Uncle Sam to guard his neutrality. After we go home and, above all, after election day, if our executive department is planning on pushing this international problem child, the international seaway and power project, as Members of Congress you should know of the possibilities lying ahead. These possibilities can best be given an airing if the Committee on Foreign Affairs will favorably report the above-mentioned resolution, so that all of us will know just how far down the road toward involvement the President wants us to go. Surely he cannot wish to have the United States Government make a treaty with a belligerent and jointly build canals, transportation systems, and power developments with that belligerent and at the same time shout to the world that he and the State Department are doing everything possible to keep the United States neutral. No one is gullible enough to feel that we can use our funds in helping any belligerent the better to carry on the war without violating the spirit of our neutrality.

Surely no one will believe for a minute that war would not affect the maintenance of such an international project and would not mitigate against free flow of neutral trade through waterways lying wholly within belligerent territory. If the news item can be believed—and I repeat, it is probably on good authority—the probability is that these important considerations are uppermost in the President's mind when he makes an agreement to hold up international discussions for the treaty until after the American people have named their President who will occupy the White House starting January 1, 1941.

With this in mind, I am convinced those same American people want no part of a treaty and project so outstandingly dangerous to Uncle Sam's desired neutral position.

Virginia Military Institute—A Builder of Men

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ADDRESS BY HON. A. WILLIS ROBERTSON AT VIRGINIA MILITARY INSTITUTE

Mr. ROBERTSON. Mr. Speaker, the alumni of the Virginia Military Institute, frequently referred to as the West Point of the South, are launching a campaign to raise an endowment fund of $1,000,000. While the V. M. I. is a State institution, supported exclusively by State funds, it draws its cadets from every State in the Union and numerous foreign countries. The needs of the public-school system in Virginia have become so pressing the State legislature has been unable to make adequate provision to enable the Virginia Military Institute to expand its training program.

The news of the attacks upon the democracies of Europe by totalitarian governments must shock and alarm every lover of a democratic form of government in this country, as well as indicating the absolute necessity on our part of being able to successfully defend representative democracy in America.

On November 11, 1938, which was the ninety-ninth anniversary of the founding of the Virginia Military Institute, I paid the following tribute to the part played through the years by V. M. I. men in upholding representative democracy:

The 99 years of V. M. I. history have been marked by the outstanding character and ability of its superintendents. Fully measuring to that high standard is one whose irrefragable courage on the battlefield and whose innate tenderness and humility mark him as truly great. That man is our present superintendent, Gen. Charles E. Kilbourne. I was flattered to receive from that distinguished soldier, scholar, and gentleman an invitation to address you today.

The memory of my college days is still too fresh to permit me to believe that any college man would choose to listen to a speech

on a holiday, but orders are orders, and "You're in the Army now." As a concession, however, to that psychology I will emulate the example of that brilliant cavalry leader, Gen. Nathan B. Forest, who, when facing a superior force, said to his men: "Boys, we'll give 'em hell for 10 minutes and if they don't run we will." So hold your ground for 10 minutes and then your bugler may sound "cease firing" and I will fall back.

It is pleasing to me to have the privilege of bringing a brief message to the cadet corps of a school with which I have had many contacts. My first contact with V. M. I. was on a Richmond football field, 32 years ago, and the V. M. I. left tackle against whom I played gave me a personal introduction to the V. M. I. spirit. Between 1908 and 1917 I officiated in most of your home games. I served with V. M. I. men in the Army, and one of your old football stars, Max Patterson, took me under his wing in the Third Infantry Company of the Fort Myer Officers Training School and helped me to get a commission. For the past 30 years I have watched you at work and have watched you at play. On numerous occasions I have stood with you at attention on your parade ground when the sunset gun was fired and the emblem of our national life and unity reverently lowered from its masthead. And that sight has never failed to thrill me, as I have thought of the part played by V. M. I. men in giving meaning and significance to the symbolism of the flag. In the flag I would see 48 stars, symbolic of great and sovereign States stretching from ocean to ocean, and in your ranks I would see the engineers who helped to construct transportation and communication systems that made the unity of that vast area possible; chemical and other research men who, under the inspiration of a Maury or a Brooke, helped to discover unto us the secrets of natural laws; still others who in the professions have made of the peacetime activities of V. M. I. a balanced program of constructive service. I saw reflected in your ranks from that white stripe of purity in the flag, character training in the fundamental distinction between meum and tuum; between yes and no; between what is ethically right and what is ethically wrong. And mirrored in the gleaming bayonets held at attention was the red stripe of courage that had never wavered in loyalty to representative democracy nor faltered in the face of an enemy.

In the first decade of your history V. M. I. men carried that national emblem under Scott in the Mexican War to the heights of Montezuma. May the recording angel blot out with a tear the tragic 4 years when our land was torn with civil strife and drenched with fraternal blood. But should that page of history be opened, recorded at its top will be the immortal deeds of heroism on the bloody field of New Market. You carried that flag to victory in 1898. And in 1917, when the call came again to take up arms in defense of an ideal of government, 2,000 V. M. I. men answered that call—a larger percentage of the living alumni than was furnished by any other school in the Nation except West Point—48 percent of the graduates of the class of 1903, the percentage raising for each succeeding year to 100 percent of the class of 1918.

The V. M. I. boys of the North and the V. M. I. boys of the South donned the Doughboy khaki—a composite of the Union blue and the Confederate gray, and as they marched to the great adventure our Nation exclaimed:

"Here's to the boys of the windswept North!
When they meet on the fields of France,
May the spirit of Grant be with them all
As the sons of the North advance.

"Here's to the boys of the sunny South!
When they meet on the fields of France,
May the spirit of Lee be with them all
As the sons of the South advance.

"Here's to the Blue and the Gray as one!
When they meet on the fields of France,
May the spirit of God be with them all
As the sons of the flag advance."

The flag they had learned in school to love was taken by 2,000 V. M. I. men for the first time upon a European battlefield, where it received, as its baptism of fire, a salute from the arsenals of hell. And in that hell, 57 lost their lives, and 120 more were severely wounded.

One hundred and seventy-seven sons of V. M. I. fell "in order that we might live in peace"—so reads the tablet erected to their memory. They thought they were battling to make the world safe for democracy and waging a war to end wars. Ten million men laid down their lives in that struggle; 30,000,000 more were wounded. The financial cost and property destruction are beyond computation. Oh, the irony of the fact that on this twentieth anniversary of Armistice Day the world was never less safe for democracy nor the peace of the world more insecure. Europe is an armed camp, with open hostilities resting upon the ipse dixit of any one of three dictators.

For more than a year dictatorial Japan has been slaughtering the Chinese without mercy, and the days of the white man in the Orient are numbered. At the so-called peace of Munich, the democracies of France and Great Britain trembled in unpreparedness before the iron heel of war and made concessions to force.

Where does that leave you and me? It leaves us, as Secretary Hull recently said, at the cross roads between rule by armed force and rule by law. We, of course, prefer rule by law, but some day may be called upon to defend our democracy by force. Your stay within these barracks has been in vain if you have not already learned it is worth defending.

With only 7 percent of the population of the world, we have 45 percent of the world's wealth, and yet there are those who insidiously seek to change the form of government under which that became possible. Consider our welfare, if you please, on a coinage basis. There is only one nation in the world that does not use coins smaller than our cent. It takes 2½ German pennies to equal 1 of our cents, 20 Italian pennies, and 25 Japanese pennies—just to mention three dictator nations. When you say to a cavalier the flying squadron is $10 better than your outfit, you are backing your enthusiasm with a few weeks' pin money, but the equivalent of a year's wages in China.

An hour's wage for an American laborer buys of the necessities of life four times as much as the wages of the laborer in Italy, three times as much as in Germany. Mussolini requires corn meal to be added to wheat flour, and Hitler rations the German consumption of meat and butterfat. And yet a near riot was started in this county in readjuster days when Jim Frazier said Maj. William A. Anderson said: "No poor man is good enough to eat fried chicken." And the "lame lion of the confederacy" replied: "Where is Frazier; I'll kill him on sight."

A recent report on taxes in Germany discloses the startling fact that 30 percent of the produced income of the country is being consumed in war preparations alone, against a total tax burden in this country for all Government purposes of less than 20 percent. And as for freedom of the press, freedom of speech, and even freedom of conscience, they just don't exist in any dictator nation. Yet subversive agitators suggest we gamble these known blessings of democracy on the tables of chance and change. They are not satisfied with our laws, with the type of government that has made possible what Americans enjoy. Preferring some foreign "ism," they want to change our Constitution. As to such a contingency, Daniel Webster warned us on the one hundredth anniversary of the birth of George Washington: "Other misfortunes may be borne, or their effects overcome. If disastrous wars should sweep our commerce from the ocean, another generation may renew it; if it exhaust our Treasury, future industry may replenish it; if it desolate and lay waste our fields, still, under a new cultivation, they will grow green again, and ripen to future harvests. It were but a trifle even if the walls of yonder Capitol were to crumble, if its lofty pillars should fall, and its gorgeous decorations be all covered by the dust of the valley. All these may be rebuilt. But who shall reconstruct the fabric of demolished government? Who shall rear again the well-proportioned columns of constitutional liberty? Who shall frame together the skillful architecture which unites national sovereignty with State rights, individual security, and public prosperity? No; if these columns fall, they will be raised not again. Like the Coliseum and the Parthenon, they will be destined to a mournful and a melancholy immortality. Bitterer tears, however, will flow over them than were ever shed over the monuments of Roman or Grecian art; for they will be the remnants of a more glorious edifice than Greece or Rome ever saw, the edifice of constitutional American liberty."

But you and I are going to resist their demands. Ninety-nine years of glorious V. M. I. history buttress my conviction that should the call come again to defend American constitutional liberty, from foes within or without, the word will again be passed down the line: "The V. M. I. will be heard from today." What a heritage; what a tradition; what a reputation to live up to.

But God grant that you may never be called upon to demonstrate your loyalty to V. M. I. traditions on the battlefield. Rather do I hope that the world will come to its senses, prefer law to force, and as to the economic causes of discontent act on the advice of Woodrow Wilson, who said, "The sum of the whole matter is this—our civilization cannot survive materially unless it be redeemed spiritually. It can be saved only by becoming permeated with the spirit of Christ and made free and happy by the practices that spring from that spirit. Only thus can discontent be driven out and the shadows lifted from the road ahead." And when that happy day comes, V. M. I., excelling in giving meaning and significance to the symbolism of purity, unity, and loyalty, as well as that of courage, can then propose as an international motto the dying words of its immortal Jackson, who, as he approached that judgment throne where justice and mercy are reconciled and the judge and the brother are one, whispered, "Let us cross over the river and rest in the shade of the trees."

Widows and Orphans Bill—H. R. 9000

EXTENSION OF REMARKS

OF

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

Mr. BYRON. Mr. Speaker, the Veterans' Affairs Committee has conducted hearings relative to presenting a bill to Congress to secure benefits for the widows and dependents of deceased World War veterans. This committee gave ample opportunity for everyone to be heard before framing a bill for

our consideration. The members of this committee are familiar with all issues involved and have worked tirelessly to secure benefits for these widows and dependents.

The favorable report of H. R. 9000 by the committee brought forth criticism from many persons, both in Congress and the general public. This criticism is based generally on the cost of providing the payments proposed. The cost of any veterans' legislation cannot be considered solely on the basis of dollars and cents involved. We recall that during the World War no expense was spared to bring this conflict to a quick and satisfactory conclusion. A large part of our national debt is composed of expenses incident to our participation in that war. Billions were expended, without question, to provide war materials and supplies. Not one provision was made for a satisfactory adjustment of the veterans and their dependents to the changed condition of living which followed the return home of the participants. Every provision enacted for the care of the disabled, their dependents, widows, and orphans has been accomplished since war days. We may look with pride to the work of the Veterans' Administration in caring for the wounded, the sick, the lame, and the blind. However, none of these expenses have been considered a part of the cost of the war. Reams and reams of paper have been used to show what the veterans have been costing the Government. Has anyone ever considered that this cost is a just charge against the cost of the war?

To separate the cost of materials and the cost of destruction of life and health of the personnel is manifestly unfair. Should we approach this question of veterans' costs with an open mind, we would discover that many of the items of cost which are charged to this account could very well be placed in other columns.

The provisions of H. R. 9000 grant a small pension to the real sufferers of war and its horrors—dependent mothers, widows, and orphaned children. When this law is passed and adjudicated as written, we will discover a drastic reduction in payments made from the local welfare boards in old-age assistance, aid to dependent children, aid to the needy blind, and general public assistance. The majority of widows and dependents who will be put on the Veterans' Administration pay roll are already receiving benefits under the provisions of aid through the local welfare boards. We believe that the dependents of war veterans are distinctly in a separate class and should be cared for by the Federal Government and should not be considered with all the relief cases in the communities.

It has been the policy of our Government since the days of the Revolutionary War to provide for the widows and dependents of its war veterans under our pension plan. We can see no reason for discriminating against this same class of unfortunates of the World War.

I believe if we will view this problem in the light of past experience we will give H. R. 9000 favorable consideration at this session. I believe in economy in government, but I do not want to see this economy effected at the expense of the disabled, the dependents, and orphans of the men who volunteered their services during the last national crisis.

To Harness Our Rivers Is To Store up Prosperity for All Times To Come

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ADDRESS BY HON. J. BUELL SNYDER BEFORE THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. SNYDER. Mr. Speaker, under permission to extend my remarks in the RECORD, I desire to include the address I made before the National Rivers and Harbors Congress at their annual luncheon, Mayflower Hotel, Washington, D. C., on Thursday, March 14, 1940, as follows:

Mr. Chairman, distinguished guests, fellow colleagues, and friends, I lived on the headwaters of one of the streams that had to do with furnishing the water that caused the most damaging flood in the history of the Nation—the Johnstown flood of May 31, 1889.

As a barefoot boy at the country Sunday-school the morning after the flood, I can still see and hear the grown-up folks talking about the flood down at the city of Johnstown, where those thousands burned and drowned. I, as a little boy, thought it was awful.

Of course, I did not realize at that time that some day my fellow countrymen would place me in a key position where I would have an opportunity to do something toward building a flood-control program for our Nation.

The Nation owes a debt of gratitude to the many committees throughout the States that constantly work for flood-control projects and programs. Here in Congress I find it a pleasure to work with my colleague WILL WHITTINGTON, of Mississippi, chairman of the Flood Control Committee of the House, and his committee; the distinguished chairman of the Senate Flood Control Appropriations Committee, Senator ELMER THOMAS, of Oklahoma, and his committee; Judge DRIVER; and many others.

In these few minutes I have, may I cite you to what Congress has appropriated for flood control during the past 7 years. The amounts are as follows:

1935	$29,395,487
1936	38,811,730
1937	27,924,487
1938	86,123,330
1939	120,110,008
1940	172,800,000
1941	110,000,000

I always take pleasure in doing whatever is possible within the money limits available to advance the flood-control program, and I trust that our financial set-up will be such each year from now on that we can complete a flood-control program for this Nation by the year 1950.

When that is completed, I believe that the Nation as a whole in 10 years' time will save the entire amount that it cost to build every flood-control project in the United States.

I thank you.

Rights of Arid States in Water

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

STATEMENT OF CLIFFORD H. STONE, DIRECTOR OF THE COLORADO WATER CONSERVATION BOARD

Mr. TAYLOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a statement made by Clifford H. Stone, director of the Colorado Water Conservation Board, on April 13, 1940.

It is a splendid statement of the constitutional rights of the arid States of the West to the exclusive use and control of the waters within their borders. It is a forceful presentation of the constitutional provisions of each State and the decisions of the Federal and State courts in relation thereto. He also discusses the possible conflicts between the Federal Government and the States in the conservation and utilization of water resources. The national interest and the doctrine of equitable apportionment of the water of interstate streams among the States are considered.

The United States Supreme Court has established the validity of interstate compacts and recognized the exclusive rights in States to apportion and distribute the use of water among its citizens. Those provisions are discussed at some length. The nature of the governmental structure, with reserve powers in the States, the necessity for protecting the economic development of these States, and the provisions of different State constitutions and laws, and decisions of the courts are fully considered.

Judge Stone clearly points out that conservation of water resources must be accomplished consistently with the foundation principles of our dual system of government and must

not be construed to destroy the constitutional rights reserved to the States. I may add that there is nothing as important to the entire arid Western States as the preservation of their respective constitutional rights to the exclusive apportionment, use, and control of the waters within their borders. Those rights must always be jealously guarded. Water is the vital and sacred birthright of every arid State. That reservation was the most important provision in the enabling act and the constitution which each of those States adopted and which Uncle Sam acquiesced in when those States came into the Union, and the West can never tolerate any "chiseling" on that birthright from any source.

Because of the disposition constantly to infringe upon, ignore, or destroy those rights, I feel that the statement is important to the West and should be preserved in the CONGRESSIONAL RECORD.

It is a helpful supplement to the very learned decision of the United States Supreme Court. Justice Brandeis delivered the opinion of the Court in the case of M. C. Hinderlider, State engineer, et al., appellant, against the La Plata River & Cherry Creek Ditch Co., on appeal from the Supreme Court of Colorado, April 25, 1938, which I inserted in the CONGRESSIONAL RECORD, at pages 8075–8078, of May 2, 1938. That decision very strongly sustained the validity of interstate compacts regarding water rights. The statement of Judge Stone is as follows:

This statement is largely devoted to a consideration of the rights of States in the arid region where irrigation is practiced, to control the appropriation, distribution, and use of water among its citizens. It concerns possible conflicts with Federal control arising from conservation and reclamation practices and developments in which Government agencies participate. No attempt is made to do more than suggest the problems and major considerations.

The development of the water resources is fraught with such wide national significance, but at the same time is so intimately associated with the welfare of local interests, that it is at once a national and a State problem. In the arid States it is a component part of land use, and, as has been stated, "water problems merge into land problems, and both water problems and land problems merge into human problems." Under our form of government, human and land problems are the concern of both the Federal and State Governments. It is patent, therefore, that the States have a very definite part as well as an obligation in the program for conservation and utilization of water resources.

The public good and a sound national policy demand planning for utilization of the water resources over large basin areas involving in many cases the interests of several States. This is true because the supply of water for essential purposes is limited and the residue must be so used that it will accrue to the maximum economic advancement of the people in the national interest, as well as for the advancement of industrial welfare of the several States. This means that all uses to which water may be put, as well as the necessities for flood control, must be recognized. Domestic, irrigation, industrial, and recreational values must be preserved to the greatest extent possible. Realizing fully the national phase of the problem, the interest and the part of the States in this development should not be disregarded in the planning and construction of projects. The very nature of the governmental structure, the federation of 48 sovereign States, and the preservation of the principle of democracy make this necessary. Economic development is the concern of each of the States. The plans of local interests within a State and the policy of development of natural resources throughout a State must be coordinated with a sound national policy for the development of large areas involving many States.

The States must, as far as possible and on an equitable basis, protect and preserve the rights of their citizens in the water resources. These rights are founded in the constitutions of many of the States subject to the doctrine, announced by the United States Supreme Court, of equtable apportionment of waters of an interstate stream among the States through which it flows. Wiel, in his work, Water Rights in the Western States (3d ed., pp. 752–755), states:

"Because of its fugitive nature, the only property rights which exist in water in its natural state, under either the riparian rights or the appropriation doctrine, are rights of use, the corpus being susceptible of ownership only while in possession."

Vested rights in water recognized by the laws of the States are founded on the principle of beneficial use and represent large property interests, denial of which would be disastrous to present and continued industrial development. These rights must be reckoned with by the Federal Government and other States.

Provisions are embodied in the constitutions of most of the irrigated-land States dedicating the water of unnavigable streams to the use of the people of the State, subject to appropriation. These constitutions, in one form or another, have been approved by the Congress. The provision of the Constitution of the State of Colorado is typical. It provides:

"SEC. 5. Water, public property: The water of every natural stream, not heretofore appropriated, within the State of Colorado, is hereby declared to be the property of the public, and the same is dedicated to the use of the people of the State, subject to appropriation as hereinafter provided.

"SEC. 6. Diverting unappropriated water—Priority: The right to divert the unappropriated waters of any natural stream to beneficial uses shall never be denied. Priority of appropriation shall give the better right as between those using the water for the same purpose; but when the waters of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the water for domestic purposes shall have the preference over those claiming for any other purpose, and those using the water for agricultural purposes shall have preference over those using the same for manufacturing purposes."

Briefly the doctrine of prior appropriation, which is recognized under the local laws in most of the arid States, is "first in time, first in right." The riparian water law of the humid East has been abrogated in these States except in California, where both riparian and appropriation rights are recognized. Under the doctrine of prior appropriation, he who first applies water to a beneficial use either upon riparian or nonriparian land, acquires a vested right to such use superior to the claim of all subsequent users. Such rights are recognized in the order of initiation until all of the water of the stream, if unnavigable, is utilized, and may be enforced without reference to State lines. Where interstate compact or United States Supreme Court decisions establishes an equitable apportionment between States, the portion allotted to each State is distributed under the State law and in that case it cannot be said that the priorities are always recognized irrespective of State lines. A review of the decisions of the Supreme Court adjudicating controversies over the waters of interstate unnavigable rivers indicate that the factors used in establishing equitable apportionment among States are not limited to a determination of priorities of use, irrespective of State lines, even where all the States involved have adopted the doctrine of appropriation.

In 1901 Colorado, where the doctrine of appropriation had been adopted by its constitution, claimed the right to the exclusive use of all waters arising within its boundaries, on the basis of its sovereign right of ownership in such waters. This claim was urged in the famous case of *Kansas* v. *Colorado* (206 U. S. 46). The decision in this case, and others which followed, established the principle that there must be an equitable apportionment of the benefits of an interstate stream between the States affected. The latest development of the law on this phase of the subject was noted in 1938 in the case of *Hinderlider et al.* v. *La Plata River and Cherry Creek Ditch Co.* (58 S. Ct. Rept. 803), where the doctrine was announced that States by compact may divide the waters of an interstate stream, even though individual rights, under appropriations recognized by the State law, are thereby denied.

The Court said:

"As Colorado possessed the right only to an equitable share of the water in the stream, the decree of January 12, 1898, in the Colorado water proceeding did not award to the ditch company any right greater than the equitable share. Hence the apportionment made by the compact cannot have taken from the ditch company any vested right unless there was in the proceedings leading up to the compact or in its application some vitiating infirmity. No such infirmity or illegality has been shown."

The challenge has been made against the right of the State to control the use and distribution of waters of an interstate stream among its citizens, subject to the principle of equitable apportionment among the affected States and the power of Congress to control such rivers for the purposes of national defense, navigation, and flood control. This challenge appeared in the petition of the Government, in the case of Nebraska against Wyoming and Colorado, now pending in the Supreme Court of the United States, for the purpose of obtaining a decree to equitably apportion the waters of the North Platte River among the three States.

After the commencement of the suit the United States filed a petition of intervention and was allowed by the Court to intervene, on the principle that the Government should be permitted to protect its claim to water necessary for the operation of federally financed structures; but the claim made by the United States that it is the owner of all unappropriated waters in the North Platte has not been passed upon by the Court, and remains a question for adjudication. It is logical to assume that the Court recognized the interest of the Government as appropriator for the actual uses of water and as an investor on the river, and, by such permission to intervene, made provision for the Government being adequately represented in the proceedings. There is no indication that such intervention was permitted on the basis that the Government is recognized as owning and in control of all unappropriated waters to the exclusion of what we believe to be the well-recognized rights in the States; but pending this litigation and before the final decree is entered in the case, it is necessary that the States defend their rights to control the use and appropriation of water within their borders.

The broad principle on which the Government relies is stated in the appendix to motion on behalf of the United States for leave to intervene as follows:

"It is the contention of the United States that existing rights to appropriate and use the waters of the nonnavigable streams of the public-domain country are derived from the United States either under the acts of 1866, 1870, and 1887, or by tacit grants in the area preceding those statutes; that these rights were granted by the United States, using local customs and State and Territorial laws as

subordinate instrumentalities only. It is the further contention of the United States that title to all the water of the nonnavigable streams of the public-domain country which has not been granted away by the United States remains in the United States."

In general the position of the States is that the following propositions have been established by decision of the Supreme Court of the United States:

"1. By the act of March 3, 1877 (19 Stat. 377), if not before, all unappropriated waters of nonnavigable streams in the arid portions of the public domain became property of the public subject to the plenary control of the States.

"2. There is no Federal statute authorizing the United States, or any of its agencies, to make an appropriation of water except the Reclamation Act of 1902, and under that act an appropriation of water may be made by the Secretary of the Interior only in conformity with the laws of the State or Territory wherein the appropriation is made. The Secretary of the Interior, as an appropriator of water, is in the same position as any other appropriator.

"3. The United States is not the owner of unappropriated water or of water rights under appropriations made by the Secretary of the Interior, but such rights belong to the owners of the land upon which the water is applied.

"4. The Congress, in accepting, ratifying, and confirming the constitution of the States, agreed that the natural waters within its boundaries are the property of the State."

The United States Supreme Court has heretofore ruled on the motion of Wyoming to dismiss the complaint of Nebraska in the instant case on the ground that the Secretary of the Interior was an indispensable party.

The Court said (295 U. S. 40, 43):

"The motion asserts that the Secretary of the Interior is an indispensable party. The bill alleges, and we know as a matter of law, that the Secretary and his agents, acting by authority of the Reclamation Act and supplementary legislation, must obtain permits and priorities for the use of water from the State of Wyoming in the same manner as a private appropriator or an irrigation district formed under the State law. His rights can rise no higher than those of Wyoming, and an adjudication of the defendant's rights will necessarily bind him. Wyoming will stand in judgment for him as for any other appropriator in that State. He is not a necessary party."

There would seem to be no reasonable distinction between the Secretary of the Interior, representing one of the Government departments, and the United States, appearing directly through the Attorney General. It follows, then, in view of this decision of the Court, that where one of the litigant States moved to dismiss because the Secretary of the Interior was not a party, the Court established the principle that the Secretary must obtain permits and priorities for the use of water from the State of Wyoming in the same manner as a private appropriator or an irrigation district formed under the State law, and that his rights can rise no higher than those of Wyoming.

That the State represents all appropriators of water is sustained in other Supreme Court cases. In *Kansas* v. *Colorado, supra,* it was held:

"While several of the defendant corporations have answered it is unnecessary to specially consider their defenses, for, if the case against Colorado fails, it fails also as against them."

Section 8 of the Reclamation Act of June 17, 1902 (ch. 1093, 32 Stat. 388), provides as follows:

"SEC. 8. That nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, * * *."

Reference is made in the Government brief to the acts of 1866 (14 Stat. 253), 1870 (16 Stat. 218), 1877 (19 Stat. 377). In the last cited statute, after providing that a claimant's right to the use of water depends upon bona fide prior appropriation, it is expressly provided that—

"All surplus water over and above such actual appropriation and use, together with the water of all lakes, rivers, and other sources of water supply upon the public lands and not navigable, shall remain and be held free for the appropriation and use of the public for irrigation, mining, and manufacturing purposes subject to existing rights."

The proper interpretation of the Reclamation Act, and other Federal legislative provisions respecting this subject, would seem to be that the Congress, in passing them, did not make a mere revocable grant of water rights to the States nor merely acquiesce in the State laws, but on the contrary recognized the rights of the States to control the appropriation and use of water for irrigation and other purposes. In other words, there has been a deliberate congressional intent to recognize these States' rights. Such recognition has ample foundation in the constitutions of the several States, and constitutional interpretations by decisions of the Federal courts.

In *California Oregon Power Co.* v. *Beaver Portland Cement Co.* (299 U. S. 142), the Court holds that the effect of the Desert Land Act was to sever the water from the land, and that a grantee in a patent would only take (295 U. S. 162)—

"The legal title to the land conveyed, and such title and only such title, to the flowing waters thereon as shall be fixed or acknowledged by the customs, laws, and judicial decisions of the State of their location."

The Court further held in this case that the nonnavigable waters on the public domain became "publici juris, subject to the plenary control" of the States, in language as follows:

"What we hold is that following the act of 1877, if not before, all nonnavigable waters then a part of the public domain became publici juris, subject to the plenary control of the designated States * * * with the right in each to determine for itself to what extent the rule of appropriation or the common-law rule in respect of riparian rights should obtain."

In *Ickes* v. *Fox* (300 U. S. 82), the Court held:

"Although the Government diverted, stored, and distributed the water, the contention of petitioner that thereby ownership of the water or water rights became vested in the United States is not well founded. Appropriation was made not for the use of the Government, but, under the Reclamation Act, for the use of the landowners; and by the terms of the law and of the contract already referred to the water rights became the property of the landowners, wholly distinct from the property right of the Government in the irrigation works. * * * The Government was and remained simply a carrier and distributor of the water * * * with the right to receive the sums stipulated in the contracts as reimbursement for the cost of construction and annual charges for operation and maintenance of the works. As security therefor it was provided that the Government should have a lien upon the lands and the water rights appurtenant thereto—a provision which in itself imparts that the water rights belong to another than the lienor—that is to say, to the landowner."

Referring to the Desert Land Act in this same decision, the following language was used:

"Acquisition of the Government title to a parcel of land was not to carry with it a water right; but all nonnavigable waters were reserved for the use of the public under the laws of the various arid-land States."

The Colorado River compact, which involves seven Western States, and which was ratified by six of the States and approved by Congress, provides:

"ART. VIII. Present perfected rights to the beneficial use of waters of the Colorado River system are unimpaired by this contract."

The Boulder Canyon Project Act (45 Stat. 1057), passed by the Congress on December 21, 1928, contains the following:

"SEC. 12. (b) The rights of the United States in or to waters of the Colorado River and its tributaries, however claimed or acquired, as well as the rights of those claiming under the United States, shall be subject to and controlled by said Colorado River compact."

"SEC. 18. Nothing herein shall be construed as interfering with such rights as the States now have either to the waters within their borders or to adopt such policies or enact such laws as they may deem necessary with respect to the appropriation, control, and use of the waters within their borders, except as modified by the Colorado River compact or other interstate agreement."

One of the considerations which, in the opinion of the writer, protects the rights of the States to control the waters of their rivers for all beneficial purposes goes to the very foundation of our dual form of government. This principle is reflected in the following language from *Kansas* v. *Colorado,* supra:

"Appreciating the force of this, counsel for the Government relies upon 'the doctrine of sovereign and inhert power'; adding, 'I am aware that in advancing this doctrine I seem to challenge great decisions of the court, and I speak with deference.' His argument runs substantially along this line: All legislative power must be vested in either the State or the National Government; no legislative powers belong to a State government other than those which affect solely the internal affairs of that State; consequently, all powers which are national in their scope must be found vested in the Congress of the United States. But the proposition that there are legislative powers affecting the Nation as a whole which belong to, although not expressed in the grant of powers, is in direct conflict with the doctrine that this is a government of enumerated powers. That this is such a government clearly appears from the Constitution, independently of the amendments, for otherwise there would be an instrument granting certain specified things made operative to grant other and distinct things. This natural construction of the original body of the Constitution is made absolutely certain by the tenth amendment. This amendment, which was seemingly adopted with prescience of just such contention as the present, disclosed the widespread fear that the National Government might, under the pressure of a supposed general welfare, attempt to exercise powers which had not been granted. With equal determination the framers intended that no such assumption should ever find justification in the organic act, and that if, in the future, further powers seemed necessary, they should be granted by the people in the manner they had provided for amending that act. It reads: 'The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.' The argument of counsel ignores the principal factor in this article, to wit, 'the people.' Its principal purpose was not the distribution of power between the United States and the States, but a reservation to the people of all powers not granted. The preamble of the Constitution declares who framed it, 'We, the people of the United States,' not the people of one State but the people of all the States; and article X reserves to the people of all the States the powers not delegated to the United States. The powers affecting the internal affairs of the States not granted to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, and all powers of a national character which

are not delegated to the National Government by the Constitution are reserved to the people of the United States. The people who adopted the Constitution knew that in the nature of things they could not foresee all the questions which might arise in the future, all the circumstances which might call for the exercise of further national powers than those granted to the United States, and, after making provision for an amendment to the Constitution by which any needed additional powers would be granted, they reserved to themselves all powers not so delegated. This article X is not to be shorn of its meaning by any narrow or technical construction, but is to be considered fairly and liberally so as to give effect to its scope and meaning. As we said construing an express limitation on the powers of Congress, in *Fairbank* v. *United States* (181 U. S. 283, 288; 45 L. ed. 862, 865; 21 Sup. Ct. Rept. 648, 650)."

After extensive discussion in the principle, the Court announced:

"It is useless to pursue the inquiry further in this direction. It is enough for the purposes of this case that each State has full jurisdiction over the lands within its borders, including the beds of streams and other waters."

It has been noted that water being of a fugitive nature, the only property rights which exist in water in its natural state, under either the riparian or appropriation doctrine, are "rights of use, the corpus being susceptible of ownership only while in possession." The right of use and regulation is exercised under the police power of the States; and there is nothing in the law which expressly or by implication shows that this power has been delegated to the Federal Government.

Other constitutional provisions, statutes, and court decisions may be noted:

The Federal Water Power Act (act of June 10, 1920, 41 Stat. L. 1077, ch. 185, sec. 27; U. S. C., 1934 ed., title 16, ch. 12, sec. 821) provides:

SEC. 821. State laws and water rights unaffected: Nothing contained in this chapter shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein.

In *Gutierres* v. *Albuquerque Land Co.* (1902, 188 U. S. 545) Mr. Justice White said in delivering the opinion of the Court (pp. 552–553):

"We think, in view of the legislation of Congress on the subject of the appropriation of water on the public domain, particularly referred to in the opinion of this Court in *United States* v. *Rio Grande Irrigation Co.* (174 U. S. 690, 704–706), the objection is devoid of merit. As stated in the opinion just referred to, by the act of July 26, 1866 (ch. 262, sec. 9, 14 Stat. 253; Rev. Stat., sec. 2339), Congress recognized, as respects the public domain, 'so far as the United States are concerned, the validity of the local customs, law, and decisions of courts in respect to the appropriation of water.'"

In *California Oregon Power Co.* v. *Beaver Portland Cement Co.*, supra, the United States elaborately outlines the history of the development of the law in relation to waters in the irrigated-land States of the West, refers to and discusses the several acts of the Congress and the uniform line of decisions of the United States Supreme Court.

An important footnote appended to this case in the official reports (p. 164 of 295 U. S.) is as follows:

"In this connection it is not without significance that Congress, since the passage of the Desert Land Act, has repeatedly recognized the supremacy of State law in respect of the acquisition of water for the reclamation of public lands of the United States and lands of its Indian wards. Two examples may be cited:

"The Reclamation Act of 1902 (c. 1093, 32 Stat. 388) directed the Secretary of the Interior (S. 8) to proceed in conformity to the State laws in carrying out the provisions of the act and provided that nothing in the act should be construed as affecting or intending to affect or in any way interfere with the laws of any State or Territory 'relating to the control, appropriation, use, or distribution of water used in irrigation.'

"The act of June 21, 1906 (c. 3504, 34 Stat. 325, 375), made an appropriation for constructing irrigation systems to irrigate lands of the Uncompahgre, Uintah, and White River Utes in Utah, with the proviso that 'such irrigation systems shall be constructed and completed and held and operated, and water therefor appropriated under the laws of the State of Utah,' etc. This was amended by the Indian Appropriation Act of March 3, 1909 (c. 263, 35 Stat. 781, 812), which again recognized the supremacy of the laws of Utah in respect of appropriation, and provided that the appropriation should 'be used only in the event of failure to procure from the State of Utah or its officers an extension of time in which to make final proof for waters appropriated for the benefit of the Indians.'"

CONSTITUTIONAL PROVISIONS

Before Wyoming was admitted to the Union July 10, 1890, its constitution was submitted to and approved by the Federal Government. Section 31 of article I, being part of the "declaration of rights" in this constitution, was and still is as follows:

"Water being essential to industrial prosperity, of limited amount, and easy of diversion from its natural channels, its control must be in the State, which, in providing for its use, shall equally guard all the various interests involved."

Article VIII was and still is as follows:

"IRRIGATION AND WATER RIGHTS

"Water is State property; section 1. The water of all natural streams, springs, lakes, or other collections of still water, within the boundaries of the State, are hereby declared to be the property of the State.

"Board of control; section 2. There shall be constituted a board of control to be composed of the State engineer and superintendents of the water divisions, which shall, under such regulations as may be prescribed by law, have the supervision of the waters of the State and of their appropriation, distribution, and diversion, and of the various officers connected therewith. Its decisions to be subject to review by the courts of the State.

"Priority of appropriation; section 3. Priority of appropriation for beneficial uses shall give the better right. No appropriation shall be denied except when such denial is demanded by the public interests.

"Water divisions; section 4. The legislature shall by law divide the State into four water divisions, and provide for the appointment of superintendents thereof.

"State engineer; section 5. There shall be a State engineer who shall be appointed by the Governor of the State and confirmed by the senate; he shall hold his office for the term of 6 years, or until his successor shall have been appointed and shall have qualified. He shall be president of the board of control, and shall have general supervision of the waters of the State and of the officers connected with its distribution. No person shall be appointed to this position who has not such theoretical knowledge and such practical experience and skill as shall fit him for the position."

Similar provisions were embodied in the constitutions of other irrigated land States, which constitutions were submitted prior to their admission to the Union and were approved by the Federal Government. Such provisions still remain in these constitutions. For example:

"Section 15 of article III, constitution of Montana, admitted to the Union November 8, 1889.

"Article XV of the constitution of Idaho, which State was admitted to the Union by act of Congress July 3, 1890.

"Article XVII, constitution of Utah, which State was admitted to the Union January 4, 1896.

"Sections 1, 2, and 3 of article XVI, constitution of New Mexico, which State was admitted to the Union January 6, 1912.

"Sections 1 and 2 of article XVII, constitution of Arizona, which State was admitted to the Union February 14, 1912.

It should be noted that these rights in the State are not only subject to the principle of equitable apportionment among States on an interstate stream but also to the power of Congress over interstate navigation.

Gibbons v. *Ogden* (9 Wheat. 1), in a controversy involving States' rights, sustained the exclusive control of the National Government over navigation.

In 1898 the Supreme Court through its holding in *Green Bay Canal Co.* v. *Patten Paper Co.* (172 U. S. 58, 80), rejected the efforts of States to realize water-power resources developed by navigation structures. Chief Justice Hughes, speaking for the Court in the case of *Ashwander* v. *Tennessee Valley Authority* (297 U. S. 288), in 1936, sustained the Government's contention—

"That the Wilson Dam was constructed, and the power plant connected with it was installed, in the exercise by the Congress of its war and commerce powers—that is, for the purpose of national defense and the improvement of navigation."

This case also upheld the constitutional authority, under section 3 of article IV, to dispose of electrical energy at this dam. It is interesting to note that in this decision the Court said, citing the case of *Kansas* v. *Colorado* (206 U. S. 46), that in disposing of this energy the method used—

"Must be consistent with the foundation principles of our dual system of government and must not be contrived to govern the concerns reserved to the States."

Flood control was at first largely considered as a local responsibility, but soon was regarded, in its major phases at least, as a national obligation. Its relation to navigation was recognized in *Jackson* v. *United States* (230 U. S. 1). Time does not permit a discussion here of present controversies involving alleged conflicts with States' rights resulting from the operation of proposed flood-control projects.

Existing Federal statutes and interpretation of the courts as to what constitutes reasonable requirements in the national interest for navigation and other purposes afford further possible invasion of the States' right of control of their waters. Within the limits of this statement, a review of these statutes and decisions cannot be attempted. It should be noted that the Federal Water Power Act of 1920 (41 Stat. 1063) is designed to subject private developments to the Commission control in order to secure more complete utilization of water resources for navigation, hydroelectric power, or other beneficial uses. This act has been under the scrutiny of the Federal courts in the recent case of *United States* v. *Appalachian Electric Power Co.* (23 Fed. Supp. 83), commonly known as the New River case, decided in 1938. The New River rises in North Carolina and flows across Virginia and West Virginia, where it joins the Kanawha. The Federal district court rejected the position of the United States and refused to enjoin the proposed electric-power development. The Government contended that because of the possible but very improbable effect the damming of the New River might have on navigation on another stream, of which the New River is a tributary, the Government should control the river from its mouth to the headwaters. It was alleged that the defendant obtained a license from the State of Virginia and was proceeding to construct without consent of Congress or authority of the Secretary of War and without a license from the Federal Power Commission. The Court held that the right of a State to provide for development of its water power must be exer-

cised in submission to paramount interests of the United States to protect its navigable waters; but, to deprive a State of its rights in this respect, there should exist facts which create reasonable belief that the interests of the Federal Government will be interfered with, and a mere averment of such interference or a nebulous and remote possibility is not sufficient.

The Court also held that the Federal Water Power Act does not confer authority on the Federal Power Commission to require a license for a dam or similar project on a nonnavigable stream, and that the findings of the Federal Power Commission are not final. It was also shown that the proposed improvement was not on public lands, and for this further reason the Government could not prevent the construction. This case was affirmed by the Circuit Court of Appeals of the Fourth Circuit, on November 6, 1939, with a dissenting opinion.

We must recognize the interrelation of development for various uses inherent in the rivers of the Nation. All values must be preserved if possible. Proper conservation and development cannot be attained without comprehensive planning and development. The national interest should not be disregarded. But these considerations and the forces behind them need not, and must not, be permitted to destroy the citadel which protects the rights and interests of the States in the waters of our rivers.

Although great decisions of the Supreme Court were necessary to establish fundamental principles with respect to the apportionment of water to States on interstate rivers, it is the opinion of the writer that the time has come when controversies over these rivers should be settled by the compact method. Often, if not always, court decrees "breed" further litigation. Compact negotiations should in all cases be preceded by investigations supervised by impartial agencies in which the interested States should participate in the cost. The value of such a procedure is evidenced by the Rio Grande joint investigation under the National Resources Committee, which was followed by a compact. An interstate suit between Texas and New Mexico, in which the United States and Colorado undoubtedly would have become parties, was settled by this compact.

It seems obvious that Federal agencies should be required in initiating projects to observe State laws governing the filing and perfecting of water rights for federally financed developments. Only in this way can present vested rights be protected and a coordinated plan within a basin preserved. Much complaint has been made and difficulties of a serious nature evidenced in cases where the official of a State charged with the administration of water rights is ignored. As has been noted, some Federal statutes require observance of these State regulations, and nearly all responsible heads of Federal agencies engaged in water-project development claim such observance, and yet evidence of nonobservance is often encountered.

Because of the interest of the States, their representatives should participate in planning. This can be accomplished through appropriate agencies such as planning commissions and conservation boards, which exist in nearly all of the States. These boards should cooperate in not only promoting feasible projects but in effectuating an orderly plan of development. For effective procedure and in order that the States assume their full measure of responsibility, Federal agencies should be expected to recognize and work with these State agencies. Such agencies should maintain the proper contact with local interest; and Federal agencies, in the interest of orderly development and coordination of State and Federal activity, should avoid a short cut directly to strictly local interests.

If States are to maintain their interests in conservation and their rights in the control of water, it is recognized that they must assume their full measure of responsibility. They must also demonstrate their ability to cope with inevitable controversies over waters. Lawsuits as far as possible should be avoided. The conference method in recent years is being recognized as the most effective method. Note the efforts of the Committee of Fourteen in the Colorado River Basin, which is working with Federal agencies and drainage-basin committees of the National Resources Planning Board to develop a comprehensive plan of development. This, after all, represents the democratic way and in the end will better preserve all interests than a recognition of the principle of strong centralized control.

Salvage of Hurricane Timber in New England

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

LETTER FROM J. F. CAMPBELL, ACTING DIRECTOR, FEDERAL SURPLUS COMMODITIES CORPORATION

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FEDERAL SURPLUS COMMODITIES CORPORATION,
NORTHEASTERN TIMBER SALVAGE ADMINISTRATION,
Boston, Mass., April 25, 1940.

Hon. JOHN W. McCORMACK,
United States House of Representatives,
Washington, D. C.

DEAR MR. McCORMACK: We are very desirous of keeping you informed as to the progress being made in the salvage of hurricane timber in New England, so that you may, in turn, pass on whatever portion of the information you wish to any of your constituents.

As you know, the program got under way in December 1938. Records show the following log receipts, the majority of which are white pine, for Massachusetts:

Receipts from beginning of project to Mar. 30, 1940

White pine	126,257,742
Other softwood	2,359,141
Hardwood	2,208,401
Total	130,825,284

We feel that we have accomplished the first two points in our salvage-program objective, namely:

1. To bring to the owner of down timber the maximum amount in conformity with good business practices.

2. To offer to purchase any and all logs which meet our specifications and establish the price of logs and prevent speculation.

It is now evident that the majority of logs the project expected to receive has been delivered, and the average delivery and the merchantability have fallen off to the point where it is not economical to maintain receiving stations with scalers in attendance. Private industries are purchasing an increasing amount and should easily consume the major portion remaining after our stations close down.

With this in mind, all active vendors have been advised by letter that the receipt of logs will cease on April 30. However, in a few cases, because of poor hauling conditions near the end of this month, some logs and pulpwood which have been prepared to our specifications will still remain in the woods. To take care of such scattered cases the following procedure has been adopted:

1. All timber-purchase agreements were executed to be completed by April 30, 1940, and no new agreements will be written.

2. Extensions beyond that time may be granted upon written request of the vendor and will not be issued until an authorized agent of the Administration has made an on-the-ground inspection to determine the approximate volume of material which will be accepted under the extension and the date of final delivery. This provision is made so that vendors who really have logs of pulpwood cut but were unable to complete delivery because of hauling conditions will not be put to expense without an opportunity to realize on the expenditure. It also gives us an opportunity to check on deliveries and determine how soon a receiving station can be closed.

3. Under no conditions will deliveries be accepted after May 29, 1940. This sets a definite dead-line date on all deliveries and again gives us an opportunity to control our costs of scaling, etc. Logs will start to stain shortly after this date.

4. In allowing any extensions the Administration further reserves the right to indicate the receiving station to which delivery is to be made. There may be cases where only one vendor who has been delivering to a particular station has logs to be delivered after April 30. This provision will give us an opportunity to concentrate deliveries.

A field check indicates that there will be very few vendors who will ask for an extension of time beyond April 30.

We trust that the above information may be of assistance to you in answering any inquiries you may receive. We shall be glad to answer any questions that may occur to you.

Very sincerely yours,

J. F. CAMPBELL,
Acting Director.

Zero Hour

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. PITTENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's edition of the Washington Evening Star:

[From the Washington Evening Star of May 10, 1940]

ZERO HOUR

The zero hour has struck on Europe's western front. Hitler's most feared blitzkrieg has come with all the ruthlessness and

violence of modern, mechanized barbarism. The neutral soil of inoffensive Belgium once more is being defiled by the grinding heel of German aggression—and a similarly shocking fate has befallen peace-loving Holland and tiny Luxembourg. Their only sin is that they stand in the path of a carefully planned drive by the Reich's formidable war machine against her democratic adversaries, France and England. The move came with dramatic suddenness—significantly at the height of the British Cabinet crisis. Britain no sooner had bared the weaknesses in her armor than Germany decided to thrust a well-timed dagger at allied vital spots—inferior air forces. Goering's vaunted air power is being given its supreme test—with savage and cminous initial results in the lowlands and in France.

The crime speaks for itself. But this much is clear in all its stark reality: On the outcome of the long-awaited German smash in the west well may hinge the entire fate of the allied cause and of European democracy. The nearness of a decision on whether Germany is to hold and use the channel ports should impress Americans with the critical stage at which the war now has arrived.

France and England face squarely the necessity of retaliating with a hard and devastating blow at Germany. There can be no minimizing the immediate peril in which the German invasion of the Netherlands, Belgium, and Luxembourg places the allied cause. Unlike Norway, where an allied failure had only a secondary influence on the course of the war, the low countries are so strategically located that their fate is bound up inextricably with that of Britain and France. If the allied cause is to be saved from disaster, German military might must be met with a fiery and masterful counteroffensive which will wrest the low countries from the hands of the invader.

Excuse for German violence—that the Allies were plotting a blow at Germany through Holland and Belgium, that the little kingdoms were conniving in a plan to overthrow the German Government, and that they failed to take military precautions in the direction of the Allies equal to those taken on the German border—is sophistry of the usual Nazi brand. Who among unbiased, sensible peoples can be so naive as to swallow such utter nonsense? The charge that the Allies were contemplating invasion of Holland and Belgium obviously is as brazen and false a contention as the mendacious Nazi regime ever has had the effrontery to make. The absurdity of it is so patent that the German case will receive not the slightest credence from intelligent persons.

Obviously the allegation is part of a formula which Fuehrer Hitler has evolved from a long study of the most ruthless precedents. It was the excuse Germany used in Norway, and it is the excuse she will use again if she decides to loose her thunderbolts over southeastern Europe. Ingredients of the Nazi formula are, first of all, a false charge of conspiracy against the Reich, followed immediately, and without opportunity for negotiation, by a violent "blitzkrieg," of which the attack on Holland and Belgium is as perfect an example as has yet been offered.

Reported misuse of the Dutch uniform, which is a particularly cowardly piece of work, clears up some of the mystery about the discovery of truckloads of Dutch Army clothing on the German border at various times in recent months. It is a variation, of course, of the Nazis' Trojan horse technique used so effectively in Norway.

The Allies have pledged immediate aid to Holland and Belgium in response to appeals from Brussels and The Hague. The big test of the Allies is at hand. They deserve every blessing in that test that farseeing Americans can give them.

The Hatch Act

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

RADIO ADDRESS BY HON. JOHN J. DEMPSEY, OF NEW MEXICO

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over the Mutual Broadcasting System on Thursday evening, May 9, 1940:

Ladies and gentlemen of the radio audience, the Hatch Act, which passed last year, combines a new "emancipation proclamation and bill of rights" for those Federal employees who are not protected by the civil-service laws.

The controversy raging at this time is whether or not State employees paid in full or in part by Federal funds should likewise receive this protection.

Let me briefly sketch the present Hatch law to you:

First. It is a criminal offense for any person to intimidate, threaten, or coerce another in connection with the election of any Federal official. This is all-inclusive—it applies equally to every person in the United States.

Second. No official or employee in the executive branch of the Federal Government can use his official authority in any way to influence the nomination or election of Federal officials. No official or employee in the executive branch of the Government, with the exception of the President, Vice President, heads of administrative branches and their assistants, and appointive officials who determine foreign and Nation-wide policies can take an active part in political campaigns or campaign management. The penalty for violation is loss of position and a ban against future employment in Government service.

Third. This legislation provides no person can exact or solicit political assessments or contributions from public employees who are paid from relief funds.

Fourth. The law provides that all employees and officials are free to vote as they choose and to express their opinions on any political subject, but are not permitted to manage or be active in a political campaign.

There are other prohibitions, such as securing lists of Federal employees to be used for political purposes, or promise of political rewards or benefits in exchange for political support.

Those are the principal provisions of the present law simply stated.

The pending amendments would extend this same protection to employees in the States paid in full or in part by Federal funds. While the pending amendments permit a voluntary contribution by Government employees other than those paid from relief funds, solicitation of such funds by other Federal officials and employees for political purposes is prohibited.

Cognizant of the growth of the spoils system over a period of many years under administrations by both Republicans and Democrats, the senior Senator from New Mexico, the Honorable CARL A. HATCH, sought in 1938 to pass this legislation, but failed by the margin of a single vote in the United States Senate. His effort was not in vain, for it resulted in the formation of a special Senate committee to make an investigation of charges of intimidation, coercion, and enforced assessments by political bosses in the elections of that year. The report of that committee, which was made up of Senators SHEPPARD, AUSTIN, and HATCH, was a startling revelation to the Congress and the people of the Nation, for it stripped bare the sordid facts of virtual political enslavement of tens of thousands of men and women, including even those on the relief pay rolls receiving a meager wage from the W. P. A.

This report left no room for doubt of the need for legislation that would stop unscrupulous and power-greedy political bosses from perpetuating themselves as dictators and building up their machines at public expense, with funds mulcted and extorted from those who were paid with money from the Federal Treasury appropriated by the Congress.

It was apparent that the time had come to protect the hundreds of thousands of Federal employees from political piracy and no longer to permit appropriations from the Federal Treasury to be used in part for campaign funds. It was high time, the advocates of the Hatch law argued, to return to the sound and honest premise that employees on the Federal pay roll are employees of the people, not the subservient slaves of politicians; that the funds in the United States Treasury belong to the people of the Nation and are not to be diverted to the selfish purposes of any individual political boss or machine.

We faced opposition—strong and subtle opposition—but the courageous and determined battle waged by Senator HATCH, backed by public demand for this legislation, carried this measure through to victory.

I deemed it my duty and a privilege, indeed, to sponsor the bill in the House of Representatives, where a great majority of the Members stood squarely behind legislation that had for its prime purpose the reestablishment of integrity and decency in American politics.

In signing the original Hatch bill, thus making it the law of the land, the President of the United States, pointed out in his message to the Congress which accompanied the bill the need for this further legislation, which would grant to employees of State and other political subdivisions the same protection given employees of the Federal Government by the Hatch Act. It is not within the power of Congress, of course, to enact laws affecting State employees, except those who are paid in full or in part from the Federal Treasury, but the thousands who come within that latter category are included in the provisions of the pending amendments. It is gratifying to know that some of the States already have adopted or are proposing to adopt laws which will safeguard their own public workers by legislation intended to supplement the Hatch law and these proposed amendments. It is my confident belief that nearly every State in the Union will, within a comparatively short time, have such a law on its statute books. I venture that prediction because I know that the vast majority of the citizens of every State are in full accord with the purposes of this legislation and, in the final analysis, public opinion writes the laws of our land.

In view of that preponderance of public favor for this legislation, you undoubtedly find it difficult to understand why there has been such bitter opposition to the passage of both the original law and the proposed amendments. I believe it is most significant that the greatest opposition comes from the very places which were shown by the report of the Sheppard committee to have the worst conditions in regard to intimidation and regimentation of voters who were on the public pay roll; States where arbitrary assessments were levied by political bosses, where workers were threatened with loss of their jobs if they didn't vote as they were told. The black spots in the Sheppard committee's report are, in most cases, the strongholds of the opponents to the legislation that would remove them as blots on our political picture. Clean politics is unafraid.

Undoubtedly you wonder, too, what arguments are advanced by the opposition. Let us consider them for a moment. The principal

argument offered against the Hatch law is that it is an infringement on the rights of the Federal employee or official; that it restricts his freedom of action and the exercise of his right of franchise.

The Hatch law is not restrictive; it is protective. No employee can be forced to pay political tribute; no employee can be forced to become a ward heeler; no employee can be coerced or intimidated. Is that restrictive? Every employee may vote as he chooses; every employee, except a relief worker, may contribute to a campaign fund if he wishes; every employee may express his opinion freely. Has he sacrificed any rights there?

Civil-service employees have been under those regulations for years. Have any of them ever complained because they are beyond the greedy reach of the political boss? Have any of them ever sought to be placed outside the protective civil-service regulations? If so, I never have heard of it.

Another opposition argument advanced against the pending amendments is that they are an invasion of State's rights; that the Federal Government has no right to say what State employees may or may not do. The amendments to the Hatch law provide only that the State employee who is paid in full or in part from the Federal Treasury with money appropriated by the Congress, shall have the same protection as any other Federal employee; that he shall not have to barter his birthright of citizenship for a mess of political pottage in the form of a job, from which he can be fired unless he becomes a cog in the machine of a political boss.

If that is an invasion of State's rights, I am sure you will agree with me that it is time the invasion started. I cannot agree with the argument that the Federal Government should send money appropriated by Congress into a State so that a part of it can be used to build up and maintain political dominance for any politician or group of politicians. I do not believe that the people of this country will agree with a political theory that will permit public officials to perpetuate themselves by voting big appropriations to pay inefficient and subservient people who are appointed only because of the tribute they will pay in money and service to those politicians.

When that sort of practice is outlawed, as it will be by the amendments to the Hatch law, another of the real purposes of the law will be evident. Employees in public work will be selected on a basis of efficiency and capability. The public, not the political bosses, will get the service paid for by public funds.

Efficient employees, devoting their full time to their work, not to politics, mean fewer employees to accomplish the same job. Fewer employees mean smaller pay rolls and smaller pay rolls mean the saving of public funds.

When political bosses can no longer profit by the appointment of a large number of employees on the public pay roll, those pay rolls will shrink and the taxpayers will benefit. And that, my friends, is one purpose of this legislation.

It is not difficult to understand, then, why there is opposition and the principal source of that opposition.

Another argument advanced against the legislation is that it cannot be enforced; that it cannot be made effective. Any law which has the force of public approval and sanction back of it, such as has this legislation, is never difficult of enforcement. But the best evidence in regard to the ultimate effect of the Hatch Act on the political morale of this Nation, I believe, can be found in the record of the W. P. A. Prior to the passage of the Hatch Act last year, it is shown by the report of the Sheppard committee, W. P. A. workers in many parts of the Nation were the prey of political racketeers. How much criticism of the W. P. A. have you heard in the last year on that score? Isn't that proof that conditions can be bettered when a sincere attempt is made, backed up by a law with teeth in it?

The President of the United States has urged the passage of these amendments; the people of the Nation are almost unanimous in favor of them; the Senate has passed them by a 2-to-1 vote.

I feel confident that the House of Representatives will accord the amendments even a greater majority than it did the original law; that is, of course, if the opportunity is accorded the membership. This opportunity is dependent on whether the Members of Congress represent their constituents as, in my opinion, those constituents desire to be represented in this matter. The Members of the House of Representatives can very readily accomplish this by signing the petition which will bring the legislation to the floor of the House from the Committee on the Judiciary.

I appreciate your graciousness in listening, and the courtesy of the Mutual network for affording me this opportunity to talk with you.

Cherry Harvest Festival, Beaumont, Calif.

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

LETTER FROM GUY BOGART

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

BEAUMONT, CALIF., *May 5, 1940.*

Hon. HARRY R. SHEPPARD,
Member of Congress, Nineteenth California District,
Washington, D. C.

DEAR MR. SHEPPARD: Beaumont's Chamber of Commerce, cherry growers, city council, and civic groups unite in extending through you an invitation to our President, to the members of the Cabinet, and of the Congress and Senate to attend the annual Cherry Harvest Festival, in Beaumont, June 14, 15, and 16. Your home community of Yucaipa, through its cherry growers, is cooperating in this midharvest festivity as the only southern California cherry acreage is transformed from its white blossoms to the red fruit to take the farmer out of the red.

Cherry pies with the vitamin D Beaumont fruit await the Washington folks.

Cherry-ly yours,

GUY BOGART, *For Cherryland.*

Let Us Be Fair to Employees, Employers, and the Public—Some Examples of Inequity in the Operations of the Wages and Hours Act—Adopt the Casey Amendments; the Gwynne Amendment; the Country-Bank Amendment

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

Mr. HARRINGTON. Mr. Speaker, during the Seventy-fifth Congress much attention was given by the House and the Senate to labor legislation. I am one of those who believed in the principle of minimum-wage and maximum-hour legislation, and so supported the Fair Labor Standards Act. I signed the discharge petition to bring that measure before the House and voted for the bill. I am proud of that vote and the fact that a Democratic Congress established the principle as a matter of law. There is certainly no quarrel with the basic philosophy nor with the underlying motives of the Wage and Hour Act. It was right when it passed and is still right, but, unfortunately, it has been made so unfair in so many instances by the ill-considered and impractical decisions and rulings of the Wage and Hour Division that no fair-minded Member can countenance continuation of the arbitrary and sometimes stupid administration of the act.

When Congress writes legislation it is as well considered and specific as it can possibly be made. Each Member in his own mind has a positive conception of the intent and purpose of that legislation. After the Wage and Hour Act was passed we felt that a great forward step had been taken in the field of social legislation, but imagine our amazement when during the past year and one-half we all woke up to the fact that the law is not what the Congress said it was at all. It is something entirely different, and our only recourse is to come back to Congress and rectify the mistakes which are so apparent in the law or, at least, in the interpretation of it.

I have been much interested particularly in the bill proposed by the distinguished and progressive-thinking gentleman from Massachusetts [Mr. CASEY] and in two or three other amendments which would clarify and assist not only employers and employees generally in certain specific industries, but would enable the present Administrator, who is trying to solve many vexing problems, to do the things many of us thought we were doing when the act was originally passed.

The other amendments beside the Casey amendments in which I am interested are, first, those applying to country newspapers, and, second, the amendment to enable country banks to continue to give reasonable and fair service to their customers, who, throughout the Middle West at least, are largely farmers and small-business men in rural communities.

I have introduced a bill seeking to exempt country weekly and biweekly newspapers from the provisions of the act where the circulation of those newspapers is 5,000 or below.

I understand my good friend and colleague, the gentleman from Iowa [Mr. GWYNNE], will offer that amendment, or a similar one, at the proper time. I trust the committee will

see fit to adopt such amendment and thus bring relief to the many hundreds of distressed country editors and their relatively few employees who now feel the burden.

I expect to offer an amendment at the proper time which has to do with the exempting from the wage and hour provision those banks and trust companies the major share of whose business is in intrastate commerce. I shall discuss this amendment separately when it is offered, but right now I want to address myself to the Casey amendment and point out many reasons why I think the Wage and Hour Act must be amended at this session. I expect to point out by example and show the urgency and need for changes such as those suggested by the gentlemen from Massachusetts. Every case cited is an actual one taken from the experiences of businessmen, particularly wholesalers in the State of Iowa. I know many of the people involved personally and can assure this House that many of the cases brought to my attention were brought by the employees rather than the employer.

The experience of the past 18 months that the wage-hour law has been in effect and operation clearly indicates that many businessmen, whose businesses are vitally affected by this law, do not yet understand it. Each day new interpretations and regulations are being issued. These interpretations, rulings, and regulations are extending the law far beyond anything that it was believed was contemplated by Congress when the law was enacted.

Every reasonable and fair-minded person will heartily approve any legislation that properly safeguards the underprivileged and that will eliminate sweatshop conditions in business and industry. This was declared to be the purpose of the wage-hour law. The extent to which it has gone beyond this declared purpose, the complex problems and uncertainties it has created for employers and employees, and the extent to which it is disrupting normal and long-established business practices, is illustrated in the typical cases hereinafter set forth.

CONTROLS WAGES AND STANDARDS FAR ABOVE MINIMUM STANDARDS ESTABLISHED BY LAW

Case 1

A firm operating branches in other cities employs a man on a salary basis of more than $5,000 per year. He is a certified public accountant and is the duly elected secretary of the corporation, although not a member of its board of directors. He has charge of the audits and accounts for the company's branches as well as its main office. Periodic auditing of branch offices and occasional contract accounts frequently requires his absence from his home city. On such trips out of the city he may prefer to work extended hours per day, or per week as the case may be, and in excess of 42 hours per week as prescribed by law, in order that he may complete his assignment and return to his home. The company furnishes such clerical assistance as he deems necessary and has at no time regulated or been concerned with the number of hours that he has put in on his work, either in the main office or on outside duties.

Inquiry to the Wage and Hour Division for a ruling as to whether or not this employee is exempt from the provisions of the wage and hour law does not give the company assurance that he can be exempt under the classification of executive or professional, or by any other provision of the law. It seems, therefore, that in this and similar cases the only authoritative determination as to whether the wage and hour law applies must come through appeal to and decision by the courts. In the meantime the employer must curtail the hours per week and arrange for accurate time records of service or else accept the liability of possible overtime payments and penalties.

Case 2

The manager of a wholesale establishment employs a private secretary at the rate of $140 per month. This young woman, as is the case with other office employees of the company, is never docked for sickness or for time taken off for other purposes. For example, she has been given time off for trips out of the city, besides being given 3 weeks' vacation with pay each year. At a certain time of the year, usually in the month of July, when inventory is being taken, this young woman puts in a few hours overtime.

Recently the records of the company, whose manager she works for, were inspected by the Wage and Hour Division, and they ruled that the company owed her about $43 for overtime she had put in, notwithstanding the fact that the records show that she actually worked 190 hours less during the year than she would have had she actually worked straight 44 hours and 42 hours per week, as required by the law.

Case 3

Another case in point is that of a young woman working in the accounting department of an employer at a salary of $105 per month. During the year 1939 this young woman was unable to work for 4 weeks because she was stricken with pneumonia. At the end of 4 weeks she returned to her job and worked between 30 and 36 hours each week for about 5 weeks and until she was able again to resume her regular work hours. During all this time she received her regular monthly salary. In addition to this she received 2 weeks' vacation with pay during the year and had also been given time off for a trip out of the city, without being docked, and received pay for all holidays not worked. Two months after returning to work after her illness, when the company was distributing bonuses to its employees, she too received a bonus of $75.

Following her period of illness and after her return to work, when her condition permitted her to do so, she worked some overtime in order to catch up in her department. An investigator from the Wage and Hour Division, who investigated the company's records, claimed the company had violated the wage and hour law and that this young woman was entitled to overtime in the amount of $5.92. In this case the employment records of the company showed that the young woman had worked 327 hours less during the year than she would if she had worked a straight 44- and 42-hour week, as provided by the law.

OPPRESSIVE CHILD LABOR

A certain employer employed a charwoman to do cleaning up around the office each night after work hours, for which she was paid a monthly wage. Because of the isolated location of the company's factory, and not wanting to be alone in the building, it had been the custom of this woman to bring with her her two children under 16 years of age. They helped her clean up the office by picking up scraps of paper, emptying wastebaskets, and so forth. The employer, in doubt as to whether this practice on the part of the charwoman might make him guilty of a violation of the wage and hour law, called for information. The Wage and Hour Division held that an employer, in permitting a woman to use her children to help her in her work, might be violating the oppressive child labor provision of the wage and hour law. It was ruled that a woman could take her children with her for company while she was working, but that they must refrain from helping her in any way.

Accordingly the employer, to protect himself, was compelled to direct the charwoman to refrain from permitting her children to help her clean the office.

LIMITS EMPLOYMENT OPPORTUNITY FOR YOUNG WORKERS

Subsection (b) of section 12—child-labor provisions—empowers the Chief of the Children's Bureau of the United States Department of Labor to determine what occupations are hazardous for the employment of minors between 16 and 18 years of age and oppressive child labor practices under the Fair Labor Standards Act.

Order No. 2 of the Chief of the Children's Bureau declares the occupation of motor-vehicle driver or helper to be extremely hazardous for the employment of such minors, and accordingly the employment of such minors is declared to be oppressive child labor. Consider the effect of this ruling:

A manufacturer of light products gave employment to a husky boy, 17 years of age, delivering some of his products after school and on Saturday mornings. He used the employer's private automobile for such purpose and, on some occasions, a light delivery truck.

Under order No. 2, issued by the Chief of the Children's Bureau, this employment became oppressive child labor, and the employer, accordingly, could not continue to give this young man employment in the above capacity.

Section 9 of Interpretative Bulletin No. 5, issued by Wage and Hour Division, office of general counsel, in November 1939, says, among other things:

> The entire legislative history of the act leads to the conclusion that Congress intended to exclude from the channels of interstate commerce all goods produced under labor conditions detrimental to the health, efficiency, and general well-being of workers.

By what possible stretch of imagination can it be found that it is "detrimental to the health, efficiency, and general well-being of workers" to work more than 42 hours without the payment of overtime when it is not held to be "detrimental" if they work over 42 hours and are paid overtime? Moreover, as in the case cited above, it is apparently not construed to be detrimental under the wage and hour law for an employee to work any number of hours per week over 42 that he may wish, at straight time, provided he works for different employers. Can it be possible that Congress intended any such inconsistent interpretations and situations to be developed when it passed the Fair Labor Standards Act?

OBSTRUCTS AMBITIOUS AND FAITHFUL, INTERESTED WORKERS

Case 1

A food wholesaler employs a buyer who has been with the company nearly 35 years. He is paid at a rate in excess of $300 per month. Recently he suffered a serious automobile accident which confined him to the hospital for a number of months. Upon his return to work it was necessary for him to rest at some time during the day. He engaged a room in a downtown hotel near his place of employment and spent several hours therein during the day, usually immediately after lunch. His need was for physical rest; so he would lie on the bed while in the room. The hotel in which he stayed was the one most convenient to his place of employment so that it was not necessary for him to travel far, but it was also a hotel which is patronized by many salesmen who have called on this buyer for many years. Frequently salesmen would go to the buyer's room for a friendly visit, and on occasion would talk business. Under a strict interpretation of the act the employer is fearful that he will be required to count as hours worked the time spent by the buyer while he is resting in his room.

It appears probable that this buyer could be regarded as an executive and, therefore, exempt under the definition issued by the Wage and Hour Division. However, one phase of the definition provides that an executive must direct work of other employees of the employer. This buyer directs the work only of his own stenographer who is an employee, but because he does not direct the work of employees—note that the plural is used in the definition—there is some doubt about his exemption as an executive, unless this definition can be interpreted to mean one or more employees.

Case 2

The application of the wage and hour law to a wholesale firm resulted in shortening the maximum workweek for its drivers from 48 to 42 hours. This firm, in collective bargaining with the union, had agreed to give its drivers enough hours at overtime so that the weekly pay check would be equivalent of the pay received formerly under a 48-hour week.

A certain truck driver of this particular company usually completed his week's work on Thursday evening. Being an ambitious individual anxious to learn all phases of the business so that he could get ahead, and having noted that most of the men occupying higher-salaried jobs in this firm had advanced from truck driver and warehouse positions, requested that he be permitted to do some work on Fridays and Saturdays in retail stores in order to acquaint himself with that most important part of the business.

After a careful analysis of the wage and hour law, it appeared to the management that if the driver were permitted to do this the company would be required to pay time and one-half for such hours as this employee might spend in such extra work, which in this case would mean $1.05 per hour. Inasmuch as this was prohibitive, the management found it necessary to forbid the driver doing this extra work.

Net result: The company lost a good truck driver because he could see no future in the business.

Under the wage and hour law this same condition confronts many thousands of young men who are perfectly willing and anxious to devote part of their leisure time to studying the job ahead of them and to preparing themselves for advancement.

Case 3

The effect of this law upon ambitious workers is illustrated in the following case:

The Chicago regional attorney for the Wage and Hour Division reports the following case: A company engaged in the customs brokerage and freight business was asked by a young man in its employ to have work assigned to him by the foreign-traffic department of the company in order that he might gain experience and become familiar with American business methods. This experience, it appeared, would be of real value to him and his father's Swedish concern when the young man returned to his native country. This young man was to devote a certain number of hours each day to such work, with the understanding that he was to receive no compensation for his services. According to the Chicago regional attorney's statement, the answer to this inquiry was as follows:

> The act contains no exemption of services performed for the purpose of gaining experience without compensation paid therefor.

While this particular situation is unusual, there are many cases of employees anxious to gain experience and develop responsibility who may not now be permitted to do so because of prohibitive cost to the employer. It is difficult—almost impossible, in fact—to develop executives under the present situation.

CLOSES THE DOOR OF OPPORTUNITY

The Wage and Hour Act was intended, in part, to protect children from employment in sweatshops. Every decent person in the country believes in the elimination of child labor in sweatshops. But here is how it works out in practice:

A wholesale establishment had an employee whose young brother quit school and asked the manager to be allowed to learn to operate a tabulating machine in the company's office without pay, because in this way he could get a practical education without costing money. The boy was ambitious to fit himself for a good job and the tabulating machine was not available in schools.

The branch manager gave his consent and the boy went to work. At the end of 3 months a representative of the company discovered the young man was working for nothing and at once suggested that he be paid something so he would be covered in case of accident. So they gave the boy $20 per month, which they figured would pay for his lunches and carfare, and which made him eligible for compensation in case of accident. After working another 3 months the company gave him $65 a month, which was later raised to $75 a month.

Investigators for the Wage and Hour Division discovered the case, ruled that this company had violated the law, and forced the company to pay the young man an additional $123. The wage and hour investigator informed the company that it would have owed the boy nothing if it had paid him no wages at all while learning, but because they paid him something they were liable. It would, indeed, be strange if this company again gave a youth an opportunity to improve himself.

DESTROYS JOBS

Case 1

A company has a salesman who travels by truck in several States. He has worked up his own route. He transports parts and accessories for automobiles from one State into the other States and then makes a certain route in selling these products. He travels from town to town and from garage to garage. He solicits the customers, makes the sale, delivers the product and collects for the article sold, and whatever is left in the truck after his trip is hauled back to his home.

This is a young man who has encouraged his employer to establish this routing, and has worked the business up on a commission basis until he receives approximately $4,500 to $5,000 a year.

Under the present interpretation of regulation 541, wage and hour law, Outside Salesmen, this man is not considered exempt under the act. His employer has notified him that he will have to limit his work to 42 hours. The salesman claims that he cannot work his route in that time; that most of his time and the best part of his time is evenings, when he can stand around the garage and see his customers when they are not as busy as during the day.

If this man is not exempt, the employer will very likely discontinue the route entirely and this young man, who is now enjoying an income of from $4,500 to $5,000 a year, will be without employment.

A CHINESE PUZZLE FOR THE BUILDING INDUSTRY

According to the interpretations of the Wage and Hour Division, the employees of a contractor engaged in building a new building, even if it is going to be used for the production of goods that will move in interstate commerce, are not subject to the provisions of the wage and hour law. This includes employees actually working on the construction project as well as office employees whose work is in connection with this particular project.

However, if a contractor is engaged in remodeling, repairing, or building an addition to an old building which is used for the production of goods that move in interstate commerce, his employees, during the time they work on that job, as well as office employees any part of whose work may be in connection with this particular job, are subject to the provisions of the law.

Apparently, if a new building is being built by a contractor for a firm who is engaged in the production of goods for commerce, and it is an entirely separate unit and not attached in any way to the old building, the employees in the office as well are not subject to the provisions of the law of the contractor working on this particular unit and his employees.

If a contractor is building a new building in another State, such of his key employees who, because of their experience and skill, are not available to him in the locality in which the building is to be erected, and who are taken from his home office across State lines to work on this project, are subject to the provisions of the law, but the employees hired in the local community where the job is located, if it is not a remodeling or repairing operation, are not subject to the provisions of the law. If it is a remodeling or repairing job, all his employees come under the provisions of the law, including those in his home office any part of whose work is in connection with the job.

DISRUPTS MUTUALLY SATISFACTORY ARRANGEMENTS BETWEEN EMPLOYEES AND EMPLOYERS

A certain firm employed three truck drivers. Because the work fluctuated a good deal, the drivers some weeks drew small checks and other weeks drew large checks. The drivers requested the employer that some method be worked out so they would be sure of a certain amount each week. They figured at 70 cents an hour, and the employer agreed to pay them $35 per week whether they worked 10 hours or 50 hours. The Wage and Hour Division ruled that during weeks the men worked up to 50 hours the employer must pay them $1.05 for all hours worked in excess of 42 per week. The result was that a system which had proved highly satisfactory to both drivers and employer had to be abolished.

AN ODDITY IN FIGURING OVERTIME

A company has a union contract under which the watchmen work 56 hours a week and receive $25 a week. This would establish an hourly rate of $0.446. However, the employer found that he did not need the watchmen on duty the full 56 hours they are permitted to work under the union contract, and has permitted them to work on 51 hours per week, but has continued to pay them $25 per week. This 42 hours at $0.446 plus 9 hours' overtime at $0.669 would equal just a little less than $25 per week.

The wage-hour inspector takes 51 hours, the hours actually worked, as the divisor, and 51 into $25 makes an hourly rate of $0.49 per hour.

Computing the straight time for 42 hours and overtime to 51 hours, the employer is assessed overtime at the rate of $2.19½ per week.

Accordingly, the employer by not requiring the employee to work the full time permitted under the union contract will be penalized and required to pay overtime.

ENCOURAGES SHARP PRACTICE BY CERTAIN EMPLOYERS

A certain wholesaler opens his establishment at 7 a. m. each weekday. One employee has made a practice of coming to the establishment considerably before the opening hour. He checks in on the time clock at various times, ranging from 6:25 to 6:35. He comes early from his own choice, not because of any request or requirement by his employer, and is not expected to perform any work before 7 a. m.

When an inspection was made of this establishment the time that this employee checked in was noted by the inspector. The employee and the employer were questioned concerning the facts. The employee was asked whether or not he ever performed any work before 7 a. m. He replied that he sometimes did perform work before 7 a. m. When asked what he did, he stated that he helped salesmen get their samples and material ready and occasionally helped to wait on a customer who called before the establishment was open. His response to questions was that he did these things "sometimes." The employer then asked him how many salesmen he helped to prepare samples and other material; he then stated "only one." He was then asked whether he did this regularly and frequently and finally admitted that he had helped this salesman a few times over a period of a number of months. Concerning his waiting on customers, it developed that this occurred most infrequently—in fact, the most definite statement that was made was a "few times."

Notwithstanding the information which was developed, the employer was required to pay for the time prior to 7 a. m. that this employee had been present after checking in, and, of course, at the time-and-a-half rate because the regular hours were 42 per week or more.

From the foregoing it is apparent that there is need for amendment of the wage and hour law for clarification and relation of the regulations thereunder in fairness to employers and employees alike.

The Federal Fair Labor Standards Act, commonly referred to as the Wage and Hour Act, has now been in effect for about 18 months. Ambiguities in the law itself and the varied interpretations of the act by the Wage and Hour Division of the United States Department of Labor have created great confusion in industry and have disrupted normal business practices to an unusual degree.

The experience of business and industry under this law illustrates clearly what happens when Congress enacts a law, general in provisions, which delegates to some Federal bureau broad power of discretion in its administration. Under such conditions business and industry find themselves governed by administrative rules and regulational rules and regulations that may be changed at the will or fancy of the Administrator.

It is clearly stated by the Wage and Hour Division's general counsel that interpretations, regulations, and definitions issued by him "except in certain specific instances where the statute directs the Administrator to make various regulations and definitions serve only to indicate the construction of the law which will guide the Administrator in the performance of his administrative duties, unless he is directed otherwise by the authoritative ruling of the courts or unless he shall subsequently decide that his prior interpretation is incorrect." Obviously the result of such an indefinite type of interpretative ruling places the average businessman in the position that he may follow these interpretations and still later find himself in violation of the law and subject to its penalties.

Business management, to properly apply the provisions of any statute by which it is to be regulated, must know defi-

nitely what the law really is and what its various provisions mean, not only today but for the future as well.

When the Fair Labor Standards Act was under consideration, and finally enacted, it was contended, and certainly assumed by everyone, that the law was for the express purpose of protecting the underprivileged and putting a floor under wages and a ceiling over hours, so that sweatshop conditions might be eliminated—an objective that should be heartily favored and approved. However, the law as it is administered goes beyond such declared purpose, and certainly it appears beyond anything that was intended by Congress.

In closing I call attention to the following colloquy which occurred in the House when the bill was under consideration in Committee of the Whole:

Mr. HARRINGTON. Mr. Chairman, the purpose of the amendment I have just offered is to exempt the many country banks throughout the Nation which are now subject to the provisions of the Fair Labor Standards Act. In most country communities the bank operates as a service establishment. Hardly ever are there more than three or four employees, and in most cases only one or two in the smaller communities.

The amendment does not exempt or exclude all banks as a group. It exempts only those banking institutions from the Fair Labor Standards Act of 1938, the greater part of whose selling or servicing is intrastate in character. Banking institutions in the large metropolitan centers are far better equipped to enable them to comply with the wage-hour law. The noncity banks of this country are far less able to employ additional help and to meet the requirements of the Wage and Hour Act with respect to the number of hours of employment of their staff members and at the same time give their local customers and farmers and other townspeople the banking service to which those individuals have become accustomed. It is those banks that will get relief from this proposal.

Mr. BARDEN of North Carolina. Mr. Chairman, will the gentleman yield?

Mr. HARRINGTON. I yield.

Mr. BARDEN of North Carolina. Does not the gentleman believe that the banks have solved this situation pretty well by moving up their closing hours, etc.?

Mr. HARRINGTON. I do not agree with the gentleman. I know that many banks in the State of Iowa in the small country communities have to strike a balance every afternoon. They have to have at least one employee stay to do the work.

Mr. BARDEN of North Carolina. But may I say to the gentleman we have heard of no bank closing in the United States in recent times, have we?

Mr. HARRINGTON. No; and I want to help them along a little further. I would like to see those banks prosper.

Mr. BARDEN of North Carolina. Does not the gentleman feel it would be better not to bring that amendment into this picture?

Mr. HARRINGTON. I think they would get along a lot better if my amendment were adopted.

Mr. MAY. Mr. Chairman, will the gentleman yield?

Mr. HARRINGTON. I yield.

Mr. MAY. Has the gentleman any figures showing the amount of compensation received by the employees of these small banks throughout the country—whether or not it is larger than the wage-hour scale anyway?

Mr. HARRINGTON. In most sections—at least in the small communities of my State—I think the ordinary bank teller or clerk gets between $75 and $110 a month. I imagine it is very much the same throughout the Middle West.

Mr. DARDEN of Virginia. Mr. Chairman, will the gentleman yield?

Mr. HARRINGTON. I yield.

Mr. DARDEN of Virginia. One of the things that has got to be guarded against, in the gentleman's amendment, is that the long hours required of the country banker are required not in order to discharge the business of banking but to accommodate the merchants beyond the actual need for accommodation. In shortening hours to get under the Wage and Hour Act the country bank in most every instance has been able to attend to its business. But the country banks as a whole are not rendering the type of service, the very long hours of service desired by the merchants, and I doubt very seriously if those long hours are justified. That is where most complaints come from—not from the bank people themselves on the ground that they cannot attend to their work, but from the merchants on the ground that the banks do not stay open long enough to make change and render other incidental service to the merchants in the small communities.

Mr. HARRINGTON. But the bank itself, of course, after the close of business, must take a balance every day. This requires overtime employment of the same people, and that is what I am trying to correct to enable them to do that without the burden of paying overtime.

Mr. DARDEN of Virginia. So far as the bank work is concerned, they can get all of their work done within the regular hours. Does not the gentleman think that is right?

Mr. HARRINGTON. Yes; I think the gentleman is right.

Mr. REES of Kansas. Mr. Chairman, will the gentleman yield?

Mr. HARRINGTON. I yield.

Mr. REES of Kansas. As a matter of fact, a number of small banks, the banks in these rather small communities, are closing on Saturday afternoons because they want to comply with the Wage and Hour Act. Is not that correct?

Mr. HARRINGTON. That is true in the State of Iowa, and I assume it is true also in the State of Kansas.

Mr. REES of Kansas. And in a great many of the States, but there is a demand that the banks stay open longer.

Mr. HARRINGTON. That is correct.

Mr. REES of Kansas. The gentleman's amendment is limited in its operation.

Mr. HARRINGTON. I limit it to those banks the greater part of whose selling or servicing is in intrastate commerce. This excludes the large banks that do an interstate business. It applies simply to the small country banks, whose business is done, in the case of 99 percent of them, within a radius of 25 miles.

Mr. REES of Kansas. That is true. The amendment would not apply to those banks engaged in interstate business where drafts go to New York and elsewhere.

Mr. HARRINGTON. This is intended to relieve those small country banks whose business is intrastate in character.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. HARRINGTON. I yield.

Mr. ARENDS. One of the reasons for the banks remaining open for only a few hours a day is because they have to close in order to keep their books and take their balances.

Mr. HARRINGTON. Yes.

Mr. ARENDS. They would like to remain open longer for the service they are rendering in these small communities.

Mr. HARRINGTON. I thank the gentleman for his contribution. He is quite correct.

Mr. CARLSON. Will the gentleman yield?

Mr. HARRINGTON. I yield to the gentleman from Kansas [Mr. CARLSON].

Mr. CARLSON. I think the gentleman has pointed out one of the places in the wage-hour law that should be amended. The banks close on Saturday afternoons in the rural communities and this is a real inconvenience to the farmers and merchants of these sections. The banks are rendering a real service and I think the gentleman's amendment should be adopted. Let us take advantage of an opportunity and correct this situation.

Mr. GEYER of California. Will the gentleman yield?

Mr. HARRINGTON. I yield to the gentleman from California.

Mr. GEYER of California. I would like to point out that these little-bank clerks get $75 a month. Now the gentleman is going to exempt them and he is going to work those people from daylight to dark.

Mr. HARRINGTON. Oh, no.

Mr. GEYER of California. Let us adopt it and maybe we will kill the whole thing.

[Here the gavel fell.]

Civil Service and Veterans' Preference—H. R. 7313

EXTENSION OF REMARKS

OF

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

Mr. BYRON. Mr. Speaker, the question of veterans' preference in civil service is one which has been debated for years. As a member of the Military Affairs Committee, I am interested in the passage of H. R. 7313 at this session of Congress.

We are voting an unprecedented amount for building and maintaining the Military Establishment, and I believe it is only fair to the ones whom we are calling into service to provide some reasonable protection for their employment after their services are no longer required in military service.

Since the establishment of the United States, all of our wars have been fought, in the main, by volunteer soldiers. This is as much of an American institution as the Bill of Rights and the Monroe Doctrine. It is fitting and proper to prepare for war in times of peace; also it is just as fitting and proper to provide for the welfare of our war veterans when we can consider their welfare in calm and peaceful times. During a war or immediately upon its termination the incentive for caring for these volunteers is lacking.

Veterans' preference as now provided by law is defective in its operation, and I believe H. R. 7313 will correct many of the ills existing. The problem of our war veterans is becoming critical. These remaining from the Spanish-American War have reached the age where they are being provided for by pension and other means. The World War veteran now averages 46 years of age, and it is becoming increasingly difficult to replace him in employment, especially in view of the

unemployment situation and new methods being developed in industry.

We are coming face to face with a problem for which we should attempt to provide an economical solution. The enactment of H. R. 7313 would insure many of our unemployed veterans being taken into Government service without any additional cost to the Government. The work coming under the supervision of civil service is necessary to maintain effective and efficient Federal administration.

My comrades of the American Legion have made a careful study of this problem, and the provisions of the proposed legislation cover many resolutions enacted by the national conventions of that organization. The members of the Legion who have made the recommendations for veterans' preference in civil service are requesting that we enact this legislation immediately. Certainly we do not want to see those who volunteered their services in times of national crisis be dependent on private or public charity. The majority of World War veterans are not interested in pensions for able-bodied men. They ask us now to give them an opportunity to put their unemployed comrades to work.

I believe by enacting this legislation we can provide a partial solution to the unemployment problem of our World War veterans and postpone indefinitely a more expensive solution. I recommend the immediate passage of H. R. 7313 as an economy measure.

It Is Not Our War

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1940

Mr. THORKELSON. Mr. Speaker, in view of the present invasion of Holland and Belgium, we may expect an ever-increasing effort by the internationalistic press to involve the United States in the present European war. This involvement may not be directed toward Europe, but may shift toward the Orient. Should this come about, let us remember that we have no interest in the Occident or the Orient, and should, for that reason, remain strictly neutral, no matter who becomes involved in war.

We have nothing to gain, but everything to lose in the present conflict. There is nothing we can save except our own country, and that cannot be saved by casting our lot with the war powers of Europe.

Let us not kid ourselves. This war is unnecessary, for had England restored part of the colonies to Germany, peace would have prevailed in Europe today. Is it logical, realizing this, that we should, in order to please English greed, engage upon destruction of lives and property? I say, if we do, God have mercy on us.

The question involved in this war is whether or not the international financiers are going to rule the world by the power of gold. England and France are fighting to maintain this power. Shall we help them to enslave ourselves to the same international exploiters? This is not a war to establish freedom, nor to save civilization. This war is fought to establish a centralized international government which is to own and control all the gold and rule the world by such power. We will not establish a better civilization. We will instead destroy the civilization we now have, for it is only in such manner that any minority can maintain its power.

I shall now quote an episode that happened on April 18, 1793, and I hope that we will use the same good sense that Washington, Jefferson, and others, used at that time:

PHILADELPHIA, *April 18, 1793.*

Memorandum of questions submitted by George Washington to his Cabinet, as to whether a proclamation of neutrality should be issued in respect to the war between France and England; how to receive the minister from France and other problems:

The posture of affairs in Europe, particularly between France and Great Britain places the United States in a delicate situation, and requires much consideration of the measures which will be proper for them to observe in the war between those powers. With a view to forming a general plan of conduct for the Executive, I have stated and enclosed sundry questions to be considered preparatory to a meeting at my house tomorrow, where I shall expect to see you at 9 o'clock to receive the result of your reflections.

Question I. Shall a proclamation issue for the purpose of preventing interference of the citizens of the United States in the war between France and Great Britain? Shall it contain a declaration of neutrality or not? What shall it contain?

(He then enumerates several other questions.)

Answer of the Cabinet:

Question I. Agreed by all that a proclamation shall issue forbidding our citizens to take part in any hostilities on the seas, with or against any of the belligerent powers and warning them against carrying to any such powers any of those articles deemed contraband according to the modern usage of nations, and enjoining them from all acts and proceedings inconsistent with the duties of a friendly nation toward those at war.

Let us observe these same principles, and peace will prevail in the United States. It is the will of the people, and it is time for Congress to pay attention to the peace of this Nation. If we Members fail to do that, we may expect internal strife or revolution, for the people of the United States are not going to jeopardize the life of this Republic.

Cassius C. Dowell

MEMORIAL ADDRESS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 24, 1940

On the life, character, and public service of Hon. CASSIUS C. DOWELL, late a Representative from the State of Iowa

Mr. SABATH. Mr. Speaker, my knowledge of the late Mr. DOWELL amounted to little more than what I saw of him in the public service, but that was enough, and of such character, as to reveal the real gentleman, for it went beyond what occurred on the floor of this Chamber, and embraced years of fairly close intercourse in the work of committees.

The records of the Congress bear witness that our late friend and colleague was an indefatigable and intelligent worker, who discussed elaborately every major question of the day. To those who only heard him it was a constant question how he could find time and command the strength necessary for the exhaustive work he did, for it showed the widest observation, the closest study, and the most thorough investigation.

Our friend practiced none of the arts of oratory and he made no effort at display of any kind, but his speeches were models of logic and conservatism. To those not interested in the subject he was discussing, his speeches sometimes appeared dry, formal, uninteresting, and hard to follow. For this reason they frequently attracted less attention than they deserved; but in the committee room, where there was less formality, as a rule, no previous preparation of what was to be said, his discussions were of the most entertaining and instructive character.

I served more than 21 years in this House with our late colleague; and although we were of different political faiths, I never heard him say a mean, unkind, or contemptuous word against a personal or political opponent. He was tolerant and in every way respected the rights of others.

I well remember this good man's interest in the subject of public highways. At the close of Republican control of the House in 1930 Mr. DOWELL had risen to the chairmanship of the Committee on Roads, which committee's records bear his enduring imprint. If I remember correctly, Mr. DOWELL became a member of that committee when it was created by the House. The great system of highways in this country is largely a monument to the sagacity and assiduity of our late friend.

Mr. DOWELL was well equipped by temperament, education, and experience for outstanding service in this body. He graduated from Drake University in 1887. He was a member

of the Iowa Legislature 14 years; elected to the Congress in 1915; and served continuously from that time, excluding 2 years, until his unfortunate passing.

It will stand forever to the credit of Iowa that she has contributed many able sons, including this honorable deceased, to help make the Congress of the United States, for they have left a record of which their families, their friends, their State, and the Nation may always be justifiably proud.

Born of Freedom—To Die of Taxation?

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ADDRESS BY DR. ERVIN T. BROWN

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Ervin T. Brown, treasurer of Rollins College, Winter Park, Fla., delivered before the Association of University and College Business Officers, at the University of Oklahoma, Norman, Okla., April 9, 1940, and Southern Association of College and University Business Officers, at the Florida State College for Women, Tallahassee, Fla., April 12, 1940:

Mr. President, without attempting to pose either as a prophet or a historian, I can assert without fear of contradiction that the past decade has been a most trying one for private colleges and universities. You, the treasurers and business managers, know that every institution in the land, from the richest to the most obscure, has been confronted with decreasing income from endowment funds, shrinkage in gifts from philanthropists, increased demands for scholarship aid for deserving students. You know all too well the expedients which have been adopted to meet these conditions. You know that some institutions have raised their rates only to find that they had less money in the end because of reduced enrollment; that faculty salaries have been reduced, in some cases below the level of decent subsistence; that buildings have been allowed to decay without proper rehabilitation; that faculty promotions have been postponed or forgotten; that hundreds of the most brilliant students have been forced to leave college and embark upon careers in the W. P. A. or the C. C. C.

Everywhere there is a hue and cry for money for buildings, for endowment, for scholarships. The rich and powerful institutions, who once selected only those students they wished to accept from a long waiting list, now have field agents scurrying about the country visiting every nook and hamlet. No longer are there merely athletic coaches scouting for football material, but dignified deans and even presidents are venturing forth on "lecture tours" to centers where prospective students are alleged to be lurking. Any student having special ability can virtually put himself on the bargain counter and await the best scholarship offer from dozens of institutions.

The standard criterion of stability of a private institution has traditionally been the size of its endowment fund. But this has been of little help during the past decade, for, largely due to political manipulation, yields have dropped from 25 percent to 50 percent or more. One of our largest and richest universities reports a drop in average yield on its various funds from 5.76 percent in 1929–30 to an estimated 3.73 percent in 1938–39, a decrease of over 35 percent. Applying this to a moderate-sized institution, having an endowment fund of $10,000,000, it means an annual loss of income of $203,000—and this sum of money will pay a large corps of professors at current salaries to teach a small army of students.

Another factor which makes the position of the private colleges and universities more complex is the competition from the State-supported institutions. True, most of these have had serious financial problems during the past decade. But, on the other hand, in times of stress, more students, relatively speaking, attend State institutions where tuition is free. Also, the State-supported institutions have been the beneficiaries of a benevolent Federal Government and now have their campuses liberally dotted with monuments to the prestige of their Senators and Congressmen. In contrast with the private institutions, this has given the public institutions a semblance of prosperity—even if their professors were meagerly paid or subject to the whims of political opinion.

In a study[1] recently made by the John Price Jones Corporation, of New York City, covering the period 1920 to 1938, it was found that in the 9 years of depression four great universities—Harvard, Yale, Chicago, and Columbia—received 21.13 percent more money through gifts and bequests than they did during the "golden twenties."

On the other hand, 45 smaller institutions received 23.86 percent less during the depression years. Here are the comparative statistics:

Received from gifts and bequests	9 years of prosperity	9 years of depression
Harvard, Yale, Chicago, Columbia	$196,498,644	$238,016,531
45 smaller institutions	213,658,830	162,684,656

Is this but an illustration of the biblical proverb, "To him that hath it shall be given"—and does it mean that the rich are getting richer and the poor poorer? If it means that, why is Chicago University, for example, planning an intensive campaign for many millions more in endowment? Why is President Hutchins writing propaganda articles in the Saturday Evening Post to pave the way for this effort, as well as pointing out much more clearly than is done in the above paragraphs the unfortunate dilemma of the privately endowed institutions? Have the American people ceased to believe in the desirability of privately endowed institutions and is this the beginning of the end of them? Quoting again from Trends in Educational Finance, 1920–38, we learn:

"Since 1929 many an institution has been physically starving. In 1934 it was authoritatively estimated that there was a piled-up demand of $900,000,000 of building needs in the colleges and universities of America. The potential demand for rehabilitation of out-worn buildings, for new educational equipment, and for new dormitories, student unions, auditoriums, and class-room buildings is conservatively estimated today at $1,000,000,000."

But these are astronomical figures. Before trying to arrive at any conclusions, let us consider something more concrete and understandable. Rollins College, Winter Park, Fla., of which I have the honor to be treasurer, 15 years ago had net assets, including land, buildings, equipment, and endowment, of only $802,000 and has been attempting to expand into a first-class, small, liberal arts college. To do this, considerable sums of money had to be raised to operate the college, to build adequate and modern buildings and supply suitable equipment, and to build up an endowment fund as well. We have been "on the firing line" during this whole period, and are consequently much more closely attuned to the economic cycle of prosperity and depression than many other more wealthy institutions. Following is a record, in round numbers, of all gifts and bequests to Rollins College, beginning with the fiscal year ending June 30, 1929:

Year ending June 30:	
1929	$250,000
1930	816,000
1931	171,000
1932	220,000
1933	267,000
1934	85,000
1935	94,000
1936	69,000
1937	84,000
1938	67,000

Roughly speaking, something over 60 percent of the above funds have gone into permanent equipment, buildings, and endowment, while the remainder has been used to keep the college in operation, pay professors' salaries, grant scholarships to worthy students, et cetera.

But at the present moment Rollins College vitally needs $3,000,000, $1,500,000 to replace obsolete buildings, purchase essential equipment, and meet its obligations at present and in the near future; $1,500,000 more for endowment, which would largely eliminate the need of annually "passing the hat" to avoid a deficit.

Unlike some of the older institutions, Rollins does not have a rich and powerful alumni body to supply its needs, consequently it has to depend upon the generosity of philanthropic-minded people who have no formal or sentimental ties with the college. Thus, anything affecting the economic status of this group is immediately reflected in gifts—or rather the lack of them—to Rollins. In the 6-year period beginning July 1, 1932, and ending June 30, 1938, Rollins College did not receive a single major gift to erect a building. We were, however, fortunate enough to receive a substantial bequest in 1933 which had been written in a will almost 30 years before.

Why, then, does a generous public not respond and meet the needs of Rollins College? From constant study of this problem, I am convinced that the will to help is much stronger now than it was 10 years ago—that then the program of Rollins College was an experiment, and now it is an experiment that has proved itself and deserves support.

Scores of reasons could be given as to why Rollins and other similar colleges and universities are facing this predicament, but the basic, fundamental reason was succinctly expressed by the celebrated jurist, John Marshall, over 100 years ago, when he said:

"The power to tax is the power to destroy."

True, private colleges and universities are exempt from direct taxes, but a far more insidious form of taxation is gnawing at their very vitals. Those who would be generous, those who have formerly been more than generous, are being taxed so that their incomes do not permit major gifts, especially if they wish to retain their estates

[1] Trends in Educational Finance, 1920–38.

intact, retain control of their business enterprises, or provide for those dependent upon them. Thus, the source of income is being stifled and threatened with permanent extinction over the coming years. A glance at the total Federal income taxes, both regular and surtaxes, on large incomes in 1931 and in 1939 will show this is no idle assumption:

Net income	Approximate total of Federal income taxes, including surtaxes	
	1931	1939
$100,000	$15,660	$34,000
$200,000	39,660	97,000
$300,000	63,660	164,000
$500,000	111,660	306,000
$1,000,000	231,660	681,000
$2,000,000	471,660	1,451,000

The proponents of the soak-the-rich theory will at once say that notwithstanding the high rates now in effect anyone who has so large an income as anyone in the classes tabulated above still has as much money left as any person should need. But it is not quite as simple as that. In addition to Federal and State inheritance and estate taxes (which have been known to result in virtual confiscation of some estates) nearly all of the States also levy an income tax. Gov. Herbert Lehman, of New York State, summed up the situation succinctly in writing to Senator PAT HARRISON, chairman of the Senate Finance Committee, under date of March 18, 1938, when he said:

"But when I tell you that in two States the combined Federal and State rate is 94 percent of all income above a certain amount and in another 90 percent above $12,000 you will see the situation is extremely serious."

At first it may be difficult to reconcile this situation with the fact that gifts to the four large institutions mentioned above—Harvard, Yale, Columbia, Chicago—have been larger during the past 9 depression years than in the preceding 9 years of prosperity. But the thinkers who have analyzed the situation—as President Hutchins, of Chicago, has done—know that the giving of the past few years has not been sound. Wealthy individuals have faced the dilemma of seeing their estates as well as their incomes confiscated by the tax gatherers and are breaking up their estates, and many of them have already made their last gift. Hence there is the rush of institutions to "get on the band wagon" and promote financial campaigns while there are still private fortunes to be distributed. The high tax rates and tendencies have been used as "ammunition" by harassed college and university officials to induce wealthy individuals to make gifts.

In 1936, Hon. T. W. Phillips, Jr., of Butler, Pa., received such a suggestion from the president of a university. Mr. Phillips has had a distinguished career as a public-spirited citizen, successful businessman, and public official. He has the faculty of being too far advanced in thought for most of his contemporaries, but has lived to see some of the sound ideas he has advanced and which were at first ridiculed, later applauded by the masses. I am violating no confidence in quoting from the letter Mr. Phillips received, and his reply, since it was inserted as an advertisement by Mr. Phillips in the Pittsburgh Post-Gazette, December 28, 1936, and later published in pamphlet form.

BUTLER, PA., *December 22, 1936.*

———— ————,

President, ——— *University.*

DEAR DOCTOR: A short time ago I received a letter from you soliciting a contribution, in which you stated:

"I call your attention to a law, passed by Congress last year, concerning the paying of income taxes. Condensed, it is as follows:

"Income-tax regulations make it possible for a person to give up 15 percent of his income to educational and charitable organizations, tax-free, and 5 percent of a corporation's income, if given to such enterprises, is tax-exempt. For example, if a married man whose net income is $70,000 makes a contribution of $10,000 to a college on or before December 31, 1936, the gift will cost him but $6,135. Uncle Sam gives up his claim on this man for $3,865. To put it another way, Uncle Sam offers to give $1 for each $2 the donor gives. This rule applies to gifts of $150 on a $1,000 net income, and above.

"Under this law, men, without added cost, can designate a part of the tax they are compelled to pay, to ——— University. Such a gift does not rob the Government * * *."

I am especially interested in the educational institution which you represent and am solicitous of the welfare of all institutions, organizations, and associations created to improve social conditions. Therefore, it is a matter of extreme regret and keen disappointment to me that in your eagerness to make unjust and discriminatory tax laws serve temporarily as a vicious instrument in securing funds for a worthy cause, you completely overlook the opportunity to perform a service far greater than securing contributions, and which in the long run would redound to the benefit of all institutions dependent upon individual contributors. All responsible heads of institutions, writing letters similar to that which you address to me, should as a matter of duty to the institution represented, as well as decorum to the person solicited, express their abhorrence of a system of taxation that destroys initiative, invites governmental extravagance, involves ever-increasing taxation, lays the groundwork for a totalitarian state, and sounds the death knell of the very work in which they are engaged.

You may be interested to know why letters like yours often do and always should fall on stone-deaf or near-deaf ears. In large and heretofore increasing numbers the makers and possessors of fortunes were generous public benefactors, evidenced by numerous churches, cathedrals, colleges, and charities, built, endowed, and in a large measure supported by them. During the last 20 years the masses, led by the radical press and by swarms of vociferous politicians, pulpiteers, and professors, have been more than advocating the crippling—they are demanding the destruction—of that element whose ingenuity, initiative, progressiveness, and aggressiveness made us a great Nation.

This destruction can be accomplished by any one of three methods: By wholesale murder, by confiscation of capital, or by high and discriminatory taxes. The latter method has been chosen in our country, although it may take two generations to accomplish that which could be done in a day by either of the other methods. Already inheritance taxes are sufficiently high to prevent the owner of a large business from passing it on to his heirs, unless he keeps his affairs too liquid for efficient operation.

The primary purpose of excessively high taxes is not the securing of sufficient funds to administer the legitimate affairs of government economically. On the contrary, the very taxes which you in your letter condone, or rather tacitly commend, are punitive. The Government levies destructive taxes and then holds out the 15-percent exemption from taxable income, if given to educational and charitable institutions, as a kind of bait in order to induce the individual to voluntarily still further reduce his capital, deplete his assets, and rob his heirs. What does this mean? Where does it lead? The class of people who have built colleges, orphanages, and hospitals throughout the length and breadth of the land, and to whom millions now living owe, and many more millions yet unborn will owe, a debt of gratitude, face destruction. Yes, we will continue to have with us many big fortunes of the new rich, made by gambling, racketeering, and grafting. But the conservative class, the promoters of the fine arts, the custodians of culture, the stabilizers of civilization are rapidly being set apart for annihilation.

All this would be true if we had only the Federal taxes which you mention, but it might be said that it is doubly true when we take into consideration local and State taxes. There have been cases in the past—and at the rate we are going, there will be many more in the future—where after State and Federal inheritance taxes have been paid little or nothing remains for the heirs.

"But if any provide not for his own, and especially for those of his own house, he hath denied the faith and is worse than an infidel."

Evidently there is a question under present conditions as to how far you have the moral right to go in soliciting funds from those having heirs, just as it is a question as to how far, if at all, they have the moral right to accede to your request. Confiscatory taxes completely relieve the heretofore generous donor from responsibility of all but nominal support of college, church, and charity, but unfortunately they deny him the pleasure of participating in a large way in benevolent work.

When the goose is killed it stops laying golden eggs. When the seed corn is destroyed there can be no crop. Therefore, unless men like you, who head educational institutions, in conjunction with those interested in hospitals, the Y. M. C. A., and the Red Cross, sponsor a movement and make it a successful movement to prevent a continuation of the improper use of the power of taxation, and substitute reasonable taxation, equitable taxation, general taxation in place of punitive taxation, then let me tell you that you are on your last round-up. The future solicitor will be compelled to make his appeal for dollar and dime contributions.

If you know of any way, other than by withholding of financial support, that would induce men and women in your position to assume leadership in advocating tax revision and economical government, I wish you would tell me.

Cordially and sincerely yours,

T. W. PHILLIPS, Jr.

The logic and reason in Mr. Phillips' letter cannot be dismissed with a mere wave of the hand. It is a challenge to every man, woman, and child who believes in private schools, colleges, universities, hospitals, orphanages—and the myriad number of similar agencies which hitherto have been the product of the noblest impulses felt by successful men and women—the desire to share their success with the less fortunate.

Another and more vital point of indirect Federal taxation of charitable and educational institutions is the taxing of all gifts from income, except the 15 percent specific exemption. Consider the logic of the situation. Suppose that Blank Orphanage has been founded and is being maintained by private charity. In recognition of its humanitarian service, the State has granted it a charter exempting it from all forms of State taxation. Let us suppose Mr. Phillips or any other successful businessman wishes to make a large contribution to Blank Orphanage. The Federal Government says, in effect:

"If you give only 15 percent of your income, we shall exempt the gift from taxation. If you give more, you will be taxed on that portion in excess of 15 percent."

I do not profess to pose as an economist, tax expert, or lawyer. Yet if this is not taxing charity at its very source—taking bread

from the mouths of orphans—I do not know night from day. It is an invasion of the rights of a soverign State more flagrant than others recorded in history over which destructive wars have been fought.

Consider a moment. A charitable or educational institution, chartered by a sovereign State and exempted from taxation because of its service to the State, is the highest expression of altruism—the nearest approach to the Golden Rule in action—that modern civilization affords. Not a penny from its budget can go into the pockets of any stockholder. On the contrary, the trustees who manage its affairs serve without a cent of salary. It exists for one purpose, and for one purpose alone, and that is to help the unfortunate or the ambitious, and thus promote the welfare of the community, the State, and the Nation. And yet the Federal tax gatherers, in their predatory search for funds, will not permit individuals to give their incomes to such an institution—beyond a certain limited amount—without taxing the donor for the privilege.

In his inaugural address, over 139 years ago, Thomas Jefferson summed up the function of good government in the following statement, which has become a classic quotation, especially in political candidates' speeches, but not in their practices:

"A wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned—this is the sum of good government."

Seven years ago this philosophy was boldly thrown out of the window. We learned to our dismay that our troubles were caused by not spending enough money; that thrift and not extravagance was the root of all our worries; that we could spend our way to prosperity. Well, we have tried it. In the 144½ years before the beginning of the present administration the Federal Government spent $112,203,367,065. In the 8 years of the present administration (taking Budget estimates presented to Congress by the President for the fiscal years ending June 30, 1940, and June 30, 1941) we shall have spent $65,628,526,692—or 58 percent as much as it has cost to operate the Federal Government for the preceding 144½ years, including the cost of the Civil War and the World War.

Although business is taxed to the point where, in 1938, according to authentic statistics prepared by the American Federation of Investors, covering the operations of 163 of the biggest corporations in American industry, 61.6 percent of the net income of these corporations went for taxes and only 38.4 percent went to the stockholders. These same corporations paid taxes amounting to $576 per employee. How does that square with Thomas Jefferson's statement that "a wise and frugal government * * * shall not take from the mouth of labor the bread that it has earned * * *"?

And even these confiscatory taxes, plus the soak-the-rich taxes on large incomes, was far from enough. By the most conservative calculation, in the 8 years ending June 30, 1941, we shall have piled up an additional national debt of at least twenty-five billions of dollars for our children to pay—or more likely repudiate by some sleight-of-hand performance.

This issue transcends all political parties. This is no time to indulge in tirades against any individual or group. I hold no brief for those buccaneers of business who have built their fortunes by exploiting the helpless. This small minority should be dealt with as racketeers. We must not allow these minor details to warp our vision; but, the moment any government oversteps the bounds of a regulating agency "which shall restrain free men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement," that government has taken the first step toward socialism, which ultimately means absolute dictatorship.

I have no quarrel with those who honestly believe we would be better off under such a system. I would only suggest they spend a year or so in one of the countries which has made such wonderful strides in this direction—Germany or Russia—and then give us the benefit of their advice. You may say: "It can't happen here." Don't be too sure. In the past few years, millions have come to look upon the powers that be in Washington as Santa Claus, the giver of all good things, the inexhaustible fountain of special gifts and favors. If the day should arrive that the majority of the citizens of these United States should look upon the Government as their master and not as their servant—our representative republican form of government will have become a thing of the past, and though Congress and the Supreme Court may exist as "rubber stamps," we shall have an absolute dictatorship in fact if not in name. And, as every thinking man knows, dictators can only perpetuate themselves in power so long as they give bread and circuses to the multitudes, which means until the national wealth has been dissipated, and then chaos.

Please do not think me an alarmist. This change will not come overnight. The United States is the richest and most powerful Nation history has ever produced, and, in the parlance of the prize ring "can take a lot of punishment." As Mr. Phillips pointed out in his letter to the university president, high and discriminatory taxation may be very slow, but it is just as sure a method of bringing about a new social order as wholesale murder and the confiscation of capital, which has brought such swift results in Germany and Russia, and where the citizens have become serfs and not free men.

But what is to be done about this situation? Specifically, what can the treasurers and business officers of the private colleges and universities do about it?

If our private institutions of higher education have any right to exist at all, they should be looked to for leadership in such a crisis. Regardless of party, sect, creed, or color, they should, in general, stand for:

"A wise and frugal government which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement."

Under such a philosophy of individual liberty all such institutions were born, and when it passes all such institutions will die—some swiftly, some slowly, but nonetheless surely.

But it is not enough to stand for a general principle. The time has come for action. I believe that every treasurer and business manager of our private institutions of higher learning, every college and university president, every trustee, every donor, every alumnus, every person interested in or benefiting from the work of any private educational or charitable organization; every one who believes in a free church—that all of these millions should unite under the leadership of the executive heads of our private colleges and universities and sponsor an immediate movement, and make it a successful movement to do two things:

1. Replace punitive and confiscatory taxation with reasonable taxation, equitable taxation, more general taxation.

2. Repeal the present 15-percent tax-exempt provision for charitable gifts in the Federal income-tax law and make all such gifts exempt from Federal income taxes.

It is high time we came out of our cloistered walls and dealt with causes instead of effects; that we cease to use unjust and discriminatory tax laws to pry contributions from those who would be most generous if given the opportunity.

If the treasurers and business offices of the private colleges and universities will accept the responsibility for leading this movement—and it is a grave responsibility—it can and will be successful. But inert millions of voters must become dynamic—yes, even militant—before their voices will be heard in legislative and congressional halls. But once aroused they can win, for no "ism" or schism, no political machine, or combination of selfish interests, can ignore them, let alone fight them.

Mr. President, there is nothing more to add. We must tackle this colossal task as a unit and win. To do less would prove that we are unworthy of our heritage. We dare not sit supinely by and expect our descendants on some distant day to point with pride to a granite shaft erected as a memorial to our once splendid private institutions, on which is engraved "Born of freedom—died of taxation!"

My Mother—A Prayer

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

PRAYER BY TOM DILLON

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[Extract from CONGRESSIONAL RECORD, May 16, 1914]

MY MOTHER—A PRAYER

(By Tom Dillon)

For the body you gave me, the bone and the sinew, the heart, and the brain that are yours, my mother, I thank you. I thank you for the light in my eyes, the blood in my veins, for my speech, for my life, for my being. All that I am is from you who bore me.

For all the love that you gave me, unmeasured from the beginning, my mother, I thank you. I thank you for the hand that led me, the voice that directed me, the breast that nestled me, the arm that shielded me, the lap that rested me. All that I am is by you, who nursed me.

For your smile in the morning and your kiss at night, my mother, I thank you. I thank you for the tears you shed over me, the songs that you sung to me, the prayers you said for me, for your vigils and ministerings. All that I am is by you, who reared me.

For the faith you had in me, the hope you had for me, for your trust and your pride, my mother, I thank you. I thank you for your praise and your chiding, for the justice you bred into me, and the honor you made mine. All that I am you taught me.

For the sore travail that I caused you, for the visions and despairs, my mother, forgive me. Forgive me the peril I brought you to, the sobs and the moans I wrung from you, and for the strength I took from you, mother, forgive me.

For the fears I gave you, for the alarms and the dreads, my mother, forgive me. Forgive me the joys I deprived you, the toils I made for you, for the hours, the days, and the years I claimed from you, mother, forgive me.

For the times that I hurt you, the times I had no smile for you, the caresses I did not give you, my mother, forgive me. Forgive me for my angers and revolts, for my deceits and evasions, for all the pangs and sorrows I brought to you, mother, forgive me.

For your lessons I did not learn, for your wishes I did not heed, for the counsels I did not obey, my mother, forgive me. Forgive me my pride in my youth and my glory in my strength that forgot the holiness of your years and the veneration of your weakness, for my neglect, for my selfishness, for all the great debts of your love that I have not paid, mother, sweet mother, forgive me.

And may the peace and the joy that passeth all understanding be yours, my mother, forever and ever. Amen.

Emmett Marshall Owen

MEMORIAL ADDRESS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. EMMETT MARSHALL OWEN, late a Representative from the State of Georgia

Mr. SABATH. Mr. Speaker, it is not a platitude or trite eulogy to say that the subject of our encomiums was a remarkable man.

Mr. OWEN was an affable, courtly gentleman of the old school; tolerant, understanding; ever exhibiting a thorough respect for the rights of others.

I am sure that nobody who served with our honorable dead in this Hall failed to admire his inordinate modesty and self-effaciveness, especially when it was so well known that he was well equipped educationally and temperamentally to engage in either rough-and-tumble or placid debate in any forum.

Mr. OWEN's life, character, and public service have been so thoroughly covered by others who knew him better than I that I could not do much more than repeat in different form that which has been so truthfully and beautifully expressed.

Mr. OWEN served 4 years in the Georgia Legislature, 24 years as a solicitor for various Georgia judicial districts, and almost 6 years as a Member of the Congress. Such long service in elective offices is indeed a fitting testimonial for any man.

Let us believe, in spite of repeated utterances of irresponsible critics of the membership of the Congress and others in public life, that continuous public service, with a persistent and relentless calcium light of publicity beating down upon public servants, is unmistakable evidence of good character and true merit.

This good man leaves a memory to be cherished and honored among all who knew him, and especially among us who had the privilege of serving with him in high position in a mercurial, difficult era that exacts much strength of mind and body.

Science and War

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

ADDRESS BY THE PRESIDENT TO EIGHTH AMERICAN SCIENTIFIC CONGRESS

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address of the President of the United States to the Eighth American Scientific Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow servants of the Americas, all of the men and women of this Pan American Scientific Congress have come here tonight with heavy hearts. During the past few years we have seen event follow event, each and every one of them a shock to our hopes for the peaceful development of modern civilization. This very day three more independent nations have been cruelly invaded by force of arms.

In some human affairs the mind of man grows accustomed to unusual actions if they are oft repeated. This is not so in the world happenings of today—and I am proud that it is not so. I am glad that we are shocked and angered by the tragic news from Belgium and The Netherlands and Luxemburg.

The overwhelmingly greater part of the population of the world abhors conquest and war and bloodshed—prays that the hand of neighbor shall not be lifted against neighbor. The whole world has seen attack follow threat on so many occasions and in so many places during these later years. We have come, therefore, to the reluctant conclusion that a continuance of these processes of arms presents a definite challenge to the continuation of the type of civilization to which all of us in the three Americas have been accustomed.

OLD WORLD AT WAR

I use this Pan American Scientific Congress as one of many similar illustrations. It is no accident that this meeting takes place in the New World. In fact, this hemisphere is now almost the only part of the earth in which such a gathering can take place. Elsewhere war or politics has compelled teachers and scholars to leave their great calling and to become agents of destruction.

We and most people in the world believe in a civilization of construction and not of destruction. We and most people in the world believe that men and women have an inherent right to hew out the patterns of their own individual lives, just so long as they as individuals do not harm their fellow beings. We call this by many synonymous terms—individual liberty, civil liberty, democracy.

Until now we permit ourselves by common consent to search for truth, to teach the truth as we see it—and by learning a little here and a little there, and teaching a little here and a little there, to allow the normal processes of truth to keep growing for the well-being of our fellow men. In our search and in our teaching we are a part of a great adventure—an exciting adventure—which gives to us a larger satisfaction even than did the adventure of settling the Americas give to our founding fathers. We feel that we are building human progress by conquering disease and poverty and discomfort, and by improving science and culture, removing one by one the cruelty, the crudity, and the barbarism of less civilized eras.

MINDS REGIMENTED

In contrast, in other parts of the world, teachers and scholars are not permitted to search for truth lest the truth, when made known, might not suit the designs of their masters. Too often they are not allowed to teach the truth as they see it, for truth might make men free. They become objects of suspicion if they speak openly, if they show an interest in new truth, for their very tongues and minds are supposed to be mobilized for other ends.

This has not happened in the New World. God willing, it shall not happen in the New World.

At the Pan American Conference at Buenos Aires, and again at Lima, we discussed a dim and unpleasant possibility. We feared that other continents might become so involved in wars brought on by the school of destruction that the Americas might have to become the guardian of western culture, the protector of Christian civilization.

In these days it was merely a fear. Today the fear has become a fact.

A LEGACY TO GUARD

The inheritance which we had hoped to share with every nation in the world is, for the moment, left largely in our keeping; and it is our compelling duty to guard and enrich that legacy, to preserve it for a world which must be reborn from the ashes of the present disaster.

Today we know that until recent weeks too many citizens of the American republics believed themselves wholly safe—physically, and economically, and socially—from the impact of the attacks on civilization which are in progress elsewhere. Perhaps this mistaken idea was based on the false teaching of geography—the thought that a distance of several thousand miles from a war-torn Europe gave to us some form of mystic immunity which could never be violated.

Yet, speaking in terms of timetables, in terms of the moving of men and guns and planes and bombs, every acre—every hectare—of the Americas from the Arctic to the Antarctic is closer to the homes of modern conquerors and the scenes of attacks in Europe than was the case in historic efforts to dominate the world in bygone centuries. From the point of view of conquests, it is a shorter distance from the center of Europe to Santiago de Chile than it was for the chariots of Alexander to roll from Macedonia to Persia. In modern terms it is a shorter distance from Europe to San Francisco than it was for the ships and legions of Caesar to move from Rome to Spain or Britain. Today it is 4 or 5 hours from the continent of Africa to the continent of South America, where it was 4 or 5 weeks for the armies of Napoleon to move from Paris to Rome or Paris to Poland.

INVENTIONS MISUSED

You who are scientists may be told that you are responsible because of the processes of invention for the annihilation of time

and space, but I assure you that it is not the scientists of the world who are responsible, because the objectives which you have had have looked toward closer and more peaceful relations between all nations through the spirit of cooperation and the interchange of knowledge. What has come about has been caused solely by those who would use, and are using, your inventions of peace in a wholly different cause—those who seek to dominate hundreds of millions of people in vast continental areas—those who, if successful in that aim will, we must now admit, enlarge their wild dream to encompass every human being and every mile of the earth's surface.

The great achievements of science and even of art can be used to destroy as well as create; they are only instruments by which men try to do the things they most want to do. If death is desired, science can do that. If a full life is sought, science can do that also. Happily for us that question is solved—for in the New World we live for each other and in the service of a Christian faith.

ISSUE FOR AMERICAS

Is this solution—our solution—permanent or safe if it is solved for us alone? That, it seems to me, is the most immediate issue that the Americas face. Can we continue our peaceful construction if all the other continents embrace by preference or by compulsion a wholly different principle of life?

Surely it is time for our republics to spread that problem before us in the cold light of day, to analyze it, to ask questions, to demand answers, to use every knowledge, every science we possess, to apply common sense, and especially to act with unanimity and singleness of purpose.

I am a pacifist. You, my fellow citizens of 21 American republics, are pacifists.

But I believe that by overwhelming majorities you and I, in the long run and if it be necessary, will act together to protect and defend by every means our science, our culture, our freedom, and our civilization.

A Party To Be Trusted

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SECRETARY WALLACE BEFORE IOWA DEMOCRATIC STATE CONVENTION

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. Henry A. Wallace, Secretary of Agriculture, before the Iowa Democratic State Convention at Des Moines, Iowa, on May 11, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This convention—this Iowa Democratic convention—is a challenge and an inspiration.

A challenge because it gives the Democratic Party the opportunity to show the American people the safe and sane road to travel for the years to come.

An inspiration because it personifies 7 years of national accomplishment under the New Deal.

Time blurs many things, but it cannot wipe out recollection of the misery which Republican mismanagement, indecision, and defeatism brought to the American people in the early thirties.

Neither can it blur the memories of the multitudes who were hungry in the cities, of the farmers who were forced off their farms, of the bank depositors who lost their money, of the businessmen who went bankrupt. For millions of men and women it cannot blur the memory of the paralyzing fear that gripped their hearts.

The American people remember how in that hour of need there appeared a man of vision, wisdom, and courage; a man who knew the road and could steer a straightforward course; a man who loved the humble and weak as well as the thrifty and capable; a man of strength who could face and conquer difficulties which to most men seem unconquerable.

The country cannot forget the tragic need of 8 years ago. Nor can it forget the return of hope and then the determination and confidence that were the gift and are the continuing achievement of Franklin D. Roosevelt.

Calm of voice and clear of eye, this man gave new heart to a faltering people. Fearless and tireless, he took the lead in restoring our sacred rights, in rebuilding our well-loved American institutions, in spreading comfort and happiness where there had been hunger and want.

The American people got over their panic. They rejected the "defeatism" of the Republican regime. They joined forces with a Democratic administration, which put through a far-reaching program of reconstruction and reform.

Placing the guarantee of the Government itself behind the safety of the banks, we have reassured millions of depositors. The crash of failing banks is no longer heard.

Setting up machinery to enforce new standards of financial honesty, we have given back to investors a confidence they had lost.

Establishing a long-needed system of social security, we have brought protection to the worker against unemployment and old age.

We have taken action to conserve our natural resources, which were fast disappearing through exploitation and neglect. Thus we have saved the fundamental basis of our wealth.

We have established a system of economic democracy on the farm, and have given our farmers at last a chance to work together to achieve equality.

Acting to assure fair standards for labor, we have outlawed the sweatshop and have begun to curb the labor spy.

We have reduced the interest burden on the farm and on the home. The old deal stands for high interest rates. The New Deal stands for low interest rates.

By spreading purchasing power to the roots of our economic life we have reopened markets and brought thousands of business concerns out of the red. Better business brought more jobs and higher wages to millions.

We have shown all the world that as a nation we know how to be a friend. Our good-neighbor policy was beginning to thaw out the frozen channels of international trade when this tragic war came on.

We have worked actively for peace. We have forbidden our ships to enter the troubled waters of Europe. We have kept our Nation out of war.

But friendly as we are, we know we must be watchful. We have made a start toward fortifying this Western Hemisphere as an impregnable citadel of democracy.

More important than all these accomplishments, the New Deal has restored the American spirit to the American people.

All this has been done in the last 7 years. For farmers, for labor, for business—for the whole American people—the New Deal has been an honest deal.

But the old deal, which wants to come back to power, is a double deal. There are two decks of cards, and you have to look close to see which deck is being dealt.

Here are some examples of what I mean. When the Republican bosses want to lure the Midwest vote, they deal a card out of one pack. They select a youthful Governor from Minnesota to be their keynote speaker. That will help them to put up a front. But the card that really counts isn't dealt from that pack at all. The card that really counts is the selection of Mr. Ernest T. Weir, one of the potentates of the Republican Old Guard, of Pennsylvania, to raise the money. Mr. Weir will get the money from his Old Guard friends. And all of us know that the men who put up the money are the men who will call the tune.

Here is another example. One of the candidates for the Republican nomination is Mr. Frank Gannett, who among other things publishes a farm paper that circulates in the Northeast. Mr. Gannett's farm paper on March 30 attacked the farm program on the ground that it favored the farmers of the Middle West. His paper said that feed prices were too high for the eastern farmers to pay. But what did Mr. Gannett himself tell the farmers of the Middle West 6 days later? In a speech in Nebraska he reached for a card in the other pack. Farm prices, he declared, were much too low and should immediately be raised.

Mr. Gannett's tactics are typical Republican tactics, always telling the farmers of one section that the farmers of some other section are getting the best of them, always trying to set group against group. By dividing the country against itself, the Old Guard hopes to conquer.

But the Republican who has more ability than anyone else in dealing from two decks of marked cards at the same time is Thomas E. Dewey, of New York. He showed his ability as a sleight-of-hand expert in taking two directly opposite stands on foreign policy. He made a speech in New York City on January 20 which seemed to place him squarely behind a policy of participation in world affairs. That was a card out of one pack. But when he came out to the Middle West, he didn't deal that card. When he spoke in Milwaukee on March 29, he dealt an isolationist card. So you can take your choice as to which card you think he really means to play.

Then, just a week ago today, Mr. Dewey came out to Marshalltown, Iowa, and used his two decks of cards to play both sides of the farm issue. He said he was for parity prices for farmers, reasonable crop loans, soil conservation, submarginal land purchase, encouragement of cooperatives, use of agricultural products in industry, and the American market for the American farmer. This sounds fine. It sounds as if Mr. Dewey is for absolutely everything we have been doing during the past 7 years. But does Mr. Dewey really mean it?

Take parity prices, for example. If Mr. Dewey stands for the parity which has already been established by Congress, how does he propose to bring it to pass? He says he wants to balance the budget, so he evidently wants to cut down on farm appropriations. He must have some other plan in mind. But what is it? Does he support processing taxes? Is he for the certificate plan? Is he for price fixing?

He says crop loans should not be used as "a device for fixing prices or achieving parity." He wants them at "reasonable levels." But what does that mean? The men in the grain trade who will be enthusiastically supporting Mr. Dewey if he is the nominee will be sure his statement means 25 cents a bushel or less.

"More purchase of submarginal land," says Dewey. We have already bought 25,000,000 acres of land at a total cost of $100,000,000. Would Dewey spend more than this?

"The American market for the American farmer," cries Dewey. Does he realize that between 1929 and 1932 the Smoot-Hawley tariff increased the American farmers' share in the home market from 90 to 93 percent, while at the same time the farmers' income was cut down by $7,000,000,000? Does Dewey want to do this again?

Dewey claims to be an expert on corn and hogs and says that the cotton program has increased the corn acreage of the South. Dewey must have gotten his figures from the Chicago Tribune. The truth is that in the 12 Southern States the corn acreage in 1939 was one and one-third million acres less than in 1932. He calls this "complete failure." He fails to mention that the cottonseed oil produced by the average acre of cotton is equivalent to the lard in a 200-pound hog, and if there has been as many acres planted in cotton in 1939 as there were in 1932, we should have had on the fat market of the United States increased competition amounting to the lard of 15,000,000 head of hogs.

Dewey speaks of the lard exports last year being only half of what they were in 1932 and calls this "New Deal bungling." The truth is that Germany, ordinarily our second largest lard market, was completely out of the export picture in 1939. Is there anything Mr. Dewey could have done about this? It is also true that in 1939 the value of our lard exports to Cuba—our third largest lard market—was more than three times as great as in 1932. That was directly a result of our Cuban trade agreement.

From all that Mr. Dewey has said so far, I am convinced that his farm program, if it had been in effect during the past 2 or 3 years, would have given hog prices at the present time at least a dollar or two a hundred lower than they actually are. Twenty-five-cent corn inevitably means $3 hogs a year or two later.

Dewey and the other Republican leaders have been making claims about the 7 Republican years that preceded the 7 Democratic years. Here are the facts: During the 7 Democratic years, farm families had an income that would buy 5 percent more, on the average, than in those 7 Republican years. Even on the basis of their own comparison, the Republicans come out behind. But remember that during the last 4 of those 7 Republican years, farmers and the Nation were sliding downhill. The fact is that in 1939 the farmers could buy 72 percent more than they could in the last year of Republican reign, and were within 1 percent of being as well off as in 1929.

Under the New Deal farm program farmers are cooperating with each other and with their Government to save their soil, stabilize their production, protect their prices, insure their crops, store their surpluses against a time of need, eliminate marketing waste, build up cooperative credit, put their abundance to use, check farm tenancy, and preserve the family-size farm. For the farmers, the New Deal has been like a burst of sunny spring after a long, dark winter.

It is amusing to note the way in which Republican candidates for President have felt it necessary during the past 5 years to stop off in Iowa to say uncomplimentary things about the farm program. Landon stopped in Iowa several different times in his 1936 campaign. In the current campaign Taft, Dewey, and Gannett have already shown how deep is their interest in winning the Iowa farmer and how great is their ignorance concerning him. Candidates catering to the big interests believe that the power of the farm program is derived in considerable measure from the steadfastness of the Iowa farmer. Unfortunately for these candidates, farmers understand the farm program better than they do.

Dewey's Marshalltown speech showed that while he seems to favor the different parts of the farmers' program, he is really making their program the object of a most vicious attack.

He is following the example of most of his Republican rivals for the Presidential nomination.

Senator TAFT says the farmers' program is based on a suicide theory.

Senator VANDENBERG calls it a "menace not only to the farmer's individual liberty but also to the preservation of free political institutions."

Representative JOSEPH W. MARTIN has called it a "demonstrated failure."

Frank Gannett says it is leading to a "totalitarian state."

Every one of these Old Guard Republicans loves to attack the farm program when he's dealing out of his Old Guard deck. Out of that deck they deal to their rich campaign contributors and promise them a reduction in taxes. Just how they can run the farm program without cost remains a double-deal secret. And no matter how many cards they may show from their fake New Deal deck, you can always be sure it is the Old Guard deck they will play.

Not one Republican speaker is specific about anything. Every one of them views with alarm everything the New Deal has done. Not one of them advocates eliminating any specific New Deal achievement. All of them would cut expenditures. Not one of them mentions specifically what items he would eliminate.

But next fall the voters will have a chance to choose. And if they really understand the issues there is no doubt what their decision will be. They will again reject the double deal of the Republicans and choose the honest deal of the Democrats.

There is one reason especially why next fall's election will be vital. That reason is the tremendous importance to American agriculture, American business, and American labor, of what happens abroad within the next few years and what we in this country do about our relation to the rest of the world.

When the present war comes to an end, our farmers are almost certain to have a problem more difficult than anything they have faced yet. England and France are now using up their dollar exchange for munitions and airplanes. After the war, they will find it impossible to lay hands on enough dollars to buy the quantities of American farm products they were accustomed to buy before this war began.

Unless the American people indicate a very great interest in working together with other nations of the world in reducing trade barriers and reestablishing freely moving international currencies, it is obvious that American agriculture will have before it an even greater need of readjustment to a reduced world demand than it had following the first World War.

England and France are going to be buying farm products, first from within their own empires, and second, from countries like Argentina, which are willing to accept industrial products in exchange for farm products. The United States, because it is a creditor nation, will inevitably be last on the list.

The problem of the war and of the peace is extremely serious. We shall face the need of making further adjustments, either in the foreign field or in the agricultural field at home. This job will require a President who understands both the foreign field and the agricultural field.

When we look at the existing set-up in the Republican Party, we find neither vision nor intelligent grasp of underlying problems.

The Republican leaders say they are in favor of increased exports of American farm and industrial products. They know, or they ought to know, that our exports can be paid for by our foreign customers only in American dollars. But where are those foreign customers going to get the American dollars to buy our wheat, our lard, our cotton, our automobiles? Can they get dollars by selling us their own goods? The Republicans are dead against letting in any imports. Can our customers get dollars by arranging for American credits? The Republicans, after their disastrous foreign-loan policy of the twenties, are against foreign loans now. Can our customers get dollars by selling us their gold? The Republicans don't like our gold-buying policy and have tried their best to kill it. They want to close every door that would make it possible for us to stay in the export market.

What is the answer? No prospective Republican candidate seems to know. But we Democrats do know. We know that the world, including the United States, can never return to sane trade relations and a maximum of free enterprise unless there is an intelligent world settlement. This intelligent world settlement will have to deal with trade barriers, with currencies, with access to raw materials, with stabilization of markets, with credits, and with gold. Then, and then only, can the "free enterprise" which the Republicans cherish so devoutly with their lips and ravish so destructively with their deeds, be made a reality.

Our Democratic Party, in contrast with the muddled thinking and double dealing of the Republicans, has a straightforward appeal to make to the voters. We don't have to say one thing in the East and another in the West, one thing in the North and another in the South, because our programs and our policies are honestly conceived, zealously executed, and written in action for all to see. Our programs and our policies do not split region from region and group from group. They are based on the general welfare, which is the sum of the welfare of every region and every group.

The Republicans lack real leaders, but our Democratic Party has been exceedingly fortunate in its leadership during the last 8 years.

No man has available for the service of the Nation such a unique combination of qualities as Franklin D. Roosevelt. No man so completely understands the twists and turns and tricks of European politics. No man is so familiar with the needs and methods of national defense. No man is more anxious to keep this country out of war.

After having seen my father wrestle with Presidents unfriendly to agriculture, I can testify that Franklin D. Roosevelt is more friendly to agriculture than any other man who ever sat in the White House. He has always backed me up when I really needed help. More than any other President, Roosevelt has had personal experience in the production of a great variety of farm commodities—cotton, dairy products, fruit, timber, corn, wheat, and so on.

He has proved himself to be a real friend of agriculture, labor, and business.

With the emergency as it is today, we should hate to face the thought of giving up the services of such an outstanding leader who we know can lead us to victory. I do not say others cannot lead us to victory. I do say that if the President should make himself unavailable, the man who makes the race must stand for the Roosevelt New Deal.

During the past 7 years the Democratic Party has developed and trained a dozen or more men, any one of whom is more competent than any Republican leader who has a chance of nomination for the Presidency.

But whatever the future holds we know the Democratic Party must be united to win in November of 1940. It must and will have the enthusiastic support of Roosevelt and the thousands of leaders and workers who have made the New Deal Democratic Party the instrument of statesmanlike progress. On this enthusiastic unity depends the welfare not only of the United States but of the whole world.

Our Democratic Party has proved it is a party which in a crisis can be trusted. Not once has our Democratic administration sought to solve a difficult problem by calling out the troops and setting the torch to the dwellings of the unfortunate. Not once in nearly 8

years of national responsibility has our Democratic administration sacrificed the ways of democracy, even though they sometimes are slow and cumbersome. We have made democracy work in all our programs.

With leadership that is intelligent, that is devoted to the public good, our Nation can face with confidence whatever the future holds. That kind of leadership can be trusted. It is the leadership of an honest deal instead of a double deal. And that is the kind of leadership the Democratic Party offers to the Nation in the history-making years that lie ahead. That is the reason the Democratic Party will win in 1940.

Seventy-Five Years of Negro Progress Exposition

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. James A. Farley, chairman of the Democratic National Committee, at the Seventy-Five Years of Negro Progress Exposition at Detroit, Mich., on May 12, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I need not tell you how happy I am to be with you today and to be privileged to see this splendid exposition celebrating 75 years of Negro achievement. As James A. Farley, a representative of our National Government, and as Jim Farley, a citizen, I congratulate you most sincerely.

At Tukegee Institute, Alabama, on April 7, I had the pleasure of dedicating a commemorative stamp in the famous American series of postage stamps bearing the likeness of the distinguished educator and leader of his people, Booker T. Washington, the first Negro in the history of America to be paid that well-deserved tribute. His great contribution to humanity is recognized by all the world. Last week I also dedicated a stamp in honor of Stephen C. Foster in the Old Kentucky Home. Probably no American has done more than this famous composer to bring to our people the realization of the home-loving, loyal, and spiritual nature of the Negro.

Stephen Foster is commemorated and loved generations after his death because he wrote of the elemental values of life; of the Swanee River, the Old Folks at Home; of good will to men, which makes a brotherhood of all men. It took a Stephen C. Foster to give all America those immortal melodies, and it took the Negro race to give all America the immortal characters about which he wrote.

I believe that this exposition, with its many impressive exhibits, showing the development of Negro culture over the past three-quarters of a century, fills a great need in America. On the one hand, it enables the Negro people to take stock of their genuine advancement in the face of obvious difficulty. On the other hand, it reveals to all Americans the nature and magnitude of the contributions of our Negro citizens. It shows, furthermore, that the dreams and the aspirations of the Negro people, their striving toward higher goals, are something that we all share in common.

The history of the Negro race in America, while not entirely an epic of unmitigated suffering, is largely the history of a people's brave and heroic struggle. Against their will, and without knowledge of the place they were to occupy in America, their ancestors were forcibly brought to what was practically a barren wilderness. It was their job to clear the land for the future cities, the factories, the homes, and the farms of America. We are fortunate in recent years that the historian, especially Carter G. Woodson, has brought the many achievements of the American Negro to the attention of the public.

We Americans are very proud of our Revolutionary War—and justly so. It was the beginning of our evolution as a democracy. If we go back to the eve of the Revolution we find that a Negro, Crispus Attucks, was the first American citizen to fall in the Boston massacre. A statue to his memory has been erected on Boston Common commemorating his patriotism.

During the Revolution many Negro slaves volunteered as infantrymen and were highly respected for their bravery and unfaltering loyalty. From Haiti came other Negroes—men who had themselves revolted against earlier tyranny and oppression—to help the Colonies win their independence. It is noteworthy that one of the most gracious tributes ever paid to George Washington, the Father of his Country, came from the pen of a Negro woman, Phillis Wheatley, a woman who came to America as a slave and lived to become one of the outstanding literary figures of her day.

Many Negroes served with distinction in the War of 1812, including several Detroit Negro slaves who fought side by side with their masters. The same is true of the Mexican War. During the Civil War we find Negroes—both men and women—entering the conflict which was to resolve not only the question of their freedom but, in a sense, that of all the workers of America.

I have just seen a statue of Frederick Douglass in the Negro Hall of Fame. I wish I had the time to tell you of the spiritual stature of this man, his penetrating and daring mind, and his amazing resourcefulness. From a slave, Frederick Douglass rose to the eminent leadership of his people and was recognized by frequent appointment to high public office.

Another heroic personality of this period was Sojourner Truth, a legendary figure who traveled the country over preaching the iniquity of slavery. She also served in the Civil War, and during the days of reconstruction worked among the freedmen. Michigan can be proud of the fact that she spent the last 20 years of her life in nearby Battle Creek. She was a great and good woman.

During the reconstruction educated Negroes led the movement to rehabilitate their people. Foremost among them were, again, Frederick Douglass and Sojourner Truth; also Blanche Kelso Bruce, who became a United States Senator, and whose knowledge and insight into the burning issues of his day enabled him to render a definite service to his country.

In the Spanish-American War and in the World War our Negro soldiers distinguished themselves by their loyalty, their endurance, and their ability as fighting men. And let me say right here that if this Nation is ever called upon again to protect our rights and defend our liberty against a foreign invader the American Negro will be among the very first to respond.

In promoting his advancement some people may say, "But the Negro did not do all these things by himself; he had plenty of help." Of course, it is true that the Negro did not make all his progress through his own efforts. None of us do. But it is also true that, given even a degree of help and guidance, the American Negro has been able to forge ahead. You cannot help anyone who refuses to meet you halfway. But it must be said to his definite credit that the American Negro has eagerly proceeded more than halfway in every movement designed to promote the advancement of his race.

During and after the troubled days of the reconstruction, the lot of the American Negro was like that of an orphan. Society provided no place for him. No particular attention was paid to his problem. No attempt on a national scale was made to alleviate his condition. Today, this American citizen, brought here against his will and turned loose from slavery without resources, without a place to call his own, is often the victim of all the evils in American society. Too frequently, he has been pushed to the outer rim of our economy.

He has migrated in large numbers from the sharecropper districts of the South to the industrial centers of the North, only to face the same economic forces from which he fled. Here he is often given the worst houses in which to live and charged the highest rentals. There is a growing sentiment in some quarters that the Negro is the last to be hired for employment and the first to be fired. Yet the Negro has contributed a full measure of devotion to his country. He has fought valiantly in the American wars. He has never been a traitor to his country or committed any act bringing dishonor to his flag, and he never will.

It is most significant that the favorable changes in Negro life have been wrought under the leadership of liberals in the broadest meaning of that term. Only in times of this kind of leadership has the chart of his progress shown a consistently upward curve. Thomas Jefferson, the father of American liberal government, freed his own slaves. Jefferson's precedent was later followed on a magnificent scale by Abraham Lincoln, whose Emancipation Proclamation was the salvation for millions. But after the glorious, humanitarian work of Lincoln, the liberal, little or nothing was done for the Negro until a new era of liberalism for all Americans came into existence under Franklin D. Roosevelt.

The Negro himself played a strategic role in this political revival. Though for many years traditionally a Republican, the Negro shook off his yoke of blind partisanship. It was with his important help that this Nation put into the White House a new leader of liberalism. That man and his wife, Eleanor Roosevelt, a great American in her own right, have indeed often proven themselves the friend of the Negro. I take personal satisfaction in thanking the American Negro for his indispensable aid in restoring liberal government once more to the American people.

What it means to have a liberal government is demonstrated by a recent decision written by Justice Hugo Black of the Supreme Court of the United States in a notorious Florida case. I think it fitting on this occasion to read a passage from the opinion in this historic case.

"Under our constitutional system, courts stand against any winds that blow as havens of refuge for those who might otherwise suffer because they are helpless, weak, outnumbered, or because they are nonconforming victims of prejudice and public excitement.

"Due process of law, preserved for all by our Constitution, commands that no such practice as that disclosed by this record shall send any accused to his death.

"No higher duty, no more solemn responsibility, rests upon this Court than that of translating into living law and maintaining this constitutional shield deliberately planned and inscribed for the benefit of every human being subject to our Constitution—of whatever race, creed, or persuasion."

Only under a truly democratic government aware of the needs and rights of all the people could such a decision have been made. Furthermore, my friends, the decision of Justice Black offers conclusive proof that the true southerner does not subscribe to the rule of intolerance, prejudice, and injustice. My own record in my home State, New York, and my record in Washington as chairman of the Democratic National Committee and as Postmaster General will bear out the fact that I give no quarter to religious or racial intolerance. I am looking forward to the day—and that day is coming, if it is not already here—when we can expunge such evils from the record of our national life.

The Negro people themselves are doing their part in bringing about better race relations. This 75 Years of Negro Progress Exposition is one way of accomplishing the task. No one can look at these products of Negro genius, culture, and enterprise displayed in this hall without realizing how thoroughly this group of Americans has interwoven itself into our national life and how valuable have been its many gifts to America.

The distinguished contributions of Marian Anderson, Paul Robeson, Bill Robinson, Dr. George Washington Carver, Dr. W. E. B. Du Bois, Dr. Frederick Patterson, and many other outstanding figures of the Negro race are a moving force for improving race relations and stimulating closer interracial harmony and cooperation. The Negro citizen himself, by his patriotism, his industry, his patience, and his progress, is also making his contribution.

All America has accepted the Negro as an essential factor in the success of our democracy. There can be no true democracy unless all the people are considered and protected alike by the Government. A house divided against itself cannot stand. We are either going to have a democracy, where all men have the right to life, liberty, and the pursuit of happiness, or we are going to have a restricted social order. I do not believe that the latter will ever gain a foothold in this Nation.

Together, black and white, Americans all, we are going to justify the blood that was shed for the preservation of our country on Boston Common and Bunker Hill, at Fort Wagner, and at Gettysburg. This is the American way. For us there can be no other. For all Americans there can be no blackout of the rights of any American.

Condemnation by Pope Pius XII of Attack on Belgium, Holland, and Luxemburg

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

ARTICLE BY JAMES M. MINIFIE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Herald Tribune of May 12, 1940, entitled "Pope Condemns Nazi Attack on Low Countries."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of May 12, 1940]

POPE CONDEMNS NAZI ATTACK ON LOW COUNTRIES—PUTS CHURCH BEHIND THEIR FIGHT IN NOTES TO RULERS; ITALY WON'T PRINT NEWS

(By James M. Minifie)

ROME, May 11.—Pope Pius XII intervened today to throw the weight of the Catholic Church into the scales on behalf of Belgium, Holland, and Luxemburg, the latest victims of German aggression. In messages to the rulers of those three states the Pope declared that he was profoundly moved and that he prayed God their liberty and independence would be reestablished by the successful result of the struggle forced on their peoples "against their will and their right."

The Pope thus alined himself and the moral and spiritual power of the Catholic Church in Italy and throughout the world against Germany and by implication against the Berlin-Rome axis and the Fascist policy of supporting the Reich in its aggression.

It is a decisive step, recognized universally here to be of the greatest significance, and it proves that the concordat between the Vatican and Italy has not bound the Vatican to the wheels of the Fascist chariot.

ITALIAN PAPERS OMIT NEWS

Italian newspapers found the Pope's action so little to their taste that they did not print a word of the messages or even mention the fact that they had been sent. Nor were they mentioned on the Italian radio. The Vatican paper L'Osservatore Romano published them on the front page and in bold-face type.

The Pope's message to King Leopold III of the Belgians crossed an appeal by the King for the Pope's moral support which arrived by telegram at the Vatican this morning. The Pope's messages were sent out last night and made public about noon today.

King Leopold's appeal said: "In violation of formal and repeated pledges to respect Belgian neutrality, and despite our attitude of absolute loyalty, Germany has brutally attacked Belgium, without warning. My country, respecting its honor and true to its word, is defending itself with all its strength. I take the liberty of asking Your Holiness, head of the Catholic Church, to support with your high moral authority the cause for which we are fighting with invincible determination."

The Pope's message to King Leopold, which had left the Vatican at least 12 hours before the King's appeal was received, was a moving and heartening blessing upon the Belgian Nation. "When," it said, "for the second time, against its will and its right, the Belgian Nation sees its territory exposed to the cruelties of war, deeply moved we send to Your Majesty and to all of that beloved nation the assurance of our paternal affection. Praying Almighty God that His heavy trial be concluded by the reestablishment of full liberty and independence of Belgium, we grant with all our hearts to Your Majesty and to your people our apostolic benediction."

WARM MESSAGE TO DUTCH

Even more striking of its kind was the Pope's message to Queen Wilhelmina, of the Netherlands, since it was directed to a Protestant sovereign. On this account the formal apostolic benediction was not given, as it cannot be given to a non-Catholic, but there was no mistaking the warmth of the Pope's message. It was: "We learn with great emotion that Your Majesty's efforts for peace have not been able to preserve your noble people from becoming, contrary to their will and their right, the theater of a war. We pray God, arbiter of the destinies of nations, to hasten with His Almighty help the reestablishment of justice and liberty."

Similarly, to the Grand Duchess Charlotte of Luxemburg, the Pope wrote: "In this sad moment in which the people of Luxemburg, despite their love of peace, are involved in the whirlpool of war, we feel our heart nearer to them. We implore Heaven for aid and protection, so that they may live in freedom and independence, and we grant to Your Royal Highness and to your faithful subjects our apostolic benediction."

Inequality Between Farm and Nonfarm Income

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE PARSONS (KANS.) SUN

Mr. REED. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement printed in my own newspaper, the Parsons (Kans.) Sun, setting out the importance to the country of the inequality that has developed in the last 30 years between the farm and nonfarm income. I regard this as the most important economic problem before the Congress, and I think it contributes more than any other single thing to the great volume of unemployment. It is my belief that unemployment will not be taken care of until the farmer has been restored to a reasonable parity of income with his town and city neighbors.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Parsons (Kans.) Sun of May 10, 1940]

FARM AND NONFARM INCOMES

The United States Chamber of Commerce meets in Washington annually. On May 1 the Kansas group of the United States Chamber of Commerce invited the Kansas Members of Congress to meet with them at dinner. That was done, and a good time was had by all.

The principal speaker for the Kansas group was an able, energetic, successful businessman. He knows his own business very well indeed and has the viewpoint of most men of his type. He started

a lot of discussion when he rather disparagingly referred to the attention which the Members of Congress from Kansas (and with whom could be included Members of other farm States) gave to the farm problem. His solution for Kansas difficulties was to industrialize the State.

The strong inference was that the farmer was a chronic grouch whose ills were more imaginary than real.

The Parsons Sun, on Tuesday, August 3, 1937, printed an editorial which is reproduced here:

"The farm problem is the disparity between the return to the farmer for his labor and the non-farm person's average income. That disparity is too great, and the extent of the disparity measures the importance of the problem which the country will have to solve.

"We know that there is a school of thought that assumes that the farmer is just a natural-born grouch and that his wails have no substantial foundation. That is why this is being written.

"Let us start with a quotation from Dr. Harold G. Moulton, president of the Brookings Institution, which is one of the half-dozen most accurate and conservative economic-research agencies of the Nation. Dr. Moulton wrote recently:

" 'It must also be recalled that farmers, as a class, have the lowest incomes of any important group. If we are to find adequate markets for the products of our industrial establishments the 54,000,000 people who live on the farms or in adjoining small towns obviously cannot be ignored.' "

The statement of Dr. Moulton may be taken as a starting point. The next question is the extent of the income deficiency for the farmer—as compared with his urban fellow citizen. This isn't so easy a question. There are statistics on the total national income, and the division of it, to some extent. Only recently have the figures showing farm and non-farm income, reducible to a per capita basis, become available."

The table which is printed at the bottom of this column is furnished by Dr. L. H. Bean, one of the foremost economists and statisticians of the country. He gives the result of his studies, based upon all available data, including that collected by various research institutions. Dr. Bean has been working on this subject for some recent years in addition to his regular duties with the department. In explaining the figures given in the several columns he says:

"It represents what farmers have available, after deducting production costs, for the purchase of food, clothing, rent, household goods, transportation, education, miscellaneous living costs, and savings. Comparable data for the non-farm population is also given."

In other words the gross farm income is taken as a basis and the production costs deducted. The nonfarm income is similarly treated. The result is to show the number of people in each broad classification and their income available for the purpose of meeting the cost of living and savings. The average reader will be startled by the disparity between what the farmer receives for his labor and management and the similar sum for the town worker and businessman. No thoughtful citizen can ignore the deep significance of these figures. They constitute the most important problem facing the Nation. In virtually every other land than ours the land is tilled by serfs or peasants. It will come to be so in this Nation, unless some remedy is found for the condition illustrated herein.

No informed writer, careful of his statements, would say that these figures are exactly correct. But that they set forth an approximation of the truth is not to be doubted and is not doubted by any student of this and allied questions. In all fairness it should be further said that some economists hold the opinion that these divisions do not entirely reflect a comparable basis as between living conditions and expenditures of the farm and the non-farm populations. Dr. Bean himself is inclined to concede that possibly the city-bought commodities are some 15 percent higher than the price paid by farmers and their families. But even if this allowance be made, the farmer and farm workers are tremendously underpaid as compared with their town and city brethren.

In the 5-year period before the World War, usually taken as a basis from which to start, the average farm income per capita available for living expenses was $141. Similar income for nonfarm population was $401. By 1932, the darkest year for American agriculture, the farm income had fallen to $60 per person, but the nonfarm income had risen to $479, nearly eight times as great for the city worker as for the farmer. Making all allowance for some error in calculations, this cannot be justified on any theory of governmental fairness. The farm problem is a problem which can only be solved by some degree of governmental policy action. It constitutes a problem preeminently important to the farm States, of which Kansas is one. No one man or group of men have all the answers to this problem. Maybe they haven't any of the answers. But that it constitutes a problem of the first magnitude no thinking citizen, who is informed, will dispute.

This problem will be with us, after even so good a year for agriculture as 1937 promises to be. This year will help the farmer a lot—but it will not solve the farm problem.

The only difference between what was said in these columns nearly 3 years ago and is being said now is that the figures up to and including 1939 are available and are given herewith. They show no relative improvement for agriculture in its relation to organized industry.

Farm and non-farm income available for living expenses

Year	Farm			Non-farm		
	Population	Income	Per capita	Population	Income	Per capita
1910–14 [1]	32,105,000	$4,518,000,000	$141	62,268,000	$25,690,000,000	$413
1925	30,830,000	7,426,000,000	241	83,205,000	65,852,000,000	791
1929	30,220,000	6,830,000,000	226	90,474,000	73,542,000,000	813
1930	30,169,000	5,115,000,000	170	92,328,000	68,456,000,000	741
1931	30,497,000	3,081,000,000	101	93,190,000	59,303,000,000	636
1932	30,971,000	1,804,000,000	58	93,608,000	46,551,000,000	497
1933	31,693,000	2,597,000,000	82	93,694,000	43,174,000,000	461
1934	31,770,000	3,376,000,000	106	94,464,000	49,164,000,000	520
1935	31,801,000	4,237,000,000	133	95,351,000	52,770,000,000	553
1936	31,809,000	5,123,000,000	161	96,215,000	61,599,000,000	640
1937	31,729,000	5,471,000,000	172	97,148,000	65,282,000,000	672
1938	31,819,000	4,451,000,000	140	97,999,000	60,236,000,000	615
1939	32,059,000	4,458,000,000	139	98,870,000	63,150,000,000	639

[1] Average.

Authority: Bureau of Agricultural Economics.

In the nearly 30 years since the base period 1910–14 hourly wages of men engaged in industrial employment, mining, manufacturing, and transportation have increased from 100 to 200 percent. In other words, their present hourly wage is 200 to 300 percent of what it was 30 years ago. Whether their annual income has increased as much depends upon the number of hours worked per year. In most cases there has been a reduction in hours. For the last 10 years there has also been a great unemployment, greater than ever before in the history of our country.

The Sun has done, is doing, and will continue to do its part in helping additional industries to locate in Kansas with the hope they may be successful and add to the population and wealth of the State. But all that may be done in that direction is insignificant as to the general prosperity of Kansas in comparison with what a removal of the inequality between the farm and the non-farm income that has come about in the last 30 years would do for Kansas.

What the Sun said nearly 3 years ago (and which its editor has been saying for 20 years) is still good.

CLYDE M. REED.

President's Message to King Leopold

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM NEW YORK HERALD TRIBUNE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Herald Tribune of May 12, 1940, entitled "Roosevelt Tells King Leopold United States Hopes for Belgian Victory."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of May 12, 1940]

ROOSEVELT TELLS KING LEOPOLD UNITED STATES HOPES FOR BELGIAN VICTORY

WASHINGTON, May 11.—President Roosevelt, answering an appeal from Leopold III, of Belgium, for moral support in Belgium's fight against the Nazi invasion, cabled the King today that the American people and their President hoped that policies of aggression would be arrested and that the Belgian people and their Government might preserve their integrity and freedom.

At the same time Mr. Roosevelt, acting under provisions of the Neutrality Act, proclaimed that a state of war existed between Germany on the one side and Belgium, Holland, and Luxemburg on the other. In a series of accompanying proclamations and orders he moved to establish and enforce American neutrality in the situation.

King Leopold, in making his appeal for American sympathy, recalled the previous interest of the United States in Belgium and asked that it be continued. His message follows:

"Brutally attacked by Germany, which had entered into the most solemn engagements with her, Belgium will defend herself with all her strength against the invader. In these tragic hours which my country is undergoing, I am addressing myself to Your Excellency, who so often has demonstrated toward Belgium an affectionate interest, in the certainty that you will support with all of your moral authority the efforts which we are now firmly decided to make in order to preserve our independence.

"LEOPOLD."

President Roosevelt made the following answer:

His Majesty LEOPOLD III,

King of the Belgians, Brussels (Belgium):

I have received Your Majesty's telegram. As I stated in an address which I delivered last night to representatives of the 21 American republics, the cruel invasion by force of arms of the independent nations of Belgium, Netherlands, and Luxemburg has shocked and angered the people of the United States and, I feel sure, their neighbors in the Western Hemisphere. The people of the United States hope, as do I, that policies which seek to dominate peaceful and independent peoples through force and military aggression may be arrested, and that the Government and people of Belgium may preserve their integrity and their freedom. As an old personal friend, I send you my warm personal regards.

FRANKLIN D. ROOSEVELT.

A World in Flames

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of May 12, 1940, entitled "A World in Flames."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of May 12, 1940]

A WORLD IN FLAMES

The wanton, simultaneous assault upon Holland, Belgium, and Luxemburg, the unrestrained bombardment of open towns and civilians wherever it seems at the moment expedient, have now at length made it plain to the most reluctant mind that Hitler, and the German Army behind him, will literally stop at nothing. No matter what Hitler and his followers have done in the past, they have always been influential groups in the democracies to believe or hope that he would shrink before the last barbarities; that, if nothing else, opinion in his own or neutral countries would stop him from letting loose a war on all civilization that would spare neither the monuments of the past, historic cities or the homes and lives of peaceful civilians. Many have found it impossible hitherto to believe the testimony regarding the complete recklessness and irresponsibility, the moral insanity of the Nazi leaders, that have come to us from Rauschning and other observers. But now we know that they are true; and because of the awful instruments of power and destruction in the hands of these madmen, all the values of European civilization now hang in the balance.

The spectacular successes of the German arms until now also demonstrate how efficient a totalitarian regime can be for the purpose of conducting a war. The very end for which such a regime seizes power, in fact, is to turn a nation into an armed camp; to fasten military discipline and barrack-room mentality upon a whole people. Such a regime, because it does not take its own people into its confidence, or consult their wishes at all, can spring lightning surprises upon other nations. Against such an enemy the very virtues of the democracies appear as weaknesses. Their refusal to invade a helpless neutral even though they may know that the totalitarian enemy is planning a foothold there to be used against them; their need to consult all parties and elements in the population regarding the next step in any broad policy; their need to explain their failures or to admit their weaknesses to their own people, and hence, incidentally, to the enemy—all these put them at times under heavy handicaps in a war against nations fighting without rules or scruples.

Some of these weaknesses of democracy are inherent; it is merely necessary to remind ourselves, in considering them, that the processes of democracy are designed primarily for peace, not war. But the totalitarian countries have exposed other weaknesses in the democratic nations that are in no real sense inherent but abandonments of the very ideals for which democracies, as such, ought to stand. The democracies have been shockingly uninformed. They have been almost fatally complacent in the face of the growing menace of totalitarian armament. Men who were their titular leaders, instead of dealing candidly with their people, instead of impressing their people with the facts that they themselves had learned or were in a position to learn, have been in fact followers; they have expressed before the voters merely the opinions and sentiments that they believed the voters already to hold. "Supposing," as former Prime Minister Baldwin once put the matter with unintended candor—"that I had gone to the country and said that Germany was rearming and that we must rearm, does anybody think that this pacific democracy would have rallied to that cry at that moment? I cannot think of anything that would have made the loss of the election from my point of view more certain."

Among the delusions destroyed in the last few days have been the last props under the arguments of the isolationists everywhere. Nothing has been shown to be more horribly false than the belief that a nation can remain at peace with security merely by an ostrichlike policy of minding its own business. Finland, Norway, Holland, Belgium, Luxembourg have all found themselves invaded despite the strictest neutrality and iron policies of noninvolvement. The first lesson in all this for ourselves is to reconsider immediately our own defenses. It will be a sad day for this Republic if the political candidates, simply because they think that that is the only thing our people want to hear, continue to tell us that what is happening in Europe is no concern of ours.

Administrative Procedure

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

LETTER FROM O. R. McGUIRE

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from O. R. McGuire, chairman of the special committee on administrative law of the American Bar Association, published in the Washington Sunday Star of May 12, 1940, regarding the so-called Logan-Walter bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington Star of May 12, 1940]

ATTORNEY TAKES ISSUE WITH COLUMNIST ON LOGAN-WALTER BILL—PURPOSE IS TO PREVENT THWARTING JUDICIAL REVIEW, HE WRITES

To the EDITOR OF THE STAR:

The Logan-Walter administrative-law bill, which passed the House of Representatives recently with 282 Members in favor of it, as compared with 97 against it, is termed by Columnist Charles G. Ross in the Evening Star of May 8, 1940, as a "Court-packing scheme in reverse" and a device which would "subject the administrative branch to a court censorship as disruptive of the proper distribution of governmental powers as would have been the Court-packing proposal." He further says that this Logan-Walter bill would "give the courts an unprecedented and wholly unwarranted power over the day-to-day functioning of the affected agencies." These statements are such that issue must be taken with Mr. Ross.

The ill-fated Court-packing scheme, which I am glad to see that Mr. Ross apparently condemns, originated in the Federal bureaucracy. That bureaucracy is fighting the Logan-Walter bill. The Court-packing scheme was an attempt to enlarge the Supreme Court of the United States so as to provide places on the bench for sufficient additional judges in favor of certain administrative policies that there would be a pro-Government majority on that great Court large enough to reverse some decisions with which the bureaucracy did not agree. The time-honored and constitutional method of changing the Constitution and the statutes was not attempted, because it was claimed that the constitutional method was too slow, but the real fact of the matter was and is that the constitutional majorities could not be secured to support such a change, as was proven when the Court-packing scheme was condemned from one end of the country to the other and was defeated in the Congress.

ATTEMPTED TO SUBSTITUTE RULE

Instead of a rule of law, the Court-packing scheme attempted to substitute a rule of men, apparently upon the pattern of Nazi Germany, where the Court of Appeals at Breslau has stated in an opinion that:

"Today's constitution is dominated by the principle of political leadership. The courts have, therefore, no right to decide upon the legal validity of political acts of the administration. Any such decision would be incompatible with the order of the national socialist state."

This same political and administrative domination of the courts in Nazi Germany was expressed by the Reich law leader, Dr. Hans Frank, in an address of 1936 to the conference of German judges, as follows:

"The party program * * * is the guiding line for decision. * * * Say to yourself at every decision which you make: How would the leader (Adolf Hitler) decide in your place? In every decision to which you are obliged to ask yourselves: Is this decision compatible with the national socialist conscience of the German people?"

The American Bar Association and many State and local bar associations fought the Court-packing scheme to defeat. That same association and a large number of State and city bar associations, as well as national business, patriotic, and labor organizations, are supporting the Logan-Walter bill as vigorously as they fought the Court-packing scheme.

The Logan-Walter bill leaves the Federal administrative agencies just as free as they now are to execute, prosecute, and decide, provided always that they function within the terms of the Constitution and the statutes. Unless they travel outside the statutes, the judicial review provisions of the Logan-Walter bill will not touch them. Instead of attempting to substitute a rule of men, as might have been the effect of the Court-packing scheme, the Logan-Walter bill would insure a rule of law by compelling the army of administrative officers and employees to remain within the terms of the Constitution and the statutes. These men, servants of the people, have no reservoir of undefined power. They have no power except that conferred by statutes, and what the statutes have given they may take away or circumscribe, as the Congress may see fit. The Logan-Walter bill is indeed in this respect a Court-packing scheme in reverse.

QUOTATIONS DO NOT APPLY

Mr. Ross has quoted from a 1907 address by Chief Justice Hughes when he was Governor of New York, but the statements so quoted from the distinguished lawyer, judge, and administrator have not the slightest application to the issue involved in the Logan-Walter bill. Governor Hughes appears to have said:

"You must have administration, and you must have it by administrative officers. You cannot have it otherwise."

This statement is, of course, too true for argument, but as I have above stated the Logan-Walter bill does not attempt to have administration by the courts. Mr. Ross confuses administration or execution of the statutes with the exercise of wholly different powers—the power to legislate, through the issuance of rules and the power to judge, through the decision of particular controversies. The legislative power and the judicial power have been conferred by the Constitution on the Congress and the courts, respectively. It is merely a matter of convenience that the administrative agencies are permitted to exercise some legislative power as to the details of statutes and that they are permitted to judge in the first instance controversies which normally would be for decision by courts. Even the lone dissenting member from the Senate and House Judiciary Committee's reports in support of the Logan-Walter bill declared in his dissenting report that one administrative agency, which he named, "has overridden the plain intent of the basic statute creating it" and "has sought to legislate and replace Congress." He was equally critical of other named agencies.

PUTS US TO NEW TEST

Chief Justice Hughes stated in 1931 before the Federal Bar Association with respect to the judging power of administrative agencies that:

"The power of administrative bodies to make findings of facts which may be treated as conclusive, if there is evidence both ways, is a power of enormous consequence. An unscrupulous administrator might be tempted to say: "Let me find the facts for the people of my country, and I care little who lays down the general principles * * *." But these new methods put us to new tests, and the serious question of the future is whether we have enough of the old spirit which gave us our institutions to save them from being overwhelmed."

Former Judge and later Governor, Nathan L. Miller, of New York, stated in an address of July 2, 1938, before the New York Bar Association, that in proceedings before Federal administrative agencies:

"The decisive question involved is usually a question of fact. The members of these tribunals can observe the forms of due process and still get some evidence into the record to support what they have decided to do. Under the present practice they ought to score a hundred percent of affirmances. If they do not it can only be because of their contempt even for the forms of law. In fact, the present limited review is, as a rule, a vain and idle effort and gives their proceedings a purely fictitious appearance of fairness."

In exercising judicial power the administrative agencies should be required to observe a few basic principles of procedure as stated in the Logan-Walter bill, and the reviewing courts should have sufficient jurisdiction to prevent the administrative agencies from doing what Chief Justice Hughes and Governor Miller have stated that they could do—and which we lawyers with long experiences within and without the Federal service know that these administrative agencies do in some cases and may do in almost all of them.

There is no sound argument to support the conclusion that these agencies should be free to follow any general procedure they may see fit in reaching quasi-judicial determinations and that when they reach such determinations, they should not be reviewed by the courts to the extent that they have reviewed trial courts in equity, admiralty and law where the trial judge hears the case without a jury.

The crux of the opposition to this bill is in this provision which would widen the scope of judicial review to the extent that the trial courts are reviewed, but not to the extent that orders of the Interstate Commerce Commission are reviewed in reparation cases.

I commend to all the statement made by Governor Miller in the above-referred-to address that there are men in this country who think that we have outgrown the Constitution and that:

"By the process of trial and error administrative law has been hit upon as the most effective weapon to destroy our institutions. Through its channels those who have been well called termites, can safely attack the foundation of our American system, for it has been discovered that administrative law screens them from judicial scrutiny. Oh, I know that when one is swelled with arrogance, oversteps the forms of due process, he may escape the judicial eye, but most of them are clever enough scrupulously to observe all the forms of due process, while disregarding the substance, of due process, and they can do it in such a way as to thwart judicial review, as we all know."

PURPOSE OF LEGISLATION

The purpose of the Logan-Walter bill is to prevent the administrative agencies from thwarting judicial review in their exercise of quasi-legislative and quasi-judicial power. That is all there is to the bill. Would Mr. Ross have less? Evidently he would or he does not understand the bill.

Mr. Ross might well read the opinion of May 7, 1940, of the United States Circuit Court of Appeals at San Francisco as to one of these administrative agencies where the court declared that it was "grasping for power" which was "to be expected" in a philosophy of "administrative absolutism" and that it was the duty of the court "to curtail this inevitable overreaching" as "one of the first necessities of a democratic government."

Yes; the judges who wrote that opinion were appointed by President Roosevelt.

O. R. McGUIRE,
Chairman, Special Committee on Administrative Law, American Bar Association.

Defense Preparations

EXTENSION OF REMARKS
OF
HON. EDWARD R. BURKE
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, May 13 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE OMAHA WORLD-HERALD

Mr. BURKE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial entitled "Wake Up, America!" published in the Omaha (morning) World-Herald of May 11, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Omaha World-Herald of May 11, 1940]

WAKE UP, AMERICA!

"It may seem alarmist to talk in such strong terms of the need for strengthened national defense. It would be alarmist if this country could still depend on the British Navy and the French Army to maintain a friendly world dominance. But while it is hysterical at this early date to expect an Allied defeat, it is also incredibly short-sighted not to begin at once preparing for the worst."

"For 3 or 4 years everything that has been, has been half-hearted and ineffective, without drive or intelligence."

The first quotation is the closing paragraph of the Alsop-Kintner report in Friday's World-Herald revealing that "the present state of our national defense is downright shocking."

The second quotation is not from a speech delivered in the American Congress by an alert Senator or Representative, but from David Lloyd George's indignant attack on the British Government in the House of Commons.

But the stinging though futile criticisms heaped on the Chamberlain ministry in the Commons this week may yet—unless Heaven and the British and the French defend us—lie at the door of our own Government.

Far better it would be that the Cassandra-like warning of "too little and too late!" be sounded before rather than after the event, and that it be heeded.

There is license for no American to join in criticisms of the Government of Great Britain because it loafed away the happy hours of peace; because, knowing, as all the world knew, how Herr Hitler was converting the whole of Germany into an arsenal and an army of air and land; knowing, as all the world knew, his grandiose plans, outlined frankly and in detail in Mein Kampf—still the British Government did not prepare for the inevitable.

For our own Government has been no less culpably short-sighted. It, too, has wasted the years of opportunity. While pouring out its billions, while adding twenty-five billions to the national debt, it has neglected the supreme duty of national defense in a world crumbling into chaos and dark night.

Not only has it slighted defense. It has failed utterly to strengthen our internal resources, to build our productive capacity, to buttress our financial power, to encourage industry, restore agriculture, cure our running sore of unemployment. And now should our first line of defense on the Rhine and in the British Navy fail us, we could face the catastrophe of war shamefully unprepared in both civic and military might.

The most powerful and richest nation on this earth, with the most resourceful and intelligent population, may some day lie supine before the thundering legions of the plunderer, weakened and drained of its strength, because its talents were buried in the ground as its head was buried in the sand.

"If the situation of the Navy is difficult to credit," comment Alsop-Kintner, "that of the Army is simply hair raising." There are hardly enough antiaircraft guns to defend the single city of New York. And they are obsolete and inefficient. Machine guns, artillery, tanks, are lacking. Hardly more than 1,500 military air pilots are trained in a year. And there is no reserve material, no adequate industrial machine to support and supply the fighting forces, though their numbers are ridiculously inadequate.

It is neither hysterical nor alarmist to mention these things. The facts need to be brought out in the open. They need to be considered and discussed. While there is no present likelihood of an attempted invasion of our shores, time is flying on the wings of light and no man can guess what a not very distant tomorrow may bring.

The lesson now being learned as a harvest of barren regret by Britain stares us in the face.

In self-defense the United States could be, and should be, impregnable. But today it is not. No more will it be next year, or the next, or the next, if the policy of neglect and the rule of inefficiency are continued.

Yet another menace calls for attention. It exists within our walls, as it has existed within every land Hitler has invaded—the loathesome and traitorous Fifth Column. We cannot doubt its existence. We cannot doubt its burrowing and infiltration into strategic works and positions, industrial and civic, even military. It is time to stop sneering at and discrediting the Dies committee. It is time for Senator NORRIS to discontinue his attacks on Director Hoover and his Federal Bureau of Investigation.

The time is at hand, in a word, to "Wake Up, America!"

A Choice Between Safety and Disaster

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY DR. C. L. NELSON AT ROCHESTER, MINN.

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the RECORD the address by Dr. C. L. Nelson, democratic chairman of the First Congressional District of Minnesota, delivered over the radio at Rochester, Minn., on April 29, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the coming campaign the voters of the country are going to be confronted with the duty of making a choice of the kind of government they wish to have in Washington. In Presidential election years they always have to make such a decision, but it was never more important than it will be this year. There have been times when our national affairs were undisturbed by economic or social questions of vital importance, when there was no sharp cleavage to distinguish one of the major political parties from the other, so that it did not make a great deal of difference to the average citizen which one was in power.

During the present decade, however, no such situation has existed. The difference between the policies of the two major parties has been so wide and sharp that the importance to the mass of the people of which one was to be entrusted with the administration of national affairs has been critical. It was a choice between safety and disaster. The Republican Party, after 12 years of unmolested and lucky, haphazard driving, at last had the inevitable crash and the Democratic Party was called upon to reassemble the wreckage and get the machine going again. It performed the task so speedily and so satisfactorily that it received the overwhelming endorsement of the people in 1936. The people had not forgotten the ruin wrought by the Republican regime, they appreciated the solid benefits brought to them by the Roosevelt administration and they were content.

No matter who the candidates may be this year, the same situation exists today that the voters had to meet in 1936. The policies of the two leading parties are as distinct and different, and their courses of action as divergent, as they were in the two preceding campaigns. The Democratic Party stands for progress, for planning for the future, for the widest possible distribution of national prosperity and for giving security to the greatest number. The Republican Party has adopted for its slogan, "Let Us Go Back," it turns its face toward the dead past, and both by precept and action declares itself in favor of restricting prosperity and privileges to enjoyment by the favored few. Despite the tribulations incident to its long and weary wanderings in exile it has learned nothing. It clings to outmoded doctrines and remains true to its masters who sold it down the river.

For a time after the bursting of the iridescent soap bubbles blown by the Coolidge and Hoover administrations, the party was so completely disintegrated that it gave evidence of life only through occasional spasmodic convulsions like those of a chicken after its head has been cut off. Its frightened so-called leaders disappeared into cyclone cellars and those who had to remain on the scene moped around in helpless bewilderment. They witnessed the bold and energetic manner with which the Roosevelt administration took hold of the desperate situation and brought order out of chaos. They saw the confidence of the country return under this inspired leadership, they saw the machinery of Government transformed from an instrument helpless in the face of destruction into a positive means of restoration and healing. Their benumbed wits even sensed the sigh of relief and joy that went up from the whole country over being saved from the abyss toward which 12 years of frenzied, irresponsible Republican rule had hurried them.

In that condition of fright and stupor many members of the G. O. P. went along with the Democrats for a while in their work of building up the country and correcting the evils which had brought it to the brink. Without resources of their own, they were glad to be led. But when they felt themselves to be entirely out of danger they began singly and in groups to revert to type. Instinct and habit were too strong to be overcome by a short course in true democracy and the leopard spots began to reappear in all their former clear visibility.

And so as soon as they were able to pull themselves together a little what do we find them doing? Proposing some new, definite method of dealing with the problems which had been thrust upon the country? Advocating improvement and extension of the benefits brought to the people by the measures of the Roosevelt administration? Far from it. They were not for any improvements; they were for restoring the past, for going back to the good old American way.

American way, old or new, sounds good, but when you come to examine what they mean by it you find it means the good old high tariff of the steel and textile trusts, of Joe Grundys, the Mellons, the Weirs, and the Girdlers—the good old tariff through which the Republican Party enabled the manufacturers for scores of years to fatten off the American farmer and the general consumer.

This showed itself in the concerted way in which the Republicans in Congress set about it to defeat the trade-agreements program, the only rational, civilized way for making tariff rates to protect the public and expand foreign commerce that has ever been put into effect in this country. The Republicans in Congress might differ among themselves about other things, they might be disorganized, but when it came to protecting their source of supplies, the foundation of their existence, the interests of the farmer, the consumer, and the country as a whole could go hang—they stood for the pap. All their disagreements disappeared under the cohesive influence of public plunder. They were united for the good old tariff, fashioned in the good old way by logrolling, trading, and the lobbies of special interests.

What the Republicans wanted to go back to and why was well described by Representative DOUGHTON, chairman of the Ways and Means Committee of the House, in telling about the framing of the Hawley-Smoot Act. "No group or interest not ably represented at the grabfest," he said, "was given more than secondary or passing consideration, and, judged by their actions, nothing could have been further from the minds of the bill's sponsors than the general welfare of the American people. Some of the most favored of the benefit grabbers actually attended the executive sessions of the Committee on Ways and Means, so I am reliably informed, while Democratic members of the committee were excluded. The experts and clerks of other favored groups were given desks in the committee rooms and became a part of the committee staff. The connection between tariff benefits and service to the Republican Party was never stronger. Those who had responded

most liberally when the campaign hat was passed had the loudest and most effective voices in the distribution of the pie."

What kind of chance has the farmer or the consumer or the average American citizen against a set-up like that?

But, a return to advocacy and defense of the extortionate protective tariff, and its favors to special interests, is not the only way Republicans have shown that they have not changed their ways or their affiliations. They fight the Wages and Hours Act and the Labor Relations Board, two measures of the Roosevelt administration which have done so much to protect labor in its rights and to secure a decent wage for all workers. This opposition has not been straightforward and aboveboard because of their fear of the labor vote, but has taken the underhanded form of hampering these agencies by cutting the appropriations necessary for their successful operation. And they have avoided coming out in the open about this by not going on record in a roll call.

Listen to a report on their behavior by the newspaper Labor, "This arrangement" (avoidance of a record vote), says the paper, "is made to order for artful dodgers and explains why, of the 169 Republicans in the House, only 9 voted against the raid. Many of these Republicans represent large industrial districts with strong union organizations, but they felt they were safe in voting against labor's interests because they were not compelled to stand up and be counted for all the world to see."

Thus the representatives of the Republican Party in Congress reveal that it is still the party of reaction and the protector of privilege. It still seeks to defeat or hamstring every measure taken for the benefit of the country as a whole and to return the Government to the keeping of those who will use its power to exploit the masses for the enrichment of a small special class.

It is not necessary to recall to the wide awake and intelligent what this Democratic administration of President Roosevelt has done in the way of strengthening the structure of democracy against the forces which were at work to undermine it and weaken confidence in its efficiency. The security given to the aged and unemployed, the safety assured to bank depositors, the protection afforded to investors, the energetic measures taken to lighten the burdens of farmers, improve their condition, and extend their market, laws enacted for the betterment of workingmen in the way of rights and wages—these are all due entirely to the enlightened, humane, and progressive administration which the Democratic Party has given to the country during the past 7 years. It is a record to be proud of. Standing squarely upon it victory over any assaults that can be made against it is assured. An appreciative country will not permit that these achievements should be destroyed.

American Legion Program of World Peace

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

REPORT OF THE FOREIGN RELATIONS COMMITTEE OF THE AMERICAN LEGION

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD the report of the foreign relations committee of the American Legion, adopted January 29, 1940, at a meeting of the committee in Indianapolis, and approved unanimously by the national executive committee of the American Legion at its annual meeting on May 3, 1940.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

The foreign relations committee of the American Legion, consisting of Chairman Wilbur M. Alter, of Denver, Colo.; Anson T. McCook, of Hartford, Conn.; and O. K. Armstrong, of Springfield, Mo., met at national headquarters here January 29 and 30. The committee agreed unanimously upon the following report to be submitted for the approval of the national executive committee at its meeting here next May 2 and 3:

"The duty confronting your committee is the announcement of a foreign-relations policy which will avert involvement in international disturbances and leave our Nation in its continued enjoyment of peace, with its sovereignty and independence secure. We base this policy upon mandates of national conventions, rather than embarking on uncharted courses, or expressing personal opinions upon particular phases of this great problem.

"MUST KEEP OUT OF WAR

"To exert every possible effort to keep our country out of war is the definite mandate of the last national convention of the American Legion. That mandate reads:

"'The American Legion views with gravest concern the apparently widespread belief that this Nation must inevitably become involved in the present European conflict. We not only believe that this Nation need not become involved, but insist and demand that the President of the United States and the Congress pursue a policy that, while preserving the sovereignty and dignity of this Nation, will prevent involvement in this conflict. The American Legion is not a law body. It often has recommended to the Congress the enactment of legislation establishing a permanent or fixed policy on important national problems. The American Legion has always strenuously advocated that this Nation pursue a policy of neutrality and peace. In the present world crisis world conditions may change so rapidly that a pronouncement by the American Legion at this time on specific legislation might be wholly inadequate in the near future. Therefore, with full confidence in the President and the Congress, we demand that the Congress continue in session during the present grave crisis and that appropriate action be taken to preserve the peace, sovereignty, and dignity of this Nation, and that our armed forces be expanded immediately to maintain our neutrality.'

"EIGHT-POINT PLATFORM URGED

"In furtherance of this and early convention mandates, we urge specifically the support of the following:

"1. To maintain an adequate national defense, including the principle of universal service.

"2. To uphold the principles of nonintervention and noninterference, as embodied in the Monroe Doctrine.

"3. To urge continually upon the President and Congress of the United States that they make every effort to prevent our involvement in the present wars, and to cooperate with them to that end.

"4. To demonstrate that our involvement in war is not inevitable and must not occur.

"5. To combat vigorously propaganda, of whatever kind and from whatever source, designed to break down our neutrality.

"6. To strive for the restoration of good faith and nonaggression among men and nations, without which there can be no lasting peace.

"7. We have necessarily stated this program in basic terms because details change with changing conditions. It is also to be noted that by action of the national convention, resolutions relating to F. I. D. A. C. have become inapplicable.

"8. As our contribution toward this goal of permanent peace and safeguard against war, we of the American Legion have pledged ourselves to seek and keep an honest neutrality; to do our own thinking and to analyze propaganda, whether it emanates from abroad or at home; and above all, to safeguard our own security, our own liberties, and our own Constitution against attack."

Home Defense Force

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

ADDRESS BY E. G. B. RILEY

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by E. G. B. Riley, of Laconia, N. H., on the subject of a home-defense force.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The crucial battle of this war is now being fought.

Hitler today, by invading Belgium, may have made his first serious error.

It was an absolute certainty that the Germans would invade and conquer Holland if they kept Belgium in the neutral column.

By refraining from invading Belgium, Hitler would have protected his right West Wall flank from both air and land attacks. He is now forced to combat the land and air forces of the Allies on Belgian soil without proper land fortifications.

The Germans must be successful in driving out of Belgium every single soldier of the Allies, or they will be unable to reap the benefits gained by their occupancy of Holland.

On September 17, 1939, over 7½ months ago, and only 18 days after this war started, your analyst, over this same radio station, stated: "Focus your attention on Rumania and note that which will take place in the southeastern section of Europe. It will be most interesting to watch, not the western front, but Belgium, Holland, and Denmark."

On November 23, 1939, nearly 6 months ago, in an address to the Laconia Rotary Club, excerpts of which were printed in the Laconia Evening Citizen of that date, your analyst stated that

Germany would surely invade Denmark, Norway, and Sweden, and further stated that Norway would be apportioned between Germany and Russia.

You will note that in the latter forecast I purposely eliminated mention of Belgium because of that country's value as a neutral to Germany as a protective barrier.

Although it must be admitted that Germany will be in a much more advantageous position if successful in occupying Belgium in its entirety than if only Holland were conquered, your analyst believes that the risks taken by Hitler in invading Belgium are not commensurate with the results that may be attained.

The new invasions are motivated by Hitler's realizations that success in Holland and Belgium will bring into this war as German allies Italy, Spain, and Japan.

To date the Allies have been fighting a losing battle. If Germany attains a full measure of success in Holland and Belgium, the Allies will not have more than one chance out of three of winning this war.

Germany's chief Allies in this war are "the traditions of the British Army and naval forces." These traditions are Germany's "fifth and sixth columns" and "the Trojan horse" which will surely bring about the most costly defeat that this world of ours has ever witnessed unless reality and coordination supplants the memory of past accomplishments and the unwarranted assurance of physical and mental superiority.

The victories of Trafalgar and Jutland are still looked upon as proof that the Nation that controls the sea can successfully withstand the assaults of any combination of hostile foreign nations.

The defeats of Gallipoli and Norway are immediately relegated to the category of unimportant trivial incidences and no beneficial changes of tactics, equipment, or armaments result therefrom.

Since the day that the Russian-German alliance was announced, there has not occurred one invasion of any foreign nation which could not have been foreseen.

In spite of this fact, every move relating to the invasion of Finland by Russia, and of Denmark and Norway by Germany found the Allies unprepared and unable to give the assistance necessary to stem the tide of war.

It does not require other than clear thinking and observance of the efficiency of the means and weapons at the disposal of the combatant nations to foresee that which is most certain to occur.

A few hours study of the war tactics and political theories taught by Maj. Gen. Karl Haushofer at the German academy in Munich which was attended by Hitler, Goering, and Goebbels, will give you an accurate insight into that which is to be attempted by the Germans. Hitler has bared his mind to the world in his book Mein Kampf. He has informed his enemies of his plans for the future and because he has done so they will not give credence to these plans.

While the German implements of war continue to prove successful, you can be certain that Hitler will follow the most direct course to this declared end, viz, the subjugation of Great Britain.

The Norwegian debacle has clearly demonstrated that German bombing and pursuit planes operating from properly constructed and situated aviation fields can wrest control of the air from any planes operating from naval airplane carriers or from aviation fields far distant from the scene of battle.

This is more understandable when you are aware that a plane in order to land on the deck of an airplane carrier must have a comparatively slow landing speed.

In addition these planes are catapaulted into the air from the decks of the carrier by machinery. As a result of these two requirements the planes operating from carriers have neither the speed nor maneuverability of planes operating from land aviation fields with their longer and safer take-off and landing runways or their greater propelling power.

The aviation fields of Norway are in Germany's possession, thereby giving them a decided advantage over the Allies.

Now that entire southern and central Norway is under Germany's control, together with practically all fjords south of Narvik, Germany will proceed to consolidate her newly conquered territory by the use of planes and submarines, at the same time harassing and hampering the Allies' attempt to land supplies and reinforcements at Narvik.

Your analyst does not agree with the unanimous opinion of the experts that the Norwegian invasion was for the purpose of guaranteeing to Germany a supply of Swedish iron ore, but believes that Germany's main objective was to secure naval and aviation bases that would be of material assistance in airplane and submarine attacks on the British Isles and British naval units, together with giving Germany absolute control of the Kattegat and Skagerrak. Germany has thus protected herself against attack from the north.

While completing the consolidation of German gains in Norway, Germany will force Sweden to sign a most humiliating secret treaty.

If Sweden agrees to the demobilization of her Army and agrees to trade exclusively with Germany and Russia, she will be permitted to retain a nominal form of self-government. Nevertheless, Germany will dominate Sweden just as completely as though she had invaded and conquered that country.

Germany will willingly waste little time on Sweden. Hitler wishes to reach his objective before the Allies awaken.

If Italy's shadow boxing in southeastern Europe and the Mediterranean Sea has not resulted in some incident that will bring about a war, Germany will encourage tension in order to keep a large part of the Allied fleet in the Mediterranean.

With Holland and Belgium subjugated, German planes will be within less than 15 minute flying time of Dover and only 20 minutes from London, England, and Germany would then be able to successfully contest the control of the air over the English Channel.

The overdone display of friendship for the French on the West wall and in the German press by the Germans can well be attributed to the fact that only from the aviation fields of France can emanate an air attack which would seriously injure German defenses and cause serious damage to German munition and industrial plants.

Until today Germany has refrained from serious air attacks on France only because of her fear of retaliation by the latter country.

After having demonstrated the futility of trying to curb the air activities of Germany and the invasion of all small adjoining neutral nations, Hitler will launch his first serious attempt to bring about peace. He will count heavily on the fact that Germany can unleash an air blitzkrieg that will wreck every important industrial city in the British Isles, and, also, that from Holland and Belgium and Norwegian bases Germany's submarines can wreak havoc on England's food and supply lines.

In the comparatively short period of time that will elapse before Germany can accomplish these results, it will be impossible for England to gain control of the air.

Germany, operating from Norwegian airports, 200 miles nearer the British naval base at Scapa Flow than the present airports in Germany, will either sink every large British naval unit or cause their withdrawal to other waters.

The reported 2,000 antiaircraft guns encircling Scapa Flow have demonstrated that they are little more effective against the speedy armored bombers than putty blowers and slingshots.

Less than 40 years ago the then all-powerful battleship was the admitted master weapon of the world.

The influence of the battleship extended to every foreign port and was the primary means of conquest.

The Whitehead torpedo was the first challenge to its might, then 25 years ago the submarine arose to hurl a more serious challenge at the diminishing power of the sea mastodon.

The submarine brought about the necessity of protecting each individual battleship with a small fleet of speedy cruisers, destroyers, and submarine chasers.

After 5 years of practical wartime experience in Ethiopia, China, and Spain the airplane was developed to a point where it required but minor refinements to prove its superiority over any naval unit or military weapon.

Any observant, clearthinking individual could recognize at that time that the slow, cumbersome battleship was more of a liability than an asset, although anyone daring to state the real facts was made the target of abuse and charged with heresy, lack of patriotism, and loose thinking. No more revealing illustration can be set forth of the peculiar channel of thought utilized by the naval authorities of the world's powers than by quoting you an excerpt from The World Crisis, the author of which was none other than Winston Churchill, the present war lord of England:

"For consider these ships, so vast in themselves yet so small, so easily lost to sight on the surface of the waters * * * on them, as we conceived, floated the might, majesty, dominion, and power of the British Empire. All our long history, built up century after century, all our great affairs in every part of the globe, all the means of livelihood and safety of our faithful, industrious, active population depended on them. Open the sea cocks and let them sink beneath the surface, as another fleet was one day to do in another British harbor far to the north, and in a few minutes—half an hour at the most—the whole outlook of the world would be changed. The British Empire would dissolve like a dream; each isolated community struggling forward by itself; the central power of union broken; mighty provinces, empires in themselves, drifting helplessly out of control, and falling a prey to strangers; Europe, after one sudden convulsion, passing into the iron grip and rule of the Teuton and of all that the Teutonic system meant. * * * Guard them well, admirals and captains, hardy tars and tall marines; guard them well and guide them true."

Thus spoke the First Lord of the Admiralty, Winston Churchill.

Less than 48 hours ago, appearing before Parliament, both War Lord Churchill and Prime Minister Chamberlain admitted that the Allies were practically helpless until they gained the mastery of the air and warned that this would take no little time.

War Lord Winston Churchill, defending himself against the justifiable attacks of the opposition, used these very words:

"But the fact remains that we failed to achieve the air parity which was considered vital to our security. Our numerical deficiency in the air—in spite of our superiority in quality, both of men and materials—condemns us and will condemn us for some time to come, to a great deal of difficulty, suffering, and danger, which we must endure with firmness until more favorable conditions can be established—as assuredly they will. He would be a wise man who knew all about this war. There is no use talking about this war in terms of the last one. Power of the air has greatly affected it. In some ways it has decisively affected the movement of fleets and armies. We must not exaggerate this new factor, but neither must we refuse to give it its deadly due."

If Germany is to be stopped or even temporarily restrained by the Allies in her devastating rape of Europe and Asia immediate changes of leadership will have to be made.

It cannot be forgotten that in 1915 and 1916, after the automobile and tractor was a proven means of transportation, the Allies purchased in this and other countries every available horse for their cavalry and every available mule for army transportation purposes. They failed even at that late date to realize that cavalry and mules had been supplanted by mechanized units.

The world will never forget the attempt of the Allies to blast their way through the Dardanelles with the resulting Gallipoli disaster.

Winston Churchill was then the First Lord of the Admiralty and history charges him with the responsibility for the fiasco.

Winston Churchill was the First Lord of the Admiralty during the Norwegian debacle and history will charge him with this second defeat which in many respects closely parallels the Gallipoli episode.

Both of these defeats can be laid to the traditions of the navy; i. e., the belief that naval power is the predominating factor of any war and that the navy is the first line of defense.

Unless the Allies give absolute control of all branches of their military power to a coordinator who is not steeped in the tradition of any specific branch of the service, the Allies will lose this war.

Let us now turn back a few pages of American history and learn that which our records show.

Every individual no matter how high his standing or his record of accomplishments has been deemed a heretic or has been charged with loose thinking or with being pro-German if he publicly expresses views which conflict with the opinions of those who dominate our military and naval activities.

On February 20, 1925, 14 years ago, Brig. Gen. William Mitchell told the House Aircraft Committee, in Washington: "There's no escape of shipping on the sea from an air atack. We have to baby them over the sea. Any ship that floats in the water is absolutely at the mercy of an air attack."

General Mitchell in 1921, 18 years ago, began his drive for a separate aviation department having equality with the Army and Navy Departments.

General Mitchell stated at that time: "The whole training of the Navy is that the armored ship is mistress on the sea, whereas actually it is just as helpless as the armored knight was when the firearm was brought against him."

General Mitchell, then Chief of the Army Air Service, conducted a 5-year campaign, and when he refused to abandon his criticism of both Army and Navy Departments in connection with their aviation policies he was forced to resign, following court martial and an ordered suspension of 5 years.

General Mitchell died 4 years ago, crucified on the altar of tradition, a martyr to his country.

Congress should posthumously award Gen. William Mitchell the Congressional Medal of Honor.

Col. Charles Lindbergh, immediately prior to this war, stated facts concerning the relative strength of the German air forces as compared to those of England and France. He was immediately charged with bias, prejudice, and of being pro-German.

Within 1 year the correctness of his statements has been most conclusively proven.

Colonel Lindbergh, the world's acknowledged aviation authority, who should be immediately placed in absolute control of all governmental production and operations of airplanes, was driven into semiretirement by the ridicule, criticism, and gibes of moronic big wigs.

There is not the slightest doubt but that in our Navy and War Departments we have many officers who are as efficient as those of any nation in the world, but they dare not state their views or even assert themselves.

This military yoke of slavery must be immediately discarded.

Without the weight of public opinion to support them, no admiral or general has the temerity to give voice to the real conditions surrounding our military preparedness.

It can be stated, with few exceptions, that everyone, irrespective of position, who has had close contact with prominent foreign Allied statesmen, becomes steeped in their erroneous conclusion that there is no defense of one's country other than by naval units.

Like millions of others, your analyst is a great admirer of Mr. Raymond Gram Swing, the radio's recognized international authority.

Let us note the results the domination of the air by the Germans over the Allies, as evidenced by the Norwegian invasion, had upon Mr. Swing's opinion.

Under date of February 6, 1940, Mr. Swing wrote your analyst as follows:

"The United States is a naval power, and invasion is the last thing that could happen to us. It would follow after defeat, if it happened at all. The crucial battle that would decide United States independence would probably be fought thousands of miles from our shores. When a nation is weak, other nations will tell it what to do. This is the essence of tyranny. It has very little to do with soldiers in rowboats, with rifles strapped to their shoulders, landing on foreign shores. If you are interested in the defense of the United States, you had better be interested in one of two things—either a two-ocean Navy or the victory of the British Navy."

In reply to Mr. Swing, under date of February 8, your analyst set forth that: You must admit that there has been no conclusive test that proves that aviation will not make ineffectual many present types of naval craft. We should not engage in any naval armament race until we know that which is needed, and we cannot build any eighty- to one-hundred-million dollar battleships unless we sacrifice our cruiser-building schedule, which would be most hazardous."

In reply, on February 14, Mr. Swing wrote as follows: "I am all with you against sending American boys to fight in the trenches of Europe or any other country. What has that to do with your plan? Our defense problem is a naval problem. I am not backing General Drum any more than I am backing you, nor am I backing any particular naval program. But the defense of the United States is at sea. Thank you for your courteous and interesting letter."

Less than 90 days ago, Raymond Gram Swing absolutely refused to give any thought or consideration to the fact that the airplane could prove to be the master of naval units or be the master weapon of defense.

Less than 10 days ago, Mr. Swing, in one of his interesting and instructive broadcasts, acknowledged that recent happenings would seem to indicate that the airplane and battleship were now "running even."

It is sincerely to be hoped that our Washington representatives will prove themselves to be of a mental caliber that will permit their admitting that they have been traveling on the wrong road of thought.

I again wish to present for your consideration my home defense force plan.

You can greatly aid in its immediate adoption, and it will assuredly be of great benefit to you and to every citizen of our United States.

My plan calls for the formation of a home-defense force which would not be sent out of the United States.

The basis for this force would be the Civilian Conservation Corps boys, who, upon volunteering, with parental consent, would be transferred from the said Corps to the proposed home-defense force.

These volunteers, who, in all probability, under our existing laws, would be caught in the first draft, would, under my plan, be exempt from being drafted for the full term of their proposed 2-year enrollment.

My plan provides for the training and education of the enrollees by veterans and Army officers with the expressed intent of developing aviators, aviation ground crews of mechanics, and of developing proper aviation fields in all parts of the United States.

The pay of the enrollees would be the same as in the C. C. C., with the same provisions that now exist, that two-thirds of their allowance be forwarded to their families or dependents.

By such a plan we would attain many desirable ends in a most economical and sound manner:

(1) We would eliminate the formation and expense of the Army of 1,000,000 men which is now being considered by Army authorities, with the resultant temptation to use it as an international threat of foreign action. By so doing we would prevent the transporting of our citizens to fight on foreign soil for foreign nations.

(2) We would be giving the members of the home-defense force an educational and mechanical training which would surely increase their earning capacity even though their military training were never called to use.

(3) We would be aiding in solving our relief problem.

(4) We would be eliminating the possibility of the disruption of business and industry necessarily caused by conscription.

(5) Lastly, and most important, the United States would have the necessary 50,000 aviators, competent ground crews of skilled mechanics, and properly located aviation fields. These latter are the requisites of the successful defense of the United States, but only if supplemented by proper aviation equipment, speedy cruisers, destroyers, and submarines.

It must be realized that over 90 percent of the commercial aviation franchises and aviation fields of the Pan American countries are foreign-owned. From this quarter emanates the danger of air attack on the United States.

No pursuit plane can arise from the ground and successfully combat a speedy bombing plane unless the former has sufficient warning of the approach of the said bombing plane. It is, therefore, necessary for the defense of this country to procure a fringe of listening and observation posts located several hundred miles from our borders.

It is absolutely necessary that we take over, by purchase, all islands within 600 miles of the Panama Canal and the borders of the United States. This can be economically accomplished by giving the owner nations credit to the amount of the purchase price against the sum now due this country for their first World War debts.

It will also be necessary to obtain listening and observation posts from our so-called Pan American neighbors, by lease and treaty, in order to protect not only the Panama Canal, but also our southern border.

The New York Herald Tribune set forth salient and deplorable facts and figures developed through hearings on the Army and Navy appropriation bill.

The testimony given before the Senate Naval Affairs Committee by Maj. Gen. H. H. Arnold, Chief of the Army Air Corps, and others, divulged:

1. That the Army had only 52 bombing planes that were not obsolete.

2. That only 6,000 planes will be produced in the United States by June 30, 1941, that is to fill the needs of this country and all the orders of foreign countries.

3. That actual deliveries for the month of March were 80 to the Army, 23 to the Navy, and 193 to foreign purchasers.

4. That estimated actual deliveries for next July are 227 to the Army, 55 to the Navy and 290 to foreign purchasers.

5. That the Army would have only 1,900 aviators by June 30, 1941.

Fellow Americans, this is a far cry from the 20,000 planes needed for the defense of our country.

It is hardly believable that the Army Air Corps has in its possession an instrument which could prove to be the deciding factor in this war.

You have noted ever since the Spanish Civil War a not-too-rapid improvement in the accuracy of bombing planes in hitting their objectives with their limited load of bombs.

Having heard rumors of incredible results obtained by our few Army bombing planes, your analyst wrote a letter of inquiry to Mr. WILLIAM J. MILLER, a Member of the House of Representatives from Connecticut. Under date of February 26, 1940, Mr. MILLER wrote the following letter:

"DEAR MR. RILEY: This will acknowledge your letter of the 21st addressed to the Honorable John E. Miller.

"As you undoubtedly know, the Army Air Corps keeps its data on bombing efficiency quite secret, but I did recently have an opportunity to see the efficiency of the new Sperry bombing sight tested and did see three bombs dropped from an altitude of between ten and fourteen thousand feet; in this test all three made a direct hit on a 12-foot target. I was told by the squadron commander that day that they could score 8 hits out of 10 on this same target. That being true, it is certainly doubtful as to whether or not we should continue building huge battleships.

"I have read with much interest the copy of your home-defense plan, and feel that there is a great deal of food for thought in it.

"Trusting this information will be helpful to you, I am,

"Yours very truly,

"WILLIAM J. MILLER."

Can you visualize that which one bombing plane equipped with such an instrument of accuracy, could do to any battleship, battle cruiser, or any large objectives?

Can you understand how any group of experts with the knowledge that any such instrument of accuracy exists permitting the United States to continue to sink hundreds of millions of dollars in battleships which have no defense against bombing planes equipped with any such instruments?

To any of the combatant countries this bomb sight is worth more than all the gold in this country.

The only question is how long can we utilize, yet keep secret its construction?

Recently Rear Admiral Joseph K. Taussig, commandant of the fifth naval district, stated his opinion before the Senate Committee on Naval Affairs that the United States is certain eventually to have to fight a Japan bent on Pacific domination. Admiral Taussig was immediately thereupon nominated for court martial by a Member of our Congress.

Japan, by moral embargoes and canceled trade treaties has been cut off from her usual supply of oil and gasoline, without which she cannot exist. Japan, with her experienced war aviators, her pursuit and bombing planes guarding her powerful fleet operating from nearby air and sea bases is absolutely certain to seize the Netherland Indies for its all-valuable oil.

It is not improbable that at this very moment Japan is making ready to seize the Netherland Indies.

Now, where is our Navy? Having just completed naval war games in the Pacific it has been ordered to remain indefinitely in Hawaiian waters.

Your analyst sincerely hopes that this gesture of backing up our State Department's expressed warning of disapproval to Japan against her indicated intention to occupy the Netherland Indies, will not cause Admiral Taussig's forecast to come true, while we are totally unprepared to even defend our own country.

Fellow Americans, are you going to permit such condition of unpreparedness to exist? There has never been a time in the history of your country that demanded more speedy, intelligent, and intensive action.

Veterans of foreign wars, Legionnaires, your country needs your influence and support to hasten the defensive arming of the United States, to stop immediately the sale of planes so sorely needed by your country and to stop the squandering of billions of dollars on obsolete impractical warships.

By stripping our country of badly needed defensive airplanes, we are courting disaster.

Remember, the Navy is no longer our first line of defense.

Old-Age Assistance

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

Mr. BREWSTER. Mr. Speaker, old-age assistance is here to stay. The only question is as to its character and extent and how it shall be adequately financed.

At the present time we are borrowing over one-half the money used to pay old-age assistance. This obviously cannot continue.

A pay-as-you-go program must be developed and that without delay if public bankruptcy is to be avoided. Let us also remember that with the collapse of our public finance will go the entire economic structure of a free America.

In Russia they started out to liquidate the capitalists, but they ended up, as was inevitable, by the liquidation of every form of private property. Particularly did they destroy the kulaks, who were nothing other than those owning a little farm.

In Maine today 14,000 of our older citizens are receiving old-age-assistance payments with an average grant of $20 a month. Meanwhile 14,000 other applicants are on the waiting list.

Four thousand of these applications have been approved. Many others have not even been investigated because State funds are not available to match the Federal funds which have been provided. Many of these cases are in very dire need as one learns from the tragic letters that are received here in Washington.

The deplorable condition of our State finances has been sufficiently revealed with a $400,000 deficiency in the amount required for immediate relief before July 1, 1940. This is entirely aside from the amounts required for old-age assistance.

Meanwhile the Federal Treasury is in no better condition with the Federal borrowing power now bumping the ceiling of the $45,000,000,000 debt limit and the administration completely befogged as to how the Budget may be balanced or the finances of the Government saved from disaster.

Those today receiving old-age assistance are grateful for the grant, but they also realize the precarious position in which their payments are placed by the condition of the Public Treasury. Meanwhile, 14,000 more applicants are awaiting consideration and their number constantly increases.

Sometimes it is intimated that concern over this problem of old-age assistance by public men is entirely incident to the agitation of recent years, and that it represents simply the reaction of politicians to the whims of public fancy.

An attack upon motives is always most unfortunate, as it prevents consideration of the merits of any particular proposal conceived in the public good.

Insofar as Maine is concerned, there happens to be a rather conclusive answer to the suggestion that the idea of a proper program of old-age assistance is a matter of recent origin. As a member of the senate in the State of Maine in 1923, it was my privilege to listen to one of the most moving appeals for a public program of old-age assistance that has perhaps ever been uttered in any legislative hall. The measure proposed by Senator Clyde H. Smith at that time passed the Maine Senate with scarcely a dissenting vote as a result of the eloquent appeal of Senator Smith and the sympathetic consideration of that plea by the members of the Senate of the State of Maine.

The measure failed of passage in the house, but this early consideration of the matter and the stanch stand of Senator Smith in conformity with a lifetime devoted to a program of this character is a sufficient refutation of the idea that interest in old-age assistance is purely of recent origin and is a result of the current popular agitation and concern.

In order that there may be a complete and adequate answer to this occasional attack upon the motives of those who now earnestly advocate a proper program of old-age assistance, I am incorporating in the RECORD at this point the speech of the late Representative Clyde H. Smith, delivered in the Maine Senate in 1923:

ADDRESS OF HON. CLYDE H. SMITH BEFORE THE SENATE OF THE STATE OF MAINE, 1923

The PRESIDENT. The only matter before the senate is the last one on the calendar, S. 320, an act providing for the benefit and assistance for aged persons under certain conditions in the State of Maine, and prescribing penalties for violation of the provisions hereof, and making an appropriation for carrying out of its purposes, tabled on the motion of the senator from Somerset, Mr. Smith, whom the Chair recognizes.

Mr. SMITH. Mr. President, I would like to offer a few remarks on this subject at this time.

Fellow members, it seems a little out of order for me to use time that is so much needed during the sunset of this legislature; and had I not refrained from taking part in many discussions during the past 3 months, and if the pending bill did not merit careful attention, I would not now intrude. But since this measure concerns the welfare of many unfortunate men and women of our State, whose very pleadings for assistance must be made to the younger and stronger of their race, it may be only fair for us to give this question careful and thoughtful consideration, for wherever the sun may cast its rays of light human beings alike must come face to face with this uncertainty in the journey of their existence.

From time immemorial kingdoms and nations have been confronted with the problem of how to provide for helpless old age humanely and economically, for each succeeding year has revealed a larger number of aged persons who have lost in life's uneven struggle and through uncontrollable destinies find themselves dependent upon the mercies and charities of others.

Methods pursued in dealing with this issue have varied and improved in keeping with the progress of man. Legend has it that in primeval days old men were placed in trees and, after singing The Fruit is Ripe, they were shaken down and clubbed to death.

When comparing this ancient practice with the modern pension system of Europe it is not difficult to realize that while civilization may ebb and flow, the character of men moves on without retrogression.

It would appear that foreign countries have been more acute to the justice of alleviating the horrors of feeble years; more responsive to those ideals that would make old age a distinction and a privilege, for nearly all civilized nations in the world except our own, have long since provided pensions for their old men and women who are unable to care for themselves.

It is almost unthinkable and inconceivable that in this land of plenty, with its generous-hearted and public-spirited citizens, that ours is the only nation that says to her wage earners "Keep up your work as long as you can, as long as you are able to produce, and when that time has passed we shall discard and scrap you just as we do the machines upon which you work when they have outlived their use." Yet we need not be dismayed, the conscience of the Nation is slowly awakening to a vision not measured by the rim of a silver dollar, for 18 of our States through their legislatures are either considering old-age pension bills or have appointed commissions to devise some method to better care for those in need. The Governor of Massachusetts asked for a pension fund of $100,000. Last Friday the State responded to this call by passing in the house 82 to 64 an old-age pension bill almost identical to this one under discussion. The Governor of New York recently made a similar demand, and the assembly almost unanimously passed a similar bill. Public-spirited men, broad-minded citizens throughout our Nation today are making similar requests.

In our State there are 121 poorhouses representing an investment of $1,118,095. Eight hundred and sixteen persons were committed to these institutions last year; 351 of them on account of helpless old age. The average cost per inmate was $5.86 per week, not including overhead and investment charges which amount to more than $1.50, or a total expense of $7.36 per week for each old man or woman supported in our almshouses, or $1.32 per week per inmate more than it would cost to care for these unfortunate souls through the provisions of the proposed act which limits the amount to $25 per month for those who have attained the age of 65 years, one-half of which is paid by the municipality where the applicant has a legal residence.

Take from our poorhouses those dependents who have been forced there on account of old age, a number representing more than 40 percent of the total commitment, and our towns could liquidate an investment of nearly one-half million dollars by disposing of these antiquated and obsolete homes, a saving in interest money equal to the entire appropriation provided in this resolve.

Besides the pauperized and stigmatized inmates of the almshouses there are many more citizens who in the fullness of their strength were proud and useful men, that today stand at the threshold of life humiliated and tortured with the prospects of filling a pauper's grave.

Let me read one of many letters which I have received during the past few months concerning this subject:

"I am 72 years of age, born in the city of Auburn and spent my life there and in Lewiston, my husband being a dentist there all the years of his business life. We owned a modest home at the time of his break-down and illness, resulting in paralysis from which he never recovered mentally or physically, living for 9 years. In the meantime I was obliged to sell our home and bought a very small one at Turner Center which I now own, on which, of course, I have always managed to keep the taxes paid. Have spent all the time there I possibly could, but have been obliged to spend a part of the time away to earn money to keep up the expense of this little home. I have wanted to feel that I could call some place home. I have often thought, did I have a very little income I could enjoy my own little home again, with garden and chickens. For references I can refer you to such men as George C. Wing, Congressman White's father, and Judge Newell, of Lewiston. I do hope that I may be considered should your kindly interest in the elderly residents of the good old State of Maine prevail."

This morning I read in the headline of our papers over $9,000,000 spent for public recreation last year, appropriated by our towns and cities. When I think of the contents of this letter and of the significance of this amount of money appropriated for pleasure; when I think of the extravagance on the one hand, and on the other we say to that poor old woman, "You starve to death or go to the city farm," I have no words with which to describe such a picture, a condition that should bring shame to every American citizen.

The enactment of this bill would not create a commission or incur administrative expense as is so common to measures of this nature. Not a single person could obtain a pension without the approval of the Governor and council, and the tax burdens would not be increased a penny, for our towns and States are already taxed to support needy citizens. It would simply replace our inhuman laws governing the care of unfortunate persons with economic and progressive legislation founded and builded on the milk of human kindness.

Pensioning of worthy citizens is not a new principle or an unheard-of innovation, even in our own State. The Supreme Court judges, our soldiers and sailors, post-office officials, school teachers, railroad and industrial employees share in this method of preventing old-age dependency.

Why close the doors? Why preclude equally deserving and more unfortunate, the workers of industry, the tillers of the soil, who, through illness and business reverses, are banished from friends, home, and fireside?

It may be claimed that to encourage is to destroy; that an assurance for old age will make us less industrious and more mindful of future years. Anyone who analyses his own mentality will appreciate the fallacy of such an idea. It is a natural ambition to go ahead, to strive for better food, better clothes, better environment and for the comforts of old age. Who would suggest that pensions granted to the boys in blue made them lazy, idle, and indolent citizens? Who would withdraw that aid so recently given the mothers of our State? God knows that both are laudable contributions; but, that no recipient can be more deserving of assistance than are those poverty-stricken fathers and mothers who are drifting in the shadow of the Great Beyond.

Mr. President, neither your father nor mine, who were so recently called from our affections, would have needed the protection of this measure, but in every community there are fathers and mothers who are waiting for the last call, that are ragged and hungry, rather than to beg of charity or meet disgrace at the city farm.

The percentage of our helpless old men is gradually growing larger, increasing at the rate of 4 percent per year. Medical science cannot cope with the unnatural drain on the workingman's energy resulting from the remorseless force and merciless precision of modern machinery which has not only shortened the period of effective service, but is gradually shutting out from gainful occupation the failing eyesight, the enfeebled nerve, and the unsteady hand of old age.

There are those who will contend that there is no need of poverty with all its wretchedness, but no man who has given this subject careful and candid reflection will arrive at such an unpardonable conclusion.

Unskilled employees represent one-third of the total amount of labor. Today the average price paid in the United States is $3.20 per day. Make allowance for vacations and shut-downs, pay for rent, food, clothes, furniture, educate the children, and live respectably. How much have you saved for the inevitable rainy day when old age and sickness comes?

It is glorious to present bills to create great reservoirs as it has been my pleasure to do; to be able to rebuild the Constitution with that skill so characteristic of the senator from Cumberland; to champion the cause of an exposition building with the ability of that favorite son from Aroostook; to father the teachers' pension act with that dignity so common to the distinguished senator from York; but it is a million times more glorious to extend the hand of help to those in need.

When the old family horse has performed its last work we place it in kindly hands and in green pastures. When the pet dog can no longer respond to its master's call every mercy is extended this faithful animal. But the old man in his declining days goes among strangers over the hills to the poorhouse.

My friends, instead of this stigma of charity, let us place the mantle of respect on those fading years by providing an adequate pension for those unable to care for themselves. For some day, my fellow Senators, when our work is done, we may have longings for peace, for comfort, for affection, for some little nook in which to sit and think and dream of life's race well run, life's work well done, life's victory won.

The one thing constant in this life, the one peak that rises above all others, the one window in which the light forever burns, the one star that darkness can never quench, is a mother's devotion. Is there a senator within the confines of this chamber who would challenge that devotion by sending anybody's mother through those gates ajar from whence no traveler returns, with a poorhouse insignia stamped upon her fair face?

Mr. President, I hope that this bill may not be considered from the standpoint of sympathy or from the viewpoint of dollars and cents but in the light of decency and of justice.

I cannot believe that this senate will vote against the only labor measure out of 890 bills that have been presented here during this term, and when the vote is taken I would like it to be by a yea-and-nay vote. [Applause.]

The foregoing speech of the late Congressman Smith would seem to dispose of any suggestion that in the State of Maine, at least, the idea of old-age assistance is a thing of recent origin. It is little wonder that so moving an appeal brought practically unanimous approval from the senate of the State of Maine at that time in 1923. The house, however, at that time was not ready to concur.

Now, however, America has very evidently and very definitely decided to provide old-age assistance. The only question is the character and extent of the assistance and how the program shall be financed.

We cannot much longer continue to borrow from Peter to pay Paul. The day of reckoning will inevitably arrive and the cupboard will be bare.

SOCIAL INSECURITY

Every citizen should clearly understand the system under which we are now operating. To call it social security is most misleading. As a matter of fact, it will soon be found really to be social insecurity.

Old-age assistance is now being paid in Maine to approximately 14,000 people on a 50-50 basis by the State and Federal Governments.

PAY-ROLL TAX

Entirely aside from this program there is now being levied upon about one-third of the workers and employers in this country a pay-roll tax, which is said by the Government to be a premium on an insurance policy to pay an old-age benefit when the worker gets ready to retire.

COMPULSORY INSURANCE

The worker has no option in this matter. If he or she is in a certain category of workers, the payment of the tax is compulsory.

Under ordinary insurance practice, this money would be set aside each year as a reserve against the time when the payments would become due as the workers reached the stipulated age.

There are, however, some curious things about this insurance policy that one-third of the workers are compelled to take.

ONE-THIRD VERSUS TWO-THIRDS

In the first place, about two-thirds of our people are excluded. If it is a good thing, it should be open to everyone. If it is a bad thing, no American should be compelled to participate. Someone is certainly being discriminated against. The two-thirds outside must be provided for in some other way—to which the one-third will be compelled to contribute through the medium of taxes of some kind in addition to the contribution they have been compelled to make for their own retirement. This is most unjust and inequitable.

COLLECTION IMPOSSIBLE

In the second place, this compulsory policy is in a company that cannot be compelled to pay. No citizen can sue the Government of the United States. But you say the Government will, of course, keep its promises.

Unfortunately, the Government within the past few years has repudiated one of its most solemn promises upon which it secured vast sums of money from its citizens, and the Supreme Court was obliged to say that the citizen had no redress, that it was only a moral, not a legally enforceable obligation, and if the Government chose to repudiate its pledges to its citizens, there was nothing either the citizen or the Court could do except to regret the immoral conduct of the Government.

DEPRECIATED DOLLARS

In the third place, a young person at 25 must look forward to 40 years of contributions of dollars of current value and purchasing power. But meanwhile the value of the dollar may be radically changed. It has already been reduced 40 percent. The President today has the power to reduce it 15 percent from its present value.

This means that in 20 or 30 years when one goes to collect the benefits under this compulsory policy the worker who has paid in a dollar may get back only what amounts to 10 cents in the purchasing power of that distant day. In other words, the Government has sold a 10-cent dollar to its citizens for 100 cents. It might well be termed a gold brick—at least to the extent of 90 percent.

NO RESERVE FUND

In the fourth place, the Government is not accumulating a reserve for its beneficiaries as every private insurance company is compelled to do or see its officers sent to jail.

The Government is spending every cent of these premiums as rapidly as they are paid in—not for the purpose of the trust but for the current expenses and extravagances of the Government of the United States.

To be sure it puts an I O U in the cash box to show the cash is missing. But when the day of reckoning arrives and the aged worker asks for his old-age benefit, then the Government must tax someone all over again to pay that benefit for which the worker has already paid once.

Very likely the same persons may be taxed all over again to pay their own benefits along with all others who may be sharing the burden of taxation at that time.

TO SUMMARIZE

Let us remember these things about the present system so far as so-called contributory pensions are concerned.

First. Only one-third are covered. Two-thirds are uncovered. Someone is being discriminated against.

Second. Although certain citizens are compelled to take a Government policy of old-age insurance there is no way the citizen can compel the Government to pay.

Third. The benefits may be paid in a 60-cent dollar such as we have today or a 10-cent dollar such as we may have tomorrow. This is what is called inflation.

Fourth. The money is all spent as fast as it is paid in so that some day someone will be taxed all over again to pay the benefits.

PAY AS YOU GO

This is why more and more people believe that a simple, sane Nation-wide system of old-age assistance upon a pay-as-you-go basis is the only answer to this problem. Then when we close our books each year we shall know that we have not borrowed from Peter to pay Paul. We shall know that we have not taken a wage earner's hard-earned dollars in return for a promise that may be repudiated by a government in another decade or rendered valueless by an inflation of the currency or by a bankrupt Treasury that will necessitate new taxation.

REPUBLICAN PROGRAM

Such a sane, sound program on a pay-as-you-go basis was the pledge of the national platform of the Republican Party in 1936. Such a program was attempted by the Republican Members of the House of Representatives in considering social-security legislation. Such a program seems altogether likely to be urged once again in the Republican platform to be adopted at Philadelphia and to be an important issue in the coming Presidential campaign.

This will mean that no one will lose any benefits that they now enjoy. But it will mean that your less fortunate neighbors will also be provided for. It will mean that the perils of the present program to the Public Treasury will be ended and that Government will cease taking money from its citizens under an arrangement that would not for one moment be tolerated by any private company.

Justice and equity will be available for all and that is all any American desires.

In addition the public finances will be placed in order. Pay as you go means a balanced budget. A balanced budget means restored business confidence, which in turn means economic recovery, and that means opportunity will once again be restored to the youth of America, and America will go ahead.

OLD-AGE ASSISTANCE HERE TO STAY

I end as I began. Old-age assistance is here to stay. The ancient system of condemning those who were in penury to go to the poorhouse is gone beyond recall. The wealth and re-

sources of America and the creative abilities of our civilization are equal to the challenge of this new order. We may recognize frankly that this movement represents a modification of our ancient economy under which the threat of the poorhouse haunted the lives of people everywhere. Whether or not the removal of this incentive will soften our civilization to the point of its ultimate disintegration and dissolution, only time can tell.

America has never been afraid to pioneer. The first essential element in this program is that it shall be put without delay upon a basis of paying as we go. Any other course means inevitable disaster for everyone—old and young alike.

Like every great reform, this subject is one receiving widespread and serious consideration by the people of the United States. Eventually the truth will emerge and the right answer will be found.

PILFERING PENNIES

The contributory program of old-age assistance now in effect simply operates to pilfer the pennies from the pockets of the poor under the guise of premiums for old-age insurance. Those payments are promptly used by the Government for current expenses, without the creation of a reserve of any character. This means that when our younger citizens come to collect their old-age benefits the cupboard will be bare, and the same citizens will be obliged again to pay taxes to secure the benefits to which they are entitled.

Such a program must inevitably fall of its own weight, because it is not founded upon principle.

A BALANCED BUDGET

Eventually all will awaken to the impossibility of this system continuing. Then a simple, honest program of old-age assistance on a Nation-wide basis, properly financed on a pay-as-you-go basis, will be evolved. The National Budget will be balanced, and America will resume its onward progress with proper provision for the older citizens of our country and with new opportunity opening for the ambitions of our youth.

How City Slum Clearance Pays Dividends

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

ARTICLE FROM THE PHILADELPHIA INQUIRER

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Philadelphia Inquirer on slum clearance:

[From the Philadelphia Inquirer of March 20, 1940]

HOW CITY SLUM CLEARANCE PAYS DIVIDENDS

In its report upon Government-aided low-cost housing projects the Philadelphia Committee on Public Affairs concludes that, while a public housing program raises many problems, the positive advantages to be gained seem preponderant. It believes that further support for such a program is vital to the well-being of the city of Philadelphia.

With these conclusions it is easy to agree. With more than 50,000 families in this city living in substandard homes, it is self-evident that low-cost housing projects are needed on a large scale.

Most of these slum dwellers are in the lowest income group, receiving less than $1,000 a year. The number of standard homes available to them is negligible.

Their present unsafe, insanitary, and overcrowded living quarters are the only ones they can afford. They are not there from choice, but as a matter of economic necessity. If private enterprise is unable to provide homes priced within the means of these thousands of families, public housing is the immediate answer.

The Philadelphia Housing Authority is striving to meet the housing shortage for the low-income group, but its projects will take care of only 6,000 families.

To redeem the remainder of the badly housed portion of our population from slum conditions there are several possibilities open to consideration. One is further expansion of the Housing Authority program, making sure that the new accommodations are priced low enough to take care of the lowest income group and that the building operations go hand in hand with slum clearance.

Another is the encouragement of private building of houses that can be rented in the $20-a-month bracket. A third is a program of rehabilitating existing houses that are worth saving; making them over, reconditioning them, and putting them on the market at a low purchase price.

The problem of substandard residences for the poor is one that cannot be evaded. The city is paying enormous sums for its slum areas, paying the price in public health and public welfare, in police and fire protection, in disease, infant mortality, crime, and juvenile delinquency.

Standard low-cost housing for the poor not only rescues slum dwellers from improper living conditions, it pays dividends to the city in money saved.

Buffalo—Greatest Transshipment Point

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

ARTICLE FROM THE BUFFALO (N. Y.) COURIER-EXPRESS

Mr. HARTER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item appearing in today's Buffalo Courier-Express. Buffalo's importance as an inland port cannot be overemphasized as the official report from the United States Army engineers states. Have in mind that our great city of Buffalo ranks first among the ports on the Great Lakes in value of tonnage handled and is the greatest center in the Western Hemisphere if not the world. Such a report definitely points to thousands of jobs, not only on the water front, on the boats but through other methods of distribution, by truck and railroad as well. The President's problem child, the St. Lawrence seaway and power project, while adversely affecting the economy of our country, would, of course, hit this employment on the Niagara frontier. Buffalo has long maintained its leading position and I am glad the latest report of the United States Army engineers again gives this deserved recognition. The news item follows:

[From the Buffalo (N. Y.) Courier-Express of May 13, 1940]

UNITED STATES ARMY ENGINEERS CALL BUFFALO PORT BEST IN WESTERN HEMISPHERE—REPORT CITES MAJOR FACILITIES OF INLAND HARBOR

WASHINGTON, May 12.—Prestige of the port of Buffalo as a preeminent transportation center is portrayed vividly in a revised report just issued by the Board of Army Engineers for rivers and harbors. Buffalo, the report states, is the greatest grain distributing center, as well as the greatest milling city, in the Western Hemisphere. It ranks first among the ports on the Great Lakes in value of tonnage handled, and second in volume of tonnage of water-borne commerce.

The report just published is the first of a series about ports on the Great Lakes. It is issued as an informative work for the guidance of Federal, State, municipal, and port agencies and to furnish useful information to shipping and transportation interests in connection with the movement of goods through various ports.

NOTED FOR TRANSSHIPMENT

The report states:

"Buffalo has long had the distinction of being the principal transshipment port in connection with rail and lake traffic to and from the West. The harbor is located at the eastern end of Lake Erie, south of the head of the Niagara River, and is 78 miles northeast of Erie Harbor, Pa., 37 miles northeast of Dunkirk Harbor, and 22 miles east of Port Colborne, Ontario, Canada, the Lake Erie terminus of the Welland Ship Canal.

"The port consists of an outer harbor formed by a breakwater system in Lake Erie; an inner harbor comprising the Buffalo River, the city ship canal, and various basins and slips, and the channels in Niagara River comprising the Black Rock locks, canal, and the

improved natural channel in the river to Tonawanda. The average season of navigation is from April 11 to December 23.

"The port has a total of 93 piers, wharves, and moorings, 12 of which are located in the outer harbor, 64 in the inner harbor, 5 in Erie Basin, and 12 in the Black Rock Canal and the Niagara River. Railroads own 20 of the terminals, but 13 of these are leased to steamship or private interests. Twenty-eight of the facilities serve grain elevators and flour mills, the port of Buffalo being the greatest grain-distributing port as well as the largest milling city in the Western Hemisphere.

"TWENTY-ONE GRAIN ELEVATORS

"There are 21 waterfront grain elevators with a total storage capacity of approximately 44,718,500 bushels. The movement of grain on the Great Lakes is highly competitive, and it is possible that this commodity moves to Buffalo because of preferential freight rates, but there are other factors which appear to be influential and outweigh the element of rates. In this connection there are extensive elevator and "afloat" storage facilities, modern transfer elevators, accessibility to the port of New York, and several modern flour mills which alone convert many million bushels of grain into flour and other products each year.

"Buffalo ranks first among the ports on the Great Lakes in value of tonnage handled and second in volume of tonnage of water-borne commerce, being surpassed only by the port of Duluth-Superior. During the period of 1929–38, the water-borne commerce at the port averaged 16,351,875 tons per year. Grain, iron ore, bituminous coal, and limestone were the principal lakewise receipts, while the principal shipments were anthracite and bituminous coal, iron and steel, and miscellaneous package freight.

"Petroleum products ranked first in volume of the receipts via the New York State Barge Canal, followed by sulfur and sugar, while grain, pig iron, and petroleum products were the principal shipments. Lakewise receipts and shipments comprised a major part of the total port traffic with an average annual movement of 10,836,298 tons, or 66.3 percent of the total commerce. The foreign imports and exports together averaged 2,702,414 tons, or 16.5 percent.

"BARGE CANAL TRADE CUT

"The commerce of the New York State Barge Canal, with an annual average of 1,766,523 tons, comprised 10.8 percent of the total. The local traffic amounted to 6.4 percent, with an annual average movement of 1,046,640 tons.

"The port has provided drydocking facilities which can accommodate vessels up to 600 feet in length and all classes of heavy marine repairs can be performed. Stationary and floating cranes and derricks are available, and cold- and dry-storage facilities have been provided in warehouses on and near the water front.

"The port of Buffalo is served by 12 railway systems and 2 industrial lines, which, together with the various steamship and barge-line services available, places the port in a most favorable position for the transshipment of through traffic and the economic assembly of raw materials and the marketing of its product."

The Townsend Bill

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. GEHRMANN. Mr. Speaker and colleagues, we must consider the Townsend bill before we adjourn. It is evident that the Seventy-sixth Congress will adjourn in less than a month. If we do, a great many important bills will have to be left without consideration. There is at least one thing that I do not believe any of us want to leave for a future Congress to take up. That is the question of adequate and uniform old-age assistance. Nearly all the legislatures of the States will meet early in 1941. That question is one of the most, if not the most, important in every State of the Union. Every candidate for either branch of Congress and every State legislative candidate will have to face that issue this fall. I believe that most of us can agree that the present Federal, State, county, and local participation arrangement is unsatisfactory, unworkable, unfair, and inadequate. And we can also agree that the Federal Government must collect the necessary taxes and distribute them to those eligible on an equal basis. The State legislatures should know before they meet next January what the Federal Government's attitude is toward ending this shameful and disgraceful method of dealing with this problem.

The new Townsend bill, H. R. 8264, was introduced at the request of a great many Members who last year said they were strong for the idea of a uniform and adequate old-age-assistance plan, but they did not think the turnover tax was workable. So after many months of study the gross-income tax, exempting the first $3,000 of annual income, was substituted. A petition, No. 28, is on the Clerk's desk, and only about 50 more names are needed to bring this bill on the floor for consideration. In fairness to everybody that really means to change the present unsatisfactory method, and I believe that includes most of us, I urge those of you that have not yet signed this petition No. 28 to please do so today or tomorrow. By signing a petition to force a bill out of committee, you are not committing yourself to a vote in favor of that bill, but you will prove to your fellow Members, as well as the people of this Nation, that you are fair-minded enough to assist in bringing legislation of Nation-wide importance to the floor for a fair and impartial debate. By that you show your desire to help shape important legislation, so that you may feel justified in voting for it. If the bill does not shape up as you think it should, you have a perfect right to vote against it. I am sure that the large majority of our constituents are fair-minded people. Even though we might have voted opposite to their views, they will respect us much more than if we block legislation by refusing to bring it up. The American way is to let the majority of the people's Representatives debate important issues, amend them as they see fit, and then finally vote on them. That is all I ask of the Members. Please sign petition No. 28 so that we can bring the bill known as the Townsend recovery plan H. R. 8264, on the floor for discussion and a vote before we go home.

A Lynchless Year

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, May 13 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM NEW YORK TIMES

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of May 12, 1940, entitled "A Lynchless Year."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of May 12, 1940]

A LYNCHLESS YEAR

In the year that ended at midnight of May 8 not one person was lynched in the United States. Last year there were three. Statistics of this crime began with 1882. The most hideous year was 1892, which saw 231 lynchings. In the time of the opening of the West to settlement, horse thieves and cattle rustlers were the chief victims. After the War between the States illiteracy and a low economic condition, frequent or usual concomitants or causes of mob violence, made the South, and especially the thinly populated and ill-policed parts of it, the favorite territory of lynchers.

The main effort to root out an evil that seemed to have become inveterate began soon after the close of the World War with the establishment of the Commission on Interracial Cooperation and its creation in 1920 of the Department of Woman's Work. In 1929 there were but 10 lynchings. In 1930 they more than doubled to 21. As a result the Association of Southern Women for the Prevention of Lynching was formed. It was widely and effectively organized with a central committee, with State committees in 13 States and with cooperating units in hundreds of counties.

This association has worked intelligently and vigorously. It has carried on an educational canvass. It has intervened where trouble between persons of the two races has broken out. It has condemned public officers, cowardly or remiss in resisting mob law, and commended those prompt and courageous in enforcing the law of the State. The association has done a remarkable job. It has given the United States for the first time a record unstained by a long-standing disgrace. These women are to be greatly honored, for they have done much to end a national dishonor.

W. P. A. Projects in New Mexico

EXTENSION OF REMARKS
OF
HON. JOHN J. DEMPSEY
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1940

LETTER AND ADDRESS BY HON. JOHN E. MILES, GOVERNOR OF NEW MEXICO

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Governor of New Mexico, Hon. John E. Miles, and also a short speech delivered by him on May 7:

STATE OF NEW MEXICO,
EXECUTIVE DEPARTMENT,
Santa Fe, May 7, 1940.

Hon. JOHN J. DEMPSEY,
Member of Congress, Washington, D. C.

DEAR JACK: I am enclosing a copy of a speech I am making tonight at Roy. It discusses a problem that may become even more serious as time goes on.

If, when the W. P. A. appropriation bill comes before Congress, there is anything that can be done along the lines suggested for making more projects possible for the counties and communities that have no funds it will be a great help to New Mexico.

For your information W. P. A. records here show that the greatest present difficulty is in obtaining projects in Taos, Rio Arriba, Santa Fe, Torrance, Mora, San Miguel, and Guadalupe Counties, with considerable difficulty also involved in setting up projects in Harding and Catron. The first seven counties mentioned were carrying as of this week, 42.7 percent of the entire relief load of the State.

By next winter these counties may be in an even more serious plight in attempting to set up projects to take care of the relief load, and I know you will want to do everything possible to solve this problem.

Sincerely yours,

JOHN E. MILES, *Governor.*

ADDRESS OF GOV. JOHN E. MILES, ROY, MAY 7, 1940

Mr. Chairman, ladies, and gentlemen, I have made many trips to many parts of the State in the past several months to take part in the dedication of new schoolhouses, city halls, recreation centers, and other W. P. A. projects, and I am certainly happy tonight to have the opportunity to join with the people of Roy in dedicating this splendid new gymnasium and auditorium.

This project, which has been a year in the making, has given work to many men, and now that it is completed it will stand for many years to give pleasure to many people and to the boys and girls of Roy who will be afforded the opportunity to use the facilities provided here.

I hope that this building will serve often as it is serving tonight, as a meeting place for the people of Roy, where you will have your town meetings, your entertainments, your community gatherings of all sorts.

The sponsor's share of this construction, which I am told amounted to only $8,000, is a comparatively small amount for the service it will give to the school district and the city, and I know that you people of Roy will feel that you certainly have gotten your money's worth.

But the $8,000 that was raised as sponsor's share for the structure was, I know, a large amount for a community this size, and you are to be congratulated on your foresight and progressiveness in making such a structure possible.

There are many communities throughout the State where similar projects should be undertaken. Many communities the size of Roy are in need of community buildings and other projects. However, many of these communities find it more difficult to raise sufficient funds to contribute the 25-percent sponsor share of the project cost.

It is this problem I want to discuss briefly with you tonight. This inability in several counties to provide the 25-percent sponsor share has deprived the communities of projects and provides a serious problem in handling relief employment.

The problem is growing in seriousness, since funds that could be used for W. P. A. projects are being exhausted, and these counties are facing the situation where it will be impossible to provide employment because of lack of projects.

This condition exists particularly in about a half dozen counties, and in these same counties nearly half of the relief load of New Mexico is concentrated.

The counties in which this relief load is concentrated normally have the lowest tax valuations in the State, so their problem is intensified not only because of normal lack of funds but because of the heavy relief load and the problem now of attempting to set up projects that will provide work relief.

The W. P. A. appropriation bill is now in committee in Congress, and there is a concerted effort to reduce the appropriation by a half billion dollars under the present appropriation.

If this happens New Mexico will be faced with a double problem. We will not only have difficulty in raising sufficient funds in some counties to provide projects, but throughout all of the State there will be less money available for work relief, even in counties where the sponsor's share is available.

In some counties there is little possibility of the unemployed being absorbed back into private employment, for there is practically no private employment. And it is these same counties that are unable to help themselves.

So until some long-time plan can be organized to put these areas on a normal economic basis we are faced with the continued but, I hope, temporary problem of providing employment. While I favor any reductions in Government spending that will ultimately bring about balancing the Budget and placing the country on a strong economic basis, I am opposed to doing this at the expense of thousands of our people whose only demand is the opportunity to make a living, and who, under the stress of present economic conditions, have little hope of ever being absorbed into private employment in their own counties.

Political speeches in which the speakers tell you over the radio and through the press than a change is needed in our economic set-up, and that if business has the opportunity it will absorb the unemployed, have an attractive sound. But that sound is as hollow as the fine phrases that are used.

From a practical standpoint, the unemployed cannot be absorbed into private employment where private employment doesn't exist.

In order to provide work in counties where it doesn't exist, we must provide projects, and, if projects are to be made available, it will either be necessary to relax requirements as to the amount of money the sponsor must provide or find new sources of funds for the sponsor's share.

Of the latter I can only be pessimistic, for I do not know where many communities or counties are to find the funds.

If action can be taken by the Congress to relax the sponsor-participation requirements under emergency conditions, it would be a happy solution. Although I do not know what success the suggestion will meet, I have today taken this matter up with New Mexico's delegation in Congress and I am urging them to make every effort to seek amending legislation that will make possible continuance of work-relief projects in communities where it is impossible to provide the sponsor's 25-percent share and where it is essential that work be provided.

While I do not think that a suggestion for outright gifts of the entire 100 percent of the project would be practicable, or acceptable by the Congress, it does seem to me that there may be cases where less than the full 25 percent might be acceptable; also, the possibility suggests itself that loans might be made available for the sponsor's share, to be paid back in taxes over a longer period of time than the funds would ordinarily be accumulated.

The problem is a serious one and may be more serious when counties and communities can no longer raise funds for sponsoring projects. Because of the seriousness of the problem, I have discussed this matter at greater length than I originally intended at this W. P. A. dedication program.

I have enjoyed this visit with you and I want to extend my sincere congratulations on the completion of this fine project. I am happy to have a part in the dedication of this building to the service of all of the people of Roy.

Thank you.

Widows' and Orphans' Pension Bill

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1940

LETTER FROM RUTH MILLER STEESE

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AMERICAN LEGION AUXILIARY,
DEPARTMENT OF PENNSYLVANIA,
Mifflinburg, Pa., May 4, 1940.

Hon. FRANCIS J. MYERS, M. C.,
Washington, D. C.

DEAR CONGRESSMAN: As legislative chairman of the American Legion Auxiliary, of the Department of Pennsylvania, may I express to you our genuine appreciation of your signature on the petition calling for the discharge of the House Rules Committee from further consideration of H. R. 9000. Thank you.

Very sincerely,

RUTH MILLER STEESE,
Department Legislative Chairman, American Legion Auxiliary.

Veterans' Pensions

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

RADIO ADDRESS BY HON. JAMES E. VAN ZANDT, OF PENNSYLVANIA

Mr. VAN ZANDT. Mr. Speaker, veterans' pensions was the subject discussed on the program of the American Forum of the Air, Sunday evening, May 12, over the network of the Mutual Broadcasting System. Under leave to extend my remarks, I desire to insert herewith my address delivered in support of veterans' pensions on the above occasion.

Ladies and gentlemen, veterans' pensions had the earnest attention of this Government on August 26, 1776, 54 days after the signing of the Declaration of Independence, when the Continental Congress passed the first pension law, which has since become the pattern for every succeeding piece of veteran legislation adopted to date.

From the days of Valley Forge our Government has paid pensions to the veteran and his dependent in every war in which our Nation has been involved. The theory that the veteran and his dependent have an honest claim on the Federal Government for assistance was voiced by a truly great American, Theodore Roosevelt, when he declared:

"Pensions are rewards for service rendered or recompense for injuries received in rendering them. They are payments, not bounties; the soldier is no more a beneficiary of the state than the state is of him."

In similar fashion, George Washington, Woodrow Wilson, and Calvin Coolidge expressed themselves in favor of the pension system.

Every war has left in its wake a trail of desolation and the World War was no exception. As an aftermath, 85 United States veterans' hospitals throughout the Nation are in operation today, filled to capacity and unable to care for a long and patient waiting list of the maimed and injured.

These veterans with broken bodies, suffocated lungs—yes, and in many instances, shadowed minds—were in 1917 the flower of American manhood. Is memory so short that one fails to recall these young men leaving their homes and families with the blessings and best wishes of a grateful Nation? Were you one of the untold millions who offered up a prayer for their safe return and in the same breath vowed that this Nation owed these boys a debt of gratitude and that nothing was too good for them?

Today that young army of 1917, in the short space of 23 years, has reached the average age of 48 years, with the appalling death rate of 91 World War veterans every 24 hours. According to statistics, 85 percent of the World War veterans are married and have three children, so that the average veteran's death leaves a widow with three children.

The two great veteran organizations—the American Legion and the Veterans of Foreign Wars of the United States—are conscious of the plight faced today by the 48-year-old World War veteran, whose physical condition is not only below par through his service, whether domestic or overseas, but whose age is a mighty barrier to his prospect of employment. This 48-year-old veteran is not alone in his plight, for be it remembered that statistics tell us he has a wife and three children.

This problem confronting the World War veteran and his dependents has been brought to the Congress of the United States after years of study on the part of the American Legion and the Veterans of Foreign Wars of the United States. And while the Congress of the United States tussles with the problem of providing for the World War veteran and his dependents, as well as veterans of all wars, a small group of veterans who happen through the grace of God not to be in need and who are employed in gainful occupations and professions, having no personal knowledge or information as to the actual need of the veteran and his dependents, join with certain publishers in disseminating false, misleading, and vicious propaganda that is intended to smear the recipient of any pension or benefits from a grateful Government. Wearing the dollar sign as a halo, these past masters of malicious propaganda are not strangers to the arena of veterandom. Their holy and horrified voices have been raised on former occasions when they charged the veteran and his dependent with raiding the Treasury and today they are running true to form when mention is made of a pension for the disabled World War veteran and his dependents.

No doubt many of you have been led to believe that every World War veteran receives a pension from the Government. Nothing could be further from the truth. Authentic information taken from Government records discloses that less than 9 percent of the 4,791,172 men and women who served in the armed forces of the United States during the World War receive benefits from the Government today.

It is interesting to note that 6½ percent of all Federal appropriations for the fiscal year ending June 30, 1940, is chargeable to the veteran and his dependents, and that this figure includes all wars. Likewise, it is shown that about 13 percent of the grand total of all Federal expenditures since the founding of our Nation represents the total benefits paid to the veterans of all wars and their dependents.

Those who heretofore have charged the veteran and his dependent with raiding the Treasury now have the gall to flatly state that the American Legion and the Veterans of Foreign Wars of the United States seek a general pension. I know of no major veteran organization that has ever advocated payment of general pensions for all able-bodied veterans, nor do I know of any bill that has been introduced in Congress to date on this subject.

There is a vast difference between a general pension and a disability pension. The latter is being advocated by the Veterans of Foreign Wars of the United States at the present time, based on the fact that after the World War thousands of veterans developed disabilities which they honestly believed to have been caused by their military service but which they unfortunately have been unable to legally prove to the satisfaction of the Veterans' Administration.

This bill appears to be the answer to the problem faced by many World War veterans, and regardless of the attack made against it, Congress will undoubtedly place their stamp of approval on it in the very near future.

With the high death rate of 91 veterans daily, and confronted with the fact that 85 percent of these veterans leave a widow and three children, the World War Veterans' Committee of the House of Representatives perfected and reported to the House H. R. 9000—a bill providing $20 monthly to the widow and a similar sum to the dependent parent, with a proportionate amount to the children according to age.

Since this bill has been reported out of committee the public has been asked to believe that this legislation will cost hundreds of millions of dollars annually and that every widow and orphan of deceased World War veterans will receive a pension.

On the contrary, those responsible for such rash statements fail to recognize the "needs" clause existing in the bill which will render ineligible 75 percent of the 96,500 widows, 23,500 children, and dependent parents of 32,800 deceased World War veterans. This "needs" clause can best be explained that where the income of the widow, parent, or orphan exceeds $50 monthly there arises a presumption that dependency does not exist.

Regardless of the charges that this bill will cost $100,000,000 annually, it is freely predicted that the sum will not exceed $10,000,000.

Tomorrow afternoon when the House of Representatives passes H. R. 9000 by an overwhelming majority they will recognize the fact that in extending benefits to the widows and orphans of deceased World War veterans they are transferring them from the relief rolls of the country to the honor roll of the Nation. In so doing the cost of maintaining these widows, orphans, and dependent parents is lifted from the shoulders of the respective States and transferred to the Federal Government, where it properly belongs, thereby making it possible for every community and State to provide more generously for other needy citizens.

In concluding my discussion on this question of veteran pensions, and regardless of the frenzied efforts of a group of selfish individuals to spread false propaganda, let me assure you that pensions are part of the cost of war and have been so recognized since the founding of our Nation.

Let's not be afraid to face the music. If our country can get itself involved in war and pay for the cost thereof, then it can certainly pay for the cost of the human aftermath of war.

The people of America who imparted their blessings to the defenders of this Nation in 1917–18 I am sure realize that in the payment of pensions to a veteran and his dependents they maintain an honor roll for those who have or are willing to give their all in defense of a grateful Nation.

Let me repeat that the pension roll has always been regarded as the honor roll of the Nation.

Yes; it has been costly; but in considering this cost let us stroll down memory's lane once more to the frantic days of 1917–18, when the youth of this Nation marched off to war with not only the good wishes of all citizens but likewise the assurance of this country's lasting gratitude for the service to be rendered.

Today, 23 years after, with the rest of the world plunged in conflict and we here in America enjoying the blessings of a great Government at peace with all nations, it is difficult to believe that these same citizens who imparted their blessings in 1917–18 are now opposing the payment of pensions to the veteran and his dependents.

I am confident that the rank and file of the great American public are grateful for the services rendered by the defenders of our Nation, and in a spirit of gratitude recognize the honor roll of our country by standing shoulder to shoulder with the American Legion and the Veterans of Foreign Wars of the United States in upholding a great American tradition—adequate care for the veteran and his dependents.

Great Britain and France Favor a Third Term for President Roosevelt, Believing That a Third Term Means United States Participation in the European War

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

ARTICLE FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Demaree Bess, published in the Saturday Evening Post for May 11, 1940:

[From the Saturday Evening Post of May 11, 1940]

OUR ELECTION AND EUROPE'S WAR

(By Demaree Bess)

GENEVA, April 5.—As far as Europe is concerned, there is only one issue in the American Presidential election this year, and that is the war issue. Europeans are amazed that so many Americans seem to believe they have already settled this question; that the United States can and will remain neutral; and that domestic affairs, therefore, are more important than foreign policy in the coming campaigns.

As seen from Europe, such complacency overlooks the fact that the Allied-German war has taken an unexpected turn. It ignores the evidence that British and French strategists have had to change their ideas about the conduct of the war, and some of their new plans are founded on the belief, or at least the hope, that they will have American military assistance before the war is over.

For years, the British and French peoples have been listening to a whole flock of American politicians and reformers and other citizens crying that the democracies must stand together against the dictatorships. Now that they are actually fighting Germany, they cannot be blamed for expecting their vociferous American sympathizers to attempt to provide them with whatever help they may require. Under these circumstances, they count upon pro-Ally Americans to keep the war issue alive in American politics until the war ends, or until we get into it.

When the war broke out last September, British and French statesmen told some of their American sympathizers: "If you lift your arms embargo, we can win this war. Your airplanes and munitions will give us the means to tip the balance. We can then bring Germany to her knees by an economic blockade." All Americans understood, when we did lift our arms embargo, that we were doing so because we sympathized with the Allied cause, and believed we were thus helping them to win.

The war proceeded for 7 months, and the Allied strategists earnestly studied its lessons. By spring they decided they must take additional measures to make their blockade effective. It was not enough to cut off Germany's imports from overseas. They must also reduce Germany's imports from adjoining Scandinavia and Russia and the Balkans. To execute these new plans they must bring more pressure upon European neutrals, perhaps even compelling some of them to enter the war. And they must call upon their friends in other neutral countries, particularly the United States, to do everything possible to send additional help.

Allied strategists had just begun to reshape their ideas about conducting their war when President Roosevelt sent Sumner Welles to Europe. Preceding him came reports from Washington that Mr. Welles represents the group in our State Department known as the pseudo appeasers. This group allegedly favors a negotiated peace in Europe because they believe that the German Army should be left intact as a bulwark against Soviet Russia. Whether these reports were true or not, when they were reprinted in European newspapers they undisguisedly disturbed British and French official circles. This Anglo-French official alarm was increased when Mr. Welles, at the end of his European tour, seemed to associate himself closely with the so-called peace schemes of Mussolini and Hitler. Those British and French journals which express official viewpoints began to hammer on the idea that the time was inopportune for peace moves of any kind, because a negotiated peace, coming before Germany had lost a single battle, would mean a German victory. Perhaps they were right. Certainly it would not mean an Allied victory.

The whole episode was reminiscent of another American election year, 1916, when President Wilson was getting ready to campaign for reelection. President Wilson also sent his representative to Europe to explore the possibilities of a negotiated peace. Colonel House was authorized to tell the British that Mr. Wilson was ready to call a conference to end the war. Our President was so eager to force a negotiated peace in Europe that he put himself on record: "Should the Allies accept this proposal and should Germany refuse it, the United States would probably enter the war against Germany."

The American public did not know for years how far President Wilson had been willing to commit us in that spring of 1916. If they had known, they might not have responded so trustfully 6 months later to his campaign slogan: "He kept us out of war."

President Wilson's rashness in committing his country was not revealed in 1916 for the simple reason that British and French leaders pointedly ignored his proposal, so that it was never put up to Germany. Anglo-French leaders did not want a negotiated peace in the spring of 1916 because they still hoped to overwhelm Germany. And with American help they did overwhelm her.

OUR PROCESSION OF WORLD SAVERS

When British and French leaders rejected the mere suggestion of a negotiated peace this spring, they naturally called to mind the events of that other spring 24 years ago. Once more the European conflict had reached a temporary deadlock, and once more there were moves for peace. These moves, as before, originated largely from neutral sources. And in 1940, even more than in 1916, British and French leaders insisted that they could not come to terms with what they called Hitlerism in Germany. In 1916 it had been Kaiserism.

Granted that Hitlerism compares unfavorably with Kaiserism and is more difficult to deal with, it nevertheless seems unlikely that the British and French Governments would have so promptly rejected overtures to peace if they had believed the alternative was defeat or deadlock. They thought, and they still believe, the balance of forces was in their favor. They could not be expected to negotiate a peace on anything like German terms so long as they could see that vast untapped reservoir of neutrals which might be more accessible to them than to their adversary.

The most powerful neutral, the United States, had unmistakably revealed that its sympathies are more one-sided in this war than they were in 1916. President Roosevelt had proclaimed himself the allied champion much more definitely than President Wilson did before 1917.

It is almost 3 years since President Roosevelt began to pull and push the American people back into the thick of world politics. His efforts recall those of a long line of American statesmen who had tried to convince us our "manifest destiny" beckons to us from the uttermost ends of the earth. That was the rallying cry of President McKinley, who led us into our War with Spain and presented us with that doubtful prize, the Philippines. It was enthusiastically taken up by Theodore Roosevelt, who plotted naive world schemes with Kaiser and Czar. It lured President Wilson into World War politics. It inspired Henry L. Stimson, President Hoover's Secretary of State, who tried to line up with Britain and France against Japan after the occupation of Manchuria. The chief drag upon the dreams of our men of destiny has been the reluctance of the American people to pay the price for making them come true.

And now, with the Allied-German struggle approaching its climax, Americans once again are waging their own internal battle over this "manifest destiny" issue, which has been fought at intervals over half a century. Alien propagandists are far less active in this contest than some Americans would like to believe. The two opposing groups are almost entirely American groups, composed of our own citizens with opposing ideas.

All European governments are aware that Americans were so thoroughly disillusioned by the propaganda of the last war that we are allergic to propaganda. So the British and French Governments, especially, are leaving us, at least to some extent, to fight out this battle alone. Their hope for further help from us resides largely in the efforts of pro-Ally Americans. It is for this reason that they are watching our Presidential election this year with such eager attention. It is for this reason that they are watching President Roosevelt so closely.

Because, whether he realizes it or not, Mr. Roosevelt has constituted himself, in European eyes, the rallying point for all Americans, whether Republicans, Democrats, or mugwumps, who want to swing further American support to England and France. For almost 3 years he has been dramatized by Europeans as the leader of the crusade which has marshaled the so-called idealistic and progressive portions of America to overcome the selfishness and ignorance of that mass of Americans who must be classed as isolationists.

THE QUARANTINE SPEECH

Naturally the average European cannot be expected to follow closely the intricacies of American political thought. It is hard enough to keep up with the more urgent political complexities of their belligerent neighbors. It doesn't matter to Europeans whether Americans who want to keep their country out of foreign wars are conservatives or Communists, pacifists or Irish-Americans. All are lumped together as isolationists.

Americans living in wartime England and France know that if these countries could name an American President Mr. Roosevelt would be elected by acclamation. Allied men and women echoed the words of one Communist Englishman who said to me: "It would be wonderful for us if Mr. Roosevelt received a third term." His European rooters have no particular interest in our President as a person. They don't care about his views on domestic questions. They simply count upon him, more than upon any other American, to promote the Anglo-French cause in the United States. Is their confidence justified? Do they perhaps appreciate better than most Americans the path which the President has followed in the past and is likely to follow in the future? To answer those questions let us look at the record upon which

Europeans base their estimates of Mr. Roosevelt. Let us look particularly at the European reaction to three sensational moves which our President initiated. First was his Chicago speech in 1937. The second was his message to Congress in January 1939. The third was the peace pledge he sought from Hitler and Mussolini in April 1939.

I was in America when Roosevelt made his famous "quarantine" speech in 1937, and I recall Americans were not much excited about it. It was interpreted as chiefly directed against Japan. But when I came back to Europe that autumn I was amazed to discover what a sensation that speech had created. It was hailed as the death blow to American isolationism and a return of the United States to world politics.

I saw that Europeans already had acclaimed Mr. Roosevelt as the outstanding spokesman for those who divide the world into democracies and dictatorships. At a single stroke, as one English weekly put it, he placed himself "head and shoulders above other men in the authority and power with which he speaks for democracy and freedom."

Mr. Roosevelt's power and authority did not derive from his words, which were no more eloquent than those of many writers and professors. They gained their force because he was the Chief Executive of the United States, and his views were regarded as reflecting American policy. When he spoke, the shadow of the Army and Navy and air force fell across his rostrum.

As events proved, European commentators foresaw the full consequences of that speech better than most Americans did. One Paris journal, L'Europe Centrale, flatly predicted that Mr. Roosevelt had foreshadowed revision not only of American foreign policy but of the arms embargo in our Neutrality Act. The speech proved to this journal that "American collaboration with pacific powers will be proportionate to the danger which threatens the civilized portion of the world."

The French review, L'Europe Nouvelle, derived particular satisfaction from the influence our President's words were likely to have upon England. The British, it declared, were "anxious not to undertake anything without the United States, but they are now assured that they may take certain initiatives and assume certain responsibilities without the risk of being disowned by the American Government."

From this time onward, those of us who lived in Europe could see that an oversimplified and dramatic interpretation of President Roosevelt's actions and speeches was gaining ground. It was easy to understand why Englishmen and Frenchmen, all through the year 1938, snatched whatever comfort they could from encouraging words coming over the Atlantic. That was a terrible year for them; their governments retreated steadily before the inexorable attempts of German militarism. That was the year when the policy of appeasement reached its apex, and when British and French leaders bemoaned the fact that only Czechoslovakia stood in the way of a division of European control with Germany. Czechoslovakia had staked its future upon its alliance with France. To placate Germany, that alliance must be disavowed. And it was disavowed at Munich. But before it was disavowed, the threat of general warfare stirred almost as much excitement in the United States as it did in Europe. President Roosevelt intervened time and again with appeals for a peaceful settlement, and in conversations with friends after Munich, he revealed that he took comfort in the belief that he had helped to prevent war. To those of us who were present at the Munich Conference, there was no evidence that the American President's peace appeals had much influence one way or the other. The British and French Governments did not need Mr. Roosevelt's help to make the peace of Munich. They needed American help only in case they decided to go to war.

Few Europeans honestly believed that the Munich surrender had prevented war. Because they sensed it, Englishmen and Frenchmen joyously greeted President Roosevelt's message to Congress the following January. Our President once again emphatically denounced dictatorships and upheld democracies, and his words were hailed, not as the personal opinion of one individual but as the voice of the American people. The London Round Table found that "President Roosevelt had issued the same warning that the United States would be alined with Great Britain and France in the event of a major European war, although, of course, the nature of the American participation cannot be defined in advance." The New Statesman and Nation assured its readers that "President Roosevelt is using the full power of his leadership to hurry along the change to a strong foreign policy." The German-Swiss newspapere, Voelkerebund, wrote that the axis powers must "consider what the intervention of a country of the importance of the United States would mean to them."

Americans who lived in Europe could see that Mr. Roosevelt's eloquent phrases, combined with certain obscure diplomatic moves that he began to make, were creating exaggerated hopes of American support in England and France. At that time, I wrote an article for the Saturday Evening Post, reporting what Europeans thought about our President's maneuvers. I suggested that unless the American people were really prepared to join England and France in war against Germany, when and if such a war came, their President was raising false hopes which eventually would prove humiliating.

THE MESSAGE TO THE DICTATORS

Shortly after that article was published I met a friend of Mr. Roosevelt who had just come from Washington. He undertook to persuade me that our President was justified in taking a hand in the European poker game, because the stake, as he saw it, was European peace, and the risks, as far as Americans were concerned, were negligible. My informant admitted that the President was trying to outbluff Hitler and Mussolini. He was doing everything he could by speeches and diplomatic moves to make the two dictators believe that the United States might forcibly back up France and England in case of further aggression. According to this friend, Mr. Roosevelt was confident he was running no danger of involving the United States in war, because such an overwhelming majority of the American people were isolationists. History has repeated itself. Once again an American President was intervening in European power politics because he believed he could use his great position to force peace in Europe. Woodrow Wilson had followed that same course in the spring of 1916. And, once more, events proved that European conflicts cannot be resolved by sonorous phrases or by diplomatic moves.

The high point of Mr. Roosevelt's efforts to outbluff the dictators came in April 1939, when he addressed his peace pledge to Hitler and Mussolini. In the middle of March, Hitler had made war almost inevitable by rushing his legions into Bohemia and Moravia. The Chamberlain and Daladier appeasement policy lay in ruins. Mussolini became so impressed with Hitler's apparent ability to get away with things that he decided to pick up Albania. This was the most chaotic period of Europe's recent history. And into Europe's turmoil and confusion Mr. Roosevelt hurled his messages to the dictators. This move caused a tremendous reaction in every European country. The Paris Temps described it as a sensation and declared: "This message has put an end, at least in part, to the state of uncertainty upon which the totalitarian states have speculated." J. L. Garvin wrote in The London Observer: "Now for the first time Hitler and Mussolini have no doubts. They know it as a certainty that America will be upon them if they strike again at any independent nation whatever." The Swiss Basler Nachrichten expressed the neutral view that "If the German and Italian Governments return negative answers, it must be known, both in Berlin and Rome, that the United States would very rapidly assume an active role, as soon as the floodgates of war were opened anywhere in Europe."

Mr. Roosevelt gave no sign that he was disturbed by these startling interpretations, and others like them. In fact, they doubtless fitted in with the policy he had adopted to block the dictators. Perhaps he was encouraged also by the bitter comments of the German and Italian press. The Berliner Morgenpost asked whether President Roosevelt "does not want, by such agitation, to push the peoples of the Americas into war against the powers of order and thus supply means for dissimulating his failures in the field of domestic policy." The Rome newspaper, Messaggero, described our President's move as "part of the general offensive launched by the plutocratic democracies against the proletarian nations, which must be considered an act of war." The German Voelkischer Beobachter wrote: "If it were necessary for the western democratic powers to prove their ideological confusions, they could not have done better than to choose President Roosevelt as their spokesman."

When that spring crisis passed without war, many of Mr. Roosevelt's supporters in the United States gave him a large share of credit for saving peace. It is curious to observe that while Americans were thinking of the President's moves in terms of peace, Europeans were estimating them almost entirely in terms of war. By that time, little hope of lasting peace remained in Europe. The question was how far America would help the Allies in a war against Germany.

A few months later, after the Soviet-German pact had finally lighted the fuse to war, the peoples of Europe, in spite of their pressing personal anxiety over the dramatic progress of the debacle in Poland, watched with strained attention our congressional debate upon the arms embargo. Once again the American political arena assumed, in European eyes, the aspect of that familiar drama in which the pro-Ally group, headed by President Roosevelt, battled against the dark forces of isolationism and finally triumphed. For the moment, that victory was accepted as adequate.

The question remained how soon Americans would be ready to make further contributions. While the European peoples watched and waited, President Roosevelt suddenly moved once again. He sent Mr. Welles to Europe. Mr. Roosevelt is too experienced a statesman not to know that this move would create endless speculation in every European capital as well as in the United States, and that his explanations for the trip would nowhere be accepted as complete.

Although British and French official circles were probably uneasy, the delight of the ordinary Englishman and Frenchman was unmistakable. They had steadfastly refused to believe that the coming of war had changed our President's attitude toward the European conflict. Englishmen and Frenchmen would have been profoundly disappointed if Mr. Roosevelt had not given some indication soon that he was still watching for opportunities to help them.

Meanwhile, French newspaper readers were finding even more solid comfort in such reports as those of Georges Lechartier, correspondent in the United States for the Journal Des Débats, where Mr. Lechartier explained that Mr. Roosevelt, by farsighted and subtle political leadership, had made it possible for the United States to intervene in this war with much more immediate and deadly effect than we did in the last war. Pointing out that Mr.

Roosevelt had not made the mistakes during the present war in terms of the last one, the French correspondent continued: "Let us not forget, as President Roosevelt has never forgotten, that one of the greatest weaknesses of the military assistance brought by America to the Allies immediately after their declaration of war against Germany in April 1917, was the total lack of military preparedness of the American people. Three months elapsed before the arrival of the first American contingents in France.

"President Roosevelt has taken care to avoid a repetition of this inadequate preparedness. By his words and his actions, he has persuaded the American general public, first, of the advantage, and then of the necessity, for the United States to have 'the largest Navy in the world' and when the public understood this, he obtained from Congress appropriations to increase the American Fleet and Army enormously.

"Today American is ready, or will soon be ready, for any eventuality."

EYES ON AMERICA

It is obvious that M. Lechartier does not regard our preparedness as wholly defensive in character. He pointed out that American opinion "is infinitely better educated today, thanks to the press and the initiative taken by Mr. Roosevelt, than it was in 1914–17." He found that a growing majority already favored assistance to the Allies "without any restrictions in the economic sphere." As for military assistance, the French writer suggested that the American Army, Navy, and air force are being prepared for action just as quickly and probably more efficiently than if we had actually come into the war last November, when we made the first breach in our neutrality legislation by lifting the arms embargo. This astute French correspondent drew attention to a fact which few Americans have grasped so clearly. The great difference between 1940 and 1916 is that we were totally unprepared then for an extensive war, whereas now our Navy and air force are all dressed up and ready to go.

So there you have the picture as it looks from Europe. Allied statesmen see across the Atlantic a country whose President for 3 years has appointed himself the spokesman for democracies and the scourge of dictatorships. They see that his boldest moves in Europe have been greeted with applause by prominent Americans of every political faith. They see that the American people, under his leadership have created a Navy and an air force which is one of the world's great offensive forces. They see that our armaments, added to their own, might smash Hitlerism just as they smashed Kaiserism.

In this situation, the stage seems to be set for a final struggle between those Americans who want to bring us into the Allied-German war and those Americans who want to keep us out. That struggle coincides with our Presidential election, and seems likely to dominate it.

The Unemployment Problem

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

RADIO ADDRESS BY HON. CAROLINE O'DAY, OF NEW YORK

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address I made over the radio.

The National Women's Conference on Unemployment is holding a 3-day conference in Washington this week, and at this critical time it is important that the Nation should know what unemployment of 3,000,000 women means to them.

The radio address follows:

Statistics are no measure for human misery and privation. Cold figures cannot paint the picture of what millions of American homes have been like under the ravages of depression. Yet there are some cold facts which the people of the United States should know.

There are 3,000,000 daughters of the American depression. Yet there were only 300,000 W. P. A. jobs for these women in February of this year. There are millions of women, then, who should be the breadwinners of their families, and who are denied the opportunity to earn this bread.

And, in the face of this appalling inadequacy of jobs, 200,000 W. P. A. workers were laid off in April of this year, many, many of whom were women. Two hundred thousand more will be laid off in May, and by July 1 a total of 600,000 must be eliminated from the works projects.

The average wage for women W. P. A. workers is $44.50 per month, or $534 per year, if they work the full 12 months. The food budget for these women is $202 annually. For an average family, this yields the munificent sum of 5 cents per person per meal.

There are over 1,000,000 families and single persons dependent upon relief for their existence. The Social Security Board tells us that the average monthly relief allowance for the United States as a whole is approximately $24. This nets a total annual income of $288, out of which comes an annual food budget of $123. In terms of day-to-day existence, the $123 yields about 3 cents per person per meal, for the average relief family.

Wives of W. P. A. workers are little better off. Their average annual wage is $648 per year, out of which the average family takes $278.64 for food. This sum breaks down to 7 cents per person per meal.

Yet, all of the official standard budgets worked out by Government agencies tell us in plain language that even the most fortunate W. P. A. family in America is far, far below the lowest level at which a family can live in decency and without hazard to the health of its members. The lowest standard budget, the so-called emergency level of the W. P. A., is $75 per month, or $900 per year. In other words, the very lowest standard of living set forth in a standard budget is $252 a year higher than the highest income group from which delegates to this conference will be drawn.

Mass job hunts and individual quests for work in industry have been conducted throughout the country for the past 2 years. The number of positions resulting from these efforts have been pitiful. Even the recent rise in the production index has been so slight that it is quite clear that reemployment in private industry has not even made a dent in our standing army of 11,000,000 unemployed.

No; something more far-reaching than has yet been undertaken must be forthcoming before we can wipe out the scourge of mass unemployment. Something more fundamental in the line of keeping the wheels of industry turning must be tried. And until this is done the 11,000,000 jobless must be given the American right to work and earn their own living.

No single member of any family is in a better position than is the mother to describe in vivid and graphic terms the meaning of unemployment to the jobless people of this Nation. It is a terrible thing to ask a mother to stand docilely by and watch her children starve slowly but surely because of the inability of their parents to provide. It is, in fact, more than any citizen of this country can demand of an American family.

The stories which will be presented by the daughters of the American depression will stand as monuments to the criminal waste of unemployment. These personal histories should awaken America to the immediate necessity of frankly meeting and dealing with the danger of continuous mass joblessness. For the 11,000,000 unemployed are citizens in our democracy. They have a right to participate in it, both as political entities and as a part of the consuming public. If one or both of these rights are taken away from the unemployed, what does democracy become to them? It becomes a mockery, a hollow phrase, or, much worse, an actual agent of oppression.

That is why this conference is so important. That is why, also, it is important that concrete improvements in the plight of the unemployed must come out of the conference. To those who have been closed out of our economy, denied the fruits of democracy, we must prove that democracy is something worth fighting for.

No single citizen would, if he or she were conscious of it, say to another citizen, "You must live on $288 per year and like it. You can only spend 3 cents per family member per meal for food. You must watch your children starve and say nothing about it."

Yet those who fight against W. P. A., those who support the layoff of 600,000 W. P. A. workers, those who would even abolish relief, those who support W. P. A. wage cuts—all of these people are, in effect, saying just that to the 11,000,000 unemployed.

There has been during the New Deal administration an effort made to improve the conditions of these jobless men and women. And certainly today is an improvement over the previous administrations. But we cannot, if we take our responsibilities seriously, be self-satisfied. The few figures I have mentioned to you tonight are ample proof of that. And it is my hope that when the daughters of the American depression meet with their president, when they meet with their congressional representatives, and when they tell their stories to the Nation, something concrete in the way of improvements will result. For I believe that only in a marked rise in the purchasing power of the masses of our people can we find the road to real economic recovery.

With all the ferment and trouble in the world about us, it is my firm conviction that Americans must seek to solidify the foundations of democracy in our land. We can only do this by making it work. And by that I don't mean making it work for a few; I mean making it work for every single man, woman, and child in America. We have not made it work for the unemployed. The delegates to the National Women's Conference on Unemployment will demonstrate this. Their stories will be a challenge to democracy—a challenge which every conscientious American must meet calmly, boldly, and objectively.

We ask you to hear out the story of the daughters of the American depression, and after you have heard them to join with the delegates to the National Women's Conference on Unemployment in their demand for the right to a job and a decent American standard of living.

Does the Present Social Security Law Really Protect the Old Folks?

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

"THE TOWNSEND CREED" AND AN ARTICLE BY DR. FRANCIS TOWNSEND

Mr. ANGELL. Mr. Speaker, there is a petition on the desk of the Clerk for the discharge of the committee from further consideration of the Townsend bill, H. R. 8264. One hundred and fifty-nine Members have signed the petition. Those in favor of securing an adequate old-age pension law should sign this petition so that the whole matter may be considered by this session of the Congress.

It is conceded by most all of us that unemployment is our economic problem No. 1. As a part of that problem, and a major part, adequate care for the older workers is uppermost. We all know that one who has reached the age of 60 years and is thrown out of employment is faced by a most serious problem in endeavoring to secure reemployment. Under existing economic conditions of mass production and technological advances, a portion of those seeking employment must look in vain. As a result, it is logical that if any one group of workers should be retired and still be permitted to share in the fruits of industry it should be the older workers who, in the past, have contributed their part.

The Townsend plan is based on such a theory. The Townsend creed is sound American doctrine. Dr. Francis E. Townsend, the originator of the plan, in an article appearing in the Washington Daily News of Saturday, May 11, 1940, discussed this plan and answered the question, "Does the present social-security law really protect the old folks?" I ask unanimous consent that I may include in the extension of my remarks the Townsend creed and the article by Dr. Townsend. They follow:

THE TOWNSEND CREED

We believe in a Nation-wide retirement security program based on American principles of equity and justice, without the possibility of discrimination on grounds of race, color, or religion.

We believe that technological advances, declining birth rates, with the attendant decrease in the number of those acceptable to industry, and constantly increasing demands for retirement of our senior citizens, require retirement should begin at the age of 60 at the latest.

We believe that the retirement of the elders is a matter of concern to the entire body of society, and therefore should be financed by a universal tax based upon the total volume of business done within the Nation.

We believe that any social-security program should be made operative on a basis which will return to profitable employment all those not retired, and thus open the doors of opportunity to the youth of our land.

We believe that stagnation of business, idle bank reserves, idle factories, idle men are caused by lack of purchasing power in the hands of the many.

We believe this condition can be remedied only by the release of the taxes collected from the people being returned into the channels of trade and commerce on a scale that will permit the living of the people to be on the typical American standard instead of a bare subsistence level.

We believe that the immediate spending of tax moneys and their return through the channels of trade should be restricted wherever possible to the purchase of American goods made by American workmen; that they should be spent within the United States and should be used discreetly to avoid retaining employable persons in idleness, and this principle should be contained in any sound recovery program.

We believe that this and all other Government activities should be placed on a pay-as-you-go basis, as neither this Nation nor any other nation can survive constantly increasing indebtedness. We must have a balanced National Budget to protect the American way of life.

[From the Washington Daily News of May 11, 1940]

DOES THE PRESENT SOCIAL SECURITY LAW REALLY PROTECT THE OLD FOLKS?—"NO," SAYS DR. TOWNSEND

(By Dr. Francis E. Townsend, originator of the Townsend Plan)

Does the present social-security law really protect the old folks?

It most certainly does not.

It is a cruel and deceptive law with pension and charity payments so indecently low as to sicken any Christian soul.

The old gentleman who grinned at us each morning from the social-security placard as we rode to town on the streetcar has been removed. His happy smile in anticipation of age security turned sour when his check, averaging $4 a week, arrived.

The figures I use have been checked by Senator SHERIDAN DOWNEY, who had them verified by the Federal Security Administrator, Paul V. McNutt.

Under the so-called Federal-State charity plan of Social Security, the average payment is only $19 a month. Can anyone defend that meager sum? Under the worker's contributory plan for which the Federal Government is wholly responsible, the record is a sad one. Fifteen percent of those taxed under its heartless provisions will receive nothing at all in return, because they failed to earn $50 in a sufficient number of calendar quarters. Their contributions will be stripped from them—and they will get not one slender dime!

Another 15 percent of the contributors will receive only the statutory minimum—a miserable $10 a month. Twenty percent more will receive under $19. One-half of all those paying contributions will get less than is given free to the average recipient of State charity pensions.

If a retired worker, enjoying the minimum of $10 a month, has a wife past 65, the Government lifts his allowance to the pitiful sum of $15. But, if the wife is only 60, they must struggle along for another 5 years on 35 pennies a day.

Those who will receive annuities of $40 a month are generally those who won't need the payment, since it is only those receiving salaries of $3,000 a year and up who will get these larger payments.

The Social Security Act is rotten with injustice to its very core. It is hardly at all a contributory plan, but almost wholly a scheme of fake dividends paid from public moneys, with substantial payments to the prosperous and meager pittances to the miserable.

Notice how indecently unfair the act is in its treatment of widows and orphans. If a man dies, who has had a salary of $3,000 or more per year, leaving behind him a widow and two or three children, that fortunate family will be given a social dividend of $85 a month. He may have paid in as little as $90 and yet his family could collect $20,000 to $25,000.

Take now the case of a man receiving the minimum benefit of $10 a month. If he should die, leaving a widow with five or six children, that widow and those children will receive just $20 a month.

Thus, this law gives to the fortunate and well-to-do, out of public moneys, a decent annuity of $85 a month and a miserable allotment of $20 to the needy and unfortunate.

Social Security extends its meager protection to only the fortunate employed in "covered" occupations. Millions of agricultural, domestic, and other employees are left outside the magic circle; and, of course, 12,000,000 unemployed cannot hope to contribute.

This law discriminates against the poor and the lowly. In Michigan, 85 percent of those who pay contributions will receive pensions, while in Mississippi, where one-half the workers earn less than $200 a year, only about 7 percent of those who pay contributions will be paid annuities. The bread filched from these destitute workers will be given to the more fortunate. Five or ten dollars will flow into the more prosperous industrial communities in the north as compared with every $1 that will be received in the Southern or agricultural States.

Finally, in answer to our question, let us take the case of the average employed worker who will receive benefits under the contributory plan. In the covered occupations his earnings are $75 a month. Eighty-seven percent of those who are married, when they become 65 have wives under 65. These will receive no additional benefits. The average worker reports to the Board as follows:

"I am married. I shall be 65 January 1; my wife is 60. I have been employed for 3 years at $75 a month. How much do I have coming?"

The Social Security expert says: "We will give you 40 percent upon the first $50 of your earnings, or $20. Ten percent upon the second $25, or $2.50 additional. So you will receive $22.50, plus 1 percent of that amount for each year, which, for 3 years, would make it about $23."

If we degrade Mr. Average Worker to a home in the slums that he might rent for $14 or $15 a month, and slowly starve him and his wife by cutting his food allowance to $15 or $16 a month, allow nothing for clothing or medical care, we see how shockingly inadequate such a pension is.

The advocates of social security have no apparent conception of the needs of social dividends for increased purchasing power. They do not grasp the necessity of increasing buying capacity by such means, for to seek these ends by pensions of $10, $20, or $30 a month is absurd; it is an amount suited to the age of poverty, not of abundance; of the wheelbarrow, not the steam shovel.

We need a national pension program which will abandon the shame and poverty of the Social Security Act and will pay to every retired citizen over 60 (age 65 is fantastically high) a decent social dividend as a matter of simple human right. We need a program adequate, not merely to assist life, but to grant it a measure of dignity and serenity.

We need a program which will be founded upon a truly equitable base, broad enough to support ample annuities; that is, upon the income of all society—including the well to do—and not simply upon the working class. In short, what we need, and what increasing multitudes want, is the Townsend plan, as submitted to Congress in 1940. And if I am any judge, that is what we are going to have.

Who Can Keep Us Out of War?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. BENDER. Mr. Speaker, if we were asked to name one principle of public affairs which the people of the United States would not lightly surrender, we should list a determination to keep clear of European politics as our unchallengeable selection. A century and a half of constant attention to the development of our own economic health while Europe was wallowing through an orgy of blood in a dozen wars has made us wary of anything smacking of European intrigue. And the experience of the last war is still too vivid for any of us to look upon our friends across the ocean with anything approaching confidence. George Washington's Farewell Address has gained tremendous support from world history since the day it was delivered. Each year it looms ever larger upon the American scene, gaining stature as one of the most prophetic warnings uttered in modern times. As a solid rock of governmental policy, it has withstood the test of 150 years of constitutional government. Every time we have departed from it we have come to grief. Every time we have resisted the cries of the internationalists to "save mankind" we have gained strength.

The people of the United States must know by this time that nations determined to destroy themselves cannot be dissuaded. Reasoning processes are as closed to them as to the minds of madmen. Not for a moment do the American people fail to sympathize with those who are insane; but we do not take up arms on behalf of one madman to enable him the more speedily to dispose of another. For almost 2,000 years the people of the European continent have battled each other desperately. They have killed, pillaged, burned the towns and farms of their enemies. There has never been a moment when anything approaching a friendly conference, with all cards on the table, has taken place in Europe. Instead, constant division has been fostered; absurd racial and national prejudices have been carefully nourished; and the whole demoniac game of Weltpolitik has been played with millions of helpless men, women, and children as pawns in the struggle.

Nowhere is this better illustrated than in the Balkans. A half dozen small nations, bitterly hostile to each other, worlds apart in their sympathies, have been created by the scheming minds of large powers which play the game most skillfully. Deliberately they have been taught to hate each other, despite the fact that not one of them is self-sustaining in even the most restricted sense of the term. In truth, the men who guide these Balkan states know full well that they need each other desperately, if they are to maintain themselves at all. Their basic interests are absolutely identical, yet they too join in the mad game of power politics as if the rattle of their swords were as mighty as old Bismarck's.

It does not require the mind of a gifted statesman to perceive that federation, political unity, a common directing agency could vastly alter the state of affairs in Europe. Nor is the situation any the less incredible in the Far East. Much as we dislike the aspirations of imperialistic Japan in the Orient, much as we prefer the peaceful, philosophic Chinese, we cannot help wondering why China's 400,000,000 people cannot unite within themselves to develop a mighty nation.

We Americans must not deceive ourselves into a mistaken belief that it is our role in world history to bring about peace and harmony through the use of the sword. Our task in the records of human destiny is to demonstrate by example that the program of democracy can work effectively. No argument can be made for Federated States stronger than the proof that it can work with millions of men and women who come from diverse backgrounds, who have in fact been brought up in the atmosphere of the same hating nations from which the witch's caldron of Europe has been fashioned.

In those halcyon years before the World War and immediately after, the lesson we have been unconsciously teaching the world seemed to be taking hold. Democracy was the pattern from which many a small nation drew its governmental design. For a time, it worked, even in a war-destroyed Europe. Then the old hatreds flared up again. They bubbled out in Spain, in Italy, in Poland. Forces interested in changing the order of things stimulated restrictive, oppressive measures against minorities.

The democratic principle of compromise, of give and take was abandoned, and majorities sought to rule through force.

The process is still going on today. And already in the United States the demand is rising from those who refuse to learn. "Now is the time," they tell us, "to intervene. Now we can walk into Europe to strike a decisive blow for human freedom. We must crush the Germanic monster to keep the world safe for democracy." The words sound all too familiar. They were the slogan of the last war. Are we to be dragged into foreign lands again on the same basis as 1917? Are we going to shed the blood of our youth on foreign battlefields once more to restore order to a chaotic continent?

We are determined that we shall not. The Republican Party is pledged to a program which rules out war completely.

But the Democratic Party, protest though it may, can offer us no such assurances. It has a long record on foreign affairs, a record which leaves no room for doubt. In the days of 1916, President Woodrow Wilson campaigned on a platform boasting that he had kept us out of war. A few months after the votes had been counted we were in that war. President Wilson was a great public figure. He was thoroughly informed on world affairs. In fact, he too sent an emissary on a fact-finding mission to Europe. Colonel House was the Sumner Welles of the Wilson era.

The similarities are striking, too striking for comfort in an hour of grave international tensions. President Roosevelt, for all his devotion to the interests of democracy, suffers from a weird ailment which seems limited to the leaders of the Democratic Party. He has megalomania, a terrifying word to express a terrifying purpose. It means a passion for achieving great results. It means a deep and frequently incurable desire to do things which will perpetuate one's name in the history books of the future. It means, in terms of President Roosevelt's personal aspirations, a consuming zeal to bring peace to a world racked by war.

Americans have not forgotten the results of the moral crusade upon which Woodrow Wilson launched us in 1917. We have not forgotten the celebrated fourteen points, nor the Peace Conference of Versailles. Still fresh in our memories is the historic expedition of President Wilson to France, where he visioned himself as the central figure in a drama which was to reshape the destiny of Europe, insure a just and lasting peace, stimulate confidence and trade.

Nor have we forgotten that over a million Americans risked their lives on foreign battlefields to give President Wilson

the opportunity to play this majestic role. We have resolved that American blood must never be spilled again for such an objective.

If the utter collapse of Versailles and Wilson's idealism has taught us anything, it has taught us that Americans cannot solve Europe's problems. No matter how objective we may be, no matter how fair-minded our views, no matter how sincere our spokesmen, the politicians of Europe will not accept our program for their continent.

It must be obvious that President Roosevelt has not yet learned this lesson. In speech after speech, the old hankering of Wilson has cropped out to reveal its reincarnation in President Roosevelt. "Aggressor nations," "quarantine," are strikingly reminiscent of the bellicose "freedom of the seas," which stirred our thinking in 1916. The mobilization of sentiment in powerful units must always precede the beginning of hostilities in a democratic state. Emotions must be roused. Dangers to institutions cherished by the people must be conjured up before they can be readied for the battle. Today the processes have become more subtle than they were in the nineteenth century. Then the program called for melodrama, faked telegrams, nonexistent insults, border incidents. Now the nations are bombarded with assaults on ideologies. Isms have replaced the incident. National insults have gone out of style, and they have been replaced by appeals for economic self-preservation.

In all these modern trappings of the old-fashioned chauvinism, President Roosevelt knows no equal. The same voice which proclaims that the only enemy we have to fear is fear itself, can equally glibly assert that the people of the United States do not live in an international vacuum; that our interests are the interests of humanity; that the concerns of Europe are our concerns. With quivering sincerity, the Democratic President of our Nation can point to the damage inflicted upon our trade, upon our industry, by conflicts abroad.

We know all these things, yet we reserve the right to weigh them in the light of our Nation's history. Those students of world affairs who see the United States as no more than an outpost of the British Empire, as a mere continuation of European development, mistake the judgment of our people's temperament. Our political history represents a determination to turn our back upon European entanglements. It is a complete repudiation of the European technique of government and the European approach to the solution of its problems. We believe in conference; Europe believes in conflict. We believe in arbitration; Europe believes in armament.

To those who minimize the dangers before us must be addressed a word of warning. The technique of propaganda is not limited to one or another side in the European war. The Allies and the Nazis are equally adept at its skillful use. In the years from 1914 to 1917, when they were laying the groundwork for American participation in the World War the lessons of subtlety were well learned. No one who reads can doubt the amazing similarity between the basic influences which were at work then and those which are operating now.

In the days of 1914 our ambassadors abroad were not long in revealing their sympathies. They are no less evident today. The Walter Hines Page who served us in London during those fierce days is matched by the William Bullitt who is our Ambassador to France today. The Brand Whitlock, of Brussells, was no more pro-Entente in 1914 than Mr. Cromwell, of Ottawa in 1940. Our roving Ambassador, Norman H. Davis, is no less anxious to witness an Allied triumph than was our Ambassador to Paris 26 years ago.

Yet even more striking than the analogy between our representation abroad in the era of Woodrow Wilson and our representation today is the basic predisposition of both administrations. In 1912 the Democratic Party swept into office on a pledge of a liberal transformation of our national life. In the words of Frederic C. Howe, "The spirit of this young America" in 1912 "was generous, hospitable, brilliant; it was carefree and full of variety. The young people in whom it leaped to expression hated injustice. They had no questions about the soundness of American democracy. They believed that the truth would make us free."

It was a day that heralded as the epoch of the new freedom, startling reminder of our New Deal. Vaguely, international peace, arbitration, disarmament, were the ideals of the new freedom. The new freedom failed to bring recovery, just as its successor, the New Deal has failed. Then as now, the Democratic President insisted that the temporary depression in certain quarters was psychological, artificially created.

All but the blind must recognize the road to war. No signposts could be more clearly marked.

A Democratic President in 1914, already predisposed to regard one side of a European war as holy and the other as tainted finds his counterpart in a Democratic President in 1940 equally determined to champion one side as against its enemies.

A regime with its foreign representatives stationed abroad in virtually unanimous sympathy with the Allied Powers in 1914 is matched by an identical situation today.

The forces of difficult economic circumstances at home under the new freedom were far weaker than they are today.

Every element of President Roosevelt's desire to mediate the crisis which is sweeping up to a climax in Europe today was present in the mind of Woodrow Wilson, and Colonel House in 1914.

Can we be certain that the National Government, under these circumstances will assure our people of peace?

War fevers spring up in America overnight. It may come upon us at any moment, for the groundwork has been carefully prepared.

Those who have prepared the groundwork will surely not seek to resist its results. The democratic National Government, with its pronounced leaning towards international participation, with its readiness to join European governments to "solve" the world's problems must be regarded as suspect. It cannot be relied upon to keep the people of our great Nation at home, working out their own problems in their own fashion.

Let Britain, France, Germany, Italy, and Russia work out their own destinies. We can never hope to solve their problems by force of arms. It has been tried before, with results so disastrous for the economy of the world that no one who grasps reality desires to see it tried again.

Until the rulers of Asia and Europe determine for themselves to end the interminable hatreds, the endless feuding, the deliberately fomented campaigns of misrepresentation, the constant suspicion with which they regard each other, no peace will come to those regions which stretch from the eastern shores of the Atlantic to the western shores of the Pacific.

Our role must not be that of belligerent again. We must make it certain that the political leadership of our country is committed irrevocably to a policy of peace. Only the Republican Party can offer us the assurance our people need. G. O. P. today spells "guarantee our peace." If the rest of the world chooses to destroy itself, we must continue to demonstrate that peace can exist among men.

Freight-Rate Differentials

EXTENSION OF REMARKS

OF

HON. EWING THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. THOMASON. Mr. Speaker, throughout the South and the Southwest, and especially in the far western section of Texas, of which my home city of El Paso is the capital, the interterritorial railroad freight-rate differentials seriously

burden agriculture and industry. It is one of the major problems in the Southwest. It has retarded the growth and business prosperity of El Paso for many years.

A significant step has just been taken in El Paso looking toward the final elimination of these differentials. Forcing our shippers of the products of farm and factory to pay penalty rates, for which there is no longer any justification whatsoever, the pockets of the consumers are rifled, their buying power curtailed, and their general prosperity hindered.

For many years the economic issues presented by these differentials have been the subject of discussion throughout the sections of the country that I have mentioned. Consumers, chambers of commerce, other organizations of businessmen, and the newspapers have given these questions serious attention and study. Many of the newspapers, indeed, are making the elimination of these differentials a major editorial objective.

Certain of these differentials that affect directly my part of the country are on the way toward elimination by an agreement recently reached there by the railroads. This is a commendable step on the part of the railroads. But the problem is not near a final solution as yet.

A diligent effort was made to bring it closer to solution by provisions in the transportation bill of 1940, the conference report on which was recently voted on in the House. I voted for that report. Subsequently, when asked by the newspapers for a statement, I said, "My principal reason for voting against the motion to recommit the bill was the fact that it embodied the Ramspeck-Hill amendment, directing the Interstate Commerce Commission to initiate action looking to the abolition of the damnable and indefensible differentials. I thought it was our only hope of getting some relief in the Southwest."

I regret that more of the Members from the Southern and Southwestern States that are so burdened by these differentials did not support the conference report for this reason. But, as I said at the beginning, a new and important step has just been taken to eliminate these differentials, and to give us what this country needs—a truly national railroad transportation system so far as rates are concerned.

This was the adoption by both the Democratic and Republican county conventions of El Paso County at El Paso last week of resolutions condemning the differentials, and seeking direct political action to accomplish this purpose.

If the delegations from my county to the two Texas States conventions are successful, planks aimed at abolishing the differentials will be included in both party platforms. And if they are supported by other States, there is a chance that the national conventions may be enlisted in this most important fight.

I sincerely hope that Democratic conventions in other States affected by these differentials will join us in this effort.

The following is the text of the resolution passed unanimously by the Democratic county convention at El Paso on May 7:

We advocate the elimination of the artificial railroad freight rate barriers between sections of this State and regions of this Nation that prevent the producers and distributors of agricultural and industrial products from finding their rightful markets and that reduce the employment of railroad labor, that put unnecessary burdens upon wage earners, and that penalize consumers.

We urge upon State and Federal regulatory bodies the promulgation of rates and regulations that will permit the producers of these products in Texas to compete with other producers elsewhere on a fair and even basis.

And we appeal to the Interstate Commerce Commission to pursue the precedent it has already set in the Southeastern Governors Rate case to the end that unjust freight-rate differentials against the Southwest and the South may all be eliminated.

We instruct our delegates to the county Democratic convention on May 7 to submit and fight for the inclusion of this plank in the county platform with instructions to the county's delegates to the State Democratic convention at Waco, May 28, to submit and fight for inclusion in the State platform a plank similar to this with instructions to the State's delegates to pursue the same course at the National Democratic Convention.

The Siren Call of Greed

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. MUNDT. Mr. Speaker, the argument that the dependent widows, orphans, and parents of veterans of the last war should not be given assistance as provided in H. R. 9000, even when needed to prevent suffering, appeals to me as being neither patriotic nor pertinent when based on the premise that such pensions are expensive. Of course they are expensive, but so is war! America is mature enough to know that wars cost money and that they create pension needs which must be met. The way to save money on pensions is not to neglect the suffering families of war veterans, but it is to maintain a national policy which keeps this country out of war.

It is with great timeliness, Mr. Speaker, that the problem of pensions comes before this body at this particular time in our national history. Even today we have read editorials and speeches and have heard speakers and radio commentators talk about increasing the belligerency of the United States, relaxing our peace-protecting neutrality provisions, and moving this country over closer to the brink of war. Sword rattlers and alarmists who see opportunity for personal gain or political preferment in breaking down this country's decision to keep out of the European war are speaking more boldly today about our involvement "at least to the extent of our credit" than they did 2 months ago. The internationalists and interventionists who have been quiet for a time are again hinting openly that "this is our war"—the prelude to another dizzy, bloody dance with Mars is beginning to be heard from the same discredited group of international financiers whose false motives and selfish moves finally plunged this country into the World War.

Nation-wide realization that wars breed pensions and that pensions must be paid may help restrain some people in this country who are beginning to look at Europe's holocaust with mercenary eyes and starting to urge in surreptitious whispers and by almost imperceptible stages that we should repeal the Johnson Act and once again permit international bankers and brokers to extend credits to belligerents. It is time we let those who would send your sons to battle realize that their dollars are not immune when the time comes to repay in some small degree to the families of these veterans the costs to them of such great personal sacrifice.

WATCH OUT FOR THE CHANT OF THE MONEY LENDERS

The chant of the international meddlers and profit seekers is again beginning with its insidious and deadly monotony. First, we should lend money to warring powers, these internationalists suggest, then when or if the tide of battle goes against our borrowers we must send the flower of American youth forth to win the war so these credits can be collected. Unhappily, we learned from the last war that even when our sacrifice of life and limb makes victory possible, our borrowers turn cold shoulders on their promises. Such financing of international war might again result in a wild epidemic of counterfeit profits, but it would inevitably end by our being drawn into a conflict which this time would first of all result in the entire elimination of American rights and liberties.

Strangely enough, it is largely the same group of internationalists and the same combination of brokers, bankers, and metropolitan newspapers which denounces nonintervention and peace-protecting neutrality which is most articulate in its opposition to pensions to those who sacrificed the most in the last war. These moneyed interventionists must learn that war costs money as well as lives, that war profits are the seeds from which post-war depressions are born, that we

should first do more to repay our debt to those who fought the last war before we move closer to the vortex of a new war.

Even the most casual observer must realize that it is not the widows, parents, and orphans of World War veterans who are urging us to flirt with dangerous international policies which might involve us in today's conflicts. It is not the common people of America who want to chip away at the foundations upon which peace is protected in this country. It is not the poor people, the farmers, the unemployed, and middle-class businessmen who are paying warlike columnists to write war-mongering comments in the newspapers or to broadcast hate-stimulating news stories and opinionated observations over the radio.

The demand to put American money lenders back into the war business does not come from the heart of America nor from the soldiers of 1917. Mr. Speaker, unhappily but indisputably, the trend toward war in this country is financed and fanned by that element of big-town financiers in this country, whose banks and brokerage firms, whose newspaper magnates and principal advertisers, whose munitions plants and powder factories offer opportunity for get-rich-quick war profits if Uncle Sam can again be freed to set about the business of becoming Europe's Uncle Shylock. This is a sordid picture, but an evening spent listening to certain well-known radio commentators or in reading the press of our larger cities pretty clearly indicates from whence comes the still, small voice of intervention, which is getting louder and bolder every day as 1940 threatens to parallel 1916.

THE SIREN CALL OF GREED

Some day, Mr. Speaker, I hope taxes can be devised, and that soon, which will provide adequate pensions for all veterans' needs in America from profits secured by those who make money out of international murder. Making the machinery of war should not be permitted to earn inflated profits in this country; I doubt whether it is good national policy to permit this business to make anything above a normal or minimum return on the investment involved. It is pretty risky business to have so many wealthy influences in this country holding a vested interest in international war.

The siren call of greed is too well-fed in America when some of our biggest businesses with control of so many of our newspapers, radio, and motion-picture facilities can envision riches for themselves by extending their money-lending activities to warring nations with whose armies they would thus entwine the safety of American youth with no other regulations binding them except those motivated by private profit, personal prejudice, racial ties, political philosophies, or individual aggrandizement. Citizens would do well to look far back beyond the printed page, the inspired editorial, or the casual comments of the news casters on the radio to discover what hidden force or "fifth column arm of Mars" is actually responsible for the all too apparent war mongering which is growing bolder and louder in America.

Mr. Speaker and friends, let us enact H. R. 9000 into law. Let us turn deaf ears to the group which urges us at the one time to relax our neutrality safeguards so they can loan money for profit to nations at war and at the other to economize at the expense of suffering by those whose personal sacrifices followed the practices and policies which involved us in the World War.

The soldiers of 1917 have become the best peace salesmen of 1940, and they are still doing their part to expose the siren call of greed which is again preparing to offer America its seductive wiles. America has not repaid its debt to the veterans of the last war; perhaps it can never do so. But today let us vote to provide at least the pensions provided in H. R. 9000 so that the needy and dependent orphans, widows, and parents of World War veterans can be kept from becoming objects of charity.

Let us acknowledge our national responsibility in this regard. Let us rededicate ourselves to peace. Let us do more for those whose heroism gave us victory during the World War and less to increase the hazards of being engulfed in a new war. Let us listen more to the still small voice of conscience and less to the siren call of greed in America.

Our Foreign Policy and National Defense

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. HARNESS. Mr. Speaker, nothing essentially new has happened in the past few days of the European war. The latest act of Nazi aggression was inevitable in the course of modern dictatorship and differs from past events only because it has increased the intensity of the war and brought its threats nearer to American interests. But because American thinking brings itself to grasp the totalitarian philosophy only with the greatest reluctance, we are shocked by this latest piece of brutality, as though we believed it impossible until we actually saw it occur.

Holland and Belgium had pursued a course of strict neutrality. They took every possible means of avoiding involvement and of preserving peace. But because they unfortunately stood in the way of nazi-ism they have been overrun. I hope this latest in the long series of object lessons will convince us that peaceful desires, no matter how sincere or how earnestly pursued, are no guaranty against aggression. I hope this will convince us that if and when American interests interfere with the course of the dictators we may expect no better treatment unless we are prepared to defend ourselves.

It would be criminally short-sighted to gamble on the hope that we may not be called upon to make that defense. Great Britain's course in the face of threat during recent years should be warning enough that such a hope is horribly costly. For 5 years, in the face of the growing Nazi threat, that empire neglected to rearm or did so reluctantly and inadequately and continued to hope that "appeasement" would satisfy demands that proved insatiable. Fortunately, we still have time to avoid the British mistakes if we will.

Congress will immediately be asked for additional defense appropriations, despite the fact that vast sums have already been assured. I hope and believe that any additional necessary funds will be allotted, but more important than more appropriations is the immediate necessity of clarifying our foreign policy. With all the money and ability to produce airplanes and battleships and to train and equip armies we must have time to perfect an adequate defense. And until we have clearly determined what our real interests are, and how far we are willing to go to defend them, it is idle to attempt to plan and provide our weapons of defense.

It is one thing to plan the defense of the continent. It is entirely another matter to protect our vital and strategic interests outside our territorial limits. It is still another to plan active enforcement of the Monroe Doctrine in a world where the British Navy is no longer confining hostile forces in Europe.

There still is no threat immediate enough to cause us undue alarm, which is fortunate. In fact, the problems which we face now will not be solved by sentiment and hysteria. What we need most now is cool, hard-headed thinking and long-range planning by the best leadership we can command. We

need the type of leadership which will take the American people into its confidence—leadership which will clarify a sound, long-range policy and implement it with a program in time so that the country can examine and judge it calmly and without undue pressure from any immediate outside threat.

There has been no such planning and policy making to date. The people have been asked to support vast expansions of our defense arms without knowing what sort of a policy this program is designed to implement. In fact, there has been entirely too much mystery and hocus-pocus about foreign affairs and our arms program.

Perhaps the most unfortunate aspect of our present situation is that it confronts us during an election year, when statesmanship is handicapped by political considerations. The risks involved when such a grave international situation threatens to become the tool of politicians are terrifying to contemplate.

The Unemployment Problem

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

EDITORIAL FROM THE EVENING OUTLOOK, OF SANTA MONICA, CALIF.

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Evening Outlook, of Santa Monica, Calif.:

PENNSYLVANIA SHOWS THE WAY OUT

At a time when California's State Employment Bureau has been turned into an insurance laboratory for the Federal Government, citizens of this State should be interested in a recent attack made by Pennsylvania upon the great problem of unemployment. Described in an article in the May issue of the Tax Digest this Pennsylvania experiment began with the organization of a businessman's program, supported by the State's Republican administration, for the mobilization of jobs in business and industry.

Back of this movement, which was launched last November, lay an experience of rapidly mounting relief costs very similar to that of California. Thus in the fiscal year 1931–32 (when the depression was at its worst) the cost of public assistance in Pennsylvania was $7,397,000. But by 1939 this cost had mounted to $122,000,000, which figure did not include additional millions paid out in the State by the Federal Government from funds collected from Pennsylvania tax sources.

This terrific increase had meant that $100,000,000 in additional taxes might be necessary unless some way could be found to reduce relief.

Accordingly the job-mobilization program was launched. It is based on the simple principle that more business means more jobs.

In the words of Chairman Walter D. Fuller: "More than 10,000 businessmen, women, veterans, educators, clergymen, and others are actively on the firing line, backed up by the constructive thinking, cooperation, and effort of several million people of the State who have been impressed with the importance of helping to cure the problems of unemployment, relief, and taxation by local initiative and consideration."

The organization is simple. There is a supervising committee in each of the 67 counties of the State, and some cities have as many as 50 local committees, so that relief and unemployment can be treated as near the source as possible. The State headquarters at Harrisburg, with the full assistance of the Government, has acted as the clearing house for reemployment ideas and stimulated activity, but the program has stressed the importance of each industry, each county, and each local committee solving its problems in its own way.

Among other discoveries the program found that, amidst widespread unemployment, there were 20,000 jobs in the State that could be filled if trained workers were available. They found 300 classifications in which there are shortages of employables. And they found opportunities for starting new industries and solving old problems.

By exchanging such information local committees were able to create job opportunities by encouraging businessmen to go forward with expansion programs, such as the addition of a new line of goods, the opening of a new sales territory, or purchase of new equipment. They were able to develop much new business, with gain in jobs, by encouraging the modernization of homes, farms, and factories. As a result, more than $100,000,000 of construction tentatively scheduled for 1941 and 1942 will be done this year by the utility, cement, steel, and other industries.

But the greatest benefit of the program has been a very sharp decrease in the number of jobless and the cost of State relief.

While the Pennsylvania job committee does not claim entire credit for this improvement, statistics show that its activities played a very large part in decreasing the relief rolls of the State by 149,961 persons. Most of these persons found employment in private industry. The same activities have been largely responsible for reducing the State relief costs from $2,000,000 per week to $1,400,000 per week.

While this fine showing was being made in Pennsylvania, its neighbor industrial States of Ohio and New York were adding to their relief rolls, and business indexes throughout most of the country were falling.

Here, it would seem, is a perfectly feasible plan for making real progress toward solving the greatest problem that this Nation confronts today. It is a common-sense plan which combines patriotic cooperation with the virtues of local initiative and enterprise. It is the American way to solve our unemployment problem, as opposed to the ways of State socialism, which have proved—through ample trial—a ghastly failure.

And Pennsylvania's experience shows that this American way can and does work.

Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ARTICLE FROM FREDERICK (MD.) POST

Mr. SHANLEY. Mr. Speaker, it is most encouraging to read the sentiments of Dr. Joseph F. Thorning, one of the most widely read and widely traveled men in America, on the subject of our foreign policy. Few men in our body politics have as many personal contacts in Europe in the clergy and laity as he. Fewer still have had the chance to maintain as large a personal correspondence. His remarks on the sanity and caution and of the efforts of two of our foremost authorities in foreign affairs come with telling emphasis at this time.

I have taken advantage of my unanimous consent to insert a report of his statement and the facts surrounding it from the Frederick Post, Frederick, Md.:

In a lecture delivered before 2,000 members of the Charles Carroll forum in the red lacquer room of the Palmer House, Chicago, Ill., Sunday, Dr. Joseph F. Thorning, professor of sociology and social history at Mount St. Mary's College, Emmitsburg, praised the peace policy of United States Secretary of State Cordell Hull and Under Secretary of State Sumner Welles.

Pointing to the calm temper manifested by the American people since the outbreak of hostilities in Europe, Dr. Thorning attributed this happy result in large measure to the constructive statesmanship exhibited by the United States Department of State, whose officials, it was asserted, were "expediting their business in a judicial, fact-finding spirit."

Dr. Thorning said in part: "Secretary of State Cordell Hull, although stanchly vindicating American rights under international law, has not engaged in any battle of words or ideological crusades. When duty required declaration of principle, the United States Secretary of State stated his case in crisp, legal phraseology. His notes of protest both to the German Reich and to Great Britain have safeguarded the neutral position of the United States and at the same time paved the way to appropriate measures of indemnification and reparation. No trace of the swashbuckler manner or sword-rattling technique has been observable. Both in tone and content, the United States diplomatic messages have been marked by dignity and restraint. Without yielding a jot or tittle of American interests Secretary Hull has stated the case for this

country in clear terminology and with a wealth of sound precedents in international law.

"The result has been that respect for America has grown abroad, while at home public opinion has been enlightened and healthy. Everybody knows that the American people are deeply opposed to Hitlerism and Stalinism. The vicious character of nazi-ism and communism is clear to all but the most extreme partisans. The propaganda of Joachim von Ribbentrop and Vyacheslaff Molotoff has been quite generally discounted, if not repudiated.

"The absence of hysteria in American public life is due largely to the noninflammatory statements of Secretary Hull and Under Secretary Welles. The latter, in the course of a most difficult mission abroad, maintained an attitude of discretion that puts to shame the gesticulating and fulminating of numerous European foreign ministers. Mr. Sumner Wells was entrusted with a diplomatic job and he accomplished his work in a high-grade diplomatic fashion. He is a credit to career men in the service. His record suggests that there should be no diplomatic post closed to career men of proved capacity. The whole policy of reserving certain missions as political plums or opportunities for social prestige may well be reconsidered in the light of recent developments. There is no suitable substitute for the trained, experienced diplomat.

"It is gratifying to note that Secretary of State Hull has kept us out of war up to the present. It is my confident belief that a continuance of the current policy will prevent the slaughter of American boys on foreign soil. Nor is there any solid basis for supposing that the American Navy or air force will be required to affect the balance of power in Europe. British sea power has not been crushed; nor has the French Army, larger than that of Germany, been destroyed. If the peace policy of Secretary Hull will be maintained, it will place the United States in a position to contribute to stability after the war."

America and Europe

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sunday Tribune of May 12:

[From the Chicago Sunday Tribune of Sunday, May 12, 1940]

AMERICA AND EUROPE

War news is strong drink. It stirs the blood and inflames the mind. Accounts of advancing armies, attacks on small nations, the meeting of air armadas, the destruction of cities, rouse the passions. In such circumstances it is difficult to think clearly and the difficulty increases as the accounts become more circumstantial and detailed.

Americans must steel themselves against an emotional response to the exciting events in Europe. The danger is that we shall let passion get the better of us, imprison our judgment, and control our national policy. If that happens, it is as nearly certain as anything can be that we shall make mistakes for which we as a nation will pay a heavy price for years and not improbably for generations to come.

Along the eastern seaboard the clamor for American participation in the war is already rising. We have discussed this phenomenon before and shall discuss it again. Meanwhile it is sufficient to say that those who are demanding America's entry in the war are concerned for the welfare of European nations to which they feel a colonial allegiance and are giving little if any thought to American welfare and interests.

This is the moment to look at the situation with as much objectivity as we can command. It is idle to pretend that we can go into the war half way. If we take steps now which announce to the world that America regards the struggle in Europe as our war, we shall inevitably send another expeditionary force to Europe. Our pride will not allow us to stand on the sidelines while the men of other nations are bleeding for the cause which we have declared to be ours. The victims of superheated emotion may think—as they thought in 1917—that we can do our part with machines and money and leave the dying to others, but the expectation is a vain one, born of wishful thinking. If we go into the war, we shall again go in with all our manpower, all our resources.

Included in the bill will be the death roll and the casualty list. After the strain of war—unless the precedents of history are meaningless—will come another period of economic disorganization and moral and financial disintegration and these consequences will be the graver in view of the precarious financial condition of the country today, before a factory has been commandeered or a man conscripted. It is as nearly certain as anything can be that if we enter the war against the totalitarian powers we shall ourselves fall into the totalitarian pattern and if we recover our freedom in a generation we shall be lucky, indeed.

Those are a few of the items on the debit side of the ledger. What does the credit side show? The people who are edging us toward war talk largely of a better world order but they are singularly vague in detailing how it is to be brought about. They have not told us what kind of a peace is to be made, and in truth they do not know, for the sufficient reason that the peace will be made by Europe, according to European notions and traditions, and not by America in accordance with our aspirations. We went all through this in 1919 and we should have learned the lesson.

They say America's interest demands participation in the war. They are speaking impractically. If the dash into the low countries is checked short of the channel ports, America's help will not be needed. If the attack succeeds, America's help will come too late to be of any account. The Germans are gambling everything upon the power of their air force to disorganize the defense; within a fortnight or so the world will know whether the Germans have won or lost.

We have no military power which we can bring to bear in that short space of time. Our Army is negligible in size. Our air force is inconsequential in comparison with the fleets now engaged. If war were declared tomorrow we could not land a force of any kind in Europe to turn the tide before the decision has been reached.

The clamor for war will rise, nevertheless. It will be checked only if Americans think and think as Americans, for America.

Uncle Sam Has Refunded Illegal Taxes for Just About Everybody Except—

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1940

Mr. CASE of South Dakota. Mr. Speaker, Uncle Sam has refunded invalidated taxes for just about everybody but the hog producer who paid the illegal hog-processing tax.

Nineteen appropriation acts from 1878 to 1895 carried a total of $353,578.14 to refund income taxes illegally collected on salaries of State employees.

Twenty-eight appropriation acts from 1896 to 1919 carried a total of $2,759,035.53 to refund a 2-percent income tax later held unconstitutional.

Nine acts in three years, 1920–22, appropriated $91,699,976.36 to refund taxes on stock dividends held to be unconstitutional.

Only four acts were required in 1922 and 1923 to refund $161,327,668.56 for unconstitutional taxes on "futures."

Six acts between April 2, 1924, and February 28, 1927, refunded $591,735,591.51 for an unconstitutional sales tax collected from merchants handling sporting goods. Think of it, Mr. Speaker, over half a billion dollars on one item!

And at least $750,000,000—three-quarters of a billion dollars—has been refunded in the late twenties and early thirties under other decisions which I shall list. More than a billion and a half dollars in other refunds, Mr. Speaker, but yet we cannot get consideration in the House for Senate Joint Resolution 66, already passed by the Senate, which seeks to make it possible for the hog farmer to recover the processing tax paid by him and later declared invalid.

REFUNDED TO RAILROADS 2 YEARS AGO

Many Members were present 2 years ago, May 16, 1938, when I called attention to a precedent we established—no; a precedent we followed—when we passed a bill to refund $138,000 to a number of railroads for a tax later held illegal. From the RECORD:

Mr. CASE of South Dakota. Mr. Speaker, reserving the right to object, this bill should not be passed without calling to the attention of the House just what is being done. Members will get letters from farmers in their territory wanting to know why they passed the bill to refund to the railroads taxes collected under an invalidated tax law and did not pass legislation that is proposed to refund the hog-processing taxes to the farmers under a similarly invalidated

tax. The principle involved is the same. * * * Dr. Black, of the Department of Agriculture, has found that the farmers paid the hog-processing tax. If we pass this bill, we have a perfect precedent for the passage of the bill refunding hog-processing taxes to the hog raisers. I hope the Committee on Agriculture will promptly report that bill.

The gentleman from Minnesota [Mr. AUGUST H. ANDRESEN] asked me to yield and said:

The bill to which the gentleman refers, about the refunding of the processing taxes to farmers, on the processing of hogs, has been reported favorably by the subcommittee of the Committee on Agriculture and is now before the committee.

I replied that I hoped the full committee would report the bill promptly. Two years have gone by. The Senate has passed a bill of that character. The House committee, we understand, by a close vote, has recently declined to report the legislation. A discharge petition is at the desk, petition No. 25, which would bring the matter before the House. Many have signed it; more signatures are needed.

In order to make clear how firmly the policy of refunding illegally collected taxes is established, I have assembled the records on the subject. I believe they will be of interest to the House.

POLICY AS OLD AS THE CONSTITUTION

Ever since the beginning of our constitutional government, Congress has followed the policy of providing for the refund of taxes which have been illegally collected.

By the act of June 30, 1864 (13 Stat. 239), as amended by the act of July 13, 1866 (14 Stat. 111), the Commissioner of Internal Revenue was given general authority to refund taxes illegally collected.

R. S. 3689 provided permanent annual appropriations for the purpose of refunding illegally collected internal revenue taxes. This provision was later repealed by acts of February 24, 1919 (40 Stat. 1145), and November 23, 1921 (42 Stat. 314; U. S. Code 31: 602), and the Secretary of the Treasury was thereafter required to submit annual estimates for such refunds, which were included in the item for "refund of taxes illegally collected" contained in the various appropriation acts, especially deficiency appropriations.

The following list indicates in chronological order the various appropriations made for the purpose of refunding illegally collected taxes, with decisions of the Supreme Court which necessitated the refunds:

GENERAL DECISIONS AND PAYMENTS THEREUNDER

In *Collector* v. *Day* (11 Wall. 113), the Supreme Court held the income tax on salaries under the act of March 2, 1867 (14 Stat. 477), invalid as to the salary of a State probate judge.

Act of June 14, 1878 (20 Stat. 128), $150,000 for payment of claims originating prior to July 1, 1875.	
Act of Mar. 3, 1879 (20 Stat. 421), $441.35 and $40,000 balance from appropriation of June 14, 1878.	
Act of June 16, 1880 (21 Stat. 254)	$3,020.77
Act of Mar. 3, 1881 (21 Stat. 428)	15.78
Act of Aug. 5, 1882 (22 Stat. 275)	11,075.05
	5,519.95
Act of Mar. 3, 1883 (22 Stat. 594)	5,053.52
Act of July 7, 1884:	
(23 Stat. 255)	2,261.28
(23 Stat. 260)	3,030.50
Act of Mar. 3, 1885 (23 Stat. 471)	8,216.83
Act of Aug. 4, 1886:	
(24 Stat. 289)	17,197.13
(24 Stat. 298)	2,996.84
Act of Feb. 1, 1888 (25 Stat. 27)	237.59
	14,128.62
Act of Mar. 30, 1888 (25 Stat. 63)	3,473.01
Act of Oct. 19, 1888 (25 Stat. 597)	95.31
Act of Mar. 2, 1889 (25 Stat. 935)	3,661.82
Act of Sept. 30, 1890:	
(26 Stat. 540)	551.16
(26 Stat. 547)	31,156.43
Act of Mar. 3, 1891:	
(26 Stat. 892)	12,317.62
(26 Stat. 895)	10,373.63
Act of July 28, 1892:	
(27 Stat. 309)	10,009.31
(27 Stat. 315)	5,965.31
Act of Mar. 3, 1893:	
(27 Stat. 668)	7,501.25
(27 Stat. 671)	4,439.55
Act of Aug 23, 1894:	
(28 Stat. 477)	$549.72
(28 Stat. 482)	253.67
Act of Mar. 2, 1895 (28 Stat. 874)	35.14
Total	353,578.14

In the decision of May 20, 1895, *Pollock* v. *Farmers' Loan and Trust Co.* (158 U. S. 601), the 2-percent tax on incomes in the act of August 27, 1894 (28 Stat. 553–560, secs. 27–37), was held unconstitutional. Payments therefrom:

Act of June 8, 1896 (29 Stat. 311)	$4,963.90
Act of July 19, 1897:	
(30 Stat. 142)	75.95
(30 Stat. 148)	37.71
Act of July 7, 1898:	
(30 Stat. 707)	34.92
(30 Stat. 710)	1,882.19
Act of Mar. 3, 1901:	
(31 Stat. 1053)	28,619.04
(31 Stat. 1056)	18,736.62
Act of Feb. 14, 1902 (32 Stat. 8)	15,881.35
Act of July 1, 1902 (32 Stat. 557)	2,919.55
Act of Mar. 3, 1903 (32 Stat. 1041)	26,404.22
Act of Feb. 18, 1904 (33 Stat. 22)	14,797.26
Act of Apr. 27, 1904 (33 Stat. 397)	82.83
Act of Feb. 27, 1906 (34 Stat. 29)	16,461.35
Act of June 30, 1906 (34 Stat. 638)	7,780.77
Act of Mar. 4, 1907 (34 Stat. 1375)	3,238.96
Act of Feb. 15, 1909:	
(35 Stat. 28)	4,141.70
(35 Stat. 31)	281.29
Act of May 30, 1908 (35 Stat. 516)	631.73
Act of Feb. 25, 1910 (36 Stat. 219)	12.50
Act of Mar. 4, 1911 (36 Stat. 1321)	462.97
Act of Aug. 26, 1912 (37 Stat. 618)	91.64
Act of Apr. 6, 1914:	
(38 Stat. 330)	61,022.44
(38 Stat. 577)	131,080.73
Act of July 29, 1914 (38 Stat. 579)	1,526.21
Act of Mar. 4, 1915:	
(38 Stat. 1155)	33,927.95
(38 Stat. 1159)	3,207.91
Act of Feb. 28, 1916:	
(39 Stat. 28)	48,335.75
(39 Stat. 33)	28,406.30
Act of Sept. 8, 1916:	
(39 Stat. 824)	111,277.75
(39 Stat. 828)	29,166.86
Act of Apr. 17, 1917:	
(40 Stat. 30)	232,556.16
(40 Stat. 33)	29,187.65
Act of Oct. 6, 1917:	
(40 Stat. 379)	107,010.93
(40 Stat. 382)	146,729.16
Act of July 8, 1918:	
(40 Stat. 838)	366,091.70
(40 Stat. 842)	55,929.55
Act of Nov. 4, 1918 (40 Stat. 1038)	451,496.72
Act of July 11, 1919:	
(41 Stat. 61)	202,602.57
(41 Stat. 63)	93,827.61
(41 Stat. 65)	163,177.50
Act of Nov. 4, 1919:	
(41 Stat. 344)	191,314.82
(41 Stat. 347)	123,690.81
Total	2,759,035.53

In the decision of March 8, 1920, *Eisner* v. *Macomber* (252 U. S. 189) the income tax on stock dividends in the act of September 8, 1916 (39 Stat. 756–757), was held unconstitutional. Payments therefrom:

Act of Mar. 6, 1920 (41 Stat. 522)	$357,389.74
Act of May 29, 1920 (41 Stat. 654)	12,000,000.00
Act of June 5, 1920:	
(41 Stat. 1038)	60,015.86
(41 Stat. 1041)	299,021.54
(41 Stat. 1044)	21,918.34
Act of Mar. 1, 1921:	
(41 Stat. 1161)	4,435,000.00
(41 Stat. 1193)	58.63
Act of Mar. 3, 1921 (41 Stat. 1274)	12,000,000.00
Act of Aug. 24, 1921 (42 Stat. 196)	1,537.26
Act of Dec. 15, 1921:	
(42 Stat. 337)	23,057,000.00
(42 Stat. 345)	34.99
Act of Feb. 17, 1922 (42 Stat. 376)	12,000,000.00
Act of Mar. 20, 1922 (42 Stat. 454)	27,468,000.00
Total	91,699,976.36

In the decision of May 15, 1922, *Bailey* v. *Drexel Furniture Co.* (259 U. S. 20), the tax of February 24, 1919 (40 Stat. 1138,

title XI), on manufacturers who employed child labor was held unconstitutional.

In the decision of May 15, 1922, *Hill et al.* v. *Wallace et al.* (259 U. S. 44), the tax on "futures" in the act of August 24, 1921 (42 Stat. 187, ch. 86), was held unconstitutional. Payments therefrom:

Act of July 1, 1922 (42 Stat. 775)	$28,122,500.00
Act of Jan. 3, 1923 (42 Stat. 1098)	12,000,000.00
Act of Jan. 22, 1923:	
(42 Stat. 1162)	42,530,000.00
(42 Stat. 1166)	168.56
Act of Mar. 4, 1923 (42 Stat. 1549)	78,675,000.00
Total	161,327,668.56

In the decision of April 23, 1923, *Spalding & Bros.* v. *Edwards* (262 U. S. 66), the sales tax on sporting goods under act of October 3, 1917 (40 Stat. 316, sec. 600 (f)), was held unconstitutional as to sales to commission merchants for exportation. Payments therefrom:

Act of Apr. 2, 1924 (43 Stat. 49)	$105,467,000.00
Act of Apr. 3, 1924 (43 Stat. 72)	12,000,000.00
Act of Jan. 20, 1925 (43 Stat. 757)	150,000,000.00
Act of Mar. 3, 1926:	
(44 Stat. 180)	149,250,000.00
(44 Stat. 189)	3,672.34
Act of July 3, 1926:	
(44 Stat. 883)	1,033.27
(44 Stat. 886)	873.13
Act of Feb. 28, 1927:	
(44 Stat. 1254)	175,000,000.00
(44 Stat. 1258)	13,012.77
Total	591,735,591.51

In the decision of May 31, 1927, in *Nichols, Collector,* v. *Coolidge et al., Executors* (274 U. S. 531), the transfer tax in the act of February 24, 1919 (40 Stat. 1097, sec. 402 (c)) was held to be unconstitutional in part. Payments:

Act of Dec. 22, 1927:	
(45 Stat. 30)	$43,000,000.00
(45 Stat. 42)	5.82
(45 Stat. 48)	292.75
Act of Mar. 5, 1928 (45 Stat. 169)	130,000,000.00
Act of May 29, 1928 (45 Stat. 935)	22.89
Total	173,000,321.46

In the decision of June 4, 1928, *National Life Insurance Co.* v. *United States* (277 U. S. 508), section 245 of the act of November 23, 1921 (42 Stat. 261), which provided that the tax exemption on the income of insurance companies should be diminished by the exact amount of interest on tax-exempt securities, was held to be invalid because it would destroy the guaranteed exemption payments:

Act of Dec. 20, 1928 (45 Stat. 1035)	$130,000,000.00
Act of Mar. 4, 1929:	
(45 Stat. 1613)	75,000,000.00
(45 Stat. 1618)	75.74
Act of Mar. 26, 1930 (46 Stat. 129)	67.04
Act of May 15, 1930 (46 Stat. 342)	130,000,000.00
Act of July 3, 1930:	
(46 Stat. 914)	8.55
(46 Stat. 917)	25.65
Act of Feb. 6, 1931 (46 Stat. 1079)	8.42
Act of Feb. 23, 1931 (46 Stat. 1223)	26,000,000.00
Total	361,000,185.40

In the decision of March 21, 1932, *Heiner, Collector,* v. *Donnan* (285 U. S. 312), a provision of the estate-tax law of February 26, 1926 (44 Stat. 70, sec. 302), was held to be in violation of the due-process clause of the fifth amendment. The law had provided that transfers of property valued in excess of $5,000, which were made within 2 years of death, without consideration, were to be deemed to be "in contemplation of death," and taxable under the estate-tax law.

In the decision of April 11, 1932, *Burnet* v. *Coronado Oil & Gas Co.* (285 U. S. 393), income from oil produced from lands granted by the United States to Oklahoma for support of schools and by it leased, was held not to be subject to the corporation tax of February 24, 1919 (40 Stat. 1075, sec. 230), under the principle of Collector against Day, decided April 3, 1871 (above). Payments:

Act of Mar. 3, 1933 (47 Stat. 1495)	$55,000,000.00
Act of Mar. 4, 1933 (47 Stat. 1612)	28,000,000.00
Act of Mar. 15, 1934 (48 Stat. 430)	$40,000,000.00
Act of June 19, 1934 (48 Stat. 1050)	323.97
Act of May 14, 1935 (49 Stat. 224)	35,000,000.00
Total	158,000,323.97

In the decision of December 9, 1935, *United States* v. *Constantine* (296 U. S. 287), the excise tax of $1,000 on brewers, and so forth, was held to have fallen to the ground with the repeal of the eighteenth amendment (December 5, 1933). A similar decision was given December 9, 1935, *United States* v. *Kesterson* (296 U. S. 299). Refunds paid:

Act of June 23, 1936 (49 Stat. 1834)	$6,000,000
Act of May 14, 1937 (50 Stat. 144)	30,000,000
Act of May 2, 1939 (53 Stat. 640)	3,800,000
Total	39,800,000

Aside from these general appropriations for "refund of taxes illegally collected," contained in the various appropriation acts cited above, Congress has from time to time, and whenever the occasion arose, granted specific authorization for reimbursing those persons who had borne the burden of illegally collected taxes.

AND IN SPECIFIC INSTANCES, TOO

The act of July 13, 1866, imposed a 5-percent tax on railroad-bond interest payments, to be paid by the railroad and deducted by the railroad from interest payments. The Supreme Court, on April 3, 1873, in *United States* v. *R. R. Co.* (17 Wall. 322), held that this was a tax imposed not upon the debtor but on the creditor, and since the creditor was the city of Baltimore, a State agency, its revenues were not taxable. The tax was thus declared illegal, and Congress thereupon, by act of February 27, 1877, provided for a refund of a tax paid under an earlier revenue act of July 1, 1862 (12 Stat. 469), which imposed a similar tax on railroad-bond interest.

The act of February 28, 1901 (31 Stat. 817, ch. 620), provided for a refund of tax of 10 percent on notes used for circulation, "such tax having been held illegal by the Supreme Court of the United States." The tax had been collected by an internal-revenue collector on "due bills" of a mercantile establishment, and the Supreme Court in *Hollister* v. *Zion's Cooperative Mercantile Institution* (111 U. S. 62) held such collection illegal.

By provisions of the War Revenue Act of June 13, 1898 (30 Stat. 448–470), a stamp tax was imposed on export bills of lading. The Supreme Court, on April 15, 1901, in *Fairbank* v. *U. S.* (181 U. S. 283), held the tax unconstitutional, and Congress, by act of June 27, 1902 (32 Stat. 406, ch. 1160), provided for a refund of the sums paid for the stamps representing the illegal taxes. This same act of June 27, 1902, as extended by acts of July 27, 1912 (37 Stat. 240), and March 30, 1928 (45 Stat. 398, ch. 302), authorized refund of legacy taxes levied under section 29 of the War Revenue Act of 1898, and declared by the Supreme Court in *United States* v. *Jones* (236 U. S. 106) to have been illegally collected under an erroneous interpretation of the law.

The act of February 1, 1909 (35 Stat. 590, ch. 53), as extended by act of March 4, 1911 (36 Stat. 1291), provided for a refund of sums paid for documentary stamps used on foreign bills of exchange drawn between July 1, 1898, and June 30, 1901, such stamps representing taxes which were illegally collected. The following appropriations were made for refunding the amounts illegally collected:

On Mar. 4, 1909:	
(35 Stat. 939)	$8,809.32
(35 Stat. 944)	273.24
Feb. 25, 1910 (36 Stat. 219)	2,307.69
June 25, 1910 (36 Stat. 809)	633.60
Aug. 26, 1912 (37 Stat. 618)	198.00
Mar. 4, 1915 (38 Stat. 1155)	396.00

The acts of February 13, 1909 (35 Stat. 1441, ch. 117; 1442, ch. 119; and 1444, ch. 123), provided for a refund of taxes improperly collected under the act of June 13, 1898, notwithstanding the statute of limitations.

The act of February 24, 1919 (40 Stat. 1085, sec. 252), authorized a refund of income, war-profits, or excess-profits taxes which were paid in excess of those properly due under

Revenue Acts of 1916 and 1917, notwithstanding the statute of limitations.

On May 25, 1931, in *Indian Motorcycle Co.* v. *United States* (283 U. S. 570), it was held that the sale of articles to a State agency was not subject to taxation under the manufacturers' excise tax of June 22, 1924 (43 Stat. 322), and Congress, by act of June 16, 1933 (48 Stat. 255), provided for refund of the taxes thus illegally collected. As a result of this same decision of the Supreme Court, Congress, by act of June 16, 1934 (48 Stat. 973, ch. 551), authorized a refund of processing taxes paid on products delivered to States.

Even more recently Congress has given expression to these traditional principles of fairness and equity and permitted reimbursement to those who bore the burden of illegally collected taxes.

OTHER FARM PRODUCTS RECOGNIZED

By the act of June 22, 1936 (49 Stat. 1739–1742, 1747–1755), as extended by acts of June 29, 1939 (53 Stat. 884), and August 10, 1939 (53 Stat. 1402), Congress made provision for refunding the processing taxes collected under the first Agricultural Adjustment Act (48 Stat. 31) and held unconstitutional by the Supreme Court on January 6, 1936, in *United States* v. *William M. Butler et al.* (297 U. S. 1). These same acts (June 22, 1936; June 29, 1939; August 10, 1939) provided for refund of the taxes collected under the second Agricultural Adjustment Act (49 Stat., ch. 641, title 1), and declared illegal by the Supreme Court in *Rickert Rice Mills, Inc.* v. *Fontenot, Collector of Internal Revenue* (297 U. S. 110).

By the act of May 28, 1937 (50 Stat. 230), Congress appropriated $15,000,000 for refund of processing taxes and other taxes illegally collected under the Cotton Act of April 21, 1934 (48 Stat. 598), the Tobacco Act of June 28, 1934 (48 Stat. 1275), and the Potato Act of August 24, 1935 (49 Stat. 782).

After the Supreme Court, in *Railroad Retirement Board et al.* v. *Alton R. R. Co.*, declared the first Railroad Retirement Act of June 27, 1934 (48 Stat. 1283–1289), unconstitutional, Congress by the act of June 1, 1938 (52 Stat. 608, ch. 315), provided for a refund of the sums paid by the railroads under this invalidated act.

The act of June 25, 1938 (52 Stat. 1150), as amended by act of August 9, 1939 (53 Stat. 1325), Congress appropriated $2,500,000 additional for refunding internal-revenue collections and $50,000,000 for refunds similar to those appropriated for on May 28, 1937—processing taxes and collections under Cotton, Tobacco, and Potato Acts.

THE HOG-PROCESSING TAX

The hog producers were injured to the extent of $361,230,867.47 by reason of the hog-processing tax levied on the first domestic processing of hogs. Of this total, $263,230,867.47 was paid into the Treasury of the United States, nearly all of which was collected by such processors from the producers by deducting the amount of the tax from the market price of the hogs at the time of purchase.

Ninety-eight million dollars of hog-processing taxes had been impounded by the courts under restraining orders that the processors had not paid over to the Government when the Supreme Court declared the tax unconstitutional January 6, 1936. It is not therefore the responsibility of the farmer that this $98,000,000 did not reach the Treasury. The hog producer, however, was injured because this amount was collected from the producer by the processor during the time the invalid tax was being levied by the Government.

Senate Joint Resolution 66, which passed the Senate August 1, 1939, expands title VII of the Revenue Act of 1936. It makes hog producers eligible to file claims for refund of hog-processing taxes which were passed back to and borne by hog producers. It requires the producer to file his claim for refund with the Commissioner of Internal Revenue and to show proof that he was the actual raiser or producer of such hogs, that he marketed such hogs for slaughter, and the extent to which the processing tax was borne by such producer during each month that the tax was in effect. It establishes a formula for determining the extent the burden of the tax was uniformly passed back to the producer each month all over the United States. It binds the Treasury and Department of Agriculture to their own findings of facts in these premises. These findings of facts are supported by the evidence presented by the Institute of American Meat Packers before the House and Senate Committees on Agriculture in 1932 and 1935.

THE MONEY IS AVAILABLE

Senate Joint Resolution 66 does not, in itself, authorize an appropriation. The joint resolution expands title VII of the Revenue Act of 1936. Section 915 of title VII, Revenue Act of 1936, authorizes appropriations for administrative expense, and for refunds and payments thereunder. Therefore Senate Joint Resolution 66 seeks to make any funds now available to pay claims under title VII, available also to pay claims authorized by Senate Joint Resolution 66. And the authorization for appropriations, section 915 of title VII is also authorization for necessary appropriations for refunds and payments under Senate Joint Resolution 66 when enacted.

Upon the President's Budget recommendation to Congress the unexpended balance of funds appropriated in 1940, estimated at $31,120,064, for refunds and payments of processing and related taxes under titles IV and VII of cotton penalty and tobacco and potato sales taxes, be reappropriated for fiscal year 1941. This was done exactly as recommended by the President in the Treasury and Post Office appropriation bill, H. R. 8068, now Public Law No. 442, Seventy-sixth Congress. This $31,120,064 for refunds and payments is reappropriated for 1941. It is not all being used. Processor claimants have exhausted their proof after 4 years under title IV and VII. Senate Joint Resolution 66 does not permit double refunds or payments. The processors have got theirs. The hog producers are entitled to their share of this invalidated hog-processing tax now, and this is what Senate Joint Resolution 66 aims to accomplish.

Thomas S. McMillan

MEMORIAL ADDRESS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. THOMAS S. MCMILLAN, late a Representative from South Carolina

Mr. MICHENER. Mr. Speaker, as a "'way up yonder" northern Republican, I arise to pay my tribute of honor, love, and respect to the life and character of that outstanding, virile, tolerant "'way down south" Democrat, the late Representative THOMAS S. MCMILLAN.

One of the compensating rewards coming with service in the House is the splendid spirit of fellowship and association. With many of us the political center aisle is imaginary except when strict party measures are being considered. TOM MCMILLAN'S friends were limited only by his acquaintances. He was a genuine southern gentleman. Regardless of the size of the group, he was always the life of the party. Few men are blessed with such a personality. Whether up on the baseball diamond, in the cloakroom, in the committee room, or in the forum of debate, our late friend always acquitted himself well. His logic in debate was always strengthened by the fact that everyone had the feeling that he would like to help TOM MCMILLAN. The Charleston (S. C.) district was the beneficiary always.

Few men could iron out an occasional sectional dispute more gracefully, more satisfactorily, and more patriotically than could TOM MCMILLAN. In his going we who knew him best have lost a true and trusted friend and the country has lost a statesman of the worth-while kind.

If the Allies Lose?

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1940

EDITORIAL BY DAVID LAWRENCE

Mr. SHANLEY. Mr. Speaker, the United States News had an editorial this week which is so realistic and so provocative in its assertions that I am including it in my extension of remarks. It would be well for all Americans to study this thought of its editor, David Lawrence, whose writings and life bracket the two great modern world wars. An expert in every sense of the word of the genesis of the first World War, he can be said to possess as splendid a background in world affairs as any man in America for an interpretation of the second World War.

I am especially impressed by his statement that—

> The present war will turn on a combination of naval and aerial elements in the north of Europe and a combination of a motorized army and aerial elements in the north of Europe and a combination of motorized armies and aerial equipment in the south of Europe when the war moves into the Balkans.

In the next paragraph he points out a truth that is forgotten by most zealous people in their efforts to aid the Allies that—

> Those who are confidently predicting that America will enter the war if the Allies lose do not point out just how we are to become a part of the struggle. Germany is cautious about invading any American rights. Her policy in this respect, is the exact opposite of what it was in 1917.

I may be bold enough to suggest the fundamental reason why Germany does not dare antagonize us is that she realizes that the fatal mistake of 1917 was to sell us short. She really felt that our entering that conflict could not be effective in time to deal a lethal blow. She felt that her continuance of the unrestricted submarine warfare was absolutely necessary for her own success. Our protests had curtailed her methods in this direction between 1915 and February 1, 1917. In fact, the allied and neutral tonnage sunk by submarines never got over 200,000 tons until September 1916. Then when the German decision was virtually made it reached astronomical heights, jumping to 881,027 tons in April 1917. The Imperial leaders were gambling that their sea devastations would outvalue the danger of direct American participation. When you recall the deplorable position of our national defense—our failure to uphold the implications of George Washington's maintenance of a "respectable defensive posture," you will see our own weakness here was a contribution to that belief of the Germans. The moral is clear.

Our country had been horrified by the violation of Belgian neutrality. It had felt the sorrows involved in the sinking of the *Lusitania*. It had its feelings developed, too, by subtle Allied propaganda, but until it felt its own vital interests were attacked it did nothing but write notes.

Yet to the date of our severance of diplomatic relations with Germany, February 3, 1917, we had lost over 150 American citizens on foreign vessels. Yet we did not feel the casus belli had been established.

But when President Woodrow Wilson saw the determination of the German Government to employ the unrestricted submarine warfare to the utmost, and when he virtually went out on a diplomatic limb, so to speak, by defining that type of warfare as opposed to the law, ethics, and international comity, and threatened to use the might and power of our Nation in strict accountability if our rights were imperiled, he had nothing to do but fulfill his ultimatum.

George T. Davis, in his A Navy Second to None, a profound book under the auspices of the Institute of International Studies of Yale University, with Nicholar J. Spykman as director, has this to say:

> German declaration of unrestricted warfare against merchantmen permitted no detours from the road that led straight toward the loss of American lives at sea, the nullification of the Sussex pledge, the evidence of the activities of the German agents in America, and the Zimmerman note provided justification for an exultant declaration of war and a basis for popular sentiment favorable to its resurrection.

"Watchman, what of the night?"

[From the United States News of May 10, 1940]

"IF THE ALLIES LOSE?"—ASSUMPTION THAT AMERICA WILL ENTER THE WAR IS NOT SUPPORTED BY PUBLIC OPINION—UNITED STATES IS UNPREPARED TO PLAY DECISIVE ROLE AS IN 1918—ISOLATIONISM STILL DOMINANT PHILOSOPHY

(By David Lawrence)

Whenever the fortunes of war turn against Britain and France, the question asked throughout America is What if the Allies lose?

Undoubtedly Americans feel today a greater concern about the outcome of the war than they did last September. Invasion of Norway and Denmark has made improbable things seem probable and every contingency, no matter how fantastic, enters the realm of the possible because ruthless war knows no rules and recognizes no proprieties or international custom.

But while America is deeply affected, it would be a mistake to interpret the basic currents of thought in the United States as having undergone any substantial change in recent weeks.

We are in about the same state of mind that the British were in the years before the Munich pact of 1938. We refuse to believe as a people that our interests are menaced as yet, and we reserve the right to rush pellmell into national-defense measures if and when the theoretical menace becomes real.

America, morever, is today unprepared for immediate war. We could carry on in defense of our own possessions, but we could not land an Army in Europe if we wanted to do so. We do not have the ships or the troops or the aerial offense. The hazards of transport are greater than they were in the last war, as the British expedition across the North Sea in recent days has proved.

We could give valuable help to the Allies with our Navy, but naval power isn't the factor that will alone turn the scales in the present war. We could be of assistance in air warfare, but not right away. We are not tooled up for airplane production as we should have to be if we became a belligerent. We do not have the pilots trained for air combat. We have made rapid strides since the last war, but we must be rated as deficient in many essential elements of military, naval, and aerial offense.

UNITED STATES COULD AID ALLIES WITH CASH AND MATERIALS

Financially, of course, and materially, we can be of great aid to the Allies. We can lend money and send materials. But the present war will turn on a combination of naval and aerial elements in the north of Europe and a combination of motorized armies and aerial equipment in the south of Europe when the war moves into the Balkans.

Those who are confidently predicting that America will enter the war if the Allies lose do not point out just how we are to become a part of the struggle. Germany is cautious about invading any American rights. Her policy in this respect is the exact opposite of what it was in 1917.

SITUATION NOW NOT ANALOGOUS TO THAT OF 1917

The most frequently heard argument is that America should not wait till the Allies lose, but should cast her lot with the British and French now, so as to avoid the necessity of fighting the triumphant dictatorships later when the Allies are exhausted. But it must be recalled that sympathetic though the United States was to the cause of the Allies in 1917, this was not the main reason for American entry into the war.

The commonly accepted version of what happened a quarter of a century ago is that President Wilson campaigned on a slogan about keeping us out of war and, within a few months after he was reelected took the United States into the World War.

This statement is simply a piece of condensed chronology that is misleading. It omits essential happenings in the interim. Back in December 1916—just after Mr. Wilson's reelection—he made an important move for peace. Rumors of his peace note leaked out and the stock market broke badly in anticipation of peace. Suddenly, in the latter part of January 1917, the German Admiralty announced that on February 1, 1917, all merchant ships, neutral and belligerent alike, armed or unarmed, would be torpedoed without warning. This was in violation of explicit pledges given the United States Government by the German Government.

Promptly the United States on February 3 severed diplomatic relations with Germany as a warning to her admiralty and in the hope that war might be averted. Subsequently some American ships were torpedoed. Still the President did not recommend war. The latter part of February found him arguing with Congress to give him authority to put naval guns on American merchant ships so as to defend themselves against submarines. He called it armed neutrality.

On the morning of March 4 the Senate was filibustering. A small group of "willful men"— so Mr. Wilson characterized them—succeeded in paralyzing the Government of the United States in a crisis. When Congress adjourned automatically on March 4 the American Government had no idea of entering the war but only of continuing to defend our neutrality. We had no intention of becoming a cobelligerent.

Then in the next month came news of loss of more American lives on the high seas and the revelation that Germany was plan-

ning to involve Mexico and Japan against us. American public opinion reacted promptly to the evident threat to our security by a government which had broken its written pledges to us. When an extra session of Congress heard the President's war message on April 6, 1917, public opinion had swung completely to the point of view that war was inevitable and that America had no choice but to accept the challenge Germany had thrown down to us.

It is important to recall these events now because they prove how the sequence, superimposed as it was on an underlying sympathy with the Allied cause, brought the United States into the war. But without the invasion of American neutral rights the chances of American involvement would have been diminished, if not altogether eliminated.

To find a parallel today one looks in vain for violation of American rights by the Nazis. Congress has voluntarily withdrawn from the position taken in the 1914–17 period. Neutral rights on the high seas no longer are defended by America, though for legal reasons we still contend we have not waived any rights.

SOME POST-WAR FRICTION MAY BE ANTICIPATED

For all practical purposes the United States, however, has abandoned neutral rights, not only for herself but for the whole world. Our refusal to stand by the doctrine of neutral rights and our willingness to let the belligerents roam the oceans at will, preying on innocent commerce, is a reversal of our historic position. But an antiwar America took that view last autumn and it has encouraged Germany to ignore neutral rights, not only at sea but on land and in the air.

We are proceeding now on the assumption that the Nazi forces will not attack America during the present conflict. Whatever friction results later out of a Nazi effort to reach into South America presents a wholly different problem of after-the-war readjustment in the world.

The Allied peoples no doubt will look upon America today as shirking a duty to democracy. The issues of the present war may be plain enough, but, unless there is a challenge of a direct character to American rights, the United States will not enter this war.

PHILOSOPHY OF ISOLATIONISTS IS NOW DOMINANT

Revision of the neutrality laws so as to permit the extension of credits may be expected in due course. This would be in line with precedent. The Nazis are the last people in the world to be able to voice a valid protest against America's return to international law in the matter of trade and credits by American citizens. Loans by the American Government itself would be a violation of the rules of neutrality.

There is no obstacle in international law against the lending of money by private citizens to a foreign Government. But our recently adopted neutrality law would have to be revised to permit Canada for instance to get credits in the United States. Maybe this is one of the things Mackenzie King, Prime Minister of Canada, talked about in his social visit with President Roosevelt at Warm Springs, Ga., a fortnight ago.

It has been said that foreign policy is usually decided on the basis of self-interest. On that basis, the United States will not enter the European war until a challenge is plainly perceived by the nation itself. The American people hope the Allies will not lose the war, but the present state of our public opinion is such that, aside from a benevolent neutrality, the United States will do no more about an Allied defeat at the hands of the Nazis than the British did when Czechoslovakia was gobbled up by Hitler.

It takes more than an underlying feeling of sympathy or kinship to awaken an Anglo-Saxon people to action. It takes a direct threat against a nation's security. And this has not yet come—at least the direction from which it may come is not yet visible.

American isolationism remains, therefore, the dominant philosophy of the hour. The struggle of human liberty versus human slavery abroad is still academic, remote, and intangible so far as it concerns the readiness of American youth to make the supreme sacrifice in the cause of freedom.

Put All Under One High Command

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

ARTICLE FROM LABOR

Mr. STEFAN. Mr. Speaker, by leave given me, I extend the following editorial from Labor of Tuesday, May 14, as part of my remarks:

PUT ALL UNDER ONE HIGH COMMAND

[From Labor of May 14, 1940]

Correspondents, commenting on the Allies' reversal in Norway, emphasize lack of cooperation. Army, navy, and air force apparently made no attempt to pull together. On the other hand, the Nazis got their instructions from one headquarters, and each arm of the service supplemented the others.

In an effort to defend the Allies' disastrous tactics some writers insist that democracies always act that way. Of course, there is no foundation for that statement. There is no reason why a democracy should not fight as intelligently as a dictatorship and with much finer spirit.

It is true, however, that the military mind has an unfortunate habit of becoming ossified and of refusing to recognize facts which to a civilian are clear as the noonday sun.

Right here at home, among our own militarists, we probably have exactly the same set-up which produced such unfortunate results for the Allies in Norway. We have an Army, a Navy, and a Marine Corps, and an air force for each.

Common sense would suggest that Army, Navy, Marine Corps, and all air forces be placed under one supreme command, and that each be directed not for the exaltation of a group of officers but for the defense of America.

Since the World War we have spent many billions on our Military and Naval Establishments. Nevertheless, almost every day we read in the papers that practically everything we have is obsolete, and that Hitler could wipe us out with just about one sweep of his hand.

We don't believe that, of course, but we do contend that Uncle Sam has spent enough to give us a highly efficient Army, Navy, and air force, and that there is no reason why all three should not move as one.

National Labor Relations Board against Sterling Electric Motors, Inc.

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

DECISION OF THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE NINTH CIRCUIT

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following opinion of the United States Circuit Court of Appeals for the Ninth Circuit in the case of the National Labor Relations Board against the Sterling Electric Motor Co.:

[In the U. S. Circuit Court of Appeals for the Ninth Circuit. *National Labor Relations Board, petitioner,* v. *Sterling Electric Motors, Inc., respondent.* No. 9209. May 7, 1940. Upon rehearing on petition for enforcement of an order of the National Labor Relations Board.]

Before: Denman, Matthews, and Healy, circuit judges.

Denman, circuit judge:

Our opinion in the first hearing of this review appears in 109 F. (2d) 194. The National Labor Relations Board has petitioned for and we have granted it a rehearing of the entire proceeding. This opinion concerns the issue of the right of Sterling Electric Motors, Inc., Employees Association, a self-organized inside or company union, to be made a party or to have notice and an opportunity to be heard before it can be destroyed by the Board's order. We discuss and attempt to appraise the congressional intent under the Board's renewed contention that Congress conferred on it this kind of administrative absolutism.

As stated in our first opinion, it was for the protection of the laborers' human right to regulate their creative effort in American society, with their increased power in union organization, that Congress created the Board. Its protection extends as much to the self-organized unions, provided for in sections, 1, 2, and 7 of the act (July 5, 1935, ch. 372, 49 Stat. 352; 29 U. S. C. A., secs. 151, 152, 157), as to the powerful unions already existing and seeking to increase their membership.

In this case the destruction was attempted by an order forbidding the employer to bargain with its employees' union for higher wages, shorter hours, or better working conditions—the destroyed functions being the only ones for which the employees created it. The men's association was not made a party or given notice and an opportunity to be heard in the proceeding.

One of the contentions of the Board is that the union, organized solely to bargain collectively with the employer, is not destroyed because the order does not run against the union but only orders the employer not to have anything to do with it. To us this contention is as absurd as if old Procrustes, of the Greek myth, had said to an athlete captured on his journey to the Olympiad, "You are not to be destroyed for the races for I am proceeding to cut off only the one leg which happens to protrude over the footboard of my bed. If you are barred at the starting line it is only because you are indirectly affected. My sword 'runs against' your leg, not against you. Besides, I maintain, Lycurgus has given a decision that you are not a 'necessary party' to the amputating process I administer." Yet, the Board insists, such

was the congressional intent which respect to its and, necessarily, all the many other administrative processes created by Congress.

The reargument offered nothing new on the Board's contention that Congress intended to relieve the Board of the burden (sic) of serving notice of the charges and time of hearing on the officials of the union in the same plant as that of the employer, who must be served, of the vexation to the Board, as prosecutor, in meeting the union's evidence, the cross-examination of the Board's witnesses, and the argument of the union's counsel, and of the disturbance to the Board, as judge, in facility in reaching a decision on its own charges.

The Board did not, because it cannot, deny that the employer's interest at the time of the trial often may be quite different from and opposed to that of the absent union. The employer himself then may want to destroy the union, either because he cannot control it or because a more powerful rival threatens a strike and a picket line. He then may "ride to a fall" at the hearing, preferring to submit to an order to desist from something already prohibited by the statute, to the pressure of a disliked union he does not control, or to a costly shut-down which may throw him into bankruptcy. The likelihood of such motivation of the employer whose trial determines the life of the union is obvious, not only to those of us who have had intimate contact with industrial disputes of the recent decades but to anyone who gives the consideration required here of employer psychology. We cannot believe that Congress ignored it, or rather would have ignored it, if, when the Labor Board bill was under discussion, some Congressman then had had the temerity to propose that the Board should destroy a union without notice and an opportunity to be heard.

Nor has the Board made any answer to the obvious fact that it is a greater evil wrongfully to destroy the union itself than it is to destroy a mere contract made by the union with the employer, leaving the union still existing for future bargaining. If it be true, as held in *Consolidated Edison Co.* v. *National Labor Relations Board* (305 U. S. 197, 233), that due process requires notice and hearing when a contract between the union and employer is sought to be destroyed, a fortiori is it true where the left of the union is at stake?

The case loses none of its importance because, during a recent congressional investigation, the Board, for the time being at least, divested itself of the power it claims Congress gave it to deny to a union its civil liberty of notice and an opportunity to be heard. This was done by the Board's promulgation of a rule granting that right. The right now exists, the Board claims, solely by virtue of its grant. The strong and now repeated insistence, first, that Congress can create in the administrative process such absolutism of control over human relations; and, second, that it intended to create it in the Labor Board, warrants our inference that the Board may contemplate annulling its rule, abrogating the right, and reassuming the absolute power when the pressure of congressional investigation is removed. Significant is the absence at the rehearing of any request by the Board for a return of the proceeding for service on the employees' association—to give it an opportunity to be heard on the charge of employer dominance.

Preliminarily it may be said that this court recognizes that no case subject to our review could show more clearly the need for a wise and deliberative exercise of the national administrative process which Congress has created for the control of labor relations in industrial plants throughout the United States. This proceeding was initiated by a Nation-wide union of the American Federation of Labor. It was seeking to bring into its organization the 70-odd employees of a small manufacturing plant in Los Angeles, Calif. A rival union, organized by the men within the plant, had a membership of 75 percent of the employees. The great brotherhood's national organizers filed a complaint which led to the Board proceeding in which the destroying order removed its rival. None of the national organizers was an employee of the plant. One of them had his headquarters in Chicago. The central control of the national union was in Washington, with a power and prestige in the American industrial world which, in large part, arises from its millions of associated employee-members in unions in every State. It was such cases as this which must have quickened the congressional intent to enact national labor legislation.

In one of the earliest decisions after *National Labor Relations Board* v. *Jones & Laughlin Steel Corporation* (304 U. S. 1), this court in *Edwards* v. *United States* (91 F. (2d) 767, 780), construed that decision as extending the congressional power even to the planting in California of orange trees whose product is "to be transported" in interstate commerce. It was on this construction of the act that we upheld the Secretary of Agriculture regulating the flow of the product of orange trees into interstate commerce. True, that statement of the law was by two of the three judges sitting, but it now stands for this circuit as a declaration of the broad area of congressional administrative power under the commerce clause. In that and a succession of cases, this court has recognized the congressional intent in a widely expanding creation of administrative agencies. Nor has any court gone farther in recognizing the congressional intent to free the Labor Board's administrative process from the technicalities of court procedure. *National Labor Relations Board* v. *Biles-Coleman Lumber Co.* (98 F. (2) 16, 17).

The many cases now decided show that, under penalizing restraints or offer of reward, the fruit grower now must consider a Washington bureau's decision before he may safely add orange or walnut trees to the few acres of his orchard and a small farmer must do the same before he determines his plowing for next season's crop. The shut-down of the single lumber plant supporting a mill town, by the heavy penalties we impose for infractions of the Labor Relations Act, often means the disruption of the family life of the employees, whose children must shift to the schools of a distant plant's neighborhood, the foreclosures of homes with the loss of part payments and, worse than this, the mental agony of parents and children that the supporting father may be marked with the stigma of the jobless and indigent.

These disturbing and often tragic results may be deemed to have been considered by Congress as necessary for the ultimate good of the creative life of Americans. However, because that good is to be obtained by powerful bureaus radiating out, through a major and minor officialdom from a distant Washington, the danger to our democracy is always present of the denial of those civil liberties upon which its existence depends. If the Anglo-American civil right to be made a party and to have notice and hearing must be observed in the orderly procedure of a court of law before a decision, as here, can immediately and directly destroy a citizen's property or his liberty to contract to form a labor association a fortiori must it be recognized in the looser proceedings we have recognized before subordinate and superior bureau officers, whose administrative decisions are finally made far from the homes of the regulated persons.

It has been said that the Board is accuser, prosecutor, judge, and executioner. This is obvious as to the first three functions. In our democracy their exercise requires the greatest of wisdom and detachment when, as here, the accuser and prosecutor sits as judge. The orders it made in this case are not final against the employer, who is a party in the Board proceeding and has the right to appear here and defend against a petition for our decree of enforcement. With regard to the destruction of the absent union the situation is entirely different.

Here, so far as concerns that destruction, the Board, at the instigation of a rival, accuses the union of employer dominance, the Board's attorneys prosecute the accusation, the Board hears and determines the truth of the charge, and the Board orders the execution of the union by its disestablishment. The Board's orders against the employer, a party, may be regarded as preliminary rules to be made absolute by our decree after a hearing of the employer's defense. So far as concerns any defense which could have been made by the absent executed union, denied its civil liberty of due process, without opportunity to produce witnesses, cross-examine, or to be heard in argument, our decree, the Board claims, must make the preliminary rule absolute.

This is the kind of administrative absolutism denounced in democratic assemblies in America as characteristic of the totalitarianism of the Central European powers. In the consideration of congressional intent the polemics of deeply moved public men, whose apprehensions are now realized in the conquest of two of the Scandinavian democracies, are not to be ignored. We do not believe that Congress in the National Labor Relations Act intended to make a long start on the road where our civil liberties are to be regarded as the "pale phantoms of objective law" which no longer control our deliberations, as the German chief justice on the first session of the newly constituted court in conquered Poland is reported to have told his colleagues.

It is our opinion that, when the Labor Board bill was under consideration, if any Congressman had stated that such absolute power was intended to be conferred on the Board, it would have been denied promptly by the bill's advocates. If its statement had been persistently pressed as expressing the proper congressional intent, we would have expected that its author would have been "shouted into silence."

In making these comments we are not oblivious of the heavy burden thrown on the Labor Board in creating a Nation-wide organization in a period of devastating labor disturbance nor failed to take account of the vast number of labor disputes it has successfully solved both by conference and formal procedure. That a Federal board so burdened should grasp for power as it does in this case is to be expected. To curtail this inevitable overreaching is one of the first necessities of a democratic government and is one of the most important duties of our courts.

The Board cites the same cases of the Supreme Court and circuit courts of appeals on which it relied on the first hearing. In none was there counsel presenting the violation of the civil liberties of the employees and their union. Particularly was there none in *National Labor Relations Board* v. *Pennsylvania Greyhound* (303 U. S. 261), where the Board, free of anyone affected to present the question of civil liberty there involved, was able to destroy the absent union.

In our first opinion we decided that these cases have been overruled by or are not in accord with *Morgan* v. *United States* (304 U. S. 1, 22, 21), in which administrative proceedings are commanded to observe "the cherished judicial tradition embodying the basic concepts of fair play" and in them men are to have their day in court and to be given the "essentials of a full and fair hearing, with the right * * * to have a reasonable opportunity to know the claims advanced against them * * *." *Cf. National Labor Relations Board* v. *Jones & Laughlin Steel Corporation* (301 U. S. 1, 47). Our decision in this regard is confirmed by a recent opinion of Mr. Justice Frankfurter in which all the Justices concurred, except Mr. Justice McReynolds, who concurred in the result. In that case, in reviewing the area and content of the expanding administrative law, the court, through Justice Frankfurter, stated:

"* * * To be sure, the laws under which these agencies operate prescribe the fundamentals of fair play. They require that interested parties be afforded an opportunity for hearing and that judgment must express a reasoned conclusion * * *."

Federal Communications Commission v. *Pottsville Broadcasting Co.* (— U. S. —, —; 84 L. Ed. 361, 366).

The Board cites as determining the congressional intent to create the absolute power claimed here, the case of *National Labor Rela-*

tions Board v. *National Licorice Co.* (— U. S. —; 84 L. Ed. 533). The report of that case shows no counsel representing the employees or the union. As we read the opinion the petition for certiorari raised no question of the disestablishment of the union. The case involves the individual contracts of employees with the employer which on their face showed agreements in violation of the act. The decision that the employer should not perform such obvious violations involves no denial of civil liberty or of the doctrine of fair play established (or rather recognized as fundamental law) in the Morgan and Pottsville cases. The National Licorice case does not mention either of these two decisions.

We cannot believe that an opinion which (at p. 541) holds the function of the Board to be that of "protecting the 'exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment,'" at the same time holds that Congress in the same act conferred on the Board the power to destroy by disestablishment a union, so self-organized, or to frustrate it in the performance of the very functions which the act requires the Board to protect, without making it a party or giving it an opportunity to be heard.

Before we deem ourselves required to recognize that Congress intended such a denial of civil liberty the Congress or the Supreme Court in a case in which the absent union sought to be destroyed is represented by counsel will have to declare it in language so plain that no other possible inference may be drawn from it. We adhere to our detailed reasoning and holding expressed in our first opinion, pages 196 to 200, 109 F. (2d).

On the suggestion of the Board that further evidence might be taken on the issue of alleged fraud of the respondent in statements in its notice to its employees considered on pages 204 to 208 of our original opinion the respondent applied for an order which we have granted for a reference on that issue. The Board has advised us that many of the employee witnesses are widely scattered since the hearing in October 1937 and that it will take a substantial time to prepare to meet the respondent's proffered testimony outlined in its application. The evidence offered in all likelihood will have to be passed upon by the trial examiner and later in Washington by the Board itself; and several weeks more may transpire before the issue is decided and returned to this court.

Since our decision of this issue of disestablishment and frustration disposes of the Board's orders as affecting the association, and since the Board insists on asserting its power to destroy the union without granting it or its members the civil liberty here discussed and has not suggested even now that it will reopen the case as a whole and serve notice on the association, as its present rule requires, we decide it now. We leave to our later consideration the orders solely affecting the employer. Further to delay with regard to this small self-organized union might amount to an unfair labor practice on the part of this court, for in that period the pressure of the Board's order and of its powerful rival well may persuade the men to give up their self-organization as hopeless, and the protection of section 7 of the act a vain delusion.

The Board's petition for enforcement of its order that the respondent employer shall not bargain collectively with the association and that respondent shall disestablish that union is denied. Decision on the petition for enforcement of other orders of the Board is reserved.

Healy, circuit judge, dissenting:

On the reargument in this case respondent applied to the court for leave to adduce additional evidence, in conformity with section 10 (e) of the act. Leave was granted, and the matter is again before the Board for the taking of further testimony. The point of fact to be inquired into is the crucial one on which the Board largely predicated its finding of an unfair labor practice and its order disestablishing the employee union as a bargaining agency.

The statute, section 10 (e), provides that the Board may "modify its findings as to the facts, or make new findings, by reason of additional evidence so taken and filed, and it shall file such modified or new findings * * * and shall file its recommendations, if any, for the modification or setting aside of its original order."

In this posture of the case, with the question of law dealt with in the majority opinion threatening to become moot, I regard its decision at this time as not only unnecessary but as ill advised. That would be true, I think, even though the question were still open to rational debate. But debate, in inferior Federal courts at least, has been foreclosed by *National Labor Relations Board* v. *National Licorice Co.* (— U. S. —), decided March 4 of this year.

Conditions in Europe

EXTENSION OF REMARKS
OF
HON. WILLIAM H. KING
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. KEY PITTMAN, OF NEVADA, BEFORE THE INQUIRENDO, WASHINGTON, D. C.

Mr. KING. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address delivered by the senior Senator from Nevada [Mr. PITTMAN] before The Inquirendo, on May 10, 1940, at the Mayflower Hotel in this city.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, members of the Inquirendo, and distinguished guests, I am highly honored by the invitation to address this body of distinguished citizens.

Hitler's blitzkrieg invasion of Holland on yesterday, while not entirely unexpected, startled the world and forced upon our minds a realization of the possible far-reaching effect of this second world war. Again we are witnessing the terrible efficiency and expedition of totalitarian powers in war. We see to what astounding extent a government under the domination of one man, a genius, perhaps, having power over life and death, supported by a great and enthusiastic people, has prepared for conquest during the 7 years of Hitler's rule. We who hold under our Constitution that we have the freest, the most independent, the greatest and happiest government on earth are forced to admit that this very independence and liberty, this rule "by the people" deprives us of the same powers of quick coordination, discipline, and centralization of command that gives so great an advantage to a totalitarian power in war.

Innately we are restrained by the laws of God and of man. We believe that nations have a right to remain at peace. We believe that such nations are entitled to live in safety, free from invasion and attack by warring powers so long as they remain absolutely neutral in word and in deed. We cannot banish from our souls the feeling of humanity which debars us from taking the lives of women and children and noncombatants. These same principles and intuitions govern to a great extent democracies everywhere. It has been these restraints upon the people and the Governments of Great Britain and France which have caused them to be a step behind always in the war with Hitler.

That which seems strange to some of us is that the Government of Great Britain should not have realized years ago that Hitler is a conqueror, imbued with a fanatical determination to make the German race dominant throughout the world. Any person with an analytical mind who has read Mein Kampf should have been convinced that Hitler would not be restrained by religion, by international law, by humanity, or by treaties, or by his word in the accomplishment of his purpose. And yet it is almost impossible for men, even though they be statesmen, who are innately governed by the laws of Christ and the humane and just laws of nations which follow the laws of Christ to conceive that any ruler would be unrestrained by any of these laws. And so Chamberlain must be excused when at Munich he took the word of Hitler that he (Hitler) was not interested in any other borders than the Sudetenland. It is to be hoped that the British and the French Governments at last understand the true character of Hitler and his determined purpose. Undoubtedly, they do. Now they are coordinating their forces and centralizing command.

It would appear that Hitler, aware of the difficulty of supplying his country with raw resources, has determined to force an issue on the west front. Possibly if the issue must be now, it is more advantageous to Great Britain and France that the final battles should be waged in Belgium. There the navies are concentrated. There they control the coast. There the great French Army comes into action. These things are encouraging.

This is not the war of 1914–18. Many of the factors are new. No one knows yet the vital part that airships will take in the present war. In view of these circumstances, the world is uneasy and has cause to be uneasy with regard to what the results may be. It was an old axiom that the nation that controlled the sea could not be conquered. This is a rapidly moving world, and things that were true yesterday are not true today.

In a radio address in Washington on February 20, 1939, I said:

"Of course, this penetration into Latin America does not become pertinent, and will not become pertinent until and unless these totalitarian powers have obtained sufficient domination in Europe and Asia to permit them to move in force against Latin America. Any reasonable man will say that that is possible. Any reasonable man would say we should protect against such possibility."

I was charged in a number of newspapers and magazines with being a war monger. I certainly had no such intention. I have no intention now of arousing a war hysteria in the United States. I realized then, as I realize now, the defects of a democracy in preparing its defense through its slow processes and in accordance with the Constitution of the United States. I would not have it otherwise. Preparations for defense cannot be made in a day or a year. Great Britain is a perfect illustration of this assertion. It takes 2 or 3 years to build a battleship, and the number that we may build is limited by our navy yards. Today Germany is engaged in mass production of airships of a quality we are advised superior to any in the world. As she conquers countries, the facilities and the labor of those countries are made available to her.

Again I reassert that while it is not probable, yet is is possible for the totalitarian powers to eventually dominate Europe and Asia. We are in no immediate danger. No government will attack us or our possessions or violate the Monroe Doctrine while this war is in progress. Our Government is not going to send its Navy or its soldiers to Europe to engage in the present war. We are not creating a war hysteria in this country when we advise our citizens as to the facts. They are entitled to know all the facts so that they may make such preparations for defense as shall be necessary. We are not threatened with war now. But in view of the fact of the great length of time it takes for the preparation for defense, it

is the duty of statesmen to look ahead and not to be caught unprepared if and when cause for strenuous defense is forced upon us. Unpreparedness for defense invites attack, while adequate preparedness is the best preventative of war. The people of our country will support unselfishly and without complaint every act necessary for the defense of our country.

There is no country in the world that has the wealth, the natural resources, and the high class of citizenry possessed by the United States. Our Constitution and our institutions will live on. This country will never be conquered.

International Law

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SECRETARY HULL TO THE AMERICAN SOCIETY OF INTERNATIONAL LAW

Mr. THOMAS of Utah. Mr. President, our Secretary of State, the Honorable Cordell Hull, is president of the American Society of International Law. On May 13, at the thirty-fourth annual meeting of the society, held at the Carlton Hotel, in Washington, D. C., Secretary Hull delivered the presidential address. This address was broadcast over the National Broadcasting System. Because of its general public interest, I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow members, and guests of the American Society of International Law, I am deeply appreciative of the privilege of serving as president of this society, and of opening its thirty-fourth annual meeting.

All of us who, as students or practitioners, are interested in this particular branch of jurisprudence, are profoundly conscious of the fact that today the subject of international law has an extraordinary significance. It is no exaggeration to say, that never before, in the entire history of the human race, has the problem of the preservation and development of order under law, presented itself with such urgent acuteness. Never before has it been so fraught with import for the future of mankind.

The concept and the structure of a law of nations, rose and evolved out of a spirit of protest against the ravages of international anarchy. In the ancient world and during the dark ages of the modern world, there widely prevailed a concept that each nation was a law unto itself, the sole arbiter of its international conduct, fully entitled—if it possessed sufficient strength—to engage in aggression and aggrandizement, to destroy by armed force the independence of other nations, and to subjugate other peoples. Force reigned supreme. Human liberty, national independence, confidence in safety and security on the part of nations and individuals, were in constant jeopardy.

Over long centuries, voices raised in protest against the nightmare of international lawlessness, grew in strength and influence, and ideas of how to achieve a law-governed world, emerged more and more. Three hundred years ago, the genius of Hugo Grotius gathered these scattered voices and ideas into a sharp focus, and gave a powerful impetus to a new spirit, to a more and more insistent demand that relations among nations be based upon acceptance and application of well-defined rules of international conduct—upon a body of international law.

Since then, enormous advances have been made in the character of relations among nations. There has been an ever-deepening and ever more widespread recognition of the inescapable fact that an attitude of unbridled license on the part of nations—in the same way that such an attitude on the part of individuals or groups within nations—is bound, sooner or later, to impair their own well-being and, in the end, lead them to destruction. There has been a wider and wider acceptance and application of the all-important fact that true social progress is possible only when nations in their relations with each other, as well as individuals and groups within nations, are willing to practice self-restraint and to cooperate for the greater good of all. Only thus can orderly processes exist and provide that social stability, security, and confidence, without which individual liberty and a free play of creative forces must necessarily be precarious, and the onward march of man must be halting, if not altogether impossible.

Institutions have been built up to give effect and reality to order under law within and among nations. They have been largely responsible for the flowering of our modern civilization in the spheres of political security, social justice, scientific progress, and economic betterment.

This progress has not been achieved without stupendous effort. There have been interruptions and setbacks. Frequently, forces have arisen which have challenged the very concept of order under law, especially in the sphere of international relations, and have plunged nations into war, the greatest of all deterrents to human progress.

That these challenges and the conditions of international lawlessness which they created have not been permanent setbacks is proof of the inherent vitality and virility of the great principles underlying the whole concept of world order under international law. These facts attest the indomitable strength of the spirit which has been the great driving force behind the determination of the human race to rise from the darkness of lawlessness to the light of law.

Today, mankind is the unhappy victim of another challenge of this sort—a powerful challenge which threatens to wipe out the achievements of centuries in the development of international law, and to destroy the very foundations of orderly international relationships. In the face of this challenge, it is of the utmost importance that every citizen visualize clearly the cardinal features of international law and of order based on law, as well as the conditions which would prevail, if they were destroyed.

Order under law in the relations between and among nations requires scrupulous respect for the pledged word. It requires fulfillment of obligations. Without these, the whole fabric of mutual trust and, in fact, of civilized existence, must crash to the ground. Without confidence that a promise made by a nation will be kept, and that an obligation assumed by a nation will be honored, international relationships become reduced to the level of the jungle.

Order under law in international relations requires that nations respect each other's independence. Unless all nations—large and small—can consider themselves secure in this respect, they must continually live in fear of being confronted with the tragic alternatives of abject submission or armed resistance. National effort must then either be half-hearted in the shadow of ever-present dread, or be increasingly diverted from activities for the advancement of national welfare, to the intensive creation of means of defense.

Order under law in international relations, requires that disputes among nations be settled by none but pacific means, and that treaties and agreements, once entered into, be revised by none but methods of peaceful adjustment. It is necessary, as all right-thinking people agree, to the peace and tranquility of the body politic of a well-ordered state, that individuals shall refrain from self-help and the employment of force, and shall settle their differences by peaceful methods and, when necessary, by the judicial process. It is no less necessary, if we are to have an orderly international society—a society capable of rendering the greatest amount of good to the greatest number of people—that members of the family of nations shall be governed by similar processes for the settlement of their differences. For centuries, efforts have been made to banish the use of armed force as an instrument for settling disputes and revising treaties and agreements. Extensive machinery of judicial procedure, of conciliation, of mediation, and of arbitration, has been built up for this purpose. The efficacy of this machinery has been amply demonstrated. It would suffice, if all nations would but resolve to have full recourse to it. Only by sincere determination to perfect it and to use it, can mankind hope to relegate the international anarchy of war to the limbo of things forgotten.

Finally, if order under law is to be stable and effective, it is essential that trade and other economic relationships among nations be conducted on the principles of fair dealing and equal treatment. Disregard of these principles leads to economic warfare, which undermines the foundations of peaceful and orderly international relations. Search for national economic self-sufficiency, discriminatory trade arrangements, failure to practice the doctrine of equality of commercial treatment are among the most powerful instruments of such warfare. These and other similar policies have the effect of disrupting the channels of trade, of reducing the volume of mutually beneficial interchange among nations of useful goods and services, and of impoverishing all nations. The resulting economic strain and distress create social unrest within nations and lead to resentment and conflict among nations.

In recent years there have been truly terrifying developments in contravention of each of these essential conditions for the effective functioning of an orderly world. There has been a staggering multiplication of instances in which solemn contractual obligations have been brushed aside with contemptuous gestures and destructive action. Powerful nations have built up vast armaments for the avowed purpose of attaining their national aims by force; and their action has compelled other nations—even those most sincerely devoted to the cause of peace under a rule of law, including our own—to increase to immense proportions their own armaments. Peaceful nations have been deprived of their independence by the use of armed force or threat of force, combined with the exercise of fraud and treachery. Conquered populations have been subjected to new refinements of oppression and cruelty. Economic warfare on an unprecedented scale and unparalleled in its intensity has come to dominate the foreign trade and other economic policies of many nations, causing immense material losses to all nations and a marked lowering of the standards of living everywhere.

The specter of a new descent into the conditions of international anarchy which characterized the Dark Ages looms on the horizon today. I am profoundly convinced that it menaces the civilized existence of mankind—of every nation and of every individual. Every nation and every individual should be actively on guard.

Our own Nation, powerful as it is and determined as it is to remain at peace, to preserve its cherished institutions and to promote the welfare of its citizens—is not secure against that menace. We cannot shut it out by attempting to isolate and insulate ourselves. We cannot be certain of safety and security when a large part of the world outside our borders is dominated by the forces of international lawlessness.

We cannot close our eyes to what is going on elsewhere in the world, and delude ourselves with the mere hope that somehow—somehow—all this will pass us by. Never in our National history has there been a more desperate need for a clear understanding by every responsible citizen of our country, of what is taking place in the world, and of how it affects us. Such understanding is essential to a wise charting and application of our National policies. Under our system of government, it is the most effective safeguard for the maintenance and promotion of the National interest.

The world is today torn by conflicts, the outcome of which will affect the lives of the future generations in all countries. The world is today threatened with an orgy of destruction—not only of life and property, but of religion, of morality, of the very bases of civilized society. The spread of international anarchy not only undermines law, justice, and morality among nations, but also inevitably impairs, within nations, these essential foundations of civilized existence.

In the face of existing conditions, we have no choice but to expand our program of armament construction to a degree necessary to provide fully adequate means of defending this country's security and its rightful interests. But if mankind is to avoid a long-continuing period of chaos and retrogression, it can only be through the firm establishment of order under law. Never before has there been a greater need for our people to place the support of a wholly united public opinion behind our Nation's efforts to exert the great weight of its moral influence in favor of a revindication and revitalization of the basic principles of order under law, which alone can give lasting assurance of safety, security, and peace.

Upon those of us who devote their lives to the improvement and application of international law, there devolves today a special duty. It is our task to help our fellow citizens to a better realization of the crucial importance which preservation of international law and of order based on law, has for them and for their country. It is our task to make the immense significance of international law a living reality in the mind and heart of every American.

While doing this, we should constantly and persistently search for ways and means of strengthening the structure of international law, and of making more effective the translation of its principles into firmly established international practice. We should spare no effort to demonstrate that the spirit which has made possible, over the centuries, immense forward strides in the development of international law, still lives.

Stunned by the cruel events which unfold all around them, millions of men and women have become a prey to doubt, hopelessness, and despair. It is all the more necessary for us, who believe in the eternal vitality of international law and of international morality, to hold fast to the conviction that law and morality will triumph over the forces of lawlessness and chaos which have again risen to challenge the very concept of order under law—just as they have, in the past, triumphed over similar challenges. I am certain of that triumph. I am certain that we and others who hold our beliefs, will not falter in that faith, or fail to do everything possible to restore and extend the full sway of effective international law, over relations among nations.

Preparedness and Peace

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

ADDRESS BY GOVERNOR LEHMAN AT REDEDICATION OF WORLD'S FAIR COURT OF PEACE

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Governor of New York, Hon. Herbert H. Lehman, at the rededication of the New York World's Fair, 1940, Court of Peace on Saturday, May 11, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Only a year has passed since we dedicated this great fair which we hoped would be a symbol of world peace.

But what history has been written into that 1 year. What changes have come to the world in a short 12 months.

A year ago the world, in spite of acts of aggression, was still nominally at peace.

Since then, many peace-loving, brave democratic nations which had joined with us here a year ago in peaceful celebration, have become victims of a cruel invader. Czechoslovakia, Poland, Finland, Norway, Denmark, Holland, Belgium all sacrificed to satisfy the insane and monstrous lust for power. Their only sin was that they stood in the path of a power-crazed, godless despot. Their cities are destroyed, their men killed, their churches ruined or closed, their liberties snuffed out, their people enslaved. To those stricken nations go out our deepest sympathy and our earnest hope for their early restoration.

We in America are still at peace. We can still think in terms of homely living and security—of baseball, of schools to which more than 20,000,000 children go in safety each morning, of economic security, of jobs, of this great world's fair, and of the hundred and one simple pleasures and problems which fill the daily lives of a peace-loving, orderly people.

We are deeply grateful, as we should be, that we can still concern ourselves with those simple things without cowering at the roar of guns, without deadly terror of bombs that rain from the sky, without fear of violence and death, and without the horror of concentration camps.

We are deeply grateful that here we still have the blessings of religious and civil liberty; that we live in a land where men can still worship as they please, think as they please, and speak as they please.

But we have become so used to these blessings that we accept them now almost as a matter of course.

Many of us have become smug and complacent. And smugness and complacency are the greatest enemies of man's liberties.

Many of us are wont to say that Poland and the other enslaved countries far across the seas which have become the victims of a pitiless invasion mean nothing to us save as subjects of our sympathy; that their fate is not our concern.

But, my fellow Americans, their fate is our concern.

Only a short time ago they too were peace-loving, orderly, democratic nations—just as we are today. And now? Now they are shambles, enslaved and helpless. The rape of Poland, the enslavement of Norway, Finland, Czechoslovakia, Denmark, and the ruthless invasion of Holland and Belgium must be matters of deep concern wherever in the world democratic peoples still live.

This war is no longer a fight just between nations. It is a struggle between democracy and religion on the one hand and dictatorship and paganism on the other.

The destruction of each of these democratic countries was another step in the relentless march of dictatorship.

The simple and God-fearing people of those nations, too, wanted peace. They, too, wanted to have their simple pleasures—to play with their children, to enjoy their little homes, and to live in security and at peace with the world—just as we do here.

They thought they were safe. They thought they would have peace because they wanted peace. But when the bombing planes and the tanks and the big guns came they found themselves helpless in the face of overpowering military force.

And yet smug people say it cannot happen here.

But it can happen here unless we, ourselves, make it impossible.

We can no longer delude ourselves with what some people glibly describe as the "safety of isolation." There is no longer isolation anywhere in the world. Wide oceans, which a few years ago were looked upon as a bulwark of defense, no longer afford security. The new and terrible mechanism of warfare, the ease of communication, the subversive Nazi and Communist infiltration, the growth of hatred and intolerance fostered by foreign propaganda, make every nation vulnerable unless it has fortified itself both from within and from without.

We can no longer afford to be complacent.

We can no longer put our trust alone in a righteous cause and in the will to peace.

In this country we must make ourselves so strong on land and on sea and in the air that no power or group of powers will dare to attack us.

No longer can we afford to be influenced by the specious plea that adequate military preparedness makes for war.

Adequate preparedness makes for peace—not war.

Today when the philosophy that "might makes right" has been forced on a large part of the world, adequate preparedness is the only guaranty against aggression and violence.

The last decade has tragically demonstrated that today the weak are at the mercy of the ruthless strong; that might directed by power-crazed rulers has temporarily prevailed over right.

The history of the last few years has proven that timely preparedness is the only effective bulwark of security and peace.

We want peace, now and forever.

But peace as free men.

Peace, to live and to speak and to think as we will, not as we are whipped into doing.

Peace, each man to worship as his conscience dictates.

Peace and security from constant fear of violence and oppression and injustice.

We have lived as a Nation for a century and a half, convinced that it is only under democracy that we can hope abidingly to have the blessings of religious and civil liberty, of tolerance, and of security.

We Americans will continue to have faith and confidence in our righteous cause of democracy and peace; but let us now fortify that faith and confidence by adequate means to defend our peace, our liberties, and our democracy.

We who love democracy must be willing to sacrifice for it just as did our forefathers. Our determination to maintain our God-given liberties must never falter for an instant. Those who are indifferent to the blessings of their liberties may lose them.

The greatest danger to democracy lies in the acceptance by inert people of encroachments on their constitutional rights and on their failure to realize that constitutional democracy cannot survive where the rights guaranteed by the Constitution are not guaranteed to all citizens.

We must protect ourselves from the enemies within by a militant love of democracy and an alertness which will sanction no violation of our civil and religious liberties.

We must protect ourselves from the enemies without by military preparedness adequate to discourage attack, and fully equipped to defeat attack should it come.

We must make ourselves strong, not in the future but now, before it is too late.

Nonsectarian Foundation for Refugee Children

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

STATEMENT BY OWEN R. LOVEJOY

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix a statement announcing the formation of the Nonsectarian Foundation for Refugee Children. The foundation will endeavor to place in American homes children arriving, under existing quota laws, from the war-torn areas of Europe. In cooperation with Catholic, Protestant, and Jewish refugee agencies, the foundation will arrange for the care of children who have been separated from their parents by reason of death, imprisonment in concentration camps, or the general disorganized situation caused by the war. Associated with the foundation are a group of very distinguished Americans from every faith and every walk of life. The foundation is a charitable undertaking dissociated from any legislative activity.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Formation of a Non-Sectarian Foundation for Refugee Children which will place in American homes children arriving here under existing quota laws from war-torn areas of Europe was announced today by Clarence E. Pickett, president, and Owen R. Lovejoy, executive director, of the new foundation. Honorary vice presidents are: Mrs. Eleanor Roosevelt; Gov. Herbert H. Lehman; Bishop Bernard James Sheil; Hon. George Rublee; Prof. Albert Einstein; Archbishop John Joseph Cantwell, of Los Angeles; President Robert M. Hutchins; Mrs. Dorothy Canfield Fisher; Most Rev. Henry St. George Tucker, Presiding Bishop of the Episcopal Church in America; Rabbi Henry Cohen, of Galveston, Tex.; President Frank Porter Graham, of the University of North Carolina; Mr. Homer Folks, chairman of the recent White House Conference on Children in a Democracy; President Homer P. Rainey, of the University of Texas and former director of the American Youth Commission; and Dr. Samuel McCrea Cavert, of the Federal Council of Churches of Christ in America. Dr. Marion E. Kenworthy is vice president.

The Foundation, located at 215 Fourth Avenue, New York City, is applying for incorporation as a charitable organization under the laws of New York State. In cooperation with the Catholic, Protestant, and Jewish refugee agencies, the foundation will care for children eligible to enter under existing quota laws, but separated from their parents by reason of death, concentration camps, or war-time conditions.

Among those who have already consented to serve as directors of the foundation are: Bishop Bernard James Sheil; Mr. Marshall Field; Hon. Bruce Barton; Mr. Paul T. Beisser, president of the Child Welfare League of America; Dr. Solomon Lowenstein; Bishop Charles K. Gilbert; Dr. Hugo Freund, head of the Michigan Children's Fund; Hon. Caroline O'Day; Mrs. Adele Rosenwald Levy; Miss Ruth Taylor; Mr. Howard S. Cullman; Miss Charlotte Carr; Mrs. Stephen Wise; Hon. Monte Lemann; Dr. Marion E. Kenworthy; Mrs. George Backer; Miss Agnes King Inglis; Mr. Sidney Hollander; Dr. Robert W. Searle; Mrs. Dorothy Lehman Bernhard; Rev. Dr. Maurice Sheehy; Hon. Justine Wise Polier; Mr. Jonathan Daniels; Maj. Benjamin Namm; Dr. John Lovejoy Elliott; Mr. Eugene Meyer; Dr. Paul E. Scherer; Mr. Jacob Billikopf; Dr. Viola Bernard; Dean Dudley D. Carroll; Mr. Harry Scherman; Hon. Whitney North Seymour; Mrs. Maurice Goldman; Hon. Lawrence Dunham; Dr. Otto Nathan; Hon. Francis Shea; Mr. Louis S. Weiss; Mr. George L. Warren; Mr. Lewis Strauss; Mr. Pickett; Mr. Lovejoy; and Hon. Newbold Morris, treasurer of the foundation.

The objectives of the foundation were set forth by Mr. Lovejoy, who, for many years, headed the National Child Labor Committee and has recently served as director of field activities and research of the American Youth Commission.

"One of the special purposes of this foundation," he said, "will be to serve the disinherited children of the Catholic, Protestant, and Jewish faiths. The people of this country must be made to realize that the needs are not confined to any one race but that children are being left defenseless in Europe regardless of religious affiliation and racial inheritance. Catholic, Lutheran, and many other Protestant children are equally exposed to political and social discrimination. Far from depriving American children of any care, it is my hope and belief that this movement will serve to quicken our realization of the needs of all children and to open up new sources of interest and aid for child-welfare work generally in this country. It is encouraging to know that those who are most skilled and successful in present programs of placing helpless American children in suitable homes share this view and are among the most active in advocating this service to children from abroad."

The foundation is developing plans to cooperate with the American Friends Service Committee, of which Mr. Pickett, president of the foundation, is executive secretary, and with other agencies engaged in serving children eligible for entry under the existing quota restrictions. Mr. Lovejoy expressed the hope that a study of the child's personal history, general background, educational record, and other information would be made available before the child's arrival in order to assure wise and careful placement.

The facilities of the child-welfare agencies throughout the country as represented in the Child Welfare League of America will be used in the placement program and the supervision of the child after placement. The foundation's advisory committee on child care is in process of organization and the personnel will be announced shortly.

National Defense

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

EDITORIALS AND ARTICLES FROM THE WASHINGTON DAILY NEWS

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the RECORD, in support of Senate Concurrent Resolution 46, which I presented yesterday, several editorials from the Washington Daily News.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 14, 1940]

LET'S LOOK TO OUR ARMS

It may be mere coincidence that the first proposal for a full-dress inquiry into our national defenses is sponsored by Senator LODGE, of Massachusetts, who may be young enough to fight if there is a next time.

It surely is no coincidence that among those who have rallied quickly to the idea were two Senators—TYDINGS, of Maryland, and CLARK of Missouri—who served overseas and who know what happens to men who take the field inadequately trained and poorly equipped.

Senator LODGE is on the right track. This country is more ready than ever before to spend whatever is required for defense, but it needs to find out why, no matter how many billions are turned over to the admirals and generals, we seem forever unprepared; why, each time a new war front develops, our military authorities seem surprised by new methods and implements of war.

We must learn—

Why, though for years our national-defense plan has called for putting an army of 400,000 into immediate action, we are now said to have modern equipment for only 75,000 men.

Why, though air power has gained in importance for a quarter century, this greatest industrial Nation is still short of trained pilots and mechanics, of latest-type planes, and antiaircraft guns.

Why our Navy turns out topheavy destroyers and cruisers that roll unduly—and if the new battleships will have proper armor.

Whether all that is necessary is being done to protect the Caribbean approaches to the Panama Canal.

Why, after years of warnings that a war might dry up the supply of essential raw materials like rubber and tin, we still go along with a few weeks' carry-over of stuff that would be more precious in an emergency than all the gold buried at Fort Knox.

What immediate steps should be taken to bring our defenses up to scratch.

Yes, Senator LODGE is on the right track. But we think a better plan than his—one surer to produce sound information and prepare the way for effective action—would be to have the investigation conducted by a committee including not only Members of the House and Senate, which appropriate the money, but also representatives of the Army and Navy, which spend the money, and of private industry, which must manufacture most of our military equipment.

The problem is too pressing, too vital, to permit working at cross purposes. The need is for energetic cooperation by legislative, executive, and industrial leaders. There is, you can bet your life, no pulling and hauling under Hitler.

PICTURE OF WAR

(By Raymond Clapper)

As seen here, the picture today is about as follows:

Europe: German attack on the low countries is no more than what was expected at outbreak of war. Outcome is in doubt. If attack is successful, Hitler is expected to take a short breathing spell to consolidate and then either turn on England or direct a major flank attack against France. Hitler is thought to be aiming for a decision this year. British and French, outdistanced in advance preparedness, need time, hope to hold on, taking a beating for several months, and in the end make their superior resources tell. Chances on war's outcome are rated at about 50–50.

Far East: Japan is under no pressure to seize Dutch East Indies, as essential supplies from there are forthcoming under present conditions. Some believe Japan intends no move unless it appears Germany is certain to win in Europe, in which case Japan probably would seize islands to forestall any argument with Germany about them. Others believe presence of American Fleet in mid-Pacific is deterring Japan.

Western Hemisphere: Every encouragement is being given to hemisphere solidarity, with assurance that the United States will do everything in its power to protect this hemisphere. Watchfulness over "fifth-column activities" is strongly counseled.

Home front: Intense speeding up of defense has begun and for the time being this is likely to be the dominant interest in Washington, completely overshadowing other questions. It is the conviction that, no matter what may be in store, we cannot go wrong by intensive defense measures. Little dispute exists between the administration and Congress on this point. Appointment of a joint committee of Congress to consider defense would facilitate prompt and wise action.

Over all it should be said that events are moving so rapidly and the possibilities are considered to be of such great moment to the future of this hemisphere that we are on a day-to-day basis. What seemed only a possibility yesterday may be history tomorrow.

Underlying all discussion is the thought here that a German victory would change our outlook materially. In that event it would be likely that within a relatively short time we should be confronted with new German naval power and new Italian naval power, plus expanded Japanese naval power, with pressures of all kinds resulting—trade pressures in Latin America, pressure for commercial air-line footholds, pressure for special concessions, all with political possibilities.

It is those possibilities that are uppermost in consideration of policies. The war is moving so rapidly that our intervention now, even were it possible, would be of little effect, and could scarcely make itself felt if Germany is destined to win during the next few months. If the Allies succeed in holding Germany, and thereby forcing a long war, then nobody knows what will happen. That will depend upon how American public sentiment moves.

The foregoing sums up fairly, I think, the attitude here toward the rapidly moving world situation.

With regard to national defense, many questions are of utmost urgency. For a minimum protective force in the field we have inadequate equipment—for instance, we have one-third as many 37-millimeter antiaircraft guns as we need, and we have shortages of varying degree, some appalling, in 3-inch antiaircraft guns, subcaliber machine guns, semiautomatic rifles and antitank guns, light tanks, scout cars, and other kinds of mechanized equipment which are vital to a modern army and which cannot be produced overnight. We are short on stocks of certain materials like rubber and tin.

Except in Government arsenals, we have little shell-making capacity, no shell-loading capacity. We are worse off than when we went into the first World War, because then we had the benefit of nearly 3 years of munition making for the Allies.

These are matters that we can get our teeth into at once, and it looks as if we are about to do it.

ONE MAN'S OPINION

(By Hugh S. Johnson)

NEW YORK.—This is a parable. It is being written within the hour that I had two teeth yanked. They were fine, perfect teeth. All mine are. Never before, except for one that got broken in a controversial colloquy, did a dental surgeon ever do anything to me—and I am 58. At 80 my mother had all her teeth. It runs in the family.

I have a complete physical check-up all too infrequently. For several years experts in head surgery have been lecturing me on what I ought to do to keep my teeth. What they recommended was a slight nuisance and a constant chore. I didn't feel anything. I didn't see anything—so I didn't do anything. This year, in the cool, impartial efficiency of the Army Medical Corps, I was told by the chief of the dental surgery section at Walter Reed Hospital:

"These two teeth have to go if you don't want to lose half a dozen."

I was very angry. Even his X-ray showed their perfection. I raged up to New York to consult independently my favorite experts—two of them—Ted Fornarton and Joe Levy. Now my two teeth are gone and, as the anesthetic wears off, it hurts like hell.

Everybody remarked on what swell teeth they were, even after they were out. But an infection had destroyed the foundation in which they were imbedded. By the protective action, advised by experts less than 2 years ago, I could have saved them. I felt nothing, so I didn't do what my experts advised.

England understands this sort of thing now and so do France and Holland and Belgium. We are beginning to understand it in a panicky sort of way. Three years ago a veteran expert on American industrial preparedness, a man with unusual sources of information on Europe, Mr. B. M. Baruch, told the President what was going on there, what wasn't going on here at all, and not going on fast enough in England and France. He said that what was needed most of all was an expert survey of our shortcomings in defense and was told to make it, after a new look at Europe where he was then headed.

What he saw abroad impelled him to report by telephone and to hurry home. Here he was told that, for political reasons, he couldn't have the veterans in experience in this field he thought he needed to make that survey. As an alternative, the Stettinius Board was appointed—and repudiated. It had to be repudiated.

So we rocked along—exactly as I did with my teeth. Now that we see what ingenious fiendishness in the hell of modern war looks like, every drowsy editorial page, column of comment, and panicky legislator begins to demand "billions for defense."

O. K., but it isn't enough. We can't meet this danger simply by passing a law, even if it appropriates billions. We have got to get them exactly when, as, and where they are needed. Saying "when, as, and where" is a problem for military and naval experts but getting the goods isn't. That is a problem for industrial experts.

The answer to three questions is absolutely imperative.

1. What are we to defend? That is an answer to be made by the President and the State Department.

2. What do we need to defend it? That is an answer to be made by the Army and Navy.

3. How can we best and most quickly and economically get what we need? That is for the leaders of industry.

Our first job, as yearlings say to bewildered West Point plebes, is to "make a collection of ourselves" before we begin to pour any more panicky billions into rat holes.

For God's sake, let's show just a fraction of Hitler's intelligence and preserve not only our skin but the teeth we are going to need so badly.

POPGUN DEFENSE

(By Ludwell Denny)

More borrowed billions down the brass-hat sink rather than belated streamlining of our popgun defense is in prospect unless a special congressional and public committee is given power to rescue the air force from the admirals and generals.

President Roosevelt, acting largely as his own Navy Secretary and War Secretary, in the last 7 years has used about $7,000,000,000 and budgeted two billion more this year to produce results which his own experts now say are inadequate.

So this week he will ask for a half billion or so more. The excuse is that German air and motor superiority in Scandinavia and the low countries has suddenly revealed our weakness.

That, of course, is nonsense. Ever since the days of Billy Mitchell, who was crucified by the admirals and generals, the "dumb public" and the "armchair strategists" have suspected the truth which the Army and Navy "experts" denied. And for several years the reports on German aviation by real experts, such as Maj. Al Williams (now a civilian who can talk), have convinced most of the country except its defense chiefs.

Even the European war itself did not convince the President and his favorite admirals and generals. Like Neville (Too Late) Chamberlain, they were unwilling to shift the defense budget weight to air power even after Poland and Finland. The deadly German use of planes, parachutists, and swift mechanized troops today in Holland and Belgium is not new.

The American press reported it in great detail last September when Hitler swept Poland. But in his new defense budget the President merely upped the ante breathtakingly without changing balance from ships to planes.

Thus there is nothing which the President can propose now that he could not have proposed years ago, or at least last fall. Even now it is extremely unlikely that the President will shift the balance from ships and old-style troops to planes and mechanized troops.

For to make that shift he would have to take away some of that budgeted $2,000,000,000 from the admirals and old generals—and Congressmen who insist on keeping useless Army Indian forts in their States—and give it to aviation and mechanization.

The anticipated half billion request will not begin to strike a fair balance between the old and new weapons of warfare. Worse, it probably will go in part for more old-style methods.

Of course the admirals and generals will accept more for aviation provided they first get more for their old pet methods.

Two things are said of the President, who bears such a heavy responsibility:

One is that he has had so many other governmental and political duties it has been impossible for him to function well as his own defense secretary; he has thus been the victim, even more than his predecessors, of the Army-Navy bureaucracy. That is the price of one-man rule.

The other is that his sincere pro-Ally policy led him to give priority in American aviation production to Allied orders at the expense of our own. Unfortunately, the Allies double-crossed him. Instead of placing heavy orders last autumn, permitting large plant expansion and bottle-neck-breaking, the Allies have not placed heavy orders here even yet.

So when Chamberlain missed this bus he also made Roosevelt miss it. And now when the Allies at last are ready—or almost—to use American industry, up jumps public opinion demanding that we cancel a few warship plans in favor of an American air fleet.

Thanks to the Chamberlain-Roosevelt delay in aircraft orders, our plants and trained mechanic supply at this late date are still very small. Our production capacity is only 500 a month, compared with Germany's 3,000. From 1 to 3 years of industrial expansion will be required, after big orders are placed, before they can be filled promptly.

In antiaircraft guns we are even worse off. After spending about $8,500,000,000 of borrowed money on defenses in the last 9 years, we now have a grand total of less than 300 antiaircraft guns—but we have lots of unprotected ships. Likewise, there is a shortage of pilots, mechanics, and training facilities.

To correct these and similar weaknesses there are two proposals:

One is to give more vast sums to the same old system.

The other is to provide a special congressional and public committee to attempt the job in which the admirals and generals have failed—a "new deal" for enlarged aviation, with a unified air corps equal to the Army and Navy.

So far as known, the President is still for the old discredited system.

Silver-Purchase Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

EDITORIALS FROM THE PHILADELPHIA RECORD AND WASHINGTON POST

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials on the subject of the silver-purchase program from the Philadelphia Record of May 11, 1940, and the Washington Post of May 13, 1940.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of May 11, 1940]

THE SENATE VOTE ON SILVER

War news has obscured one of the most significant votes taken by the United States Senate—to discontinue the Government's silver-purchase policy.

Launched in 1934, this policy has committed the American people to buying, at inflated prices, all the silver that the rest of the world could mine or otherwise gather together to sell to us. That we had no use for the metal was beside the point. Domestically, it served as a subsidy to the silver mines of the West, and at the same time it was embraced by others on the ground that it created buying power for our goods abroad.

Of course silver buying created foreign purchasing power for our goods. But the price was paid by us. We sold useful goods, took in exchange silver for which we had no use, and, therefore, buried in the ground. In all, the process amounted to giving away the products of American labor.

The result would have been the same had Congress chosen to buy tin, lead, soybeans, or elephant tusks.

It is precisely the same with gold.

But because so much of the current world economy is draped around what remains of the gold standard, a sudden departure from our gold policy would have consequences much more serious than those which will follow if the House of Representatives backs the Senate in ditching the silver folly.

Sooner or later we must take a similar step with gold. If we don't we will simply go on giving away the products of American labor on one hand, burying a useless metal on the other hand.

It is Congress' job to find an orderly way out of that miasma, too.

[From the Washington Post of Monday, May 13, 1940]

SENATE AND SILVER

For the second time within a year the Senate has voted to suspend the buying of foreign silver. But it appears to be very doubtful whether the House will act upon the bill. Indeed it is hinted that the silver bloc in the Senate did not put forth its best efforts because of a belief that the measure would be held up in the House.

As Senator BARKLEY says, the Silver Purchase Act "does not take money out of the pockets of the taxpayer in the ordinary sense," because silver acquisitions are paid for by issuance of silver certificates. But for every ounce of silver bought from foreigners purchasing power has been put in the hands of foreigners and can be used to buy our goods. In other words, in exchange for an overvalued metal of which we have a superfluity we are parting with valuable commodities. Furthermore, this silver adds to the volume of excess reserves and constitutes the basis for a potential inflation of credit and currency.

However, it seems futile to reiterate these and other conclusive arguments in favor of abandonment of a program that is among the maddest of all our misguided monetary experiments. With administration support there might be hope of overcoming the resistance of the silver bloc. But with Secretary Morgenthau opposed to any change in the status quo because of the critical international situation, ultimate victory for the Townsend bill seems extremely doubtful.

Parity and Other Substantial Benefits Provided by the Federal Government, With Particular Reference to the Second Congressional District of Mississippi

EXTENSION OF REMARKS

OF

HON. WALL DOXEY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1940

On the Conference Report No. 2024 on the Department of Agriculture appropriation bill, 1941

Mr. DOXEY. Mr. Speaker, as long as the high protective tariff for industry prevails in this country, agriculture is definitely entitled to parity.

I have been of this school of thought before I was ever a Member of Congress. Since becoming a Representative in the House of Congress from my native State of Mississippi, I have at all times worked and voted on every occasion for parity payments to the farmers of this country.

Only recently, just during this Democratic administration, has Congress ever provided for any parity benefit payments to the farmers.

The Committee on Agriculture of the House of Representatives, of which I am a member, drafted, fashioned, and passed the bill in this regard in the House. It was then passed by the Senate and signed by President Roosevelt and became a law in May 1933.

Since that time Congress has each year appropriated around $225,000,000 for parity in addition to soil-conservation benefit payments and other direct payments to the American farmer totaling nearly a billion dollars a year.

Since the decision of the Supreme Court of the United States in the case of United States against Butler et al., receivers of Hoosac Mills Corporation, on January 6, 1936, declaring the processing tax levied on processors for the benefit of the farmers unconstitutional, all farm-benefit payments have been made by direct appropriation of Congress out of the Federal Treasury. Each year we have had a hard fight and a close vote to get this money for the farmers. Every year the fight has become hotter and hotter, harder and harder.

Any friend of the farmer can see that we cannot continue to get these benefits for the farmer by direct appropriations out of the United States Treasury year in and year out.

Last year our Committee on Agriculture in the House spent weeks and months considering the cost-of-production plan, price fixing for agricultural products, and other plans designed and submitted to aid the farmer. However, no agreement by the committee could be reached, and when I sensed that we were not going to be able to agree on a permanent farm program and in all probability have no Federal farm program at all, I introduced and reported out of my Committee on Agriculture a bill, H. R. 6598, which continued the present farm program as it then existed.

This bill passed in both the House and Senate and became a law—Public, No. 149, of the Seventy-sixth Congress. Our present farm program would have expired by operation of law on January 1, 1940, had not the Doxey-Hatch bill or some similar bill been enacted into a law.

However, Congress is now still having the same experience and fight as to "How and where are we going to get the money to finance this farm program?"

It is very evident to my mind that we cannot continue to get all these farm-benefit appropriations through Congress each year unless we do provide some additional method of obtaining money for the farmers' benefit. It will not be long before these appropriations will be cut off by Congress, and then the farmer will have no program and no benefit payments either.

The American farmer will then be where this Roosevelt Democratic administration found him—in the midst of poverty and despair.

To avoid this state of affairs, this calamity to the farmers and the whole Nation, I recently introduced a bill (H. R. 8769) which proposes to reenact the processing-tax law and provide permanent and lasting benefits to the farmer, and, by virtue of this processing tax, not make the farmer absolutely dependent for his benefit checks upon money appropriated each year by Congress out of the General Treasury of the Government.

This Doxey bill (H. R. 8769), known as the Agricultural Commodities Parity Act of 1940, is intended just as a supplement to the present farm program. It provides money for parity.

I want the present program to continue and hope to obtain as much direct appropriation as possible to carry it on in its present form. In addition thereto and as a supplement thereof, this Doxey bill (H. R. 8769) is designed to raise the money that Congress refuses to directly appropriate for the aid of the farmers out of the general funds of the Federal Treasury.

I am thoroughly convinced that some time in the near future Congress will have to decide one way or the other whether or not we are to have a permanent farm program that will in some measure provide for permanent farm benefits with money raised and provided by other means than by direct appropriations from the United States General Treasury.

Whether this permanent farm program is to be financed in whole or in part by the method as provided in my bill H. R. 8769, or by the certificate plan, as advocated by Secretary of Agriculture Wallace, or by some other taxing and money-raising plan, is a matter that Congress must and will determine sometime before long. I am quite certain that Congress will not continue much longer to each year appropriate out of the General Treasury nearly a billion dollars for the benefit of the individual farmers of this country.

The farmers are entitled to these benefits and my thought in presenting this matter to Congress before the final blow to the farmer comes is to get Congress to consider the processing-tax plan or some other plans that will provide the money for the benefit of agriculture. When you help the farmer, you help all business.

We should certainly not let the farmers down. You all know they are the bedrock of our economic and national structure. The farmers cannot survive on lip service; they must have actual help.

I want to see real, beneficial, and permanent results given to the farmers of this country—not mere promises. Up to now, this Democratic Roosevelt administration has delivered. We have stood by the farmers. Regardless of our critics, the farmers know we have not only done more for them than was ever done for them, but they know we want to continue to help them and do more for them if we can. However, to accomplish this, we must keep fighting and be ever alert, for the enemy never sleeps.

Of course, we have made mistakes and our plans and programs have by no means been perfect. However, we have tried and kept right on the job and have done our best under the existing circumstances. We have done something more than just talk and promise. The people who have criticized and opposed what we were doing and trying to do for the farmer, offered no constructive program and proposed no permanent solution for the farm problem. Those critics just found fault and made mountains out of mole hills. It is much easier to be destructive than it is to be constructive. It is easier by far to tear down a house than it is to build one. So it is with a farm program. A legislative farm program is a long-range program requiring much time, thought, and effort as well as money to make it a success.

There is no committee in Congress that has worked harder or longer and, with modesty I say, accomplished more than has our House Committee on Agriculture. I am proud to be the ranking member of this committee and have the honor to be chairman of one of its great subcommittees.

We realize you cannot perfect a well-rounded farm program in 1 month or even in 1 year—it takes a long time. Neither can you solve the farm problem by one piece of legislation. It takes many separate laws. You have to approach the problem from many angles and sides. Varying conditions and different agricultural commodities demand different treatment and different provisions of the law. One section of our great country is primarily interested in one agricultural commodity; another section of the country is interested in an entirely different agricultural commodity. So it is with the financial structure of the farm problem. Taking it as a whole, the program must be financed by different methods and from various sources in order to take care of the entire farm problem. That is what my bill does—it proposes one of the methods and provides one of the sources of revenue, namely, the processing tax to be paid by the manufacturer or processor, and in turn this money is paid to the individual farmer direct by the governmental machinery set forth in the bill.

But you say this cannot be done; that law was declared unconstitutional by the Supreme Court of the United States. That Court, by a 6-to-3 decision—the dissenting Justices being Mr. Justice Stone, Mr. Justice Brandeis, and Mr. Justice Cardozo—held that the business of farming was local, not national. It decided you cannot tax one class of citizens for the specific benefit of another class. The Court, by a divided opinion, also decided that the original Agricultural Adjustment Act was in fact coercion through economic pressure and that the act invaded the reserved rights of the States, and so forth.

I answer you back, that is true. The Supreme Court as it was constituted in 1936 did so declare with three Justices dissenting.

But this is 1940 and many changes have occurred in this country in the last 4 years. I have also made many changes in my proposed bill. I have prepared it with the decisions of the United States Supreme Court before me. I have not the time here to analyze my bill and compare it in detail with the law that our Supreme Court declared unconstitutional, and discuss the legal phases of it and show wherein it differs and give my reasons for believing my bill is constitutional, although the former law was declared unconstitutional.

They both provide for processing taxes, but the approach and machinery provided are somewhat different. I am sure that many of you who are better friends of the farmer than you are constitutional lawyers will agree with me that if the original A. A. Act had never been knocked out and was in operation today, we would have plenty of money now to pay the farmer his benefits due him and would not have to

depend on getting the money from the Treasury by acts of Congress each year. We certainly would not find ourselves up against the obstacles and troubles that we are today face to face with.

Personally, I think the original A. A. Act was the best, fairest, and surest program we have had up to this time for the benefit of the farmer. That is why I am taking this position and have tried to prepare a bill with the good features of the old A. A. Act included and the bad provisions eliminated.

However, here in Congress, regardless of what is proposed for the farmer's general welfare, it is always met with all kinds of opposition. Already there is being circulated all kinds of propaganda against my bill, H. R. 8769, "to obtain parity prices for the farmer." Certain special interests, certain groups, certain organizations, and a number of the textile people have begun a concerted and active campaign condemning my bill. The opposition is organized and working hard, saying and doing all kinds of things to block the consideration and passage of my bill, known as the Agricultural Commodities Parity Act of 1940. The opposition is saying that this bill is unconstitutional; that it will hurt business; and that it will cause our cotton-export trade to fall off. The opposition is even putting out the propaganda that the bill will hurt the farmer and make him pay more for the goods he buys.

If our people in general and the farmers in particular will only reason a little, they will readily understand that this is all just propaganda put out by the selfish interests.

Even if a farmer did have to pay 5 cents more for the shirt he bought, he would get from $25 to $40 more for the bale of cotton he sold.

Consider how this plan worked when it was in operation. Think of the huge amount of money that was spent and put into the cotton South compared to the small cost to the Southern States. Fair prices for the commodities the farmer raises is the farmer's greatest need.

I ask the merchant, the professional and business men in States like Mississippi—What have the subsidy checks that have been paid to the farmer meant to your business? When the Government checks are stopped, what will it mean to your business as well as to the farmers?

The people of the South and of the West—the merchant, the businessman, the laborer, and the farmer—know that these Government benefit checks that have been paid to the farmers of our country have been a lifesaver to all of them.

I want these subsidy checks to continue, but if Congress does not enact some kind of a permanent law based on the pattern of my parity bill or some other similar plan, it will not be very long before our general farm program and these benefit checks will be a thing of the past.

Then you will know who has been the farmer's real friend. Then you will appreciate the difference between talking and doing. I have learned by doing. Results count, not promises. This administration thus far has produced results. Look and you will find all around you evidence of a permanent nature of the worth-while accomplishments of this Democratic administration.

I repeat for emphasis—if our farmers are going to be paid by the Government the money as benefit payments that they are entitled to in order to get parity for the crops they raise, Congress must provide by law some way to get the money other than by general appropriation each year for the entire sum necessary to do the job.

That is my theme song. If you help me sing it, you will make sure the farmer will be taken care of. If we do not raise some extra money, the farmer before long will not be getting these Government checks that in the past few years have meant so much to him. Certainly I wish we could continue them, but I am afraid after this year we will not have the votes in Congress to do so. The number of Members in Congress who come from agricultural sections and who are primarily interested in agriculture are relatively few in comparison to the entire membership; that certainly is one of the reasons why we always have such a hard fight to get anything for agriculture.

Frankly, I am not sold on any one bill or any one plan—just so Congress acts and insures the farmer he will get parity or as nearly so as possible for his products.

I am thoroughly convinced, however, that if my bill, H. R. 8769, known as the Agricultural Commodities Parity Act of 1940 is passed by Congress and becomes a law and is permitted to function, it will prove to be a tariff law in reverse. The farmer will be paid the benefits due him at the expense of the manufacturer. My bill will certainly give the farmer some of the breaks and benefits he is justly entitled to.

With the farm credit structure properly operated in the interest of the farmer, the farm tenant program receiving reasonable appropriations, and the other farm measures already reported by our Committee on Agriculture, most of which have been enacted into law, properly functioning, I can vision the dawn of a new day for American agriculture.

I regret exceedingly that the President saw fit to veto the Cotton Crop Insurance Bill recently passed. Some of us had worked hard and a long time to get this measure enacted into law and were surprised as well as disappointed by the President's veto.

The House has recently passed the Doxey Cottonseed Grading bill, H. R. 8642. I trust the Senate will pass this bill at this session of Congress, and I hope the President will sign it.

The Smith-Doxey Cotton Classification Act, the Norris-Doxey Farm Forestry Act, and other similar laws enacted during this administration will mean more and more to the farmer as the programs develop.

Agricultural legislation is a long-range program and it takes time and money to develop it. Agriculture must have its friends at court, so to speak, to carry on.

My friends, let us consider some of the benefits this great Government, just in recent years, has provided for its people.

Take my own congressional district as an example, the one I am most familiar with and have the honor to represent in Congress—the Second Congressional District of Mississippi—composed of the following 10 counties: Benton, De Soto, Lafayette, Marshall, Panola, Tallahatchie, Tate, Tippah, Union, and Yalobusha.

As a result of the policies inaugurated and the legislation enacted under this Roosevelt Democratic administration, the Second Congressional District of Mississsippi has received the following benefits during the periods indicated:

FARM BENEFITS—A. A. A. PAYMENTS

Farm value of cotton lint and seed and payments made under the Agricultural Adjustment Administration programs in the Second Congressional District, Mississippi

Year	Cotton			Other Agricultural Adjustment Administration payments [2]	Total Agricultural Adjustment Administration payments
	Farm value [1]	Agricultural Adjustment Administration payments [2]	Total		
1932	$6,149,000		$6,149,000		
1933	9,427,000	$2,322,800	11,749,800		$2,322,800
1934	12,090,000	1,593,900	13,683,900	$7,200	1,601,100
1935	9,266,000	2,201,500	11,467,500	1,900	2,203,400
1936	16,160,000	1,205,000	17,365,000	222,000	1,427,000
1937	16,927,000	970,000	17,897,000	268,000	1,238,000
1938	12,968,000	3,710,000	16,678,000	777,000	4,487,000
Total 1933–38		12,003,200		1,276,100	13,279,300
Average 1933–38	12,806,000	2,001,000	14,807,000	[4] 255,000	2,213,000

[1] State average price received by producers times estimated production.

[2] The following payments are included: 1933, rental and benefit payments, and profits on cotton options in connection with the cotton acreage plow-up; 1934, rental and benefit payments; 1935, rental and benefit payments and price adjustment payments; 1936, agricultural conservation payments; 1937, agricultural conservation payments; 1938, agricultural conservation payments and price adjustment payments.

[3] Includes Agricultural Adjustment Administration payments made to commodities other than cotton, soil-building payments, and the amount of increase in small payments.

[4] 5-year average.

From the above table it can be readily seen that the counties in the Second Congressional District of Mississippi are receiving their fair proportionate share of benefit payments from the Federal Government under the agricultural adjustment program, according to the farm values.

FARM CREDIT LAND AND CROP LOANS BY FARM CREDIT ADMINISTRATION

Loans made by years from 1933 through 1939, and loans outstanding as of Dec. 31, 1939, for the Second Congressional District in Mississippi [1]

LOANS CLOSED

Year	Federal land bank		Land Bank Commissioner		Production credit associations		Emergency crop loans		Total	
	Number	Amount	Number	Amount	Number	Amount	Number	Amount	Number	Amount
1933					[2]	[2]	7,788	$593,845	7,788	$593,845

1935	19	44,600	107	132,375	[2]	[2]	2,313	124,915	2,439	301,890
1936	10	30,700	58	92,425	[2]	[2]	1,568	67,470	1,636	190,595
1937	20	53,300	40	42,350	945	$801,000	1,316	70,620	2,321	967,270
1938	54	117,600	79	66,800	957	879,000	1,228	63,160	2,318	1,126,560
1939	24	59,300	43	51,200	909	1,049,000	935	49,135	1,911	1,208,635
Total	326	908,800	1,405	1,476,950	2,811	2,729,000	18,437	1,143,330	22,979	6,258,080

LOANS OUTSTANDING

Dec. 31, 1939	[4] 1,447	[4] $3,253,040	1,138	$1,166,175	[2]	[2]	[4] 5,923	[4] $169,964	[4] 8,508	[4] $4,589,179

[1] The Second Congressional District in Mississippi consists of the following counties: Benton, De Soto, Lafayette, Marshall, Panola, Tallahatchie, Tate, Tippah, Union, and Yalobusha.
[2] Not available.
[3] For the period May 1, 1933, through Dec. 31, 1934.
[4] Includes loans made prior to 1933.

From the foregoing table it can be readily seen that the counties in the Second Congressional District of Mississippi received $6,258,080, representing a total of 22,979 applications from the Farm Credit Administration.

FARM SECURITY REHABILITATION LOANS—FARM-TENANT HOMES

The Farm Security Administration has rendered wonderful assistance to needy farm families who could not get adequate credit anywhere else. In the Second Congressional District of Mississippi the Farm Security Administration has made rehabilitation loans totaling $953,422 and grants totaling $34,322.

The F. S. A. has also been of inestimable assistance in giving advice and guidance in sound farming methods and in assisting tenants and sharecroppers to get more secure land tenure arrangements.

Aside from the rehabilitation program the F. S. A. makes loans under the Bankhead-Jones Farm Tenant Act to tenants, sharecroppers, and farm laborers to enable them to purchase family-sized farms of their own.

While it has been necessary to confine loans to certain counties, because of the limited funds available, the F. S. A. has made 65 such loans in the Second Congressional District of Mississippi, totaling $254,761. This year it is expected that about 80 Bankhead-Jones loans will be made in the Second Congressional District of Mississippi, totaling approximately $330,000.

SOIL CONSERVATION PROJECTS

Statement of funds obligated by the Soil Conservation Service in the Second Congressional District, State of Mississippi, to Feb. 28, 1940

Activity	Headquarters or post-office address	Jurisdictional area	1935	1936	1937	1938	1939	Obligations to Feb. 28, 1940	Total obligations as of Feb. 28, 1940
REGULAR FUNDS									
Soil- and moisture-conservation operations through demonstration projects.	New Albany, Miss.	Benton, Union, and Tippah Counties.				$42,725.56	$51,348.17		$94,073.73
		Benton, Union, Tippah, Clay, and Monroe Counties.					24,500.75	$66,491.79	90,992.54
Soil- and moisture-conservation operations through cooperation with soil-conservation districts.	do	Parts of Panola, Marshall, Benton, Tippah, Union, Pontotoc, and Lafayette Counties.					435.03	36,027.69	36,462.72
Soil- and moisture-conservation operations through technical cooperation furnished Civilian Conservation Corps camps outside of project areas, the State extension service, and other Federal and State agencies.	do	Northern half of State of Mississippi.				7,528.34	14,692.68	11,899.86	34,120.88
Erosion nurseries for propagation of plants for use in soil- and moisture-conservation operations.	Holly Springs, Miss.	Marshall and Yalobusha Counties.			$6,046.57				6,046.57
	New Albany, Miss.	Union and Yalobusha Counties.				9,193.87			9,193.87
	Coffeeville, Miss.	Yalobusha County					13,330.72	16,492.05	29,822.77
Acquisition of submarginal land in accordance with provisions of title III of the Bankhead-Jones Farm Tenant Act.	do	do						71,380.00	71,380.00
Facilitation, improvement, protection, and supervision of land acquired under title III of the Bankhead-Jones Farm Tenant Act.	do	do					3,397.57		3,397.57
	New Albany, Miss.	Yalobusha, Choctaw, Oktibbeha, Winston, Noxubee, Chickasaw, and Pontotoc Counties.						21,202.29	21,202.29
Flood-control surveys for run-off and water-flow retardation and soil-erosion prevention on watersheds of flood-control projects authorized by law.	Oxford, Miss.	Union, Lafayette, Marshall, Panola, Benton, Tate, Tippah, and Pontotoc Counties.					14,923.21	6,852.86	21,776.07
Total, regular funds					6,046.57	59,447.77	122,628.13	230,346.54	418,469.01

Statement of funds obligated by the Soil Conservation Service in the Second Congressional District, State of Mississippi, to February. 28, 1940—Continued

Activity	Headquarters or post-office rddress	Jurisdictional arer	1935	1936	1937	1938	1939	Obligations to Feb. 28, 1940	Totalo bligations as of Feb. 28, 1940
CIVILIAN CONSERVATION CORPS FUNDS [1]									
Civilian Conservation Corps camps [2] assigned to this service performing soil- and moisture-conservation operations.	New Albany, Miss.	Union, Pontotoc, Benton, Lafayette, Tate, Yalobusha, and Tippah Counties.	$45,613.12	$202,394.08	$88,344.63	$82,622.79	$84,369.42	$60,729.54	$564,073.58
Total Civilian Conservation Corps funds.[1]			45,613.12	202,394.08	88,344.63	82,622.79	84,369.42	60,729.54	564,073.58
EMERGENCY RELIEF FUNDS									
Soil- and moisture-conservation operations through demonstration projects.	New Albany, Miss.	Benton, Union, and Tippah Counties.				3,023.42	26,541.89		29,565.31
		State of Mississippi						32,789.84	32,789.84
Total Emergency Relief funds.						3,023.42	26,541.89	32,789.84	62,355.15
Grand total, all funds			45,613.12	202,394.08	94,391.20	145,093.98	233,539.44	323,865.92	1,044,897.74

[1] The Civilian Conservation Corps figures do not include the salaries and wages, subsistence, and other expenses of Civilian Conservation Corps enrollees, since such expenses are paid by the War Department.
[2] Accountability not kept by individual camps.

From the foregoing table it will be seen that a total of $1,044,897.74 has been obligated for the counties in the Second Congressional District of Mississippi as the result of soil-conservation projects being established by the Federal Government in the second district.

HOME LOANS

Refinancing operations by Home Owners' Loan Corporation in Second Congressional District of Mississippi

County	Loans closed	
	Number of applications	Amount
Benton	8	$9,792
De Soto	13	19,873
Lafayette	44	85,277
Marshall	37	68,060
Panola	38	56,362
Tallahatchie	91	169,629
Tate	27	46,444
Tippah	26	37,699
Union	45	82,246
Yalobusha	53	65,835
Total	382	641,217

The Home Owners' Loan Corporation terminated its lending activities on June 12, 1936, but up to that time they made the above number and amount of loans to home owners in towns and villages in the Second Congressional District of Mississippi. (The table under "Farm credit" shows the loans made to farmers.)

ACTIVITIES OF FEDERAL HOUSING ADMINISTRATION IN SECOND CONGRESSIONAL DISTRICT OF MISSISSIPPI

Volume of Federal Housing Administration insuring operations by counties

[Net cumulative totals through Dec. 31, 1939]

County	Title I property-improvement loans insured		Title II small-home mortgages accepted for insurance		Total	
	Number	Amount	Number	Amount	Number	Amount
Benton	14	$4,329.21			14	$4,329.21
De Soto	157	64,908.78	8	$24,100	165	89,008.78
Lafayette	71	24,575.86	32	125,100	103	149,675.86
Marshall	62	23,044.63	11	43,400	73	66,444.63
Panola	99	38,557.25	13	30,300	112	68,857.25
Tallahatchie	164	65,966.15	23	56,700	187	122,666.15
Tate	83	36,926.14	12	41,200	95	78,126.14
Tippah	29	6,371.43	4	13,700	33	20,071.43
Union	45	18,706.01	13	43,100	58	61,806.01
Yalobusha	126	42,119.58	26	55,000	152	97,119.58
Total	850	325,505.04	142	432,600	992	758,105.04
State total	14,776	6,219,745.40	4,561	14,337,489	19,337	20,557,234.40

From the above table it will be seen that the Federal Housing Administration has assisted many home owners in the Second Congressional District of Mississippi to improve their homes and build new ones.

HIGHWAYS

Summary, by counties, of Federal-aid highway and grade-crossing projects programmed since July 1, 1933, in Second Congressional District of Mississippi, as of Feb. 29, 1940

County	Estimated total cost	Federal funds	Miles
Benton	$419,670	$269,670	17.8
De Soto	646,437	636,966	18.0
Lafayette	975,397	465,147	38.6
Marshall	691,741	362,140	34.5
Panola	1,221,169	644,023	56.4
Tallahatchie	423,561	329,091	23.5
Tate	315,439	314,592	23.8
Tippah	273,333	192,148	17.5
Union	516,460	318,985	27.0
Yalobusha	323,135	196,566	9.3
Pontotoc and Union	20,129	19,599	1.8
Leflore and Tallahatchie	84,237	84,237	5.2
Coahoma and Tallahatchie	57,601	14,400	2.8
Tunica and De Soto	166,978	164,593	7.9
Total	6,135,287	4,012,157	284.1

From the above table it will be seen that the Federal Government has spent more than $4,000,000 in constructing and improving the main highways in the Second Congressional District of Mississippi.

T. V. A.

The T. V. A. has spent $617,000 in constructing 974 miles of rural lines, and $475,000 for the construction of transmission lines and substations located in the Second Congressional District of Mississippi, serving 8,314 customers, as follows:

Contractor	Residential		Commercial		Estimated miles of rural line	Service area (counties)
	Number of customers, Jan. 31, 1940	Average annual use	Number of customers, Jan. 31, 1940	Average annual use		
Holly Springs	684	1,835	266	2,201	60	Marshall and Benton.
Tippah	642	1,017	250	1,611	46	Tippah (Miss.) and Hardeman (Tenn.).
New Albany	1,549	1,446	394	2,735	98	Union, Benton, and Tippah.
Pontotoc	1,533	1,158	358	2,290	228	Pontotoc, Union, Marshall, and Calhoun.
Northeast Mississippi.	411	881	99	722	134	Lafayette.
Water Valley	638	886	164	2,581	0	Yalobusha.
Tallahatchie	1,103		223		408	Yalobusha, Tallahatchie, Panola, Tunica, Tate, and Quitman.
Total	6,560		1,754		874	

RURAL ELECTRIFICATION

Rural electrification has been provided to some extent in every county in the Second Congressional District of Mississippi.

Five hundred and thirty-eight miles of rural electrification lines have already been constructed in the district at a cost of $523,000.

Other applications are pending which will be taken care of as soon as additional funds are made available by Congress.

SUMMARY OF N. Y. A. EXPENDITURES IN SECOND CONGRESSIONAL DISTRICT OF MISSISSIPPI

High-school student-work program

Fiscal year	Number of high schools participating	Average number of students aided monthly	Total amount expended yearly
1935–36	65	355	$9,184.06
1936–37	81	305	10,482.25
1937–38	78	246	7,470.99
1938–39	77	305	9,694.00
1939–40	78	638	[1] 19,412.00
Total			56,243.30

[1] The 1939–40 figure represents the total allotments to the high schools in the Second Congressional District. Actual expenditures by the end of the school year will not be appreciably different.

The large increase in allotments in present fiscal year as compared to 1938–39 was due to (1) an increase in total appropriation by Congress and (2) a special allotment of funds in these counties due to extremely bad crops.

College student-work program

Fiscal year	Average number of students aided monthly	Total yearly expenditures
1935–36	326	$31,429.95
1936–37	335	32,181.09
1937–38	282	21,344.76
1938–39	325	25,110.00
1939–40	303	27,765.00
Total		137,830.80

Out-of-school work program

1935–36	$11,000
1936–37	28,143
1937–38	31,271
1938–39	59,196
1939–40	55,000
Total	184,610

From the above tables it will be seen that the youths of the Second Congressional District of Mississippi have been greatly assisted by the N. Y. A. program of the Federal Government.

PUBLIC HEALTH

Amounts expended in Second Congressional District from funds made available for cooperative health work to Mississippi by the U. S. Public Health Service for the years 1930 to 1939, inclusive

	1930	1931	1932	1933	1934	1935
Studies of rural sanitation, Union County Health Department		$1,400				
Studies of rural sanitation, drought-stricken areas, Union County Health Department		500	$2,850			
Federal Emergency Relief fund, public health work; Union County Health Department						$1,130
Title VI, Social Security Act:						
De Soto County Health Department						
Lafayette County Health Department						
Marshall County Health Department						
Tallahatchie County Health Department						
Union County Health Department						
Federal Emergency Relief fund, flood rehabilitation:						
Sanitary district (comprising De Soto, Tunica, Tate, Panola, Quitman, and Tallahatchie Counties)						
Tallahatchie County Health Department						
Venereal Disease Control Act:						
De Soto County Health Department						
Marshall County Health Department						
Tallahatchie County Health Department						
Total		$1,900	$2,850			$1,130

Amounts expended in Second Congressional District from funds made available for cooperative health work to Mississippi by the U. S. Public Health Service for the years 1930 to 1939, inclusive—Continued

	1936	1937	1938	1939	Total
Studies of rural sanitation, Union County Health Department					$1,400.00
Studies of rural sanitation, drought-stricken areas, Union County Health Department					3,350.00
Federal Emergency Relief fund, public health work; Union County Health Department	$390.60				1,520.60
Title VI, Social Security Act:					
De Soto County Health Department				$1,895.00	1,895.00
Lafayette County Health Department				1,550.09	1,550.09
Marshall County Health Department	1,245.05	$2,500.00	$2,800.00	2,512.86	9,057.91

Total	2,552.44	8,972.65	12,887.54	11,765.44	42,058.07

SPRING LAKE STATE PARK, HOLLY SPRINGS, MISS.

From July 1935, when camp SP–8 was established, to February 29, 1940, the sum of $92,943.17 had been expended on Spring Lake State Park out of C. C. C. funds allotted to the National Park Service. This sum covers the cost of project overhead and jobs; it does not include the cost of maintaining and operating the camp or paying the enrollees, since these functions are the responsibility of the Army.

From the above, it will be seen that recreational activities have not been overlooked in the Second Congressional District of Mississippi.

We hope to make Spring Lake State Park No. 8 one of the most attractive State parks in the country.

FLOOD CONTROL—SARDIS DAM—ARKABUTLA DAM—HICKAHALA CREEK

The following statistics show the amount of money spent in connection with flood-control work in the Second Congressional District of Mississippi since 1929 and that required to complete such work:

Location of work	Money spent since 1929	Estimated future expenditures
Sardis Dam and Reservoir	$11,823,575	$3,306,425
Arkabutla Dam and Reservoir	213,261	10,569,739
Hickahala Creek	23,000	

Location of work	Money spent since 1929	Estimated future expenditures
Emergency Flood Relief under sec. 7, act of May 15, 1928:		
Upper Quiver River drainage district	$10,401	
Matthews Bayou drainage district	14,764	
Patterson Bayou drainage district	1,885	
Locopolis drainage district	3,176	
Panola-Quitman drainage district	106,619	(1)
Newsom Lake drainage district	8,612	
Glendora drainage district	6,377	
Roane private levee (Tallahatchie and Leflore Counties)	3,000	
Total under sec. 7	154,834	
Grand total	12,214,670	$13,876,164

[1] Unknown.

From the above table, it will be seen that the Federal Government has already spent over $12,000,000 and approximately $14,000,000 additional has been authorized to be spent in the Second Congressional District of Mississippi for flood-control purposes.

NATIONAL FOREST

The Holly Springs National Forest Unit was established in the Second Congressional District of Mississippi on August 30, 1933, and the first approval for purchase of land therein was given on January 11, 1934.

Since that time the Federal Government has spent $460,971 for the acquisition of 117,406 acres, at an average price of $3.93 per acre, in this national forest which takes in portions of Benton, Lafayette, Marshall, Tippah, and Union Counties.

This amount of money does not include the expenditures for improvements that have been made within the Holly Springs National Forest by the C. C. C. camps and other governmental agencies.

We are now working on a plan whereby the 200,000 acres of land purchased by the Federal Government in connection with the construction of the Sardis Reservoir will be added to the Holly Springs National Forest.

Plans are being developed to make this area one of the greatest recreational sections of our country.

C. C. C. camps will soon be established in this area, and other governmental agencies will soon begin work improving and developing this entire unit as a national forest and recreational area.

C. C. C.

Civilian Conservation Corps activities in Second Congressional District of Mississippi

County and camp location	Camp commenced operation	Camp ceased operation	Authorized enrollee strength	Estimated expenditures April 1933 through Mar. 31, 1940

Total				885,000
Tippah County:				
PE-59, Blue Mountain [3]	June 30, 1933	Mar. 30, 1935		315,000
SCS-15, Blue Mountain [3]	Mar. 30, 1935	Dec. 31, 1935		135,000
SCS-23, Ripley	Oct. 4, 1939	(2)	200	90,000
Total			200	540,000
Union County: PE-61, Myrtle [1]	July 6, 1933	May 4, 1934		150,000
Yalobusha County: SCS-12, Coffeeville	Oct. 2, 1935	(2)	200	795,000
Aggregate			1,000	9,350,000

[1] This camp first operated as PE-61 in Union County until May 4, 1934, then as F-9, operated in Marshall County until Sept. 12, 1934, and since that date as F-9 in both Marshall and Benton Counties.
[2] Active.
[3] PE (Private Erosion) were under the administration and technical supervision of the Forest Service until Mar. 1, 1935, at which time they were transferred to the Soil Conservation Service (SCS).

From the above, it will be seen that certainly the Second Congressional District of Mississippi has been greatly benefited by the expenditure of over $9,000,000 in C. C. C. activities.

FEDERAL BUILDINGS

Three hundred and sixty thousand dollars have been spent in the Second Congressional District of Mississippi since I have been in Congress for the construction of a Federal building in each of the following towns: Batesville, Charleston, New Albany, Oxford, and Ripley.

These post-office buildings erected at county sites are modern, and add greatly to the beauty of the town and the convenience of the public.

I am exerting every effort to get an appropriation for another postoffice building in the Second Congressional District of Mississippi, but any appropriation for work of this type will necessarily have to be an omnibus appropriation and the town selected for the construction of another Federal building, if one is allotted to the district, will have to be eligible according to postal requirements, and be passed on by the Interdepartmental Committee on Public Buildings.

I sincerely hope we can secure the necessary appropriation and obtain another postoffice building for my district at this session of Congress.

PUBLIC WORKS

Non-Federal projects in Second Congressional District of Mississippi

County	Loan	Grant	Total
De Soto	$54,000	$42,838	$96,838
Lafayette	241,000	462,423	703,423
Panola	14,257	26,305	40,562
Tallahatchie	42,500	39,980	82,480
Tate		95,780	95,780
Tippah	82,850	59,893	142,743
Union		99,079	99,079
Yalobusha		19,018	19,018
Total	434,607	845,316	1,279,923

From the above table it will be seen that many counties in the Second Congressional District of Mississippi profited by the P. W. A. program.

We are indeed glad that our State University in Lafayette County has been dealt with so generously by the Fed-

eral Government in this regard, as we know that students attending the university from all the counties of the State will benefit by the improvements at the university, located at Oxford, Miss., made possible by this P. W. A. program.

Certainly we wish more could have been done in the district by this particular lending agency but, under the law, the P. W. A. could accept no application after September 30, 1938.

RECONSTRUCTION FINANCE CORPORATION

Amounts authorized and disbursed by the Reconstruction Finance Corporation in the Second Congressional District in Mississippi, from Feb. 2, 1932, to Feb. 29, 1940, inclusive

Class	Amount authorized	Amount disbursed
Loans to banks under sec. 5 of the Reconstruction Finance Corporation Act, as amended	$624,250.00	$519,494.02
Loans to business enterprises under sec. 5d of the Reconstruction Finance Corporation Act, as amended	22,180.00	10,908.79
Loans to public bodies under sec. 5d of the Reconstruction Finance Corporation Act, as amended	1,322,845.53	709,756.10
Authorizations under the act of Mar. 9, 1933, as amended:		
Subscriptions for preferred stock of banks	536,000.00	386,000.00
Purchases of debentures of banks	496,000.00	333,500.00
Total, act of Mar. 9, 1933, as amended	1,032,000.00	719,500.00
Loans to or for the benefit of drainage, levee, irrigation, and similar districts, under the Emergency Farm Mortgage Act of 1933, as amended	932,515.62	732,768.65
Loan to finance the repair of damage by earthquake, flood, or other catastrophe, under the act approved Apr. 13, 1934, as amended	625.00	625.00
Total	3,934,416.15	2,693,052.56

WORK PROJECTS ADMINISTRATION

Federal funds for State Work Projects Administration projects, approved by the President under the various Emergency Relief Administration Acts through Mar. 9, 1940, for the Second Congressional District of Mississippi,[1] by counties

County	All acts	Emergency Relief Appropriation Act of—				
		1935	1936	1937	1938	1939

FEDERAL SURPLUS COMMODITIES DONATED

To the State of Mississippi for distribution to eligible relief clients, in which the Second Congressional District participated, October 2, 1933, through February 29, 1940, with estimated retail values—

Period	Quantity shipped	Estimated retail value
	Pounds	
Oct. 4, 1933, to June 30, 1935	21,386,456	$2,596,120
July 1, 1935, to June 30, 1936	12,208,416	1,284,776
July 1, 1936, to June 30, 1937	6,593,337	584,049
July 1, 1937, to June 30, 1938	29,978,116	1,687,827
July 1, 1938, to June 30, 1939	58,228,594	4,306,335
July 1, 1939, to Feb. 29, 1940	50,138,000	2,964,458
Total	178,532,919	13,423,565

COTTON LOANS

Cotton loans by crop years made by the Commodity Credit Corporation in Mississippi were as follows:

Period	Amount	Bales
1934–35	$28,978,842.04	475,660
1935–36	100,442.67	1,971
1937–38	27,232,861.64	617,114
1938–39	35,817,777.41	762,317
1939–40	29,332.00	636

VETERANS' BENEFITS

Data with regard to veterans' benefits according to counties are not obtainable but the following table indicates the number of living veterans and deceased veterans whose dependents were receiving pension benefits, including compensation and emergency officers' retirement pay; also the number receiving military and naval insurance as of June 30 each year for 9 years, 1931–39, together with total amounts disbursed for these benefits, adjusted-service and dependent pay and administration during the fiscal years 1931–39 for the State of Mississippi.

An approximate distribution of expenditures for the State of Mississippi: Number of veterans or deceased veterans whose dependents were receiving pension benefits including compensation and emergency officers' retirement pay on June 30 each year and disbursements for these benefits during the fiscal year 1931–39

Administration		870,946		1,018,254		1,040,437		898,940
Construction		70,671		768,597		370,441		
Total disbursements		6,735,875		11,921,608		10,955,296		[3] 7,865,988

[1] Disability allowance.
[2] Pensions—classification by wars or by living and deceased veterans is not available.
[3] Construction not included.

NOTE.—Administration includes all expenditures incident to the maintenance and operation of all offices and hospitals, all forms of medical, hospital, and domiciliary care.

CONCLUSION

The foregoing facts and figures show some of the worthwhile benefits and substantial improvements derived by the Second Congressional District of Mississippi within the last few years as a result of the plans and policies of this Democratic administration.

To have served in Congress during these years as a Representative of the Second Congressional District of Mississippi and to have had a part in this history-making epoch of this great Nation is an honor and privilege that I deeply and sincerely appreciate.

Objections to the Use of Goats In Testing Bombs

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1940

Mr. LUDLOW. Mr. Speaker, on Thursday of this week, at Aberdeen, Md., some experiments will take place which, in my opinion, should make the people of America very sad.

Many scores of goats will be bombed for the purpose, as announced, of determining the effects of a high explosive on live tissue. To be exact, my understanding is that 252 of these animals have been selected to be blown up. Arrangements to conduct the experiments are proceeding on schedule, without the approval of the War and Navy Departments, and notwithstanding General Wesson, Chief of Ordnance, United States Army, said in a letter to me a few days ago:

Neither the War Department nor the Navy Department considers the use of animals either desirable or necessary, as both of these services feel that the required information can be obtained from instruments, which have been developed for the measurement of explosive effect.

There was a time when vivisection was bitterly condemned, but the vivisectors will learn something new if they will take their seats on the bleachers at Aberdeen and see live goats blown to pieces instead of being cut to pieces. Whatever their emotions may be, they no doubt will agree that we are not progressing very far in the direction of humaneness. Nevertheless, the die is cast, and the goats will be made the goat, although the ordnance experts agree that this slaughter of goat life will be worthless from the military standpoint.

I have no criticism of the honorable men who are sponsoring these strange goat experiments. They think one way about it, and I think exactly the opposite, but I respect their good intentions just as I hope they respect mine. My own opinion is that it is absolutely wrong and that no effort to justify it could ever make it right.

I wish to submit for the RECORD, without comment, correspondence that has passed between Senator SHEPPARD and myself during the last few days, as follows:

MAY 8, 1940.

Hon. MORRIS SHEPPARD,
Chairman, Committee on Military Affairs,
United States Senate, Washington, D. C.

DEAR SENATOR SHEPPARD: I note a dispatch in an evening paper of May 7 under a Baltimore date line which says:

"The new liquid oxygen-carbon explosive will be tested on live goats at Aberdeen, Md., on May 16, inventor Lester P. Barlow announced yesterday after the Towson, Md., State court had dismissed the plea of a pet magazine for a restraining injunction."

In my opinion these tests will be revolting to 99 percent of the American people, and I was surprised when I was told that they are to be conducted under authority of a joint congressional committee of which you are chairman. You know my exalted opinion of you as a man of high ideals and Christian character and I have no criticism of you or the other members of your joint committee, who are my esteemed colleagues, but I wonder whether on more mature consideration you would not feel justified in moving for a reconsideration of the authority that has been given to make these cruel tests. It may seem like an unimportant matter, but it is really important in its meaning and implications.

If we have gone so far in the direction of militarism that we are willing to blow live animals to bits to learn the art of blowing human beings to bits we have indeed traveled far on the road toward Hitlerism, Mussolini-ism, and Stalinism.

I call your attention to the fact that the ordnance officials and United States military experts on high explosives do not approve these tests. I quote as follows from a letter I have received from General Wesson, Chief of Ordnance, United States Army:

"I wish to acknowledge receipt of your letter of May 1, 1940, relative to the use of live animals in connection with the proposed test of the Barlow liquid-oxygen bomb. This procedure was directed by the joint congressional committee created to investigate the bomb if and when the demonstration is conducted.

"Neither the War Department nor the Navy Department considers the use of animals either desirable or necessary, as both of these services feel that the required information can be obtained from instruments, which have been developed for the measurement of explosive effect."

Believing as I do that tests of this kind would run counter to the sentiment and feelings of practically all of the people of America, I hope that the joint congressional committee will withdraw its approval. As I assume that the action of the joint committee in giving its sanction to the blowing up of live animals was expressed in the form of a resolution I will be most appreciative if you will send me a copy of the text of that resolution as I think if the experiments are to proceed the public is entitled to have the facts cited in justification for them.

Again let me say that I have the highest regard for you and the high ideals for which you have stood in public life and I have been glad to follow your leadership, but I cannot approve these tests which seem to me to be a glaring example of cruelty to animals.

Very sincerely yours,

LOUIS LUDLOW.

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
May 11, 1940.

Hon. LOUIS LUDLOW,
House Office Building, Washington, D. C.

DEAR SIR AND FRIEND: I am in receipt of your letter of May 8 and note what you say concerning the use of live goats for the liquid oxygen-carbon experiment at Aberdeen, Md., on May 16.

The inventor says that unless he can ascertain what the effect of the explosion will be on live-animal tissue, he will not be in a position to know what its effect will be on live-human tissue. Mr. Barlow believes that the effect of the liquid oxygen-carbon explosive, involving no steel fragments, splinters, or things of that kind, will not cause laceration or mutilation of living beings, but will stop life within so wide an area and to such an extent that the perfection of such an explosive will have a distinct tendency to arrest and stop war as a means of settling human disputes. For these reasons, I favor the test with goats.

While the Chief of Ordnance of the War Department says in his letter to you that he does not believe that the use of animals is desirable or necessary in this experiment, yet it is true that both the Army and the Navy use live animals in many experiments.

I enclose copies of letters from the War Department and the Navy Department which will explain themselves.

Thanking you for giving me your view of the matter, which I profoundly respect, I am very sincerely yours,

MORRIS SHEPPARD, *Chairman.*

P. S.—The resolution the joint committee adopted in this matter is still in the hands of the two Senators who wrote it, and at the moment I do not have a copy.

M. S.

WAR DEPARTMENT,
Washington, May 3, 1940.

Hon. MORRIS SHEPPARD,
Chairman, Committee on Military Affairs, United States Senate.

DEAR SENATOR SHEPPARD: Your letters of April 22 and 29, requesting information whether live animals have been used by the War Department in connection with any tests or experiments in the past, have involved an extensive investigation and search of the records.

As a result of the investigation, it is found that the Medical Department of the Army uses live animals in its professional work in military hospitals and laboratories in the same manner that they are used in all recognized clinical and research laboratories and first-class hospitals throughout the United States. It is estimated that the total number of animals used annually by the Medical Department in the diagnosis and control of infectious disease amounts to the following: Forty thousand mice, 2,500 guinea pigs, 1,000 rabbits, 100 chickens, 100 canaries, and occasionally a sheep or a monkey.

The combat arms have used live animals, including goats and pigs, for testing the efficacy of new arms and ammunition on live tissue, the same results not being obtained by using dead animals due to the absence of moisture. The animals used in these tests are rendered immune to pain by injecting, in an intravenous manner, suitable substances which cause them to pass to a state of comma, and they are killed before consciousness returns.

Tests have also included the effect of various gases on live animals, in order to develop methods of treatment in such cases and devices for protection against gases for use by animals and members of the military forces. Every precaution is taken in animal experimental work with gases to secure the essential data without inflicting unnecessary or unjustifiable pain or death.

I trust the foregoing is the information you desire and regret the delay in complying with your request.

Sincerely yours,

HARRY H. WOODRING,
Secretary of War.

THE SECRETARY OF THE NAVY,
Washington, May 4, 1940.

Hon. MORRIS SHEPPARD,
United States Senate.

MY DEAR SENATOR SHEPPARD: In reply to your inquiry of April 29 concerning the use which may have been made of live animals by the Navy Department in testing war material, you are informed, though possibly other instances might be disclosed by more extensive search, that the following appear to comprise all work of this sort done by the Naval Proving Ground at Indianhead, Md., and by the Naval Proving Ground at Dahlgren, Va., as far back as about 1903:

(a) In 1935 a cat was subjected to gun blast in a shelter where instruments had shown it should not be injured.

(b) In 1919 some dogs were used in tests with poison-gas projectiles.

(c) In 1911, in experimental firings against the *San Marcos*, cats and chickens were used.

(d) In 1906 shock effect inside a turret structure was tested using either sheep or goats (just which kind of animal was used cannot be gathered from the record).

(e) Just prior to this, dogs were used in the same test.

(f) At some previous date, it is understood from the recollection of personnel connected with the work of that time, that chickens were used in tests to determine the effect of gun blast near the muzzles of large guns.

Sincerely yours,

LEWIS COMPTON,
Acting Secretary of the Navy.

The New Veterans' Administration Hospital for Massachusetts

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

LETTER FROM BRIG. GEN. FRANK T. HINES, ADMINISTRATOR OF VETERANS' AFFAIRS

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I have received today from Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, and Chairman of the Federal Board of Hospitalization, notifying me of the President's approval of a 300-bed general medical hospital for the Massachusetts area. I am delighted that approval has been given this badly needed project. It will make it much easier for the Massachusetts disabled veterans to receive the treatment they need. It will save a great deal of money now spent in transporting these veterans to the diagnostic center in Washington. The veterans will welcome treatment nearer their homes, and it will make it easier for them to establish their claims. The letter follows:

FEDERAL BOARD OF HOSPITALIZATION,
Washington, D. C., May 14, 1940.

Hon. EDITH NOURSE ROGERS,
House of Representatives, Washington, D. C.

MY DEAR MRS. ROGERS: In the program of future construction for the Veterans' Administration for accomplishment from year to year within the period of the next 10 years, recommended by the Federal Board of Hospitalization to the President and approved in principle by the President on May 9, there is included a 300-bed general hospital for the Massachusetts-Rhode Island area.

Immediate consultation is contemplated with the Director of the Bureau of the Budget to determine upon how funds may best be made available to undertake necessary preliminary work, such as the selection of site and preparation of plans.

Sincerely yours,

FRANK T. HINES, *Chairman.*

The Dependence of Agriculture and Industry

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. BRYSON. Mr. Speaker, as the history of American agriculture is written so will the history of this Nation be written. Between agriculture and industry there exists a basic interdependence which closely links the fortune of the one to the other.

In recent years we have come to more fully understand that when the farm population of the United States suffers and loses its purchasing power, the people of the cities, of necessity, suffer. It is absolutely essential that we maintain a wholesome degree of balance in our economic life. Agriculture must be kept on a parity with industry.

But an alarming disparity between the prices which farmers sell their produce for and the prices at which they purchase manufactured articles has been discovered. We are now considering a measure designed to equalize these differences between the price which the farmer receives for what he sells and the price he pays for what he buys. In view of the present situation, parity payments to our farmers are both proper and necessary if we are to reestablish our economic balance.

If farm prices and the prices farmers pay were at parity, it would take no more pounds of cotton now to buy a work shirt than in 1910–14. And no more pounds of hog to buy 100 pounds of nails, but the situation has changed. In testifying before the Senate Appropriations Committee, Secretary of Agriculture Wallace recently said, "Work shirts could be ordered from the 1913 catalog at an average price of 57 cents. The average price in the 1940 catalog is 73 cents, an increase of 28 percent. At January 15 prices in 1933, it took 4.7 pounds of cotton to buy a work shirt. The cost now is the equivalent of 7.2 pounds of cotton, or 53 percent more than in 1913.

Common nails haven't changed much, if any, since 1913; but the price has gone up 74 percent. At January 15 prices for hogs in 1913, it took 31 pounds of hogs to buy 100 pounds of 8-penny nails. But at January 15 prices in 1940 it took 70 pounds of hogs to buy 100 pounds of 8-penny nails, an increase of 126 percent.

Furthermore, in making parity payments to the farmer, we are striking at another basic problem, namely, the disparity between per capita on the farm and per capita income elsewhere. Last year, according to statistics prepared by the Bureau of Agricultural Economics, per capita farm income was $139 while per capita nonfarm income was $639. The largest per capita farm income during the last 10 years was $172. That was in 1937 when the per capita nonfarm income was $672. Our farm families, which represent over a third of this Nation's total population, are certainly entitled to a larger share of our national income. Parity payments make a blow at this economic inequality.

RURAL ELECTRIFICATION

Not only is the farmer entitled to a larger share of our national income but he is also entitled to a greater share of the comforts and conveniences of modern life. There is no reason why farm homes should not be made just as comfortable as city homes; no reason why the benefits of electricity should not be afforded those who live on the farm just as they are afforded those who live in the city.

With this thought in mind, I wish to call the attention of the House to the outstanding piece of work which is being done by the Rural Electrification Administration. In 1935, only about 10 farm homes in every 100 had central

station electric service and in 14 States less than 4 in every 100 were served by electric lines. Some 6,000,000 American farms were entirely without electricity.

Today, however, there are approximately 180,000 miles of R. E. A.-financed lines serving more than 400,000 farm families and other rural users. The Rural Electrification Administration, in its annual report, also advised that 80,000 additional miles of line were under construction or being surveyed and planned, which when completed will make electric service available to over 750,000 users. The report continues:

During the 4½ years since the Executive order of May 11, 1935, established R. E. A., electricity has shown its worth as a tool for bettering the social and economic position of the American farmer. More farms have been connected to electric-distribution lines during this brief period than during the preceding half century or more since the birth of the electric-power industry. In response to the demand created by the coming of service to hundreds of thousands of farms of all types and in all parts of the country in the last few years, there has been an unprecedented development of productive uses for electric energy on the farm and in the farm home.

Recently, in commenting on the 1939 R. E. A. report to Congress, the newspaper columnist, Charles G. Ross, hit the nail on the head when he said:

The annual report of the R. E. A. has just come to hand. It contains some remarkable facts and figures. I don't see how any fair-minded person can read this report without coming to the conclusion that even if some of the loans which the R. E. A. has made in "thin" areas go into default, the cost of its operations will have been negligible as compared with the benefits. The R. E. A. is deservedly popular in Congress, and you can search the Glenn Frank report from end to end without finding any suggestion that it should be abolished.

Even more noteworthy is the fact that active opposition from the privately owned utilities has about faded out. There is still friction here and there, but by and large the private companies and the farm cooperatives financed by the R. E. A. are getting along comfortably together and in some cases there is cooperation between them. The Georgia Power Co., for instance, has gone out of its way to be helpful to the R. E. A. financed systems.

Therefore, Mr. Speaker, I trust that this House will not retreat from its duty to the American farmer, will not forsake its responsibility to restore agriculture to its proper place in our economic life, but instead will pass an appropraite bill sufficient to meet these and other vital needs of the American farmer.

The Invasion of Denmark and Norway

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. DINGELL. Mr. Speaker, I ask unanimous consent to insert in the RECORD remarks which I had intended previously to deliver as a speech before the membership of the House.

The rapid change in world events makes it necessary for me now to write a sequel or a continuation of this discourse in order to properly cover two additional and valiant nations which as victims are being dipped in a sea of their own heroic blood.

Mr. Speaker, the martian madmen from Nazi Germany stunned the civilized world as Denmark and Norway, two peace-loving nations, were struck down without provocation or warning. These two peoples are outstanding as examples of peaceful and democratic government which typifies all that is highest and noblest in the promotion of amicable neighborliness. The greatest misfortune and danger of these Nordic peoples was their proximity to the hell of insanity and organized fiendishness. Only yesterday, so it seems, Mr. Speaker, I visited Copenhagen, the modern capital of Denmark. It was then serene, active, and beautiful. Some of the finest and cleanest people in the world live there. Thousands of happy, carefree boys and girls, everywhere to be seen, were bicycling all about the city. No thought of war, no fear of harm. They asked nothing of their neighbors except to be left alone.

From there I flew north to Oslo, in the land of the hardy, disciplined Vikings. These practical and peaceful people, who once were among the most daring and warlike of any in the world, learned from experience that there is neither gain nor glory in war. They laid down their arms. They beat their weapons into plowshares and decided to do with and till what productive soil God Almighty so sparingly gave them. They sought no "lebensraum" by a "blitzkrieg" at the expense of their neighbors. They were not causing an everlasting row or casting aspersions upon friendly, peaceful neighbors. Since the available tillable, arable land in all Norway amounted to about 4 percent, they grimly faced the fact that they must go to sea to earn an honest living. They mastered and monopolized by scientific methods the whaling industry. They excelled all other people in the field of fisheries. They became the second or third largest maritime nation of the globe and the Norwegian flag fluttered at the masthead of merchantmen in every seaport in the world. Not only did they furnish bottoms to all the nations but they built for sale sturdy and seaworthy vessels for the maritime use of other countries until they became leaders in this industry. The great timber resources and mineral deposits were exploited and developed systematically and profitably.

While they packed, canned, pickled, dried, and smoked small fish for export, and similarly converted the giant mammals of the deep into oil and fertilizer, at the same time they produced lumber and pulpwood which they shipped for export at a handsome profit, which in turn was converted into food, clothing, and various useful imported products. Altogether by this process they raised the living standard of the Norseman to the highest level on the European Continent. In Norway is to be found the outstanding example of how much can be done with so little if the people are determined and peaceful.

The serene atmosphere of the Northland, even the beauty of the mountains, lakes, and matchless fiords, became more attractive to the tourists because of the gentleness, refinement, and friendliness of the Norwegian people. They were temperate in all things, prosperous, healthy, and gay, and good neighbors to all nations. Their virtues are too numerous to mention, their faults and vices too insignificant to detract from their great moral value.

Then the fury of human madness broke out, and the fiends of a thousand hells invaded their peaceful domain. A studied, coldly calculated plan of invasion was put into effect, and a dazed world, already calloused and inured to mass outbreaks of depravity and base barbarism as evidenced in the subjugation of Austria, the enslavement of Czechoslovakia, and the murder and plunder of Poland and Finland, cried out in horror when two more inoffensive neighbors, Denmark and Norway, were deprived of their national freedom as they were crushed beneath the iron heel of the invader. Treacherous creatures, posing as cultured human beings, came to Norway and to Denmark by the thousands as tourists; cameras in hand, they feigned friendship and kindness. They gorged themselves upon the wholesome and plentiful food in these countries. They came and went as they pleased; ostensibly they were friends. However, they were spies, sabateurs, and trained soldiers of the German Army in civilian clothes. By land they enfiltered the country as tourists; by sea they gained admission as whalers. Their arms and weapons of murder came later. Norwegian seaports were captured after infiltration, a plan similar to that which was used in Austria, Czechoslovakia, and Poland, and which is being used right now with the ultimate same purpose against Sweden, Holland, Belgium, Yugoslavia, Rumania, and Hungary.

In a recent speech I predicted the fate of the Scandinavian countries, and I now utter the prophecy that before the madness of the Hun is finally crushed or the disease actually runs

its course and causes self-destruction that Belgium once again and Holland will suffer a blood bath and will join in martyrdom their sister nations of Austria, Czechoslovakia, Poland, Finland, Denmark, and Norway. Beyond that we might expect to hear even before this speech is finished that the same fate has been meted out to Hungary and the Balkan countries.

They must die, these subhuman peoples, to prove the superior "kultur" of the Germans and to make them masters and all other peoples their slaves. However, they will rise again, these martyred nations. Meanwhile, God spare America, may she remain strong and aloof from the carnage, so when the sanity of the world is reestablished and peace returns our beloved country may aid in the restoration and rehabilitation of mankind.

The brave and undaunted Norwegian Foreign Minister, Halvdan Koht, in a broadcast on May 5, said that Norway's only crime was that she was "too strict in her neutrality."

Koht condemned the German invasion of Norway as being like the depredations of the Huns and vandals; said he, "they laid towns and villages in ashes," and added, "the German memorandum to Norway at the start of the invasion clearly showed that Germany intended to force Norway into war against the Allies." He asked, "If our telephone, telegraph, and other means of communication were surrendered to the Germans, could this be called neutrality?" These were nazi-isms' preinvasion demands. The entire world shudders with revulsion at the slump into barbarism of the German militarists.

It has always been my contention that the great bulk of American citizens, without regard to origin or nationalistic antecedents, with relatively few exceptions, condemns this outbreak of madness, murder, and plunder.

An interesting and substantiating bit of evidence is to be found in the clipping from the New York Times, under date of May 6, which I take the liberty of reading into the RECORD:

GERMAN GROUP HITS NAZIS—SOUTHERN CALIFORNIA LEAGUE DECRIES INVASION OF NORWAY

LOS ANGELES, May 5.—The local executive board of the German-American League for Culture, claiming 1,500 members in this area, telegraphed the Norwegian consul here today that it "feels the urge to express deep indignation over the ruthless invasion of your peace-loving homeland."

"Like hundreds of thousands of German-Americans," the message stated, "we are convinced that you and we, and all other foes and victims of Hitlerism and violence, will see restoration of their common democratic ideals in a not-too-distant future."

The league is a national anti-Hitler organization of which Dr. Frank Boas, of Columbia University, is honorary president. The league received a reply from Irving S. Bent, Norwegian vice consul here, expressing gratitude.

Address Before National Democratic League

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

ADDRESS BY HON. JOSEPH R. BRYSON, OF SOUTH CAROLINA

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered to the National Democratic League of the National Democratic Committee in Washington last Saturday, May 11:

In speaking to you today I would be passing over the gravest, most critical question of the moment if I failed to take cognizance of what has happened in Europe during the past 48 hours. Suddenly yesterday there came flashing across the air waves and over the newspaper wires news of the greatest tragedy of our time. Europe had plunged into the long-feared total war and the fight to a deadly finish had started.

This Nation with the other nations of the Western Hemisphere are standing by for further developments from abroad. With anxiety and concern we are patiently waiting and hoping, realizing full well that for the world at large there can be no escape from the repercussions of the spreading war in Europe.

We are approaching what perhaps will furnish the most crucial test of this administration. But we approach this test reassured and confident that our national leadership today is equal to the responsibility and ready for the task. This administration is keeping constant vigil over the peace and security of the American people.

For some months now the President and the Congress, under his leadership, have been laying fortifications against this country's involvement in war abroad and the fortifications against invasion of this country by any foreign power. The President called the Congress into extraordinary session last September shortly after the outbreak of the European war. We were not long in adopting legislation which not only reaffirmed our desire to keep America out of war but also effectuated the means of keeping us out.

One of the strongest and most salient features of the neutrality legislation enacted at the extraordinary session of Congress last October was that it placed restrictions on the use of American ships in trade with belligerents. The present Neutrality Act expressly forbids American ships from transporting cargoes and passengers in the war zones. This is proving a great safeguard against our involvement in the European war.

We know that what did most to draw us into the last war was the sinking of American ships and the loss of American lives on the high seas. We have to a large extent removed the danger of a recurrence of incidents which might again inflame public sentiment and lead us down the road to war. Keeping public sentiment strongly against our going into war is, after all, the thing which will do most to actually keep us out of war. We have, I believe, laid the foundation for a firm clear-cut international policy which is best calculated to keep us from again drifting into war as we did in 1917.

And during the years of this administration we have strengthened our national defenses all along the line. Yes, we have appropriated large sums of money for national-defense purposes and the Congress is now giving serious and careful consideration to many supplemental recommendations made by the President and War Department officials. Provision has been made for not only the construction of a large number of planes for our air corps and battleships of our Navy but also for the purchase of large quantities of equipment for other divisions of the Service. Secretary of War Woodring recently stated that "the past 12 months have seen intensive governmental effort to mend the gaps in our military fences."

Because of what has been done to preserve the neutrality of this Nation and to adequately meet its needs for national defense, we may look to the future in the hope that we are prepared to keep America from going to war and keep war from coming to America. It is to these objectives of peace and security that this administration is directing every ounce of its energy at this very moment. And here, without elaboration, I should like to describe the President's foreign policy in a single statement by saying that it is a thing of outstanding statesmanship, protecting American interests in the present world crisis and doing the all-important job of keeping us out of Europe's war.

But conduct of our foreign affairs in time of world-wide unrest has been only one of the responsibilities so competently met by this administration. It has been during the past 7½ years under the leadership and driving power of an administration concerned with the social and economic problems of this Nation, that we have made some of the greatest gains in the history of this country. It is important that when we go into the campaign a few months from now that we let no one mislead the American people as to what party has been responsible for these gains and what party can be expected to continue the fight for advancement.

The real issue before the American people in 1932 and 1936 was the right of the average American man and woman to lead a finer, a better, and a happier life. In 1940 that is still the real issue before the American people although the Republican Party is trying to evade that issue. Their attempted evasions simply consist of declaring themselves in favor of everything we of the Democratic Party have done to affirm the right of the average American man and woman to lead a finer, a better and happier life, and at the same time posing as great believers in all the reforms which have been carried out during the present administration. Yet, is there anything in the record to show that they were the ones who brought about these changes; is there anything in the record to indicate that the American people can depend upon them to carry our program forward? The answer is emphatically "No."

Our duty is to put the questions to them squarely by asking: Under what administration was the Social Security Act placed on our statute books? Under what administration was the wage-hour law placed on our statute books? Under what administration was legislation for the protection of bank depositors placed on our statute books? Under what administration was the right of our farmers to receive their share of our national income recog-

nized? Under what administration were steps taken to conserve our national resources against ruthless exploitation? Under what administration was regulation of the stock market against the abuses of speculation undertaken? Under what administration did we set out to bring electricity to the farm homes of our Nation? Under what administration did we call halt to discriminations against organized labor?

And I could go on, consuming considerable time, in making this inquiry about our legislative gains during the past 7½ years, but enough has been said to prove this one point, it has been during the present administration that we have taken our long stride toward the goal of social and economic betterment. The American people will not be turned away from their drive toward that goal by the promises of the Republican Party but instead they shall assure the continued march forward by entrusting completion of this task to the men and women who started it, the Democratic Party.

The Price of War

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. BOREN. Mr. Speaker, the World War, which lasted 1,565 days, was the bloodiest and costliest war that had ever been fought. During the conflict about 65,000,000 men were mobilized and forced to participate, for a longer or shorter time, in the economically unproductive activity of organized destruction. Of these men about 9,000,000—one in 7—died in action or of wounds. Approximately 22,000,000—one in 3—were wounded, and of these, 7,000,000 were permanently disabled. A number of the wounded died within a few years after the war as a consequence of their disabilities, while many shell-shocked or gassed veterans continued to lead tortured existences. More than 5,000,000 men were reported missing after the war.

More than twice as many men were killed in battle during the World War as in all the major wars from 1790 to 1913 together, including the Napoleonic Wars, the Crimean War, the Danish War of 1864, the Austro-Prussian War, the American War between the States, the Franco-Prussian War, the Boer War, the Russo-Japanese War, and the Balkan wars. Two-thirds of the men mobilized and two-thirds of those killed were on the Allied side.

The estimated number of civilian deaths owing to the war was slightly in excess of the number of soldier deaths. The noncombatants fell victim to such disasters as starvation, disease, massacres, epidemics, and raids. In addition, the various national birth rates declined, sometimes to dangerously low figures.

Equally staggering were the monetary costs of the combat and the destruction of property on land and sea. The average daily cost to all belligerents of the war in the first 3 years was $123,000,000. In 1918 the average daily cost was $244,000,000, that is, more than $10,000,000 per hour. The total net direct cost of conducting the war thus was $186,000,000,000, the Allies expending $126,000,000,000, and the Central Powers, $60,000,000,000. To this sum must be added property damages on land to the extent of almost $30,000,000,000; damage on sea aggregating $7,000,000,000; production losses of about $45,000,000,000; and war relief and losses to neutrals of more than $2,000,000,000. The total real economic cost amounted to $270,000,000,000.

If to this figure be added the $67,000,000,000 generally estimated as the capitalized value of the human lives lost as a direct consequence of the war, a total of $337,000,000,000 is reached. This sum does not take into account the additional economic loss caused by the wholesale crippling and devitalization of soldiers and civilians, the billions of dollars of interest due on the debts contracted by the fighting powers, or the vast sums which will continue to be appropriated for generations to come as pension money. It is more than double the capitalized value of all the wealth of any one belligerent except the United States. Verily, the men who met to consider the terms of peace after the World War faced a grave responsibility—the responsibility of so settling conditions that the ghastly loss in lives and goods should not have been entirely in vain—(from The World Since 1914, Langsam).

United States and the World War—Statistics

American troops killed in action	37,568
Died of wounds received in action	12,942
Wounded, not mortally	182,674
(These figures do not include casualties of the Navy and the Marine Corps, amounting to about 11,000.)	
Troops engaged in the World War (Americans)	4,057,101
Casualties from other causes (disease, accidents, drowning, suicides, murders, executions, etc.)	69,466
World War debts of Allies to United States	$2,430,730,897.21

The Division of Economic Research of the National Labor Relations Board and Mr. Saposs

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. VOORHIS of California. Mr. Speaker, much of the conflict over the work of the National Labor Relations Board has raged around its Division of Economic Research and the director of that Division, Mr. David Saposs.

I have never taken the position that the National Labor Relations Act was perfect nor that the act should never be amended. I realize that improvement is possible in almost any law, particularly a comparatively new one or one so important a measure as this one. I believe some mistakes in choice of personnel have been made by the Board and that they should be corrected.

But I am decidedly in favor of the basic provision of the National Labor Relations Act and of expeditious, fair, and effective work by the Board and its staff. It is important that in all the discussion of the matter no injustice should be done.

The importance of the work of the Division of Economic Research is great and it has been seriously misrepresented. Also the beliefs and position of Mr. Saposs have been terribly distorted and a real injustice done him.

I believe the very best evidence that could be offered, both with regard to the importance of the work of the Division of Economic Research and with regard to Mr. Saposs, is contained in the following letter from Dr. Leiserson, member of the Board:

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C., May 14, 1940.

Hon. JERRY VOORHIS,
House of Representatives, Washington, D. C.

DEAR MR. VOORHIS: This is in reply to your letter of May 10. I, too, have been much concerned over attacks on the Division of Economic Research, because I feel that this Division is doing a very necessary job for the Board and is doing it well.

Shortly after I was appointed to the Board I made a special study of the work of the Division, and I was convinced that the Board would be very seriously handicapped if the services of the Division were eliminated or curtailed in any way.

Much of the controversy over the Division, I think, arises from a misunderstanding of its functions. Actually, this Division does no abstract or general research in economics. It is essentially a technical service agency to assist the various divisions of the Board in performing their functions. If there is a problem of jurisdiction in a case, for example, the Division of Economic Research assists the regional directors and trial attorneys in securing technical information about the business of the company, its corporate organization, and its accounting, manufacturing, and shipping processes in order to establish whether it is engaged in interstate commerce or not. If the Board orders back

pay for employees illegally discharged, the Division helps secure detailed information to determine the amount of back pay involved. If a pay-roll analysis or other statistical material is necessary in case development for a regional office or for the Administrative Division of the Board, the Economics Division helps with the technical work of assembling, classifying, and analyzing the data.

While the functions of the Division have been misunderstood, the personnel has also been misunderstood. Mr. Saposs, the head of the Division, has been assailed as a Communist, but the fact of the matter is that he has been rather vigorously opposing the activities of Communists. Mr. Saposs is very well qualified for his position. He was appointed from the very top of the civil-service register, and I think the Board is fortunate in having a man of his experience and ability.

Sincerely yours,

WM. M. LEISERSON.

No one in America has written more widely or with more directness against Communist activity in this country than Benjamin Stolberg. Here is what he says about Mr. Saposs:

I have known Mr. Saposs intimately for over 20 years. I share the opinion of most of our responsible economists and journalists that he is the leading national authority on labor. He is no more Communist than you or I. He is a great scholar and a good Democrat.

And we find Time magazine commenting, as follows:

The House Appropriations Committee slashed the 1941 Budget estimates for N. L. R. B. from $3,180,000 to $2,843,000, scratched out entirely a $45,900 appropriation for N. L. R. B.'s research division, which Labor-Economist Saposs heads. * * *

This sabotage really hurt; thus cut down, N. L. R. B. cannot function efficiently. Ludwell Denny, Scrips-Howard labor expert, noted that present delays, with their attendant evils, result directly from an overworked, understaffed N. L. R. B. To abolish the research division on the ground that "no need exists" he called absurdity's height "at a time when both employers and unions are criticizing the Board for knowing too little about the economic facts." Newshawk Denny knew, as did the House, that what N. L. R. B. foes really sought was abolition of Economist Saposs; that the bushy, rumpled little expert—long-time Carnegie Institute and Rockefeller Foundation labor authority—though often denounced as a Communist, is neither red nor useless, but a zealous watchdog of labor rights.

So much for Mr. Saposs. He is neither a Communist nor a friend of Communists. No doubt he holds some views which are very progressive if not radical. But his fundamental loyalty to the basic democratic institutions of America cannot be successfully called in question.

And now with regard to the importance of the work of the Division of Economic Research, I submit herewith a description of that work.

THE FUNCTIONS OF THE N. L. R. B. DIVISION OF ECONOMIC RESEARCH
THE USE OF ECONOMIC DATA IN LABOR BOARD CASES—COURT RECORD

A statement by James E. Pate, which appeared recently in the Southern Economic Journal stresses the work of the N. L. R. B. Division of Economic Research as an indispensable element in administration of the Labor Relations Act:

These services, especially that of economic research, are a powerful complement to the Board's legal work. No small amount of the success that the N. L. R. B. has had before the courts may be attributed to facts that it has been able to present on the respective industries. * * * Public policy cannot be determined or enforced in a vacuum, or by legal precedents alone. Adjudication as well as legislation must be based on the facts of economic and social conditions. Only in this way can the law be vital. For the purpose of finding these facts a bureau of economic research is invaluable.

The frequent use in court decisions of materials prepared by the N. L. R. B. Division of Economic Research indicates clearly the importance of economic data and analysis to the work of the Board. These were used abundantly in all of the early decisions in which the Board was upheld by the courts, such as: *N. L. R. B.* v. *Jones & Laughlin Steel Corporation* (301 U. S. 1), *N. L. R. B.* v. *Freuhauf Trailer Co.* (301 U. S. 49), *N. L. R. B.* v. *Friedman-Harry Marks Clothing Co.* (301 U. S. 58), *Associated Press* v. *N. L. R. B.* (301 U. S. 103), *Washington, Virginia & Maryland Coach Co.* v. *N. L. R. B.* (301 U. S. 142), *Santa Cruz Fruit Packing Co.* v. *N. L. R. B.* (303 U. S. 453). Economic materials in these decisions included descriptions of corporate structure and the multiple enterprises of a given company, the flow of commodities in interstate commerce, the effects of strikes upon interstate commerce, the labor policy of a given company, and procedures in collective bargaining.

More recent court decisions which take cognizance of economic materials are *N. L. R. B.* v. *Highland Park Manufacturing Co.* (C. C. A. 4), March term, 1940; *Mooresville Cotton Mills* v. *N. L. R. B.* (C. C. A. 4), March term, 1940; and *N. L. R. B.* v. *Sunshine Mining Co.* (C. C. A. 6), October term, 1939.

Direct evaluations of the work of the Division have been made by two different circuit courts. In *N. L. R. B.* v. *The Griswold Manufacturing Co.*, the third circuit commented in very pointed terms:

Brief mention may be made of the respondent's complaint that there was "prejudicial use of incompetent, irrevelant, and immaterial testimony." Particular objection was expressed by the respondent against the admission of the testimony of David J. Saposs, chief economist for the National Labor Relations Board, who was called as an expert by the petitioner. His testimony was on the subject of the process of collective bargaining.

There is no merit to this objection.

In *National Labor Relations Board* v. *Pennsylvania Greyhound Lines, Inc., et al.* supra (p. 267), Mr. Justice Stone, in a footnote, cited numerous experts and textbooks "on the significance of recognition of collective bargaining." One of the expert authorities cited by Mr. Justice Stone was the Twentieth Century Fund, Inc. Mr. Saposs was a research associate with the Twentieth Century Fund, Inc. Nothing further need be said on this score.

In N. L. R. B. against Crowe Coal Co., the eighth circuit court summarized the importance of economic data in Board cases, quoting from the Board's brief:

The propriety of introducing in evidence economic data of the character of Board's exhibit 11 [Bulletin No. 2, The Effect of Labor Relations in the Bituminous Coal Industry Upon Interstate Commerce] obtained from governmental or other authoritative sources, is well settled. See, for example, *Virginia Railway Co.* v. *System Federation No. 40* (300 U. S. 515, footnotes 4 and 5, pp. 545, 546) in which the Supreme Court referred to the bulletin entitled "Governmental Protection of Labor's Right to Organize," which is Bulletin No. 1 in a series prepared by the Board's Division of Economic Research. The exhibit now under consideration is Bulletin No. 2 of the same series. And see *National Labor Relations Board* v. *Jones & Laughlin Steel Corporation* (301 U. S. 1, footnote 8, p. 43); *National Labor Relations Board* v. *Pennsylvania Greyhound Lines*, (303 U. S. 261, footnote 2, p. 267).

In the course of its decision upholding the ruling of the Board, the Court made direct use of factual material contained in the Division's bulletin No. 2.

It is argued in respondent's brief that it has "no knowledge * * * of the use to which this coal will be put or the place to which it will be transported," but no such want of knowledge was stipulated or found by the Board. It is stated in the bulletin of the economic division in evidence that "typically there is no provision for storage of coal at the mine" and that "production is customarily not undertaken until orders are received and a supply of cars assured."

In October 1939 the United States Supreme Court refused to grant a writ of certiorari in this case.

FUNCTIONAL DESCRIPTION OF THE WORK OF THE DIVISION

The work of the N. L. R. B. Division of Economic Research arises directly out of administration of the Labor Relations Act, usually in connection with specific cases before the Board. Comprising an integral function in administration, this work is sharply differentiated from the activities of the United States Bureau of Labor Statistics or similar Government agencies which engage in general research. The prohibition in the act against the appointment of persons for statistical work "where such service may be obtained from the Department of Labor" has no bearing upon the existence of the present Division, since it performs a kind of service that is not and cannot be rendered by the Department of Labor. The major part of the Division's work is nonstatistical, and its occasional use of statistical technique is related to subject matter that is not within the scope of the Bureau of Labor Statistics.

If the Board were compelled to secure assistance in the preparation and presentation of economic data from an outside agency, the present structure and organization of the Division would have to be duplicated as a separate unit within

that agency. Even if this unit were attached physically to the Board offices, as it must be for expediency, there would still be a serious administrative problem of integrating the work of the outside unit with the work of the Board.

Additional reasons militate against the use of an outside agency. Efficiency, as well as convenience, requires that the Division be an integral part of the Board's organization. Not only must the personnel of the Division be trained in economic subject matter and analysis, but also they must be intimately acquainted with the established principles and procedures of Board work and its uses of economic material. Use of an outside agency would not only increase the cost of securing economic data for administering the act but would also result in a great loss of efficiency.

Functioning as a service and advisory group within the Board, the Division gathers materials and makes analyses usually upon the request of other Divisions, the administrative offices, or members of the Board. This work is done at various stages of a Board case, chiefly prior to the issuance of complaint or authorization of hearing, in the preparation for or conduct of hearing, and in the preparation of appellate briefs. Economic materials were used extensively in the briefs of all the important early Labor Board cases, and they continue to be used in new cases. In addition to interstate commerce data which were featured in the early cases, increasing use is being made of economic data on labor relations.

After a case has been decided, the Division's service may be required in the course of securing compliance with back-pay and reinstatement orders, usually in the form of employment record analyses (supplemented by studies of employment policy with reference to hiring and tenure), financial data and analysis, and studies of "substantially equivalent employment." A relatively minor part of the Division's work is done at the request of review attorneys and trial examiners, who require information and assistance of a technical nature in handling certain phases of a record. As an outgrowth of work done in connection with a group of cases the Division coordinates separate studies and materials for mimeographing and printing, to make them readily available for subsequent cases and for general use.

Because the variations in the type of data and analysis required for administering the act and because of the unpredictable flow of work coming into the Division, it is necessary to have a relatively large part of the staff professionally trained in economic subject matter and analysis and capable of working with a minimum of direct supervision. Thus, persons may be shifted from one task to another although the major part of their work is specialized in one of the five functional groups discussed below.

ECONOMIC DATA AND ANALYSIS FOR QUESTIONS OF JURISDICTION

The preparation of material on interstate commerce and other questions of jurisdiction has constituted a major function. Initially commerce materials were secured for cases involving the steel industry, clothing, fruit packing, press services, et al. With time, the emphasis has shifted to new industrial groups and to borderline cases of jurisdiction.

The mere procurement and presentation of commerce data is a specialized and technical job. The exact ownership of a company is found through examination of registration statements and other materials on file at the Securities and Exchange Commission or other agencies of the Federal and State Governments and through examination of standard business manuals. Sources of raw materials and destination of products are ascertained by studying publications of the United States Department of Commerce and other agencies, trade papers, corporation reports, and in some cases by examining data on file with the Interstate Commerce Commission. After the data have been secured, they are sometimes reworked and made part of an exhibit for the record.

Where jurisdiction has been widely established for a given industry through court decisions, commerce data are secured in routine manner, but for cases that require more than routine handling, descriptive and analytical materials are prepared. Studies have been made of the nature and functioning of insurance companies, with emphasis on the operations of companies involved in Board cases—John Hancock and others. For the Bank of America cases, studies were made of the historical development and present operations of the modern banking system, including interrelations between credit and the functioning of our entire economy. In a number of dairy cases special studies have been made of the production and distribution of dairy products with reference to the operations of respondents in Board cases; recently a mimeographed memorandum was distributed to the regional offices, outlining the character of the dairy industry and the sources of information for commerce data, as a guide in preparing dairy cases.

STUDIES OF LABOR RELATIONS

In the field of labor relations the Division has made numerous studies of personnel policy and procedures in collective bargaining. Specialized knowledge and training in the organization and functioning of industry, personnel administration, the form and organization of trade unions, and the detailed practice of collective bargaining are essential to this work.

A Nation-wide case involving the Western Union Telegraph Co. illustrates the use of economic analysis in charges of company domination and interference. An exhaustive study was made of the labor policy of the company and the history of the Association of Western Union Employees, to assist the Litigation Division in determining the disputed facts in the case. Members of the staff worked with the attorney preparing the case, assisted at the hearing, aided the attorney drawing up the Board's brief, and assisted the attorney arguing the case before the circuit court.

In addition to this intensive work on the Western Union case, similar studies are made for other cases. These studies of labor policy are supplemented by the collection of materials on espionage, strikebreaking, and the policies and practices of employer associations whose members are involved from time to time in Board cases. The information may be requested by the regional offices before the issuance of a complaint, by the Litigation Division for use at the hearing, or for the preparation of stipulations, settlements, and appellate briefs.

The Marshall Field case (southern textile mills) illustrates the use of economic data on collective bargaining. The case was settled by stipulation during adjournment of a hearing at which the Chief Economist testified on the role of outside parties in the bargaining conference. The respondent had insisted upon the inclusion and possible participation of outside parties as a condition of entering into negotiations with the union. The testimony, substantiated by materials from authoritative sources, described the recent history of labor relations in the southern textile industry, the nature of the negotiatory process in collective bargaining, and the use of third parties as a technique developed in recent years for combating labor organization.

For a number of cases in which the written agreement was an issue, materials were gathered to describe the agreement as one element in collective bargaining. These materials outlined the history and use of the written agreement as revealed in the literature on collective bargaining, the practice of bargaining in a group of industries, and the extent of written agreements. Upon the basis of this research, the Chief Economist testified in a number of cases, and subsequently the data have again been used. They have recently been supplemented and edited for publication and issued in the form of Bulletin No. 4.

Studies of union organization and collective-bargaining practice are also used in cases involving questions of appropriate bargaining unit.

EMPLOYER RECORD ANALYSIS

Cases involving alleged discrimination, back-pay orders, and orders of reinstatement to substantially equivalent

employment give rise to a third major function: Analysis of employer records and related data. This work requires training and experience in statistical analysis as well as a comprehension of business activity and personnel administration. Since the basic data are secured from employer records, the analyses are conducted largely in the field.

In cases of alleged discrimination, a study of employment records makes it possible to determine upon the basis of objective evidence whether discharges were made in accordance with some nondiscriminatory system during the ordinary course of business or whether they were directed chiefly against union members. The record analysis is particularly necessary for charges involving a large number of workers where the statements of respondent and union are confusing and contradictory. The economy and effectiveness of record analysis is illustrated by a recent case which originally involved more than 60 persons. Upon the basis of the record analysis, the regional office found that the charges affecting less than one-fifth of the number could be substantiated with employment-record evidence. A complaint has now been issued for the smaller number of persons, and altogether the preparation for hearing and conduct of the case have been greatly expedited.

Record analysis is equally important in the computation of back pay and in securing reinstatement. At the present time, in connection with the Circuit Court decree in the Republic Steel Corporation case, the division is outlining procedures for the computation of back pay affecting roughly 10,000 workers. Similar analysis is being made for a number of other cases, including Stackpole Carbon Co., Titan Metal Products, American Mfg. Co., National Motor Rebuilding Co., Mayer Handbag Co.

STUDIES OF THE EFFECTS OF THE N. L. R. B. AND BOARD RECORDS

From time to time the Division makes studies of the effects of the act upon industrial relations, chiefly in terms of strike activity and the extent of written trade agreements. For this purpose the Division compiles no basic strike data, but confines itself to adaptation of data compiled by the United States Bureau of Labor Statistics. The data are grouped to permit comparison of strike activity with the record of Board cases and comparison of strikes in industries over which the Board has established jurisdiction with strikes in other industries. For its study of written trade agreements, the Division makes similar use of data gathered by the Bureau of Labor Statistics, supplementing these with other materials that are readily available.

The only statistics compiled by the Board are the record of its own activities, comparable to the administrative statistics compiled by any government agency or the inventory control of a private business enterprise. The Board record covers the number of cases filed, the number of workers involved, the disposition of cases, the number of elections conducted by the Board and their outcome, the time consumed in handling cases at different stages of Board activity, and so forth. From time to time special studies are made, for example, the recent study of the financial strength of respondents in the Board cases, presented to the House committee investigating the Labor Board. The magnitude of this record is such that it requires the supervision and direction of persons trained in statistical method and labor relations, and familiar with the Board's functioning. The bulk of the compilation and tabulation is done by statistical clerks.

REFERENCE, EDITING, ADMINISTRATION

The Reference Section was set up initially to maintain a file of work materials that would expedite the work of the Division and avoid duplication of effort. This function has expanded with an increasing volume of work, and, in addition, the growing number of requests from other divisions of the Board for information of an economic character has necessitated a gradual expansion and reorganization of the Section. Closely related to the work of the Reference Section is the information—"dictionary"—service that is provided by the Division to the Review Division, the Trial Examiner's Division, and the Litigation Division. Frequent requests are received from these offices for factual information of the type that is known as common knowledge and of which courts take judicial notice.

Administration and editorial work in the division are not differentiated from similar functions in other agencies. From time to time materials that have been prepared for a group of cases are coordinated, summarized, and supplemented in order to make them available in subsequent cases. The printed materials, which have appeared as a series of bulletins, are also useful for reference purposes. Other materials are mimeographed for distribution to the several Washington and regional offices of the Board.

The administrative assistant aids the Chief Economist in planning, assigning, and directing research work, including the supervision of specific projects. One of the special projects that has been under his supervision is the preparation of materials for congressional hearings, particularly during the past year. When economic data are needed to throw light on proposed amendments, these have been the subject of study by the division.

A COMMON PRACTICE

This employment of economic experts by Government agencies is no novel thing. On the contrary, the employment of economists by the National Labor Relations Board to make studies and to testify in connection with proceedings before the Board is, contrary to current statements, entirely in accordance with practice that has been well established throughout the Federal Government for many years. The Labor Board is distinguished in this matter only by the small number of economists that it employs and the low percentage of its total appropriation that is used for economic research.

Confronted with technical questions arising in the course of its work, the administrative agency cannot function intelligently without assistance from persons trained in the technical fields—accounting, economics, statistical method, engineering, and so forth. The uses of such personnel vary with the functions of the administrative agency, but their necessity is established by the character of the problems with which the agency must deal.

The Federal Trade Commission, created in 1914 to prevent "unfair competitive practices which are prohibited by section 5 of the Federal Trade Commission Act," maintains a large economic division, headed by a chief economist, to make studies and provide expert testimony in connection with administration of the Trade Commission Act and the Robinson-Patman Act and also to make studies of more general intent.

The Interstate Commerce Commission, created in 1887 to maintain just, reasonable, and nondiscriminatory rates on common carriers, has a large staff of economists, statisticians, accountants, and engineers to study and deal with specialized problems arising in the course of its work; the same persons are used as expert witnesses at the hearings of the Commission. The Commission's Bureau of Statistics collects data concerning the corporate history, organization, investments, capitalization, indebtedness, physical property, and operations of all common carriers subject to the provisions of the Interstate Commerce Act.

The Securities and Exchange Commission, created in 1934 to prevent fraudulent practices in the sale of securities and to supervise and regulate the registration of securities, maintains several groups of expert personnel, including marketing analysts, economists, and accountants. Entire administrative units within the Commission are staffed largely with nonlegal, expert personnel. The same personnel testify from time to time at hearings of the Commission.

The Federal Communications Commission, created in 1934 to act as a licensing and regulatory body, has an accounting and engineering staff to aid in administering the Communications Act. Members of this professional staff participate

at hearings of the Commission, testifying on the Commission's behalf, assisting in the cross-examination of witnesses, and acting in an advisory capacity. Similarly, the Federal Power Commission, created in 1920 to act as a licensing and regulatory body, employs engineers and accountants to assist in its work.

Additional examples of the use of expert personnel by administrative agencies are found within the Departments of Agriculture, Interior, Labor, and Commerce. There are 23 or 24 statutes administered by various divisions of the Department of Agriculture. The Packers and Stockyards Division—of Agricultural Marketing Service—is an example; for hearings under the Packers and Stockyards Act, rate engineers—i. e., economists and accountants—are employed by the Department to make studies and testify as expert witnesses. The Bituminous Coal Division of the Department of the Interior makes use of marketing specialists, technical analysts, and cost experts of its own staff to testify at hearings. Other examples are the Public Contracts Division and Wage and Hour Division of the Department of Labor and the United States Maritime Commission in the Department of Commerce.

Preparedness

EXTENSION OF REMARKS

OF

HON. ALBERT SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

ARTICLE FROM THE GRIFFIN (GA.) DAILY NEWS AND REPLY THERETO

Mr. CAMP. Mr. Speaker, pursuant to permission granted by unanimous consent to extend my remarks in the RECORD and to include therein an editorial column by Editor Melton of the Griffin (Ga.) Daily News, addressed openly to me and my reply, I submit the following:

[From the Griffin (Ga.) Daily News of May 10, 1940]

"GOOD EVENING," BY QUIMBY MELTON

Congressman SIDNEY CAMP,
Washington, D. C.

DEAR SID: Germany's invasion of Holland, Belgium, and little Luxembourg has spread the German attack into three new countries, countries that wanted above all else to be neutral. The fact that Germany claims she invaded these countries to "protect their neutrality" is a poor excuse that will be believed only by those who are blinded by the cause of nazi-ism. Holland, Luxembourg, and Belgium have been raped, just as Belgium was in 1914.

Hitler has told his people "der tag" (the day) has come and insists that on the outcome of the battle along the Western Front rests the entire outcome of the war. He gives strong intimation that his ambition is to bring the whole world under Nazi sway.

The time has come when we in America, Congressmen as well as the people back home, must make up our minds that what has happened to Belgium, Holland, and Luxembourg shall never happen here.

In this connection, I believe it would be wise for Congress to take steps to put this Nation on a war basis, and this suggestion is made, not as a belligerent move but as one to guarantee our peace. Hitler has demonstrated that a nation caught unprepared is "his meat."

By putting the Nation on a wartime basis I mean:

All members of the Organized Officers' Reserve should be called into active duty. You will remember, Sidney, that, during the World War, it took America from April until September to get officers trained to command units in the National Army. And you'll remember it was a year before any United States troops were sent into battle to any extent.

All Reserve Officers should be examined to see if they are fit for training as air pilots; we'll need pilots by the thousands, and thousands of airships as well.

An intensified recruiting campaign should be put on for our Army, Navy, and Marines. Recruiting men for training, not fighting, but training them so well that in case of invasion they will be ready to fight.

We must prepare for a blitzkrieg—we won't have any 6 months to get ready next time! We won't have 24 hours. Belgium, Holland, Luxembourg, Norway didn't.

Our Government should immediately round up every undesirable alien and see that he goes back to the country whence he came. And at the same time all American citizens who are engaged in subversive activities should be taken into custody and put where their ardor for this dangerous thinking will cool off.

Part of Germany's success in Norway, in Poland, in Czechoslovakia, was largely due to the fact that Nazi sympathizers were already there to welcome the incoming troops and to give them information and to lead them to strategic points.

We must have none of that—and don't fool yourself that there are not plenty of Nazi sympathizers and other subversive followers, who would take advantage of any situation that would give them a chance to undermine our Government.

I believe our Government should immediately give orders for war materials to every factory in our Nation that can be converted into a war-material factory. Special attention should be given to speeding up manufacture of airplanes; of antiaircraft guns; of bombs; of automatic rifles; of fast cruisers, and so forth.

I am not being hysterical today, Mr. Congressman. I'm just thinking back some 23 years when you and I were young men at Camp Gordon, training for the war. You'll remember, Sidney, how many of our boys were trained to drill with wooden guns; you'll remember how youthful "90-day wonder" officers were given the responsibility of training these men (and they did a damn good job of it, too); you'll remember how, on arriving in France, our artillery had to borrow French seventy-fives to use as light artillery; how we had to borrow French Chauchat rifles because we had no automatic rifles to speak of.

I'm thinking of these days today, Sidney, as I write you this letter. And I 'm thinking of the days to come when we may be faced with possible blitzkrieg unless we are prepared.

And Sidney, I'm thinking of our boys and girls; the youngsters of today who must bear the brunt of fighting and who would be victims of any blitzkrieg that might be successful. For it would be they who would lose their privileges as free American citizens.

Let's take steps to put America on a war-preparedness basis—for, Sidney, I feel positive that thus we will be able to keep out of war; and if we cannot keep out of the war we'll be able to protect ourselves from any invader.

Maj. QUIMBY MELTON,
Griffin Daily News, Griffin, Ga.

DEAR QUIMBY: The open letter addressed to me and published in the Good Evening column of the May 10 issue of your valued paper is timely and I believe represents the chief thought and interest of the majority of our people. The "total war" inaugurated in Europe and Germany's lightning invasion of the small and defenseless countries have caused thoughtful Americans everywhere to inquire as to the condition of our national defense. You recalled the days of 1917–18 when America entered the World War, how it took us from April to September to train officers to command our National Army, and an equal length of time to finally put these troops in the line of battle. You recalled the days when we were young soldiers of the Eighty-second Division at Camp Gordon training for the war—how the "90-day wonder" officers (and the allied armies had none better) worked to get our boys ready for the front lines, how they drilled with wooden guns because modern rifles were not available and, when the division arrived in France, how we "borrowed" our wagons from the French and British, our light artillery (French seventy-fives) and automatic rifles (French Chauchats) from the French. America was unprepared for that war. Let us see how our Government profited by that example. Armistice Day 1918 found us at last with a magnificient Army. Our Navy was the strongest in the world. In 2 years we had built a great merchant marine. Did we keep it up? The superb organization perfected during the war was virtually disbanded by the Republican administrations that followed. Our Army of 4,000,000 men was reduced to a paltry 200,000. Our Navy was greatly reduced under the Kellogg Treaty, great modern battleships were actually towed out into the ocean and sunk, and our merchant marine rusted away at the docks. Appropriations for national defense were cut to the bone and, while the nations of Europe were mechanizing their armies and building huge air forces, this country was experimenting with a few "samples" of modern equipment. All our military and naval experts agree that our first line of defense is our Navy. Under the Monroe Doctrine we have undertaken to defend the whole Western Hemisphere, our line extending, therefore, from pole to pole on both the east and the west, yet the Hoover administration did not appropriate one cent for naval extensions.

The Democratic administration recognized the plight of our national defense from the beginning, and our President has called the attention of Congress to the same at each session, and we have done more than the average citizen realizes. Since the beginning of this administration we have appropriated $4,200,000,000 for naval expansion alone. We now have 3,200 naval planes, and are increasing this number at the present time to 6,000. We have built and now have the strongest and most efficient navy in the world, and under the Vinson bill we are engaged in a 4-year expansion of the same, building 294 capital and auxiliary ships as fast as our yards can

turn them out. Our naval aviation is the largest and most efficient in the world.

In the Hawaiian Islands we have the greatest naval base in the Pacific, the Gibraltar of the west. The fortifications of the Panama Canal are the best and strongest known. We are training thousands of young men now as aviation pilots and ground mechanics, this training being done at the best technical schools in the country, and we are building planes for these pilots. It is not intended that this expansion will stop until we are supreme in the air. Our Army is being mechanized, and we are training it in a systematic way at Fort Benning and elsewhere in maneuvers as like actual warfare as possible.

It is estimated by experts that it requires 60 tons of shipping for each man carried across the sea in an expeditionary force, and that, therefore, our Navy demands first attention so that we may be able at all times to stop any such force from landing here. But we have not neglected our Army. We have a standing Army, well trained, of 220,969 men and a National Guard of 253,000 men. They are well armed and equipped. We have over 75,000 trained Reserve officers ready for service. The air force of the Army is about the same as that of the Navy, and we have 1,400 commercial pilots besides.

It is agreed that we must be prepared for any emergency that may arise as a result of the European tragedy and be ready to defend western democratic civilization against any combination of forces that may conspire against us.

Our President recognized this long ago and forcefully directed the attention of Congress to prepardness in his January message to us.

We have already recognized the danger of subversive groups here, and the Dies committee has worked long and is now working daily to identify this "fifth column." Chairman VINSON has already introduced a bill to close our doors to immigration during this war. A bill will be introduced this week to greatly increase antiaircraft defense and also our military and naval air forces. Congress seems determined to have this country prepared.

I believe that we should begin the construction of the proposed Nicaraguan Canal at once. Any interference with the Panama Canal might seriously interfere with the mobility of our fleet, and as now constructed the Panama Canal barely permits the clearance of our largest battleships, the Canal being only 2 feet wider than the width of the ships of the largest class.

I am sure the people of our district appreciate your patriotic and wise movement to bring this subject to the attention of thoughtful citizens.

I hope and pray that America will be spared from war, but I believe that our best insurance is prepardness.

Sincerely,

A. SIDNEY CAMP.

New Veterans' Hospital Authorized for Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1940

LETTER FROM BRIG. GEN. FRANK T. HINES

Mr. VAN ZANDT. Mr. Speaker, President Roosevelt recognized the need for additional hospital facilities to accommodate the many thousands of war veterans in Pennsylvania, when on May 9 he approved in principle the report of the Federal Board of Hospitalization which included a new Veterans' Administration facility consisting of 400 general hospital beds and 784 domiciliary beds in the Pennsylvania area.

The action of the Chief Executive is made known in the following letter received from Gen. Frank T. Hines, Chairman, Federal Board of Hospitalization:

MAY 14, 1940.

Hon. JAMES E. VAN ZANDT,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: In the program of future construction for the Veterans' Administration for accomplishment from year to year within the period of the next 10 years, recommended by the Federal Board of Hospitalization to the President and approved in principle by the President on May 9, there is included a new Veterans' Administration facility, consisting of 400 general hospital beds and 784 domiciliary beds, in the Pennsylvania area.

Immediate consultation is contemplated with the Director of the Bureau of the Budget to determine upon how funds may best be made available to undertake necessary preliminary work, such as the selection of site and preparation of plans.

Very truly yours,

FRANK T. HINES, *Chairman.*

Civil Aeronautics Authority

EXTENSION OF REMARKS
OF
HON. EDWARD A. KELLY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

Mr. KELLY. Mr. Speaker, being a member of the Interstate and Foreign Commerce Committee when the Civil Aeronautics Authority bill was pending before it, it was the duty of every member to determine whether the administration over aviation would rest in the Department of Commerce, where it was, or to determine and create a new agency known as the Civil Aeronautics Authority.

A great discussion arose as to who and what department was best fitted for its supervision and its regulation.

We were all familiar with what was happening to aviation at the time the proposal was made to Congress for a change in the administration of those by departmental interference over this industry—interference manifested for power of control over aviation.

The Government has had a hand in practically every step of this industry from its beginning to where it is today.

The first air-mail routes were operated by the Government. Later private companies carried the mail under substantial subsidies, and every Member of Congress is very familiar with the scandals that followed. Following these scandals the public was aroused and demanded of this administration that proper steps be taken to safeguard this industry, yet in its infancy, from its shameful surroundings. Then the Government tried carrying the mails again by placing Army pilots with Army planes, and we know the results of what happened.

Finally, a complete reorganization was proposed, and on Tuesday, March 10, 1938, the Interstate and Foreign Commerce Committee met to consider and hold hearings on bill H. R. 9733, to create a Civil Aeronautics Authority.

Mr. Speaker, in the beginning of these hearings my mind was made up to place the Authority of Civil Aviation with the Interstate Commerce Commission, a Commission dealing with the problems of carriers and a Commission that has proven through the years of its capability; its personnel is of the highest type to be found in any Government department. But knowing of its many problems that is was confronted with, especially with new legislation created for the purpose of truck and bus regulation, that this Commission had its hands full, and therefore felt the need of a new agency to deal with aviation.

In the testimony presented by Clinton M. Hester, Assistant General Counsel, Treasury Department, he states:

Before discussing the provisions of this legislation I wish to preface my remarks with a brief outline of the circumstances surrounding its presentation to this committee in its present form.

At the last session of the Congress there were pending several bills dealing with the subject of civil aviation. Because of this fact the Interdepartmental Committee, consisting of Assistant Secretaries of six executive departments—State, War, Navy, Post Office, Commerce, and Treasury—was established last fall for the purpose of studying these bills and making such recommendations thereon to the Congress as the Committee might deem advisable.

The Interdepartmental Committee held hearings for 2 months, during which representatives of every phase of the aviation industry appeared and testified concerning the type of civil aviation legislation that should be recommended. At the conclusion of these hearings the Interdepartmental Committee embodied its recommendations in the form of a bill which it submitted to Representative LEA for his consideration.

Under its provision air lines operating in interstate, overseas, and foreign commerce would be required to obtain certificates of convenience and necessity from the Authority, and the Authority would be authorized to regulate the rates and other practices of such air lines.

The bill would cancel existing air-mail contracts and authorize the air lines to carry mail under certificates of convenience and necessity issued by the new Authority.

To this new agency would be transferred all the powers relating to civil aeronautics which are now exercised by the Department of Commerce, the Interstate Commerce Commission, and the Post Office Department, with the exception of certain postal functions, which would be retained by the Post Office Department.

The functions to be transferred from the Department of Commerce to the new agency are those relating to the safety regulation of commercial and private flying and the fixing of the rates for carriage of air mail.

Mr. Speaker, there were many fine provisions provided for in this bill, that has helped aviation since the Civil Aeronautics Authority was created. Under the set-up of this act, aviation was lifted out of the terrible mess it was in, and has accomplished an outstanding record for civil aviation of any agency of the Federal Government under this administration.

Under the Civil Aeronautics Authority we know who is doing the job. We, of the Democratic Party, can look with pride of its fine manner under which it has functioned for the past 2 years, for experiences of the past demonstrate the utter failure of the plan proposed here, under the Reorganization Plan No. IV.

There is no question in my mind that selfishness of departmental heads has ill-advised the President, for if my memory serves me right, it was the Administration that wanted the Civil Aeronautics Authority created. Therefore, Mr. Speaker, I cannot agree with administrative leaders that now want to abolish this outstanding agency that has proved its worth to civil aviation.

Public Works Administration

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

ADDRESS BY RAY C. KIRKPATRICK

Mr. HENDRICKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Ray C. Kirkpatrick, assistant on Labor Relations, Public Works Administration, Federal Works Agency, convention of the Florida State Federation of Labor, Daytona Beach, Fla., April 9, 1940:

As assistant on Labor Relations for the Public Works Administration, I bring you the personal greetings of Mr. John M. Carmody, Administrator of the Federal Works Agency, and Col. E. W. Clark, Acting Commissioner of the Public Works Administration. They desire for you a most successful convention.

It is a distinct pleasure for me to be here today, and to tell you briefly something about the Public Works Administration. Further, it is entirely appropriate that I speak to you of this agency for, after full consideration is given to its broad range of objectives and accomplishments it must still be concluded that the P. W. A. was formed as an emergency measure designed to assist the workingman in general, and the building trades in particular.

A moment's reflection will, I believe, serve to demonstrate this idea. You will recall the universal distress experienced by all classes of our society when, in 1933, the legislation forming this agency was enacted. Farmers, industrialists, merchants—everyone felt the fear and stringency of the period. All economic activity languished and the industrial machine faltered seriously. Money was scarce, particularly among those of the lower income brackets; construction of any nature was rare; and hunger and extreme want were common. The present progressive administration, under the direction of President Roosevelt, realized the seriousness of the emergency and undertook forceful measures in an effort to overcome the more pressing problems.

It was appreciated that true corrective measures must begin with those in greatest need. Therefore plans were formulated whereby the destitute and hungry could be given necessities immediately and a means of securing an appropriate standard of living in the future. To that great class of our people termed "consumers" there had to be restored adequacy of purchasing power. With this accomplished, a base would be established upon which true recovery could be founded.

The immediate needs were alleviated through direct relief and made-work projects. An additional plan was then prepared whereby employment could be created on a scale sufficiently broad to be effective, and in such a manner that the efforts of those thus employed would contribute to, rather than burden, society. The purpose of these efforts was to aid in restoring the national purchasing power and thereby, with other means, to initiate a national recovery.

The latter plan was put into operation when the Public Works Administration was established in 1933 and authorized to embark upon the largest program of public construction ever entrusted to a single agency. Powered by an initial appropriation of $3,330,000,000, P. W. A. was charged with encouraging widespread public construction. The program was introduced in two phases—Federal and non-Federal. Under the first, projects such as the construction of navy-yard facilities, Army barracks, Federal prisons, the dredging of navigable streams, and works of a similar nature were undertaken. Further construction was initiated on those huge reclamation projects desirable for the welfare of the Nation, yet too large to be undertaken by private interests. Typical of these are the Grand Coulee Dam, Shasta Dam, and the All-American Canal.

The non-Federal phase of the program was of a different nature. Here an opportunity was given public bodies everywhere to construct schools, highways, sewers, hospitals, or any other project that was desired and needed by the local group to be served. Under this phase participation was encouraged by giving to the public bodies funds not to exceed 30 percent of the cost of labor and materials. It was necessary that all construction be approved as to need, type of construction, utility, and design. Long-term loans at reasonable interest rates were also made available where appropriate. Subsequent legislation by Congress in later years increased the grant to not in excess of 45 percent of costs.

Three factors were outstanding concerning this program. First, it created a large amount of on-site work under desirable working conditions. Second, industry was stimulated because of the tremendous amounts of materials required. In the early part of the program P. W. A. material orders constituted over three-fourths of the total output in some industries. Third, the projects were of a permanent nature designed to serve this and future generations. Through your personal experience, I am sure you are aware that these projects are sound in construction, utilitarian in purpose, and beautiful in design. I refer you to the Life magazine dated April 1, 1940, for illustrations of over 50 of these P. W. A. projects. Gentlemen, expending of funds for such purposes is more than mere "pump priming."

This program was of particular interest to our 3,000,000 skilled building craftsmen. These men had participated in the boom building period between 1922 and 1930, during which time construction costing on an average over $10,000,000,000 annually was accomplished. Strangled by the depression, this annual figure had dwindled in 1933 to less than a third of that of the peak year. As a natural consequence, it follows that less than a third of the building-trades craftsmen were working with any degree of regularity. I am sure you will remember these trying times.

When the Government embarked upon an extensive program of public-works construction, therefore, the building trades were markedly affected. The plan was particularly attractive because construction was to be prosecuted under the normal contract method, and all workmen were to be employed at prevailing rates of pay and under favorable working conditions. Although preference was granted to those men on relief rolls, union locals were designated as proper referral agencies, and with the agencies of the United States Employment Service provided the only sources from which men could be obtained.

This program proved very popular. From July 1933 to March 1939, P. W. A. aided in the construction of 35 percent of the Nation's hospitals and allied public-health facilities, 65 percent of all courthouses, city halls, and other nonresidential public buildings; 65 percent of all sewage-treatment plants; and 70 percent of all education buildings.

You will undoubtedly be interested in learning the extent to which Florida has participated in this program. As of March 1, 1940, 231 projects had been or were being constructed by local public bodies in your State, estimated to cost $40,126,020; 73 of these projects were educational buildings, and 79 of the remaining were sewers, waterworks, or power facilities. An outstanding example of local improvement under this program is the construction of your great bridge-highway system across the keys.

In addition, there have been, or are being, constructed in Florida 285 projects estimated to cost $26,000,882 under the Federal program. This phase of P. W. A. is financed entirely by the Federal Government and is responsible in this State for such works as the flood-control project at Lake Okeechobee, extensive construction at the Pensacola air station, numerous Coast Guard stations, and the conservation program being conducted in the Everglades.

In all, 516 projects estimated to cost $66,326,902 have been constructed in Florida by the Public Works Administration. The United States Bureau of Labor Statistics has determined that 35.8 percent of the money spent for labor and materials on these projects is received in wages. This program has, therefore, placed approximately $22,000,000 in the pockets of Florida workmen. The figure is particularly impressive in light of a further study by the Bureau of Labor Statistics, which disclosed that, for every man-hour of work created on the site of a Public Works Administration project, 2½ man-hours of work are necessary to provide the required materials. It may be safely said, therefore, the P. W. A. program in Florida has resulted in the creation of approximately $50,000,000 in wages.

The Public Works Administration is now being liquidated. Because of the lack of funds, it has been necessary to return some 96 applications for grants to assist in the construction of additional projects in Florida, estimated to cost $43,552,982.

There are now pending in Congress bills to perpetuate in various forms the purposes of this administration. Notable among these is Senate bill No. 3589, introduced by Senator ANDREWS, of this State, which provides for an appropriation of $300,000,000 to be loaned to public bodies to assist in the construction of public-health and educational projects, and facilities for recreation and the handling and storage of farm products.

The outcome of this and the other proposed legislation is not known, but, regardless of the future, we who are connected with P. W. A. take great satisfaction in its splendid accomplishments and in the knowledge that a means has been determined whereby depressions can be overcome through cooperative efforts of the Federal, State, and local Governments.

Thirty Millions of Dollars for Home Financing Purposes in Kansas

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

LETTER FROM STEWART McDONALD

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Honorable Stewart McDonald, Administrator of the Federal Housing Administration, and the summary of operations of that agency in the Fifth Congressional District of Kansas, broken down by counties, through the close of the year 1939:

FEDERAL HOUSING ADMINISTRATION,
Washington, April 29, 1940.

The Honorable JOHN M. HOUSTON,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN HOUSTON: The semiannual summary of F. H. A. operations reveals that 24,818 families in Kansas have received loans of $30,405,650.26 for home-financing purposes. These loans were made by private lending institutions and had been insured by the Federal Housing Administration as of the close of business December 31, 1939.

Of this amount, 17,169 families obtained $5,392,633.26 in order to improve, repair, and remodel their properties under the property-improvement provisions of title I of the National Housing Act.

In addition, F. H. A. insured loans totaled $25,013,017 in Kansas for the purpose of financing home ownership for 7,649 families.

At the present time approximately 12,000,000 people in the United States are receiving the benefits of the F. H. A. program.

The F. H. A. insured mortgage has been a most instrumental factor in developing new home construction, the year 1939 breaking all records in volume of loans insured. The 1940 volume thus far exceeds even last year and I feel confident in forecasting that 1940 will show the greatest small-home building program since 1927.

If you desire, I shall be very glad to send you a further summary of F. H. A. operations in Kansas, broken down by counties through the close of the year 1939.

Sincerely yours,

STEWART McDONALD,
Administrator.

Volume of Federal Housing Administration insuring operations, by counties, Kansas

[Net cumulative totals through Dec. 31, 1939]

County	Title I. Property Improvement Loans Insured		Title II. Small Home Mortgages Accepted for Insurance		Total	
	Number	Amount	Number	Amount	Number	Amount
McPherson	89	$31,882.75	103	$345,400	192	$377,282.75
Harvey	115	40,373.95	64	168,550	179	208,923.95

Arm Our Army at Once

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune:

[From the Chicago Tribune]

ARM OUR ARMY AT ONCE

(An Editorial)

Perhaps there are Americans who think they have something tangible to show for the eight and one-half billion dollars spent on national defense in the last 10 years. They are wrong. If our Army were to be subjected to such a test as the armies of Europe are meeting today we should suffer a defeat which would be as prompt as it would be ignominious and humiliating.

Little Belgium is far better prepared to meet an invader than we are. We couldn't stand off a first-class power on land for a week. We have a population of 130,000,000, and the greatest industrial organization the world has ever known, but our factories could not begin to produce the necessary supplies for an army in a year, and by that time they would not be our factories.

An overstatement? An exaggeration? Well, an army needs rifles. The sluggish minds of the Ordnance Department finally decided 30 years too late that an automatic rifle was desirable. We ought to have equipment for half a million men, at least. The Army staff, in fact, is reckoning on an army of a million at the start of a war. We haven't enough of the new rifles to keep even a division supplied with them. At last reports there were fewer than 8,000 of the guns available, and the quantity is being increased by no more than a few hundred a month. It is still far from certain that the new gun is nearly as good as the bureaucrats say it is, but whether it is good or not so good, this country didn't get a supply of modern rifles for its eight and one-half billions.

Our lack of modern artillery is even more appalling. Practically speaking, we haven't any. Such cannon as we have would be outranged and put out of action in a few days if not in a few hours of such fighting as is now being seen in Europe. We didn't get artillery for our eight and one-half billions.

In antiaircraft weapons our deficiency is even more glaring. We have about 50 high-grade guns of 3-inch caliber which were obsolete before they were issued. We have perhaps a dozen modern weapons of heavier caliber. And that's all. We didn't get antiaircraft defense for our eight and one-half billions.

If there is anything to be learned from the war in Europe it is the military value of airplanes. In this department we are hopelessly outclassed. The Army today has only 2,700 planes and of these all but 52 large bombers are regarded as obsolete. They would have been all right in the last war or even 5 years ago, but they would be outfought by the speedier and better armed types which are now flying over Belgium and Holland. We didn't get an air force for our eight and one-half billions.

And so it goes. Perhaps we have enough flags and bugles, but we are woefully short of arms and much of what we have is so inferior in quality as to be negligible. As matters stand today, we are a push-over for any first-class military power which can effect a landing on our shores.

There is, of course, the Navy, but nobody can feel certain that it is able to withstand the kind of punishment which a navy must take in the 1940 kind of war. It may well be true that most of it is obsolete and that the cost of rebuilding the ships to meet modern weapons of attack would be so great as to warrant scrapping the whole fleet and starting anew.

A distrust of the designers and builders of our ships appears to be shared by the Secretary of the Navy himself. Mr. Edison permitted himself to say the other day that he would like to get some civilian brains to assist in the planning of the ships. He could use some, too, in supervising construction in the hope that endless delays would be avoided.

In the world in which we live our country should be strong. In fact, it is grotesquely weak, unprepared, wholly unequal to the tasks which a cautious diplomacy would impose upon it, and our diplomacy is not cautious.

We have paid a fabulous price for next to nothing. We issue grandiose proclamations telling the rest of the world what to do and what not to do, but we haven't the means to enforce our will and we are at the mercy of any first-class nation which calls for a showdown.

The situation demands prompt and thoroughgoing correction. The monopoly of the ordnance officers and the Navy constructors should be broken. The Army and Navy should tell the manufacturers of this country what it wants by way of performance and then leave it to the engineering brains of the country to devise the weapons and to the industries of the country to build them.

The advice of competent men not on the active list should be solicited not occasionally but constantly and followed. Such men as Rickenbacker, Lindbergh, and Al Williams have repeatedly warned the Army and Navy of the extent and power of the German air force, but the warning was long unheeded. In truth, these three men and a few more like them have more knowledge and experience in the field of aviation than is possessed by the entire bureaucracy, and their judgment and advise are correspondingly valuable. In common sense their recommendations should be set up as a guide. Otherwise, we shall continue to spend immense sums for planes and still be unready for war.

America is unprepared and each day finds us falling further behind. We are rich, and fat, and feeble. The confidence of Congress in the ability of our armed services to provide us with an adequate apparatus of defense has been misplaced. The time has come for a radical shaking up and shaking out of the uniformed bureaucracy in Washington. The national danger can be averted only if an aroused country demands from the playboy in the White House the housecleaning which is long overdue.

The Real Agricultural "Merry-Go-Round"

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. JOHNSON of Indiana. Mr. Speaker, before Congress adjourns legislation should be passed which will be a permanent solution of our agricultural problem. We should not continue from year to year with ill-considered, makeshift legislation, much of which actually is detrimental to our farmers. Agriculture has been used as a political football. It is our basic industry and we shall never have a prosperous condition until we have prosperous agriculture.

The agricultural legislation which has been passed under the New Deal appears so much at cross purposes that I cannot help but feel that millions upon millions of dollars are being wasted each year, these millions being expended largely because of the conflicts of New Deal legislation and activities without producing real benefits to agriculture.

First, Congress appropriates about $500,000,000 a year for controlling agricultural production through the Agriculture Department. The average farmer received very limited amounts of this money.

Second, Congress appropriates over $200,000,000 a year to cut out and control production by parity payments; these parity payments go to cotton, corn, wheat, rice, and tobacco farmers. Many States have never seen a dollar of this money. Ten States received over one-half of this money. Texas alone received 27 percent of this money in 1 year. Cotton farmers received 45 percent of the total money set aside for parity.

Third. Congress appropriates over $100,000,000 a year to increase farm production by the Farm Security Administration, which subsidizes new farmers and sets them up in the farming business.

Fourth. Congress appropriates over $100,000,000 a year to take the farm surpluses off the market.

Fifth. Congress continues to appropriate and provide $100,000,000 to put more land under irrigation for the purpose of growing more crops and increasing the surpluses so more appropriations will be needed for control of the surpluses.

Sixth. The President reduced the tariff on farm products to an extent where over $4,000,000,000 worth of competitive agricultural products were imported during the last 7 years, at an average of over $500,000,000 worth each year.

In short (1) we appropriate millions of dollars to increase production by putting new farms into production. (2) We appropriate more millions to cut out and control the production which we have already appropriated millions to increase; and then, (3) we appropriate more millions of dollars to take the surpluses off the market, for which, we appropriate millions to increase; and finally, (4) we lowered the tariff thereby allowing the importation of billions of dollars worth of agricultural products. This does not make sense. The farmers have had $3,000,000,000 in subsidies by the New Deal. They lost $4,000,000,000 worth of markets by imports. Their share of the increased debt is $6,000,000,000, which they will have to repay, with interest, when the great day of reckoning comes.

Year by year, month by month, and day by day, we see these follies in Congress. Last year while the Surplus Commodies Corporation was spending $30,000,000 of public money in buying up and giving away surplus commodities we imported $92,000,000 of the same commodities from foreign countries. Would the taxpayers of any county in America reelect county officials who spent $100,000 to take productive land out of production in the north end of their county and at the same time spend another $100,000 to bring a lot of unproductive land into production in the southern end of their county, and at the same time made it possible to have sent into their county great quantities of farm products which take away the markets of their farmers?

This seems to be a real agricultural merry-go-round and a real run-around for the taxpayers of America.

"We Will Go Up or Down Together; Ours Is a Common Destiny"

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

ADDRESS OF HON. JOSEPH W. MARTIN, JR., AT THE REPUBLICAN STATE CONVENTION AT LITTLE ROCK, ARK., ON MAY 11, 1940

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Republican leader of the House of Representatives, Hon. JOSEPH W. MARTIN, Jr., delivered at the Republican State convention, Little Rock, Ark., May 11, 1940:

It is an honor I deeply appreciate to be asked to address this convention. As a representative of New England I welcome this opportunity to bring a message to the people of the South.

I come to the glamorous and hospitable Southland not as a citizen of another section alien in interests and ideals to your own. I come to you as one of you; as a fellow American; as one of a united people, to talk over with you our common problems.

I say I come to you as one of your own, because in this day when free constitutional government is threatened we must stand as one nation. We must stand as one people united, as we stood back in the days when the boys of the South marched away shoulder to shoulder with the boys of the North to the battles of the Spanish-American War. We must stand united in this battle to preserve States' rights, and to maintain our liberties and our privileges enshrined in the constitutional Bill of Rights, as we stood united when the boys of the South and the boys

of the North sailed away together to spill their blood on the battlefields of Europe, believing—mistakenly, it is sad to say—but believing they were upholding their ideal of making the world safe for democracy. As we stood united then, in helping to fight a war which we believed was a war to end all wars, so must we now stand united, the people of the South and the people of the North, you of Arkansas and we of Massachusetts, in the determination that we shall not again permit our Nation to become involved in alien wars; that the boys of the South and the boys of the North shall not again march away together to sail overseas to fight in foreign conflicts and to spill their blood in vain.

This splendid gathering of Republicans is impressive. Time was, undoubtedly, when it required great moral courage, and passionate devotion to an ideal, to be a Republican in Arkansas. A singular evolution has come about. Today the Republican Party actually is closest to the ideals of Jefferson. The Republican Party is fighting to preserve States' rights against the encroachments of a great and arrogant political bureaucracy at Washington. You of the South, like us of the North, face a dark menace—a sinister threat to our liberties—in that great political bureaucracy. It has sent its tentacles creeping into every nook and corner of this land like some great octopus preparing to crush every vestige of liberty and privilege out of the people and to suck dry the substance of our citizens.

It is needless for me to remind you today that under the greatest, freest, most enlightened government ever devised by the mind of man, the powers granted under the Constitution to the Federal Government are strictly limited, and were meant to be so. All those powers not specifically granted to the Federal Government in the Constitution are reserved to the States or to the people.

The true purpose and function of government was well described by the great philosopher, Spinoza, in the 1600's when he said:

"The last end of the state is not to dominate men, nor to restrain them by fear; rather it is so to free each man from fear that he may live and act with full security and without injury to himself or his neighbor. The end of the state, I repeat is not to make rational beings into brute beasts and machines. It is to enable their bodies and their minds to function safely. It is to lead men to live by, and to exercise, a free reason; that they may not waste their strength in hatred, anger, and guile, nor act unfairly toward one another. Thus the end of the state is really liberty."

That is the kind of government, Mr. Chairman, the people of Arkansas and the South want. That is the kind of government Massachusetts and New England want. That is the kind of government the Middle West and the far West want. And, please, God, it is the kind of government we are going to continue to have in this country!

We dare not ignore the implications of the threat which faces us. They were well set forth by Eugene Lyons in his description of conditions in Russia, when he said:

"Absolutism at the top implies hundreds of thousands, even millions, of large and small autocrats in a State that monopolizes all means of life and expression, work and pleasure, rewards and punishments. A centralized autocratic rule must function through a human machine of delegated authority; a pyramid of graded officialdom; each layer subservient to those above and overbearing to that below. * * * Where there is only one employer, namely, the state, meekness is the first law of economic survival. Where the same group of officials wields the terrible powers of secret arrests and punishments, disfranchisement, hiring and firing, assignments of ration categories and living space—only an imbecile or someone with a perverted taste for martyrdom will fail to kowtow to them."

The people of New England want no such government as that. The Arkansas of the Conways, of Walker, of the Cumminses, of the Yells, of Ashley, of Sevier, of Ringo, Fowler, Drew, Pike, Johnson, Miller, and the other illustrious men who in their day put their brand upon history and helped to establish this great free Nation, will have none of that sort of bureaucracy. The South of Robert E. Lee will have none of that kind of bureaucratic government. The West, which that great citizen from my State, Albert W. Pike, helped to explore and develop, will have none of that kind of government.

Neither the people of the South nor the people of the North want to be educated, entertained, or supported by a political bureaucracy.

They don't want to be told what kind of furnaces they shall use in their cellars; how to raise their children. They do not want to be directed as to what they shall or shall not read, hear, see, wear, or eat. They desire none of these things from a Federal bureaucracy at Washington.

It was through steadfast devotion to ideals of liberty that our forefathers established this great Nation on enduring foundations. Steadfast devotion to ideals of liberty made possible all the real progress civilization has ever known.

I sincerely believe you in the South who fight for the Republican Party today are making a mighty contribution not only to the cause of genuine Americanism, but to the welfare of the South as well.

You are the torch bearers of a new era which must eventually dawn in the South. No one can deny that the South would be better off if there were two strong parties. Too long you have been taken for granted. Too long the South has been regarded as a sectional vassal of a political party. Too long the favors and the benefits have gone to those sections which had to be wooed and won, because the solid South was always counted upon to march to the polls and vote the ticket straight, whether she was abused or not; whether she got any benefits or not; whether she received her just dues or not.

No real progress can come to any country or to any section unless there is a genuine advancement of the whole people. With competition between two parties, the people get better laws, more honest and efficient administration, more personal liberty, and better government.

It is not pleasant for a boy or girl born south of the Mason and Dixon's line to face the prospect that, no matter how able or brilliant he or she may be, no matter how high in the leadership of their own section they may rise, they are practically barred from ever being President because they live in a one-party area.

Now is the time—a particularly propitious time—for the South to throw off the chains of a one-party system. The policies of the New Deal—impairment of States' rights, the transfer of control from the community to the Federal Government, regimentation, restriction, and confiscation—all those are offensive to you, the descendants of those sturdy pioneers who developed the Southland.

You do not believe in squandering the assets of the Nation.

You do not want the Federal Government to control and dominate the business life of this Nation.

You do not have to continue to give blind loyalty to a group that has wandered completely away from the principles endorsed by you and your forefathers.

It is a grave decision the men and women of the South are compelled to make. I think there is no question but that after careful study their choice will be for America. They will join the patriotic band of Republicans and Democrats who will unite this year to save this Nation.

The question confronting us all is not so much whether the Democrats or the Republicans will win, but whether America shall be kept American. Alien philosophies which would poison the very life blood of our Nation are finding expression and exercising force in the activities of the bureaucrats. These alien isms must be stamped out of this Nation for all time. America must be safeguarded against "Trojan horses."

The saving of America presents the greatest challenge to our patriotism we have ever faced. It overshadows all narrow partisanship, sectionalism, class hatreds, and suspicions.

We have seen how Europe is constantly in war and turmoil because of ancient prejudices and grievances. We must not permit such a spirit to continue in America. The North, the South, the East, and the West, all have a vital interest in the preservation and upbuilding of our country. The South cannot prosper except that we in the North must benefit. Conversely, the North cannot prosper without benefiting the South. We will go up or down together. Ours is a common destiny.

It was because of this deep sense of our interest in your problems that the Republican agricultural study committee, composed of representatives appointed to study all phases of agricultural problems, has given special attention to the difficulties and possibilities of Southern agriculture. One very interesting and extended meeting was held in Dallas, Tex., last December 8 and 9, and another was held in Charlotte, N. C., March 1 and 2. Much helpful information came from those meetings.

The South is demanding, and the South is entitled to have, economic equality with the North in industrial and agricultural advancement; in production capacity and in purchasing power; in living levels; in wage levels; in working conditions. The people of the South want, and they are entitled to have, the comforts and luxuries which make life attractive in the North.

The South will never be truly prosperous until her people are on such an economic equality with the North. When that is achieved Northern as well as Southern producers will find a great new market here at home that heretofore never has existed.

The South today, fellow citizens, stands on the threshold of a vast new development which before the advent of modern industrial chemistry was undreamed of. I need not tell you of the tremendous strides being made in the Southern paper-pulp industry, utilizing slash pine as raw material. The development of plastics; synthetic resins; industrial processing of woods and sugarcane fiber; rayon and cellophane; starch from Southern sweetpotatoes; cotton roads; aircraft materials from the farm; soybeans; castor beans; perilla seed; tung oil—a great number of new farm products possible because of the favorable conditions in the South—will create for you new industries, new crops, new sources of revenues, new markets.

The South is not merely a one-crop country. Cotton is no longer king. You are standing on the threshold of a new era coming with the aid of the new science of farm chemurgy. It will completely overshadow your present cotton industry and bring to you riches hitherto unforeseen, revenue to free you from the shackles of economic want and insecurity, and open to you the doors of plenty and prosperity.

Many of your most serious social problems are rooted in economic causes, just as the most serious social problems of the whole Nation and of the whole world are rooted in economic causes.

Your social and economic problems are our problems. Time was, for instance, when cotton was considered exclusively a southern crop and a southern problem. Today with the Government owning 6,700,000 bales of cotton, and with the Commodity Credit Corporation having outstanding loans of nearly $127,000,000 on 2,683,000 more bales, we in the North are in the cotton business with you, whether we like it or not.

Take peanuts, one of your great crops. You folks, of course, are aware that this crop is protected by a tariff of 7 cents a pound, enacted under a Republican administration. Your principal competitive producers are India and China. Those two countries, according to recent market reports, were selling their peanuts on the British markets at 50 percent below the price you folks in the South are obtaining for your peanuts. That 7 per hundred pounds tariff protection absolutely gives you the United States market for your peanuts and protects your $50,000,000 a year industry. Therefore, we Republicans are in the peanut business with you. Peanuts are a Republican crop.

Some insist the South has fared well from the standpoint of governmental relief, both general and agricultural. Of course, we all agree that in times of depression such relief as is necessary to prevent suffering ought to be, and must be, provided; but I am sure I speak your sentiments as well as mine when I say the South does not want to be permanently on governmental relief. The South will never consent to be a pauperized section, depending upon the whims and the favors of a political bureaucracy at Washington for existence. The South can be provided with new crops, new industries, and new markets to replace her lost cotton markets. Those markets can be developed to absorb the products of the South at fair prices; your people can be put to work in industry at good American wages. When your people are given their fair economic chance, they will not require, they will not want, and they will not accept governmental relief.

The people of the South always have been a proud people; proud of their honor, and their courage, and their thrift, and their self-reliance, and their initiative, and their vision. And I say the people of the South, throughout the 10 years of our great depression, have lost not one bit of that commendable pride. With an equal chance and a fair field, you will not fail to give a good account of yourselves.

We must uphold, both in the South and in the North, the principle that the States are supreme within the rights they have never surrendered.

The South has a destiny to help save this Nation from the encroachments of this Federal bureaucracy. This is so because you still do things—you are still progressing—in terms of home rule.

That great exponent of the South, Henry W. Grady, of Georgia, once came to Boston, in my State, and said something at a banquet that has always struck me with great force. It was this:

"Far to the South, Mr. President, separated from this section by a line, once defined in irrepressible difference, once traced in blood, and now, thank God, but a vanishing shadow, lies the fairest and richest domain of this earth. It is the home of a brave and hospitable people.

"There is centered all that can please or prosper humankind. A perfect climate, above a fertile soil, yields to the husbandman every product of the Temperate Zone. There, by night, the cotton whitens beneath the stars; and, by day, the wheat locks the sunshine in its bearded sheaf. In the same fields the clover steals the fragrance of the wind and the tobacco catches the quick aroma of the rains. There are mountains stored with exhaustless treasures; forests, vast and primeval; and rivers that, tumbling or loitering, run wanton to the sea."

This, my fellow citizens, has always been to me one of the most beautiful descriptions of the Southland.

I should like to feel that today I am returning Henry Grady's visit, and I should like to add in my simple words my own estimate of the South:

Land where the beauty of her womanhood is alike an inheritance and an art; land where the honor of her manhood is more prized than any other human accomplishment; land where liberty is dearer than life itself; land where culture, spiritual values—the finer, the nobler, the more beautiful qualities of life—mean more than all material possessions. That is the land where we may expect to find, unpolluted, untarnished, vigorous, vibrant, and alive that spirit of Americanism, that love of freedom, that sense of the values of the human soul, and of individual liberty which will ever hold aloft the torch of freedom on the continent of North America.

The Work of a Congressman

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. THILL. Mr. Speaker, at no time were the American people so interested or concerned with what is going on in Washington as they are today. But few of them are aware of the duties and obligations which a Congressman must shoulder while in Washington.

The legal requirements for a Representative are that he be 25 years of age, a citizen of the United States for 7 years, and a resident of the State in which he is elected. There are 435 Representatives, apportioned among the 48 States according to population. All are elected every 2 years.

A man has to learn to be a Representative just as he must learn to be a carpenter, a farmer, an engineer, a lawyer, or a doctor. A new Congressman must begin at the foot of the class and work his way up. No man should be elected to the House for a frivolous reason or simply to gratify his desires, because a Congressman's work is hard and his hours of work are long. The oath of office is administered to him on January 3, the day prescribed by the Constitution for the annual meeting of Congress. He hears the Speaker intone these words:

I do solemnly swear that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God.

From that moment the new Congressman feels he has become part of our country and is writing its history. Preceding generations have left his people a heritage of freedom and independence which he must protect and preserve.

The drafting of bills, both private and general, and serious study of legislation introduced, requires the Congressman's constant attention. There are over 15,000 bills pending in Congress today. We have bills to revise the calendar, bills to authorize the President to proclaim a day of fasting and prayer, bills for anniversary celebrations, bills to pay pensions, bills to provide rotation of daylight saving, bills to take over relics and historical sites, and bills which seek to give employment to every person in the United States through various schemes or devices.

Sometimes it seems as if a Congressman has become nothing but a glorified office boy. He is called upon as a bill finder, a getter-out of the Army, Navy, or Marine Corps, a law explainer, issue translator, resolution interpreter, business promoter, veterans' affairs adjuster, recoverer of lost baggage; so that a Congressman is finding it harder each day to consider legislation, because of the many side issues which take his attention. But his main duty is to study legislation, and this work must be done above all things.

Now that the Federal Government has taken on so many new duties, has established so many bureaus and commissions, it has further handicapped the Congressman as a legislator. He is kept busy calling on different departments of government. For example, if someone is not satisfied with the W. P. A., the Congressman is asked to investigate the matter; if someone does not like the set-up of any other relief work or Government agency, the Congressman is asked to check into the matter; if a businessman does not get a Government contract, he wants the Congressman to look into it; if anybody wants a job of any kind in any part of the United States, the Congressman, although powerless to help, is again called upon.

The mail which comes into the Congressman's office is very heavy. Some Representatives have received over 1,000 letters and telegrams in 1 day. Let us take a typical day of a Congressman in Washington. After the mail is looked over and replies have been dictated, which takes a good portion of the morning, the Congressman hustles around for weighty conferences with Government officials, attends committee meetings, keeps appointments with constituents. Usually the House meets at noon, so that the afternoon is spent on the floor of the House, where the Congressman must watch with an eagle eye what takes place. He must act on the legislation being considered and be able to stand at a moment's notice to refute or support a statement. He must be ready to meet any challenge or threat which is made against the rights of his constituents. This leaves the Congressman an evening of work at his office preparing speeches and legislative matters. Yet, the Congressman must appear ready and willing and tireless for any social duties. A Congressman is expected to be present at all important Government functions; he must attend all sorts of meetings and is expected to give timely, informative talks on current issues. But, regardless of the heavy labor involved, practically every Congressman prefers this work to any job he has ever had and will not relinquish his duties as a Representative without a terrific fight.

A very important factor which governs a Representative's standing in the House, one which few people are aware of, is that of duration of service. A Congressman's long service not only gives him experience and prestige with the membership of the House but it acquaints him with every branch and bureau of the Government, as well as with the heads of the departments and the leaders in the various bureaus with which he has to deal. A Member attains high rank on committees provided he can put in several terms of continuous service. If an old Member is defeated in one election and then is returned to the House in a following Congress, he must again start at the bottom of his committees. The Honorable Champ Clark, a former Speaker of the House, had this to say about Members in Congress:

> The best rule, it seems to me, is for a district to select a man with at least fair capacity, industrious, honest, energetic, sober, and courageous and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps him amazingly in doing things.

In a memorial oration before the two Houses in commemoration of the life and death of James A. Garfield, Senator Blaine said:

> There is no test of a man's ability in any department of public life more severe than service in the House of Representatives; there is no place where so little deference is paid to reputation previously acquired or to eminence won outside; no place where so little consideration is shown for the feelings or the failures of beginners. What a man gains in the House he gains by sheer force of his own character, and if he loses and falls back he must expect no mercy and will receive no sympathy. It is a field in which the survival of the strongest is the recognized rule and where no pretense can deceive and no glamour can mislead. The real man is discovered, his worth is impartially weighed, his rank is irreversibly decreed.

American citizens are likely to forget or treat lightly the privileges of our Republic, because they receive them so easily the day they are born or obtain citizenship. But remember some of our fellow men in Europe had this right only a few years ago, and now they mark only ghost ballots, or no ballots at all. We shall retain our rights as free citizens only so long as we guard them intelligently.

To exercise our privileges as citizens in one of the few countries where freedom still has a genuine meaning; we should understand how our Government functions, and how our laws are made.

Let us follow a bill from the time it is drafted to the time it becomes a law. A Representative can introduce a bill on any subject, but it is well to note that important bills, such as tax bills and reform measures, are usually written by the members of the majority party on the respective House committees. It has been stated that during the last six or seven years many of the so-called reform measures were written at the White House. After a Congressman has drafted the bill and is satisfied that it meets all legal and technical objections, he introduces the bill by putting it in the "hopper" at the Clerk's desk. No speech is made at the time of introduction, except that a Congressman might ask unanimous consent to speak for a short time, to advise the House that he has introduced a certain bill. After the bill is introduced, it is usually referred to the proper committee by the Parliamentarian of the House, and the bill is given a number by the chief bill clerk. There are approximately 48 committees to which different bills are referred and each one of these committees specializes in some phase of modern legislation.

The bill is printed at the Government Printing Office, which, incidentally, is the largest printing plant in the world. This office prints Government publications, committee hearings, reports, books, pamphlets, and the daily CONGRESSIONAL RECORD, which contains a word-for-word account of all that is said and done in both the House and Senate while Congress is in session. After the committee gets the bill it is considered by the members of that committee. Most of the many thousands of bills that are introduced are tabled or buried in committee and seldom, if ever, heard from again. There is one way in which the bill can be taken from the hands of the committee, and that is through the signing of a discharge petition by 218 Members of the House, but such action rarely happens. All bills are filed in the House document room, and anyone can obtain a copy. If a bill is of some importance to an interested group, they may exert pressure upon Congressmen to get the bill considered, either by hiring professional lobbyists or by sending letters and telegrams urging that action be taken. Normally this pressure means little to Congressmen. When a committee decides to take up a bill it may rewrite or amend it. If the bill is of general importance, usually the name of the chairman of the committee is given to the bill, since he introduces the rewritten legislation. The various committees sometimes decide to hold public hearings on important bills, and interested persons or experts are given an opportunity to present their case for or against the bill. Subcommittees may be appointed who make their recommendations to the full committee for final action. If the committee decides to report the bill to the House, it is referred to the proper calendar. Usually a special rule has to be obtained from the Rules Committee to bring up a bill of major importance for consideration, because the calendar is crowded with hundreds of bills. The leaders of the majority party, who have charge of the House program, then decide when the bill is to come up for consideration. I might mention in this connection that the majority party—now the Democrats—rule the House with an iron hand. Under our system of government the minority party is practically powerless to get any legislation considered or to force action on any measures.

The majority party elects the Speaker. They obtain the majority of the members on each committee in proportion to the number of Members they have in the House. When a bill is brought before the House, it is usually considered in the Committee of the Whole, which permits action with only 100 Members present constituting a quorum instead of the usual quorum of 218. When the House gets ready to pass a bill, one-fifth of the Members may demand a roll call or record vote. Voting machines are not used, and it takes about one-half hour to call the roll of 435 Members and record their votes. If the bill passes the House, it is sent to the proper Senate committee, which considers the bill in a similar manner to the House committee. Like action is taken in the Senate as occurred in the House of Representatives. If the Senate passes the bill in a form which differs from that of the House measure—and I might say that this usually happens—then a conference committee of Senators and Representatives is appointed to iron out any differences. The bill must then be approved by both the House and the Senate, and after such approval it is taken to the President. He can either O. K. the bill or veto it. If the President fails to return the bill to Congress within 10 days it becomes a law without his signature, unless Congress adjourns during that 10-day period, when the unsigned bill is killed by a so-called pocket veto. If the President decides to veto a bill, he sends it back to Congress with a veto message, and the House and Senate can then override his veto by a two-thirds vote. If the President signs the bill, it goes to the Secretary of State, who proclaims it a law.

This is just a short summary of lawmaking, and briefly touches upon the work of a Congressman. But it should give the average person a clearer picture of what confronts his Representative in Washington.

Neutrality

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, the hour has arrived when our affections, our fears, and our prejudices are to be tested. It has been easy enough to say, "Let us be neu-

tral" so long as the conflict in Europe and the Orient was in a more or less quiescent stage.

We have known—and it has been pointed out in my comments several times—that the time would arrive sooner or later, in all probability, when we would have to meet squarely, face to face, the possibility that the Allies might be defeated. It has also been pointed out that it was entirely within the range of probability that neutral countries would be overrun in this war, neutral cities bombed, neutral innocent and peaceful men, women, and children blown to pieces, or gassed, or riddled with machine-gun bullets. All of these inexpressibly dreadful things have come to pass.

It is exceedingly unfortunate that there should be added to the strain on our sense of neutrality the example of the President of the United States leading the way to unneutral thinking and speaking.

Some of us are old enough to remember that in the campaign of 1916 Woodrow Wilson put a similar emphasis on his determination to keep out of war. We all know what happened.

These sonorous and sweeping declarations against going to war, but approving the use of methods "short of war," are worth little at this time. To be sensible, we should get right down to the unpleasant facts and face them.

Will we continue to support the cash-and-carry policy of the existing Neutrality Act?

Will we approve the release of the latest types of our war planes for sale to the Allies?

Will we permit the Allies to use military appliances such as the American bomb sight and other military secrets?

Will we eventually favor American occupation of Greenland in event of a threat of Nazi seizure?

Are we sooner or later going to occupy Dutch property in the Carribean?

If the Allies run out of money, say 2 years hence, will we forbid further shipment of planes and other supplies, even though a German victory were apparent, or would we weaken and extend them credit?

If Germany continues to win victories, will we repeal the Johnson Act and modify the present Neutrality Act?

If Japan should move in on the Dutch East Indies, and in that way blanket the Philippines, would we remain passive?

What will we do in event of the defeat and subjugation of England and France by Germany?

These are all exceedingly grave questions which we must face, and face now.

There is, however, one outstanding fact that we must constantly keep in view, and it is this:

If our national-defense mechanism is, as we are told, less than 25 percent efficient, both as to size and equipment, quantity and quality, after an expenditure, in the last 7 years, of $8,000,000,000 in direct appropriations, to say nothing of the funds that may have been diverted from other appropriations to military purposes, by Presidential order, are we not, in all common sense, bound to turn to and bring our own national defense up to adequacy instead of thinking of sending either money or men across the seas?

We might just as well recognize the fact now that we are squarely up against the necessity of facing the naked truth, that with a national debt of $45,000,000,000, a national defense said to be less than 25 percent efficient, we may be called upon to assert our traditional position within the zone of the Monroe Doctrine.

Above everything else, every man and woman should face the fact that the most intense strain is going to be put upon our emotions, our sense of justice, of all those principles which make up what we call civilization, because they are all being outraged and trampled under the feet of armies of ruthless, brute force.

We must be on the lookout to guard ourselves against the propaganda that is certain to be loosed upon us in these days when civilization itself seems to be tottering on the edge of the abyss.

We must keep our feet on the ground and our heads clear, and remember that in this materialistic and selfish world our first duty is to the youth of the Nation who must do the fighting and the dying if we should lose our heads and indulge in another attempt to make the world safe for democracy.

Paul V. McNutt's Views on Government and Business

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

ADDRESS BY HON. PAUL V. McNUTT

Mr. LUDLOW. Mr. Speaker, in the city of Detroit, on May 6, at a State-wide democratic rally, Paul V. McNutt made a notable speech outlining his views on the relations between government and business. Reiterating his adherence to the capitalistic system, he indicated his belief that the happiness and prosperity of America lie in the direction of preserving that system and integrating it with the basic objectives of democracy, a real task for the statesmanship of our times. The title of his address was "The Democratic Party and Business."

In Indiana, where Mr. McNutt, as Governor, gave our State the best business administration it ever has had, he is recognized as a man of sound business judgment and broad vision in regard to the application of business principles to the administration of public affairs. His successful management of the State's finances enabled the State to meet every obligation promptly in the darkest night of the depression, including the salaries due to school teachers, whereas in many States the teachers were obliged to go without pay for long periods, and in some of our neighbor Commonwealths the schools had to be closed. He was the sponsor of the Indiana gross income-tax law, which has operated very beneficially in our State. He had the happy faculty of being able to combine a keen realization of the wants and needs of our distressed people with a faithful regard for governmental economy, and the result was that while suffering and distress were amply and sympathetically provided for in Indiana under his administration, he left the State treasury in excellent condition.

Because of the fact that Mr. McNutt is now prominently before the country as a probable Democratic candidate for the Presidency in the event that Mr. Roosevelt chooses not to run, I think his Detroit address will afford citizens of our country an interesting insight of his philosophy as affecting major policies in the relations between government and business and by unanimous consent of the House I present his address for publication in the CONGRESSIONAL RECORD so that all may know his views. The address referred to was as follows:

We live in an age when both capitalism and democracy are challenged. There are those in Europe, and, indeed, in America, who predict that neither will be able to survive the impact of world forces.

I believe in capitalism and in democracy, and I believe that the political philosophy of the Democratic Party is the only philosophy consistent with both. The United States has repeatedly got into trouble by pursuing a political course which was at variance with the fundamental principles of business in a democratic society. And on every such occasion the American people have turned to the Democratic Party to rescue them from the resulting confusion, chaos, and bewilderment. That is what happened in 1932. And because the question is now raised for reconsideration, I think it is time we looked into the substance of the arguments.

As I see it, the purpose of business in our society is the production of consumers' goods and the distribution of those goods among our 130,000,000 people. It is a tremendous enterprise, running upward now of $70,000,000,000 a year.

In a capitalistic society, this process must be carried on in such a way as to show a profit to the enterprise, and afford employment to the potential consumers of the products of industry. In a capitalistic democracy such as ours, the process must occur in such a manner as to extend as far as possible the advantages of production to the entire community. If business fails in any of these particulars—to make a profit, to afford employment, to extend its benefits widely—there results a serious disruption of our political and economic balance.

AUTOMOBILE INDUSTRY CITED AS EXAMPLE

In the light of these criteria, let me take for an example the principal industry in this city because it makes a showing that probably cannot be equaled in the entire history of capitalism.

Born in the early years of the century, the automobile industry has grown until it constitutes one-seventh of the Nation's business. In 1939 it sold to the citizens of the United States almost 4,000,000 new motor vehicles. If we include used cars, the total will run approximately to 10,000,000. It has supplied the people of the United States with almost 30,000,000 of the world's 43,000,000 automobiles. This is a magnificent achievement in democracy.

The Federal Trade Commission in its exhaustive study of the automobile industry, has paid high tribute to this accomplishment. "Consumer benefits from competition," it said, "have probably been more substantial than in any other large industry studied by the Commission."

Not often does an industry receive praise of this character from a Government investigating agency.

On the profit and employment side, the record is correspondingly high. More men are kept at work in the various parts of the automobile business than in any other industry in the world. Moreover, the wage record has been good. Throughout the checkered history of the struggle between labor and capital, there has been less trouble over wages here than in most fields of production.

And there have been plenty of profits. One company alone has made a billion dollars in profits in the past 25 years. Another group, under single management, earned a billion dollars during the 7 worst years of the depression. One large concern, producing hundreds of thousands of vehicles annually, has shown a substantial profit for every single year of the depression. Nor are the profits confined to the production end of the industry. Dealers and distributors in 1937 showed an average return of 15 percent on investment, after deducting executive salaries.

It is not too much to say that the automobile industry provides the greatest demonstration in all times of what business can do in a democracy. It has furnished to 75 percent of the people in the land one of the greatest miracles of modern science for the improvement and enjoyment of life. It has done this at a consistent profit to all engaged in the production and distribution, and at a wage level which has made possible widespread consumption of the product by the workers. Progress not only is phenomenal, but steady. Each year there is a better product at lower cost to the consumer with the maintenance of a reasonable level of profit.

The reason for the great record made by Detroit's big industry seems to me to be clear. It has, on the whole, complied with the cardinal principle of capitalism. It has had competition.

You have big companies in this industry. There is nothing wrong with big companies so long as there is competition.

You have millions of dollars combined in a few organizations. There is nothing wrong with combinations of capital so long as there is competition.

MASS PRODUCTION ALL RIGHT IF ACCOMPANIED BY COMPETITION

You have mass production on a gigantic scale. There is nothing wrong with mass production on any scale, so long as there is competition.

The whole theory of private business, as a socially desirable method of production and distribution, is that there will be vigorous, legitimate, effective competition.

Capitalism works so long as goods are produced in as large quantities as possible and distributed as widely as possible at a reasonable profit on the investment. The only possible way in which this can be accomplished is by competition.

It is to insure fair, keen, and effective competition that the Government must exercise some control over business. When there is sufficient regulation to insure this competition, the function of government becomes one of cooperation and encouragement and assistance in the solution of the problems of labor and capital. It must insure collective bargaining and see that labor has a fair chance to get its proportionate share of the profits of industry.

It has been on this basis that the Democratic administration has approached the problems of the depression in an effort to reduce unemployment and help business.

On the whole, its record is one of amazing success. America is well on the road to recovery. We have made tremendous strides. Let us look at some of the facts. We have tackled the curse of unemployment and have reduced the number by half at the end of 7 years.

By putting additional people to work, we have increased the national profits in 7 years by a total of $138,000,000,000. We could pay off the entire national debt of the country which has been accumulating since 1789 and still have a clear profit of $98,000,000,000—a tidy sum even for a rich Nation.

The benefits of this recovery have been distributed widely among workers, farmers, business, and industry. I should like to call your attention to a few comparative earning statements of business and industrial concerns to indicate the progress made in 7 years.

All the corporations in the country which made tax returns in 1932 taken together showed a deficit, before dividend payments totalling nearly $4,000,000,000. After payment of intercorporate dividends and Federal taxes, this deficit exceeded $5,000,000,000. In 1937, the compiled net profit of all corporations was nearly $8,000,000,000—a gain of $12,000,000,000 annually in net profits in the 5-year period. That is progress.

Take a few specific examples selected at random. American Can increased its earnings from 1932 to 1939 from twelve million to twenty-two million annually. After payment of all taxes, Federal and State, this corporation had increased its net earnings from eleven to eighteen million. That is progress.

The Chrysler Corporation boosted its earnings from a deficit of eleven million to a profit of forty-five million in 1939. After all taxes had been paid, it was $48,000,000 better off in 1939 than in 1932. That is progress.

General Foods increased its earnings from twelve million to eighteen million. Taxes didn't eat up all the profits, as is shown by its net after payment of all taxes: ten million in 1932, fifteen million in 1939. Phelps-Dodge went from a four million deficit to a $14,000,000 profit. Sears-Roebuck from a two million deficit to a forty-seven million profit. Du Pont from twenty-seven million to a one hundred and seven million profit. That, too, is progress, according to any theory of prosperity.

VAST INCREASE OF BANK DEPOSITS

A few days ago I received a pamphlet from the Detroit Chamber of Commerce showing a little of what has happened in this city since 1933. Total bank deposits increased from three hundred million in 1933 to nine-hundred million in 1939. The department-store index rose from 64 to 102. Total building from four million to sixty-two million.

The city was far better off than in the boom days before the stock-market crash. More than a hundred thousand more men were at work in 1937 than in 1929. One hundred and thirty million dollars more in wages were paid. A half-billion dollars more materials were bought and processed in 1937 than in 1929. Detroit has reached, after 7 years of the New Deal, an all-time high in wealth, activity, and prosperity. If the city of Detroit and the State of Michigan ever prospered, it has prospered under the administration of Franklin D. Roosevelt and the Democratic Party from 1932 to 1940.

There are prophets of doom who predict that America is on the road to communism or socialism. Most of them are in the Republican Party, and, curiously enough, many of them deriving generous profits from the very organizations whose earnings I have just quoted.

Mostly, however, they are to be found in the ranks of Republican candidates seeking office on a platform of terrorizing the American people by false accusations and scurrilous libels. Mr. Dewey thinks we are heading for totalitarianism. Mr. Gannett is sure Roosevelt is a Communist. And Senator TAFT is scared to death because the Democratic administration is completely socialistic. Similar charges have been hurled against every reform movement ever introduced in this country. In the progressive reforms of the early part of the century, the same gloomy predictions were made. The popular election of United States Senators was proclaimed a break-down in our constitutional form of government, and even President Taft declared that the initiative and referendum was taking America straight to socialism. We can readily understand the terrified concern of the current TAFT. It runs in the family.

It's more than that, however. It runs in the party. The Republican Party has always opposed every movement to bring our Government and our economic system into conformity with the major premise of democracy. And it has not hesitated to do so by holding up the bogey man of socialism.

EXPERIENCE WITH COMMUNISM AND STATE SOCIALISM HAS PROVED UNHAPPY

I do not envisage for America a gradual drift toward and final arrival at a system of communism, of State socialism, or State capitalism. There are several varieties of such economically organized States in the world today, and the experience of none of them is such as to induce us to follow its example.

The experience of America, as indeed the experience of all democracies, has been one of synchronizing two systems of economics. We have always had a mixed economy under which the task has been the proper coordination of the principle of government planning with the principle of the free play of economic forces. Theoretical economists can plan out on paper a perfect system under either principle. A political society, however, which could function in such an economic medium would not be a democracy.

It would vary from practically no government at all to complete totalitarianism. No government geared to either theoretically pure economic system has been able to withstand the onslaught of economic forces over an extended period.

Democracy, therefore, represents a political society designed to combine the best elements of a free economic order and a regulated economy. The great hazard involved is that of a house divided against itself, with the forces of government pulling in one direction and the forces of business and commerce pulling in another.

To avoid such a result, farsighted statesmanship is necessary—a statesmanship which can successfully withstand the temptation to withdraw completely from the field of economic regulation and at the same time resist the pressure to regiment and restrict the economic activities of the Nation to a single pattern.

To strike the proper balance at any given time requires vast coordination of effort on the part of Government agencies themselves and the meshing of Government activity with the normal business and industrial machinery of the Nation. Unless this is done with consummate skill, confusion and uncertainty will result on all sides.

SOME MISTAKES DUE TO MISUNDERSTANDING

There have been some mistakes. Business has not always understood government, and government has not always understood business.

On the whole, however, I believe the overwhelmng majority of businessmen recognize the progress that has been made and are willing to cooperate fully in bringing about complete and full prosperity.

The same thing is true with labor. The administration has made good its pledges to labor. It has curbed the abuse of the injunction; it has guaranteed labor's right to organize; it has written into the law of the land the right to collective bargaining.

Here, again, some mistakes have been made. But no one can deny that labor has made more progress under the Democratic administration of the past 7 years than in any other like period of our history.

I believe that both capital and labor will join every other class of American people and show their confidence in the only political party ever to make a sincere, forthright, and effective attack upon the forces that threatened to paralyze this Nation.

When the Republican spokesmen talk about the capitalistic system, they are not talking about what you and I and the average American businessman mean by capitalism at all. And when they yearn for individual initiative and for private enterprise, they no more want a free economic order than the Communists or Socialists who avowedly seek to destroy it.

A STRONG CASE OF NOSTALGIA

There is, in all this Republican tall talk a strong trace of nostalgia. They want the kind of business conditions which we had during those deceptive years of the twenties.

During those years there was no more economic freedom in this country for legitimate, competitive business and industry than there now is in Germany or in Italy or in Russia. Both production and distribution, and both commercial and investment banking were ruled by monopolies and sinister combinations of finance. Labor and consumers were exploited, investors and independent businessmen were helpless. Business was regimented then, but it was not by the Government. It was regimented by powerful groups who "liquidated" nonconformists with a ruthlessness that matches that of any European dictator.

Under this regime, the weakest and most inefficient plants were protected, if they played ball with the monopolies, production was curtailed, and the normal expansion of employment checked. Monopoly and the resulting inflation almost wrecked this country during those years. It was not by a wide margin that we escaped the fate of European nations where monopolistic cartels had followed a similar course of regimentation until a weak and do-nothing Government capitulated and the hope of economic freedom was gone forever. That is the way fascism is born.

In America, the people had too much common sense to become the victim of such a process in 1932. They elected a strong government which has waged war on monopoly and has set out to restore conditions which will allow the free play of business and industrial competition.

And the people are still using their heads. It is highly significant that the latest Gallup poll discloses 31 out of 48 States favoring the Democratic Party. By November not even Maine and Vermont will be left.

It is significant that the recent Fortune survey shows that the citizens of this country believe, by a margin of 2 to 1, that the Democratic Party has the interest of the people more at heart, that it has the most devoted public servants, that it has a greater desire to keep the Nation out of war, and that it exercises more common sense on public problems than the Republican Party.

That, my fellow Democrats, means victory in November—overwhelming, complete, and unequivocal victory.

And it means the preservation of the democratic way of life on this continent.

Dr. John Gorrie

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

ARTICLE RELATIVE TO FLORIDA'S DISTINGUISHED CITIZEN

Mr. PEPPER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very interesting and comprehensive article on a very distinguished Floridian and a very distinguished American who is one of Florida's contributions to the Hall of Fame, Dr. John Gorrie, who deserves the credit and recognition of being the inventor or discoverer of the process of making artificial ice.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. JOHN GORRIE

That Dr. John Gorrie perfected and patented the first ice-making machine in all the world should be as generally known as is the human need for artificial ice.

The manufacture of artificial ice, no doubt, existed in the dream life of others. Gorrie was the first to make the dream a reality. The friction between the historical writer who so credits Dr. Gorrie and the one who dares nominate any other would be such as to "cause the sparks of truth to scintillate" and establish this fact for the world.

As long as men harvest from the fields of the scientific world the fruits of its genius without fear of its loss, it may not be considered strange if they forget the great planter.

A writer recently commenting upon the several statues in Statuary Hall, in the Capitol at Washington, said, "A few are local heroes so obscure and forgotten as to cause derisive mirth among Capitol sightseers. Such a one is the statue of Dr. John Gorrie, sent to Washington by Florida in 1914."

The artificial-ice manufacturers and the descendants of those among whom he lived have not forgotten who he was and what he did. To his memory on a plot of ground at Apalachicola, Fla., known as "Gorrie Square," stands a monument erected by the Southern Ice Exchange. A school in the city of Jacksonville, Fla., and a bridge 6 miles in length, crossing an arm of the Gulf of Mexico, connecting East Point and Apalachicola, are named in his honor. The "John Gorrie Memorial Foundation" has been chartered to provide Apalachicola with a hospital.

Throughout the ages men have placed statues, erected monuments, and established other memorials in an effort to preserve human achievement. Names, birth, and dates of death, with generous inscriptions, are not sufficient to distinguish the objects of the honor for their historic renown. Experience has taught this. Something of the man must be known.

No book-length biography of Dr. Gorrie has ever been written. Historians have been too careless of the fame of this great scientist.

It was during the time Dr. Gorrie was medical officer in charge of the United States Marine Hospital at Apalachicola he first knew he could make ice.

At that time science had not found the way to prevent malaria and yellow fever. Medical science not knowing the cause of these diseases was in continuous experiment to find a remedy. It was obvious to Dr. Gorrie that the oppressive heat of summer had serious effect upon the recovery of fever patients. He worked out a system of air conditioning. Lake ice, for that was all the world knew about at the time, was placed in an urn or basin close to the ceiling, suspended by chains. Immediately above the ice he installed a hood with a pipe, passing it through the floor above and into the chimney. Outside air was sucked through the pipe onto the ice. Chilled air spilled around the room. It was observed that even when the ice had melted the air blown over the water kept the room cool. This led to the experiment of forcing air through small tubes over water. The greater the force the cooler the air.

He built a steam-driven pump which packed air to many times its atmospheric pressure and the released air chilled water until it froze. The first time this fact was noticed is dependent upon a statement made some years after Gorrie's death, by an ex-slave who claimed to have been his office boy at the time. He said the pump had been in continuous operation for 24 hours and he noticed that the air was not coming through the tube as usual and in seeking the reason he found the tube, as he said, "all

clogged wid ice." He fixed the date as in the summer of 1839 or 1840.

To give semblance of correct recollection to the Negro's statement it is known that Dr. Gorrie retired from active practice of medicine to give his time to the study of air conditioning and refrigeration. After his retirement, and in 1839, he began to write a series of articles on science, medicine, and refrigeration, which appeared in the New York Lancet and the Southern Quarterly Review. In the June 15, 1844, issue of the Commercial Advertiser, the editor in writing about Dr. Gorrie's article "on the prevention of malarial diseases," said, "we know of no want of mankind more urgent than the cheap means of producing an abundance of artificial cold. To warm countries it would offer benefits as countless as those that would arise in a cold climate from the finding of illimitable supplies of fuel. The discovery and invention which our correspondent proposes to apply to this object are calculated to alter and extend the face of civilization." No further data is available to show definitely just the date when Dr. Gorrie made the first artificial ice.

Practically his entire library, including his manuscripts and the drawings and working model of his ice machine were destroyed after his family had left their home in Apalachicola, during the evacuation of the city from March 1862 to April 1865.

The first private exhibition of his ice machine and its product and the first public showing of the artificial ice are known. Before record is made of the time and place of these two exhibitions of the ice-making machine and the ice, truth will not be ill at ease if it be boldly stated that it is probable:

Dr. John Gorrie made the first artificial ice at Apalachicola, Fla., sometime prior to 1844 and likely in 1839.

Dr. Gorrie exhibited the ice machine and its product first, to famed Botanist-Physician Alvan Wentworth Chapman; a few days subsequently to the public at a gathering of dinner guests in the Mansion House, at the time the second largest hotel in Florida. Dr. Chapman's story of the incidents leading up to and the first private and public exhibition of the machine and artificial ice has been handed down from family to family. Miss Winifred Kimball tells interestingly the story as it came to her. The story lives in the memoirs of Judge George Raney, a distinguished citizen who lived in Apalachicola at the time, now deceased. The data collected by Hon. George Whiteside when the monument was built to the memory of Dr. Gorrie corroborates the story.

"In all my visits to the laboratory of Dr. Gorrie and our discussion of his study of air conditioning, refrigeration, and artificial ice I never saw his ice machine," said Dr. Chapman, "until a day late in June 1850 he called me into his laboratory. He was excited and nervous, something I had never noticed before. He was not inclined to nervousness and excitement. Jokingly I said, 'Have you found the way to freeze your patients?'"

"Not exactly, but I have made ice."

"The hell you have!"

"If I succeed," he replied, "I can reduce the temperature of that warm country to where it may be classed as a summer resort."

Dr. Chapman said Gorrie never made a positive statement that was not definitely true. "I have made ice." When he made that positive statement, said Chapman, "there was no time for further levity."

"May I see the machine at work and the artificial ice it makes?"

"Of course you can, but I wish for the time being to keep the matter in confidence."

"I was the first person in Apalachicola to whom Dr. Gorrie exhibited his ice-making machine and to see the ice made with it," said Dr. Chapman.

"A day or so after this, Monsieur Rousard, who was the French consul stationed at the port of Apalachicola, also a cotton broker, socially popular and a friend both to Gorrie and to me, was confessing his embarrassment because he could not get ice for a 'Bastile Day' dinner he was giving."

The people of Apalachicola were dependent on lake ice, which was brought in from the North by sailing vessels. There were times when the ice supply was completely exhausted. Sailing vessels then, as now, can make no definite time for arrival. At the time the French consul was talking to Dr. Chapman the ice supply was exhausted. The boat bringing ice was overdue.

"As soon as I could get to Gorrie," continued Dr. Chapman, "I told him of my conversation with Monsieur Rousard and requested him to relieve the embarrassment, to which he quickly consented."

A meeting of Rousard, Chapman, and Gorrie was had in Gorrie's laboratory. Artificial ice was made. The three saw the machine produce a cube of ice. No one else knew about it.

The disappointment which Monsieur Rousard had expressed to his friends over the prospect that no ice would be available for his patriotic dinner was supplanted with the declaration, "For my dinner I will have ze ice." Overnight, so to speak, he was optimistic about ice being available for his dinner. His friends did not understand. He did not explain. The general belief was that the overdue boat would not dock in time for ice to be served at his dinner. Wagers of champagne were offered that he would not have the ice. Rousard accepted all bets offered him. The guests of the mansion house were suffering the inconvenience of no ice. The gamester's chance became common among them. To excite curiosity to the highest pitch Monsieur Rousard answered many good-natured thrusts, by offering the wager of a basket of champagne that he would not only furnish ice next day, but that the ice would be made in Apalachicola. The bet was promptly taken.

No one except the three who last visited Gorrie's laboratory knew that he was working long hours on the hot July days preceding the day of the dinner. His machine was piling up cubes of ice, about 8 inches high and 10 inches long.

The hour for the dinner arrived and the ice boat was still overdue. Good-natured jests were indulged at the expense of those who had backed their host. Some acknowledged the loss of their wager.

The large dining room was beautiful in decoration and brilliantly lighted. The guests were seated. Dr. Gorrie on the right and Dr. Chapman on the left of the host. As honor guest Dr. Gorrie responded to the first toast.

"I can see him now," said Dr. Chapman, "of medium height, with a large head crowning a stout frame, sallow complexion, and dark hair and eyes. His countenance usually serious, verging to sadness, seldom lighted with pleasing smile, never with laughter. He was now a master."

This was perhaps the greatest moment in Dr. Gorrie's life. He gave the toast: "My friends, we drink to France in warm red wines."

Then Dr. Chapman arose and said: "We will now drink to our own country and an American, the world's greatest scientist, who made the machine which has produced the artificial ice which will chill our champagne."

There was silence. There was no ice to be seen. Everyone had a peculiar stare. Just at the moment, when the tenseness must be broken, all eyes were turned on the host. Monsieur Rousard was on his feet. "France gives her people what they want, so if my guests want ice, they shall have it if it demands the work of a miracle." At the moment he stopped speaking, placing his hand on Dr. Gorrie's shoulder.

Attention was now directed toward the opening doors leading from the serving room into that brilliantly lighted, large dining room. Waiters came marching in bearing baskets of champagne covered with ice, and silver salvers upon which rested cubes of ice.

The dramatic effect was breath taking. Monsieur Rousard, with the enthusiasm of the French, continued, "Today it is an American who has worked the miracle."

The guests were on their feet with outbursts of applause. They left their places to grasp the hand of Dr. John Gorrie, extending to him congratulations upon his wonderful achievement.

To make his wager good, that the ice would be made in Apalachicola, Rousard invited the guests over to the laboratory of Dr. Gorrie. The machine and how it worked was explained. It was put to work, and before the eyes of these gentlemen, artificial ice was made.

Dr. Gorrie applied for, and was granted, on May 6, 1851, the first patent in all the world on a machine to make ice. United States patent No. 8080.

"Behind every great project, as in a work of art, there lies a vision, the willful playing and coaxing of the imagination toward certain desired ends—trial, error, disappointment—then reality."

Dr. Gorrie took no thought of fame and fortune. His paramount concern was for the sick. Cooling hospital wards was of more importance than the commercial possibilities of his ice-making machine. He completed the work of air conditioning the sick wards in the hospital. He developed the first process for air conditioning.

The first system of air conditioning in the world was installed by Dr. John Gorrie in the sick wards of the United States Marine Hospital at Apalachicola, Fla.

An application for a patent on his process for "cooling and disinfecting ventilation" was pending in the United States Patent Office at the time of his death.

Gorrie was now ready to consider the commercial possibilities of his ice machine. His friends had been impatient with him because of the wait of more than a year since he had been granted a patent on his ice-making machine. Friends were thinking in terms of dollars and cents. Dr. Gorrie had been thinking in terms of service to the sick. He raised all the money he could by hypothecating all of his property, except the patent on his ice machine. This he kept free of lien to be used to raise such additional money as necessary to build a large ice machine. New Orleans, upon the advice of friends who had financial connections there, was selected as the most likely place to finance the commercial venture. The first ice factory was to be located in his home city.

Dr. Gorrie had been in New Orleans but a short time when he contacted a gentleman from Boston, Mass., who, for a three-fourths interest in the ice-machine patent, agreed to finance the commercial venture. With the pledge of his partner he was assured sufficient money to put manufactured ice on the market. Financial worries out of the way, he wrote home that he was happy and that an unlimited supply of cheap ice would be put on the market. With Gorrie busy with engineers explaining his machine, completing drawings for the making of patterns for the foundry work to build the first large ice machine, the folks at home were busy planning for the erection of the first commercial ice factory. The first machine completed, the others would be less expensive and delivery would be rapid. Soon in every important center artificial ice would be available for all human and industrial need. Industry was thinking in terms of what an abundant supply of cheap ice means in the matter of storage and shipment of perishables to distant markets. Dr. Gorrie was thinking of what an inexhaustible supply of ice means in the treatment of the sick. Those were great days in the life of Dr. Gorrie.

He could not fail; but he did.

His partner died. That source for money to carry on was cut off.

He thought he could interest other capital. The newspapers which had expressed favorable opinion of his process for the manufacture of ice reported the discontinuance of the project. This was the cue for the news to become widespread that the ice-making machine was a thing for the world of mythology. A northern paper, editorially commenting upon the suggestion that ice could or would be manufactured, said: "A crank called Dr. John Gorrie down in Apalachicola, Fla., claims he can make ice as good as God Almighty." Dr. Gorrie traveled over the North and South in an effort to interest other capital. Wherever he went, ridicule of his process for making ice had preceded him. His commercial venture in collapse, unable to inspire confidence in the practicability of manufacturing ice on a profitable basis, his fortune gone, he returned to Apalachicola.

History offers abundant evidence that progress is seldom made except through the suffering of some individual. Dr. Gorrie suffered the humiliation and embarrassment of failure. He was keenly sensitive to the ridicule that was heaped upon him. Laughed at, jeered at, and haunted by increasing debts he could not meet; fearing that his neighbors had lost confidence in him, he secluded himself within the walls of his home, where he spent his last months in sorrow and bitterness. The grim sarcasm of defeat was more than he could stand. He died.

Dr. Gorrie was born on the Island of St. Nevis in 1802; the exact date he did not know. With his father, Capt. John Gorrie, and his mother, a beautiful Spanish woman, he landed at Charleston, S. C., on October 3, 1803. Captain Gorrie was an officer in the Spanish Army.

The family settled in the best hotel and a sum of money sufficient for the use of the mother and child deposited in the bank, Captain Gorrie returned to his post of duty. He never returned to the United States. Each month liberal remittances were received. The son was educated in the best private schools of Charleston. Soon after his graduation the monthly remittances ceased to come. There was no word from Captain Gorrie. What misfortune had befallen him was never known. The spirit of Mrs. Gorrie was crushed. She was heartbroken and did not live but a few months more.

The mystery surrounding the birth of Dr. Gorrie, the flight from St. Nevis, and the disappearance of Captain Gorrie will never be known. Whatever the mother may have told to the son is buried with him. There must have been a great love and a gripping story of romance surrounding Dr. Gorrie's parentage. Imagination may build as it pleases.

After the death of his mother, young Gorrie entered the College of Surgeons and Physicians in New York City. His funds were limited. When his capital had been exhausted and his plan to leave school to seek employment to earn money sufficient to carry on his studies was known, classmates offered financial assistance. His record was excellent. The faculty did not wish an interruption in his studies. Provision was made for him to work his way on through school. At the time of graduation he was regarded as one of the most promising members of his class.

He practised first at Abbeville, S. C. He soon had an established reputation for medical skill. He was socially prominent and popular. Intimately associated with the family of the great Calhoun he absorbed much of the democracy of this statesman.

It was at Abbeville Dr. Gorrie interested himself in the study of malaria. He wished to extend his research work in an effort to find preventive control and the treatment of this disease. At that time the major medical problems of Apalachicola, Fla., were malaria and yellow fever. Although this city was one of the larger cotton markets on the Gulf Coast, it's development was retarded by the spread of these and other febrile diseases. Here was the field for his work.

Dr. Gorrie came to Apalachicola in 1833. After some years of clinical observation he reached the conclusion that the control of the fever was essential in the treatment of these diseases. While his ideas upon the prevention of these fevers were not entirely in accord with subsequent discoveries, he advocated the draining and filling in of swamps to prevent fevers in the interest of public health. He observed that persons who slept under nets rarely contracted the fever. He did not suspect, what is known this day, that the effectiveness of the net was due to the simple fact that it kept mosquitoes from biting the person within.

To apply the idea of controlling fever he developed the unique method of ventilating the room by means of an opening in the wall at floor level instead of using the windows and doors. Ice in a receptacle which he had suspended from the ceiling cooled the air, which, being heavier, descended and passed out of the room through the opening at floor. This arrangement produced a circulation of cool air which passed over the patient. With this method of ventilation in actual service Dr. Gorrie became the father of modern air conditioning as a method for the treatment and prevention of certain diseases.

Ice was essential to carry on his treatment of fever. Often the supply of ice in the city was exhausted. All the ice available was brought from New England, sometimes costing as much as a dollar a pound. Gorrie turned his attention to a method for manufacturing ice. Eventually he succeeded. The original model of his ice machine, now in Smithsonian Institution in Washington, comprised essentially a pump with which to compress air in a chamber in which was a container filled with water. After being compressed the air was permitted to expand rapidly, thereby absorbing heat from the water and so producing artificial ice.

Dr. Gorrie's days were busy days. He found time, however, for social and civic contacts. He made friends. He served as treasurer of the city; a time as postmaster; secretary of the first Masonic lodge organized in the city; was an incorporator and helped build Trinity Episcopal Church. He was resident physician of both the city and of the United States Marine Hospital. Many of the articles which he wrote on sanitation, refrigeration, a system of air conditioning, and artificial ice, are extant.

Dr. Gorrie was respected as the most prominent physician in the State of Florida. In May 1837 he married the socially prominent and beautiful widow, Mrs. Carolina Bierman. There were two children born unto them, John Gorrie, Jr., born May 8, 1838, and Sarah Gorrie, born September 7, 1843. John, educated as a lawyer, was a brilliant man. He served as an officer in the Confederate army—was wounded in battle and died as a result of the wound in 1866. Sarah married a Confederate soldier who was killed in battle in 1862. The daughter had one child. The widow of Dr. Gorrie died in May 1864 at Marianna, Fla. Sarah died at Milton, Fla., December 29, 1908.

Dr. Gorrie chose to die alone. His services to humanity was a matter of jest. The world had rejected the product of his scientific knowledge. It is said that in the trying hours of his last illness he refused to see anyone. This did not keep friends from calling at his home and inquiring about him and offering such services as they could render.

Conscious that the end was but a few days away he asked for paper and pen, expressing a wish to make a will. As item 1 he wrote: "I wish to be buried plainly and neatly, my body to be exposed in the public burial ground situated near the bay of Apalachicola." To request that his body be exposed to public view was the only way left for him to express an appreciation for the kindness, courtesies, and prayers of his people.

Dr. Gorrie died on June 29, 1855. The date of his death as given on his monument is June 16, 1855, which is an impossible date. His last will and testament, in his own handwriting, now on file in the probate judge's office in the courthouse at Apalachicola, Fla., is dated June 22, 1855. A matter of little importance, but in the interest of accuracy should be known.

Dr. Gorrie's property, with the exception of his interest in the patent on his ice-making machine and the process for air conditioning, was under pledge for the money borrowed to finance his venture in the commercial field of manufactured ice. In the commercial world these processes were rejected as collateral. He knew what artificial ice, refrigeration, and air conditioning meant to medical science, to humanity, and to industry. The future revealed to him that some day the world would appropriate his scientific gift. As testimony of his faith he bequeathed these scientific achievements by the fourth item of his will: "I give, devise, and bequeath unto my said wife all my interest in and to certain patents granted or to be granted to me by the United States Patent Office or other patent offices throughout the world. The one for an artificial process for manufacturing ice of which I have an interest of one-fourth extending all over the earth, the other for cooling and disinfecting ventilation, the interest of which (when granted) will be solely and exclusively mine."

Dr. Gorrie's funeral, as reported by the newspapers at the time, was the largest ever seen in Apalachicola. His body was exposed at the burying ground. Friends and neighbors came to honor him. For hours they were passing by the casket viewing the remains of this great man. Great crowds stood around in silent tribute. His unselfish effort to serve humanity stirred many a slumbering sob. Men and women did not blush for the tears that filled their eyes.

If life is but a dream and death be its awakening, then in the world of dreams the work, the fame, the genius, the name of Dr. John Gorrie will forever live.

The old burying ground has long since been abandoned. The remains of Dr. Gorrie's body were removed to the center of what is now known as Magnolia Cemetery. A monument over his grave has been erected by the people of Apalachicola.

Twenty years, approximately, after Gorrie's death, renowned Botanist-Physician Alvan Wentworth Chapman and Harvard's even more celebrated botanist, Dr. Asa Gray, passed Gorrie's grave. Said Chapman: "Gray, there is the grave of the man whom we all recognize as the superior of all of us."

Dr. Gray read: "Here lies John Gorrie," adding: "I was assisting in the chemical department of the College of Surgeons and Physicians in New York City and I distinctly remember Gorrie as occupying a prominent position in that class. He was regarded as the ablest and most promising man in his class. I knew him well."

The workman dies. His work lives on.

"We mortals have not divine patience, nor are we capable of taking the long view of life the Lord takes. In consequence, more often than not, we fail to recognize the possibilities wrapped up in human beings. But He sees them, and unhurried in the knowledge of eternity vastness He quietly waits until they develop."

It was predetermined and inevitable that the first artificial ice in commercial quantity would be manufactured at Apalachicola, Fla. Some years after Dr. Gorrie had made artificial ice in his laboratory there was built in Apalachicola the first commercial ice factory in the world.

There was a time when the world failed to recognize the possibilities wrapped up in Dr. John Gorrie's process for the manufacture of artificial ice.

Dr. John Gorrie rightfully belongs in that Medical Hall of Fame which includes the greatest scientists of the world.

The Road to Peace

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1940

ARTICLE BY DR. JOSEPH F. THORNING

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Rev. Dr. Joseph F. Thorning, which appeared in the May issue of the magazine Light, of Brooklyn, N. Y.:

[From the magazine Light, Brooklyn, N. Y., May 1940]

THE ROAD TO PEACE

(By Rev. Dr. Joseph F. Thorning, Ph. D., Litt. D.)

The war in Europe has not changed the need for rebuilding our social order with a view to justice for the workingman. Indeed, a fair deal for the workers will do much to remove the causes of conflict. Consequently, every move that puts wealth and income into the hands of the laboring population is an advance on the road to world peace.

Prior to the World War in 1914, a start had been made in Belgium to give the workingman his due. Like war, it began in tragedy. The drama was one of labor organization and its leading character was a young man named Joseph Cardijn, born on November 13, 1882. This youngster had held the crucifix to the lips of his father, whose death, in the full flush of manhood, was attributable to toil in a factory where unsanitary conditions prevailed. Watching the agonized features of his dying father, Joseph Cardijn made a pledge that he would devote his life to a crusade for health and happiness among the working people of Belgium. This pledge was repeated and consecrated by a vow he made upon the eve of his promotion to the sacred order of the priesthood. This was in June 1906.

THE PRELUDE

Before plunging into the task of unionization, Father Cardijn studied the subject at home and abroad. A trip to the factory districts of England brought him into touch with the British trade-union movement. Returning to Belgium, he was given a short teaching assignment in the archiepiscopal college and was then appointed curate at the Church of Our Lady at Laeken.

Again, his technique was one of investigation and study, this time on a cooperative basis. In conjunction with "a few high-minded men" he brought to light the vicious conditions which prevailed in the workshops and factories of the neighborhood. Filth accumulated in the washrooms and toilets. Restrooms for young women workers were nonexistent. Pay was scanty, hours long. Both the health and morals of boys and girls were in peril.

Home life did little to counteract the bad influences of mine and shop. The majority of the workers infested, rather than lived, in slum districts that reeked with the odor of clogged drains and uncollected garbage. Was it surprising that the young priest decided that his first job was to create a healthy mental attitude among his parishioners and, more particularly, to help the youth of both sexes to overcome the inferiority complex which, in the haunts of poverty, bred with the speed of weeds in a swamp? He determined that his people should learn to help each other.

In 1912, therefore, Father Joseph Cardijn gathered together the nucleus of a labor organization with spiritual ideals: Seven needle-workers, all girls and all between the ages of 13 and 14. Presently, their numbers were augmented by a group of young men, eager to better their own condition and that of their fellow workers. Piety, study, action were the original watchwords of this little band.

ORGANIZATIONAL BEGINNINGS

The year 1915 was a turning point in a twofold sense: A syndicate of apprentices was formed and the fury of the World War swept through the ranks of the young organization. Many members of the syndicate were mobilized; some were killed; others were wounded and allowed to return to their home communities. Father Cardijn continued his work with the few who remained or returned. These 4 years were a period of intensive training and preparation.

At the end of the conflict in 1919, the stage was set for a genuine youth-labor organization called the Jeunesse Syndicate. The next year, five priests, inflamed by zeal for the cause, joined the movement. Hundreds of workers flocked to the standard of Christ the Worker and a newspaper was founded with the banner headline: Young Syndicalist Workers. The campaign was blessed by archbishops and bishops. Benedict XV in Rome added his august commendation. Finally, the movement crystallized in 1924 as the Jeunesse Ouvrière Chrètienne, more popularly known as the Jocists. Youth in action for the workers, under religious auspices and motivation, tells the whole story in a nutshell.

THE SPIRIT

"Back to Christ, Young Workers!" constituted the rallying cry of the Jocists. They were organized according to their vocational set-up: the students with students; chemists with chemists; transport workers with transport workers; and farmers with farmers. Badges and uniforms were distributed; meetings were held; study circles developed for weekly conferences; and public manifestations prepared.

See, judge, act became the order of procedure. The inquiry precedes every other task. Mr. Paul McGuire calls it the "nerve center of the whole Jocist method." The young worker observes and collects concrete facts which show the real position of the wage earner and his responsibility. In the study circles he discusses these facts with his comrades; together they look for the causes of a given evil and its opposition to the plan of God as revealed in the Gospel. When the moment comes for action, the young laborers choose a remedy: they help a companion who is out of work, sick, or injured, or a worker's family; or they assist some one of their members in the choice of a profession or further vocational training. Each section provides facilities for thrift, insurance, credit unions, labor organization, and moral education.

The atmosphere of a secretariat is electric with plans, ideas, and accomplishments. The movement, working on the imaginations of the youthful members, creates a mass psychology which inspires courage and confidence in the ranks of labor. In these circles the carpenter or miner feels himself better understood, more firmly upheld and more fervently loved. In short, the youth of all classes are fired with blazing enthusiasm for the world of tomorrow which is to be their world. Conquest for Christ is dramatized as the work of "a new youth for a new world."

GROWTH AND EXTENSION

When Father Joseph Cardijn visited Rome in 1925, he was received by His Holiness, Pius XI. The Pope gave his paternal blessing to the Jocists. In the same year, the group of needle-workers who had organized in 1912 adopted the name of Jeunesse Ouvrière Chrètienne Feminine; the first national committee of the J. O. C. was formed; a general Congress was convoked in Brussels, and in October the Jocist Manual was published. By the end of 1926, the Belgian experiment had not only established itself in every parish of the nation, but also had attracted attention in neighboring countries.

Early in 1927, Father Cardijn was invited to the so-called Red Zone of Paris, a Communist stronghold, in order to familiarize the French workers with the apostolic nature of the Jocist organization. The first meeting was held in the dingy room of one of the Parisian clergy. Seven hundred young workers were invited to an organization meeting; 70 accepted. A young layman explained the Belgian activities; what their brothers and sisters were trying to accomplish across the border; what they believed could be done in France. Six workers were interested enough to enroll themselves in the unit. Within 2 years there were 110 similar centers.

Five years later, there were 500 active units in the Paris community alone. The national organization counted 60,000 workers. The Young Christian Peasants (J. A. C.) have an equally large organization, recruited from the sons and daughters of farmers and farm laborers. Forty thousand French students from universities, colleges, high schools, technical and primary schools are united in a movement called the J. E. C. (the Young Christian Students), while the youth of independent groups are gather in the J. I. C. (Youth of the Middle Class). Each member has the zeal of an apostle, influencing the lives of at least 10 of his work mates, or fellow clerks, or fellow students. Every Jocist develops religious and social reform at his or her own point of contact with the world. In this way, the leaven of Christ permeates every environment, or milieu, from the mines to the shops and stock exchange.

CHRIST'S PRESENCE

Why should a single worker be able to radiate virtue, power, joy?

The answer is to be sought in the individual Jocist's sense of the presence of God. Christ is present to these workers in His name. Their minds and their hearts are lifted on high. Religion is the familiar stuff of their lives. Aware of Christ's teaching, they talk of their Leader with the intimacy and ease with which boys and girls speak of their adventures, their amusements, their picnics, the playmates, or their jobs. Not that these activities are the be-all and end-alls of existence; they are but episodes in lives that are meant to be wholly Catholic. If one goes walking, Christ is his companion. If one goes motoring, Christ is in the car.

Daily life is conceived of as a vocation; a complete life; a thorough destiny; writing, studying, games, work, dancing, scouting, courtship, marriage, entertaining, or being entertained * * * all these are dipped in the chrism of Christ stamped with the seal of Christ, blazing with the love of Christ. Or, to use Paul McGuire's happy phrase, all these routines of daily existence are "Christened," vitalized by the heartbeats of God. This is more than strength through joy; it is union with the fountainhead of grace, virtue, and eternal glory.

Is it any wonder that the Revue Des Jeunes (Paris) can write: "After attending some J. O. C. meetings one realizes what gigantic progress it is making toward the rechristianization of the working classes." Besides direct contact work, J. O. C. employs songs, movies, pamphlets, picnics, public manifestations. It conducts vocation and orientation service while other functions include measures to secure work, board, and legal advice for members or

nonmembers. It gives assistance to soldiers and sailors, furnishes medical aid, rehabilitation services, and nursing care. Of course, the backbone of these services is a network of syndicates, savings banks, and insurance systems.

The song of the Third Communist International intones the melancholy refrain: "Stand, ye damned of the earth * * *."

In marked contrast to this depressing sentiment is the ringing challenge of the Jocist hymn. This sings out to youth:

"Stand, the call of Christ resounds.
The task is noble, but stern.
Onward with the struggle,
Never resting nor relenting,
For Christ we must conquer."

TENTH ANNIVERSARY

Canon Joseph Cardijn, at the tenth anniversary celebration of his organization, in the presence of 100,000 devoted companions, described the conditions and motives which had inspired him to create the J. O. C. The spiritual and temporal life of the young workman, he declared, are inseparable. Further, it is not possible to ignore a man's material life, if one wishes to help him to save his soul; living and working conditions formerly prevailing among workmen were in brutal contradiction to what was necessary to help them gain eternal life; the situation can be mastered only by forming and organizing workers in such a manner that they can help themselves and conquer their own salvation. Speaking of the goal of the J. O. C., he added, in a stirring peroration that brought his audience to its feet:

"Not slaves, not beasts of burden, not machines, but sons, collaborators, heirs of God!

"And to accomplish this there must be work; in the midst of work a center of work and an organization of work;

"And for that there must be a home and family life;

"And for that there must be a professional organization, a social organization, a national and an international organization which must be worthy of this origin divine, of this dignity divine, of this destiny divine.

"The young workers are not destined for material wealth, nor for imperialism, nor for materialist nationalism.

"But riches, but work, but economic, and financial organization, but the entire civilization must help all the young workers and the men of the whole world to attain their destinies. * * *

"Against atheism, against nihilism, against materialism, the J. O. C. struggles with energy and courage, with stanch soul and with hearts dedicated to the real and complete royalty of Christ, guided by the church, in the ranks of the Catholic crusade, which groups transform and launch the young workers as apostles among their brothers and in their centers. * * *

"Jocists, be ye the glory of the church,
Jocists, be ye the glory of Christ,
Jocists, be ye the honor of your country,
Jocists, be ye the hope of your times,
I bless ye.
Forward!"

PROTESTANT TRIBUTE

It may be prudent to balance this enthusiastic valedictory with the report published by a distinguished Protestant gentleman, Mr. Harold B. Butler, director of the International Labor Office at Geneva. In the course of a statement which described the social activities of the churches, Mr. Butler wrote:

"The social work done by the Catholics tended to confirm further the supremacy of the moral element over the economic order, and of man over the product of his work. Catholic associations realize more and more that it is useless to establish even the most perfect organizations, if at the same time the spiritual level is not raised; in 1934, there was a new movement on these lines. * * * The work done by the Jocists for the improvement of the laboring classes is well known. The spread of specialization in the important organizations of Catholic youth is due to the Jocist movement. Thanks to its example, to its influence, Jocism has made the papal instructions, now the standard in social movements, possible to all: 'The first apostles for the workmen, are to be workmen, and the apostles for the industrial and commercial world are to be industrialists and merchants' (quadragesimo anno)."

THE RECKONING

There are 200,000 young men and women organized on these principles in France; 10,000 in Holland; 2,000 in Switzerland, and growing centers in Spain, Portugal, Colombia, the Belgian Congo, and Great Britain. Prior to the tragic events of last August the movement was being seriously studied with a view to an organization in Catholic Poland. Lithuanian and Czech and Slovak workers had likewise evinced an interest in the movement. Within a relatively short time, the Jocists have enjoyed phenomenal success in Canada, while the United States has witnessed the spread of this Canadian effort in New England.

The Belgian J. O. C. now counts 68 regional federations for boys and girls; 2,204 local sections in some 2,670 cities and villages in Belgium; 85,000 members, divided equally among boys and girls. It must be borne in mind that each of these units has its own publications, served by national magazines and reviews. During 1935, 1,735,320 pamphlets, explaining the social philosophy of the church, were distributed. One workman, who read some of this material, made a typical remark:

"So Christians still exist; for the 30 years I have been working here the only pamphlets I've been given have been distributed by Communists, Marxists, or freethinkers. I had never been told that a God died for me." This occurred in the factory of John Cockerill in England.

CANADIAN JOCISTS

Jocism in Canada was introduced, as in France, by a priest, Father Henri Roy, O. M. I., who, like Father Joseph Cardijn, belonged to an impoverished workingman's family. Father Roy, a native of Lewiston, Maine, still remembers with a terrible tenseness the days and nights when as a boy of 7 he crept out of the Montreal slums to sell newspapers, carry messages, do odd jobs, anything, for a few pennies with which to buy food for the family. In order to study for the priesthood he undertook a high-school course at the age of 22. Today he stands in the front ranks of 50,000 Jocists in Canada. His motto remains what it was in the initial stages of his career: "On Guard for Christ, young workers!"

At the J. O. C. headquarters in Montreal, consisting of several huge rambling buildings painted red and gray, there is a constant flow of homeless youngsters. Thousands find food, clothing, shelter. Both a doctor and a dentist are on hand to give the young people the care they need.

Every effort is made to find work for both boys and girls. Employers cooperate wholeheartedly with Father Roy, for he has bettered working conditions not only for the youngsters but also for the employers. Theft, breakage, and waste in the factories have been practically eliminated.

"What can you offer your comrades?" one of the Jocists was asked.

"Nothing but a chance. We spread confidence in God and life everlasting. If the workers do not get what they richly deserve in this life, then in another life they will reap their reward. It is eternal hope, my friend, that makes the world go round and keeps us steadfast."

One Sunday last July the Canadian Jocists gave a practical exhibition of their philosophy and their faith. In the Cathedral of Notre Dame, Montreal, 106 couples were united in holy matrimony. The streets were filled with boys and girls in blue and white uniforms with blue berets and the prized J. O. C. pins. Inside the cathedral thousands upon thousands of youthful voices were lifted in song. It was the greatest mass marriage ever celebrated on this continent. It was a triumph of tomorrow over the divorces, childless marriages, contraceptives, and indecencies of today.

JOCISTS IN THE UNITED STATES OF AMERICA

A most interesting study of American jocism has been undertaken by Mr. Paul J. Taggart, president of the student council at Mount St. Mary's College, Emmitsburg, Md. According to Mr. Taggart, who visited Jocist headquarters at St. Marie, Sacred Heart, and St. Augustin parishes in Manchester, N. H., the secret of the J. O. C. "miracle" is hard work and an intelligent use of time by young Catholic workers. He describes a meeting in which "the youths are all primed" with knowledge and questions. The Jocist, he relates, "prays * * * attends retreats * * * frequents the sacraments * * * begins his work soundly entrenched in Catholic practice as well as Catholic principles."

Mr. Taggart describes as typical the success of a few Jocists in a shoe factory who managed to quiet the filthy tongues of their fellow workers. Many workers objected to indecent speech and impure topics of conversation, but it took a few Jocists to put their foot down—by their pure example—and clean up a moral cesspool. That won respect for the little band, and now the few are busy teaching the many the inner meaning of jocism.

Father Achielle Lettré, the spiritual director of the St. Augustin parish unit, is quoted as follows:

"We would be suspicious of gifts of money. We don't ask for that. We ask for gifts of self. A man must labor for God before he appreciates jocism. What we want is work."

In other words, the difference between a Communist and a Jocist is that the Communist says to his fellow worker, "What you have is mine"; and the Jocist says to his companion, "What I have is yours."

Loyalty of the Negro People

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

LETTER FROM A. PHILIP RANDOLPH

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

letter from A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters:

BROTHERHOOD OF SLEEPING CAR PORTERS,
May 10, 1940.

MY DEAR CONGRESSMAN ALLEN: Permit me to express my sincere appreciation for your kindly expressions on the position I took in the National Negro Congress, which was recently held in Washington, D. C.

I assure you that I was completely disgusted and amazed at the bold and brazen expressions of sympathy for the Soviet Union, even going to the extent of declaring that the Negro people would not fight in a war between the United States and Soviet Russia against Russia. Of course, that body was packed with Communists, and the applause to this statement was an expression of sympathy of Communists of that position, but it was not an expression of the sentiment of the Negro people. Out of some 1,200 delegates, 300 or more were white, and the white and colored delegates were either Communists or sympathizers with Communists, or under the domination of Communists. I was practically alone against this manifestation of Communist sentiment.

However, the American people need have no doubt about the loyalty of the Negro people to the United States of America, the defense of whose flag the Negro has shed his blood upon every battlefield from Bunker Hill to Flanders of France. Throughout the glorious history of the Negro people, we have never been disgraced with a Benedict Arnold, nor would we have anything to do with the Trojan horse and "fifth column" tactics that may serve the interests of any foreign state, for the first, fundamental and main allegiance and devotion of the Negro is to his own country, the United States of America.

When I am in Washington, I hope to enjoy the pleasure of coming in to see you to have a chat.

With cordial good wishes, I am

Very sincerely yours,

A. PHILIP RANDOLPH.
International President.

Slum Clearance

EXTENSION OF REMARKS
OF
HON. PAT CANNON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1940

ARTICLE BY L. S. REMSBURG

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by L. S. Remsburg, which was published in the Fort Lauderdale (Fla.) Daily News on May 2, 1940:

[From the Fort Lauderdale (Fla.) Daily News of May 2, 1940]

SLUM CLEARANCE, LOW RENTAL PROJECTS REDUCING NATIONAL COST OF SICKNESS AND CRIME

(By L. S. Remsberg)

Elimination of America's slums and the rehousing of thousands of low-income families in decent, safe, and sanitary dwellings should substantially reduce the stupendous cost of crime and disease, prolong the lives of many victims of wretched housing conditions, and improve the general welfare of communities throughout the Nation.

From a dollars-and-cents basis the slum-clearance and low-rent housing program being conducted through the cooperation of the United States Housing Authority and local housing authorities in many cities holds the greatest significance to the taxpayers of the Nation.

CRIME, SICKNESS COST TWENTY-FIVE BILLION

It has been estimated that crime costs America $15,000,000,000 per year, or an average of $10 per month for every man, woman, and child in the United States.

Sickness runs crime a close second. According to estimates made by health and welfare activities in the United States, the annual bill for sickness and postponable death amounts to approximately $10,000,000,000.

House-to-house canvasses conducted in 204 communities, with the aid of W. P. A., revealed that 1,100,000 homes in 830,000 buildings were absolutely unfit for use; that 1,166,000 out of 8,000,000 had no private bathing facilities; that 1,221,000 of these had no private indoor water closets, while more than 1,300,000 were badly crowded. Additional studies revealed disastrous effects of these conditions.

PRIVATE BUILDING NOT SUFFICIENT

The very fact that such slums exist and that such deplorable conditions prevail indicates definitely that private enterprise has not been able to cope with the situation. Houses by the thousands have fallen into decay, to become the unwholesome and inadequate refuge of suffering families who cannot afford to pay the rentals required for decent dwellings. Housing shortages have made matters even worse.

Under our economic system private enterprise is powerless to supplant these blighted areas with decent homes which it can profitably sell or rent to the lower-income families. Prices of land, costs of building materials, and costs of labor and financing are too great for the buying power of at least one-third of the Nation.

Actual records of home building bear this out. For example, surveys by the United States Bureau of Labor Statistics showed that in 28 representative cities, from 1929 to 1936, only about 8 percent of the dwellings built were within reach of the 65 percent of families having annual incomes under $1,500. Since then building costs and rents have advanced faster than incomes.

It is an accepted fact that a family cannot afford to own a home costing more than two or three times its annual income, also that families of low income cannot afford to pay more than 20 percent of their income for rent. This being true, there is no question that we must go beyond the abilities of private enterprise if we are to properly house the poorer people of the Nation.

HOUSING ACT HELD SOLUTION

The United States has found this out in very recent years, and Congress made possible a national program when it passed the United States Housing Act of 1937, authorizing the United States Housing Authority to lend local housing authorities $800,000,000 to clear slums and build housing projects for slum dwellers, and appropriated $28,000,000 per year for subsidies to insure rents low enough for rehoused dwellers to pay.

As a result of this action by Congress, the local housing authority at Fort Lauderdale has obtained contracts to build low-rent housing projects. Under terms of the Housing Act, an equal number of slum dwellings are to be eliminated by demolition, condemnation, and effective closing, or by compulsory repair or improvement.

Completion of the present program in Fort Lauderdale will mean the elimination of approximately 150 unsafe, unsanitary, and unfit dwellings, and re-housing of an equal number of families in substantial, clean, and comfortable homes, among pleasant surroundings. This will not only increase assets, and reduce liabilities, of this community, but will serve to some degree to cut down the annual bill for crime and sickness.

The Communist Party and the Negro in the United States

EXTENSION OF REMARKS
OF
HON. ARTHUR W. MITCHELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1940

STATEMENT BY A. PHILIP RANDOLPH

Mr. MITCHELL. Mr. Speaker, at this time, when there is rumor of much subversive influence at work in the United States, it is only natural for attention to be turned toward the American Negro, who constitutes our largest minority group, and who, because of his economic status and political weakness furnishes the most fertile field for subversive activities in this country. There is no doubt but that there is being made a very serious effort on the part of the agents of subversive propaganda to enlist and organize the Negro against this Government. I am therefore calling attention to a statement made recently by A. Philip Randolph, the former President of the National Negro Congress, an organization which is thought to be dominated by communistic influences and partially financed by Russian Communists.

WHY I WOULD NOT STAND FOR REELECTION FOR PRESIDENT OF THE NATIONAL NEGRO CONGRESS

(By A. Philip Randolph)

I am convinced that the Third National Negro Congress has not succeeded in removing from the mind of the public the idea that the charge of the Dies committee, that the National Negro Congress is a Communist front, and a transmission belt for Communist propaganda, is not true. In fact, the congress has brilliantly succeeded in giving the charge every appearance of truth and validity.

I am convinced, also, that until the stigma of the Communist front is wiped from the congress, it will never rally the masses of the Negro people.

The procedure, conduct, and policies of the Negro congress, as set up in this third national meeting, will make its influence in the affairs of the American Negroes, short lived. The American Negroes will not long follow any organization which accepts dictation and

control from the Communist Party. The American Negro will not long follow any organization which accepts dictation and control from any white organization.

In the last national executive committee meeting in New York City, Brother John P. Davis was authorized to go out and borrow $1,000 to help put the third congress over. He informed me that he had borrowed it and mentioned the name of a man. I was given no specific identity of the man. What was the source of this money? The delegates to the congress should know. Because whatever is the source of the money with which the congress is run, will also be the source of its ideas, policies, and control.

It is a well-known fact that most of the contributions to this congress, expressed by the secretary, Mr. Davis, are from C. I. O. unions. Is this the reason why the congress is taking the C. I. O. line?

In an executive committee meeting in New York City, Mr. Davis informed it that the Communist Party contributed $100 a month to the congress. Is this the reason why the congress refuses to attempt to make plain to the American people that it is not a Communist front? These questions should be definitely and unequivocally answered.

When I was asked in a committee meeting in New York to visit some unions, or sign a letter to be sent to certain unions for funds, I refused, because I am unalterably opposed to having a Negro organization, which is supposed to be fighting the battles of the race, depending for its main income upon a source outside of the Negro people themselves.

I am opposed to the National Negro Congress depending upon the Communists or C. I. O. for its financial maintenance because I am opposed to the congress being dominated by either the Communists or the C. I. O. The congress should be uncontrolled and responsible to no one but the Negro people. But it will not be uncontrolled and responsible to no one but the Negro people unless the Negro people supply the money for its maintenance.

Now, there is nothing against the congress receiving contributions from unions, but it is dangerous business where there is a split in the labor movement for it to receive practically the major funds upon which its existence depends from unions on one side of the fence. It is bound to make the congress biased toward one side, and thereby destroy the united front and mass character of the congress, because it will no longer be able to rally the Negro workers in the A. F. of L.

When the National Negro Congress loses its independence, it loses its soul and has no further reason for being. It also forfeits and betrays the faith and confidence of the Negro masses. It will shatter the hopes and aspirations of the Negro people who yearn and pray for the Negro Congress not to sell out either to labor or capital, Communists or Republicans or Democrats.

Since the trend of the National Negro Congress is obviously toward domination by the Communists and the C. I. O., I would not stand for reelection for president.

I do not oppose domination of the congress by the C. I. O. because I am opposed to the C. I. O. I would be opposed to domination of the congress by the A. F. of L., or any other white organization.

With respect to domination by the Communists, I am not only opposed to domination of the congress by them, but I consider the Communists a definite menace and a danger to the Negro people and labor, because of their rule or ruin and disruptive tactics in the interest of the Soviet Union.

It was apparent, immediately the congress got under way, that the temper, flavor, and viewpoint of the congress were communistic and that the resolutions adopted would reflect the Communist line. It was not long before my suspicions were confirmed, for the person who was selected for the chairman of the resolutions committee is an acknowledged Communist. This was an unpardonable, colossal, and childish blunder. I didn't protest against it, because I knew it was useless, since the congress was deliberately packed with Communists and C. I. O. members who were either Communists or sympathizers with Communists.

The Third National Negro Congress was a miserable failure, so far as representing the sentiment of the American Negro people is concerned. Uproarious applause greeted every favorable reference in the congress to Soviet Russia. The statement was even made that the Negro people would not fight in an imperialist war against the Soviet Union. But this is far from the truth. If the United States declared war upon Communist Russia tomorrow, the Negro would fight Russia with all the fervor and patriotism of any other 100-percent American. Anyone who believes to the contrary is living in a fool's paradise.

Soviet Russia was hailed as a land without poverty or race prejudice. But the fact is there are no Negroes in Soviet Russia that would occasion any manifestation of race discrimination. However, it is significant to note that Bolshevik Russia freely sold oil to Fascist Italy to assist the murderous war of invasion of the peace-loving and ancient Kingdom of Ethiopia.

I quit the congress because I was opposed to linking it up with Labor's Non-Partisan League, the political mouthpiece of the C. I. O., since this was a departure from the original minimum program upon which there could be general agreement and a sound basis for rallying the Negro masses.

It seems axiomatic and as simple as one, two, three, that the congress could not rally the Negroes in the A. F. of L., if it were tied up with the C. I. O., and it could not rally the Negroes in the C. I. O. if it were allied with the A. F. of L.

I quit the congress because I was opposed to it, or its officials, expressing sympathy for the Soviet Union, which is the death prison where democracy and liberty have walked their "last mile" and where shocking blood purges wipe out any and all persons who express any dissenting opinions from dictator Stalin.

I quit the congress because I saw that the Communists were firmly in the saddle and the delegates were not subject to the influence of facts and reason. Their minds were already made up when they came there by Communists' manipulations, caucuses, and propaganda. Nothing could shake them. Even poor old men and women from the deep South and from some parts up North, who didn't have the slightest idea of what it was all about, parrot fashion, went down the Communist line, like bleating sheep led to slaughter.

I quit the congress because it is not truly a Negro congress. Out of some 1,200 or more delegates, over 300 were white, which made the congress look like a joke. It is unthinkable that the Jewish congress would have gentiles in it, or that a Catholic congress would have Protestants in it, or that the famous all-India congress would have in it as members natives of Africa. Why should a Negro congress have white people in it?

It is no evidence of religious prejudice that Baptists don't accept Methodists into membership, or of sex prejudice that women's clubs don't take men in as members. It was perfectly ridiculous and distressing, if not comical, to observe the white delegates dominating the applause for Communists' policies and tactics.

But while I oppose white members of the Negro congress, I favor the congress collaborating with nonpolitical white organizations that are progressive, liberal, and sound.

The Negro people must beware of all subtle forms of Communist propaganda poison to save themselves from destruction. It seems to be beyond the realm of debate that the Negro people cannot afford to add to the handicap of being black, the handicap of being "red."

Notwithstanding the fact that these are serious and grave moments for the present and future of all democracies, I am firmly of the opinion that the Negro, because of his unfaltering trust in God, and his love for peace, tranquillity, and justice, and because of his spirit of long forebearing and tolerance, will be the last of American minority groups to yield in any degree to these approaches and appeals from the agents of subversive propaganda. In this connection I should like to call the attention of white America to the fact that the Negro should be treated with fairness and justice in all matters. How long will white America disregard the rights of this group and expect it to withstand the teachings of those who are unfriendly to our country?

If there should ever come a day when the Negro yields to these influences it will be because of the activities of such white organizations in our country as the Ku Klux Klan and other similar organizations founded and sustained on racial prejudice. I think white America should take due notice and immediately modify its attitude in Government and in economic opportunity toward the Negro; give him the same chance and the same consideration that is given all other racial groups. If this is done there need never be any fear of the Negro going astray.

Representative Paul J. Kilday as a Member of the House Military Affairs Committee

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. MAY. Mr. Speaker, when the Seventy-sixth Congress convened and the leaders of both sides had agreed upon the apportionment between parties on the various committees, we found that on the Committee on Military Affairs, of which I have the honor to be chairman, the Democratic Party would receive but one new member in the place of the four Democratic vacancies. By the unanimous vote of the members of the Ways and Means Committee, the gentleman from Texas, the Honorable PAUL J. KILDAY, of the Twentieth District, was assigned to that vacancy.

Today I want to report to this House that the selection of PAUL KILDAY, has proven to be a wise one. The gentleman from Texas, PAUL J. KILDAY, has made good as a Congressman

and as a member of the Committee on Military Affairs. He has had the good judgment and the good sense to follow precedent in beginning his membership; he has worked hard, studied hard, listened, and learned, so that now he is an effective member. He came to our committee with a background and with experience which admirably qualified him for the important work of the committee. He comes from one of the most important military centers of the United States and knows the Army from long association. In addition, he has a brother who is an officer in the Army, a circumstance which has induced him to manifest a keen interest in the Army over a long period of time. Still further, for a period of 3 years he was a civil employee in the headquarters of the Army Air Service. He has advanced two places on the committee during this Congress and his position on the committee is secure.

The work of the Military Affairs Committee has been important and heavy during this Congress. We have handled the most extensive and important expansion of the national defense ever known in times of peace. In a time when the angry flames of war are surging through Europe and Asia, maintaining the security of American peace through a program of military preparedness for national defense has become a problem of the National Government of first concern, and the work of the Military Affairs Committee of this Congress has become of first-rank importance. In such critical times I am glad that we have on that committee such men as the gentleman from Texas, PAUL J. KILDAY. He has shown marked ability and a thorough understanding of the many perplexing problems of our country's defenses. I am happy to state that he has at all times manifested deep concern as to our military objectives, and has at all times been courteous and cooperative. He enjoys the esteem and confidence of all members of the committee, and so far as I can now recall, he has not, though a busy man, missed a single hearing of the committee during the 2 years that he has held membership. It is my desire and hope that he shall in these crucial and trying times continue as a member of this now strategically important committee. His 2 years' experience has already meant much, demonstrating his native ability.

Draft Roosevelt

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 14 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. WILLIAM G. McADOO AT SAN FRANCISCO, CALIF.

Mr. PEPPER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by a great American, Hon. W. G. McAdoo, formerly a Member of this body and formerly Secretary of the Treasury of the United States, on the subject Draft Roosevelt. It is a radio address delivered in San Francisco on May 4, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Permit me at the outset to make a personal statement. When I withdrew from the Roosevelt ticket for delegates, I said that I was "out of politics and unwilling to reenter." Because this has been misconstrued, perhaps for partisan reasons, I wish to say that I meant that I would never again run for an elective political office. I did not mean that I would abandon my right as a citizen to express my opinion or to discuss questions affecting the welfare of our State and the Nation whenever I felt disposed to do so.

When you go to the polls, as every good citizen should, you will, if you are a registered Democrat, be presented with a ballot containing four columns of delegates to the Democratic National Convention. At the top of the first column is this statement: "Candidates preferring JOHN NANCE GARNER"; at the top of the second column is: "Candidates preferring Willis Allen"; at the top of the third column is: "Candidates preferring Ellis Patterson"; at the top of the fourth column is: "Candidates preferring Franklin Delano Roosevelt."

WOULD DRAFT ROOSEVELT

It is, of course, the duty of each voter to determine for himself which of these gentlemen as a candidate for the Presidency of the United States he prefers. If you want to reelect that eminent statesman and patriot who for 7 years has filled the office of President with extraordinary distinction and ability, you will cast your vote for the delegates who favor the renomination of Franklin Delano Roosevelt.

I have said publicly heretofore, and I repeat now, that I favor the reelection of President Roosevelt. Objection has been raised by some of the President's opponents to the election of delegates favoring his renomination because the President has refused to declare himself a candidate. The American people do not care whether or not he says in words that he is a candidate. They know that they have the right to make him a candidate whether he seeks the office or not.

The President would make a grave mistake to enter into a scramble with other candidates for the nomination. As a dignified, patriotic, and high-minded gentleman he naturally shrinks from seeking the office again. But that does not disqualify him from accepting a nomination if the national convention should tender it to him and, as a dignified, patriotic, and high-minded gentleman, he could not refuse to accept the call of his party to serve the American people for another 4 years.

THIRD-TERM HOAX

Others say that we ought not to elect any man for a third term. Why not? Because, they say, George Washington refused to accept a third term and that it has become a tradition that no man should be elected President three times. I respect the large body of public opinion which believes in this theory, but there is no constitutional provision and there is no law of Congress that forbids a third term. It is merely tradition; and it will survive so long only as it serves the public welfare. Thousands of traditions have had to fall before the forward march of civilization because the developments of the future and the progress of a people cannot be tied immutably to the views, opinions, or customs of a past age.

The time has now arrived when this tradition must disappear before the crucial onrush of another deep and incalculable European convulsion. Before the grave issues involved in this conflict are settled the ablest brains of this country will be demanded for our security, peace, and progress. We must use all possible and honorable means to keep out of the war. I believe the reelection of the experienced Roosevelt, himself an apostle of peace and a tremendous influence for good, is essential. No other man is so well equipped as he, by experience and knowledge of the complicated problems now facing the world and the United States, to serve the best interests of the American people in this critical time.

EXPERIENCE NECESSARY

What would happen to us if we should put a green, inexperienced man in the White House next year? However patriotic and well-intentioned a green man may be, he cannot, in the very nature of things, handle these grave problems with the skill and ability that the man who has been immersed in the tangle of these great affairs, and who knows better than any green man can know what should be done as he confronts the various and serious emergencies that will inevitably arise with the progress of this murderous war.

Many people say that we are far away from the seat of the war, and that all we have to do is to attend to our own business. I am in favor of attending to our own business, but I should like to point out to you that the destinies of America, even though we succeed in preserving our own peace, are bound up in the decisions which will be made eventually on the battlefields of Europe. As a great nation we are inevitably affected by what happens in Europe, no matter how successful we may be in keeping out of the bloody conflict itself.

WHAT COULD HAPPEN

Let me illustrate the point: Suppose that Germany and Stalin should conquer Great Britain and France. The first thing the victors will consider is the disposition of the rich territories and possessions of Great Britain and France. The flag of Great Britain flies over Canada, our good neighbor to the north. It also flies over the important island of Bermuda, only 775 miles from New York and Baltimore. It flies over nearly all the islands of the West Indies which are adjacent to the coast of Florida and command the approaches on the north side of the Caribbean Sea, through which all commerce transiting the Panama Canal must pass. So long as these possessions remain in control of friendly nations we need feel little concern about them.

But suppose that in the partitioning process Canada should be turned over to Stalin and the West Indies and Bermuda should be handed to Hitler. At once our Monroe Doctrine would be violated. Immediately we would either have to abandon the Monroe Doctrine and allow these great powers to take Canada and the West Indies or we would have to challenge any attempt on their part to do so.

MUST FACE FACTS

It is not necessary for me to speculate on the consequences of that issue if presented to the American people. I mention it because I want to emphasize and bring thoroughly to your consciousness the fact that so long as any European powers possess these vital parts of the Western Hemisphere they will always be

involved in the quarrels of Europe, because they must naturally support the flag of the country which flies over them. If Canada were independent and the West Indies were independent they would not be involved if Great Britain and France went to war with other European nations.

I am not attempting to make an argument for the independence of Canada and the West Indies. I am trying to bring out the fact that so long as the flag of any foreign power flies over them, they become involved in any war in which the parent country may become engaged.

It is not at all certain that we may not be forced to face this issue on the ground of the Monroe Doctrine, if not on other grounds, economic and political, that may be even more commanding than the Monroe Doctrine. If that time should come, would we not be far safer to have our wise and experienced President, Franklin Delano Roosevelt, represent us than any green or inexperienced citizen, however patriotic and earnest he may be, in dealing with the complicated and dangerous problems which will present themselves in the circumstances I have described?

NOT IDLE SPECULATION

Perhaps you may say that this is long-range speculation on my part. I remember that when I was Secretary of the Treasury under that great statesman Woodrow Wilson during World War No. 1, I said, in speeches during the Liberty Loan campaigns in 1917, that we could not depend wholly upon the Atlantic and the Pacific Oceans to protect us; that the time was not far distant when airplanes would be flying these oceans. Many people thought that I was of unsound mind when I made these predictions; but since that time our airplanes are flying the Pacific via Honolulu and Manila to Hong Kong on the Chinese coast; and they are also flying the Atlantic via Bermuda to Lisbon, Portugal. These achievements merely foreshadow what is yet to come in the way of increased, more rapid, and safe air transportation, and the development along with it of air armadas which may have a determining influence upon the destiny of the whole world.

Imagination and foresight are inseparable elements of statesmanship. Without imagination the creative faculty is seriously deficient. It is not testing imagination too severely to visualize the possible attempt in the not distant future for the great powers now engaged in the European conflict to change existing sovereignty over Canada and the West Indies. The world is going to be reapportioned as a result of the present war, and no one can say that the improbable may not become the actual. Roosevelt has the required imagination and foresight, along with his tested experience and ability, to meet all the demands which the future may impose upon our constitutional government.

We occupy a strong position, but we cannot look with indifference upon European events which may, as I have already said, profoundly affect our own destiny; and when the time comes to settle the issues arising out of the present war we want the experienced Franklin Delano Roosevelt at the helm.

There is no danger that he may become a dictator or that he will attempt to found a dynasty. All that stuff is merely political claptrap. I have known Mr. Roosevelt more or less intimately for more than 30 years. I regard him as one of the greatest men we have produced in the present century, and I know that, with his ripe experience and exceptional qualities of statesmanship, he will serve the American people during the uncertain and perilous times ahead of us with rare wisdom, ability, and devotion to his countrymen.

It is for these reasons that I favor the election of the delegation which is pledged to support him in the Chicago convention.

Schools and Training Courses in Government Departments

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

ANSWERS OF SECRETARY OF AGRICULTURE AND CIVIL SERVICE COMMISSION TO ACTING COMPTROLLER GENERAL'S SPECIAL REPORT

Mr. COCHRAN. Mr. Speaker, recently the Acting Comptroller General sent to you a letter in the form of a Special Report relating to certain schools and training courses which various Government departments and agencies conduct with a view to increasing the efficiency of their workers. This letter was referred to the Committee on Expenditures in the Executive Departments of which I am chairman. Certain statements were made by the Comptroller General which were answered in part at the time. Wide publicity was given the report, and I placed the answer of the Department of Agriculture and Department of the Interior in the RECORD. I have two more letters on the subject; one from Secretary Wallace and the other from the Civil Service Commission, which I am including as part of my remarks. They follow:

UNITED STATES DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
Washington, May 13, 1940.

Hon. JOHN J. COCHRAN,
Chairman, Committee on Expenditures in Executive Departments, House of Representatives.

DEAR MR. COCHRAN: We have read with interest the letter of the Acting Comptroller General of the United States and the Special Report relating to certain schools and training courses which are being conducted in, or by Government departments and independent establishments (76th Cong., 3d sess., S. Doc. No. 182).

On page 2, third paragraph, the Acting Comptroller General says, "Attention is invited to the fact that the acts quoted do nothing more than provide that Government records, documents, and papers shall be available to students and research workers; and the Executive order quoted does nothing more than authorize the conduct of in-service training courses for the training of employees of the various departments and establishments of the Government."

It is hardly necessary to say that this is not the interpretation which has been uniformly adhered to in reference to those acts since the organization in the Bureau of Standards about 1908, of graduate courses in physics, mathematics, and chemistry, and since the organization of the Graduate School in the Department of Agriculture about 1921. In Higher Educational Circular No. 14, Department of the Interior, Bureau of Education, the acts in question are referred to as "Ample legal authority for the maintenance of such educational work within a Government bureau." (See p. 1, par. 3, public, Feb. 1919.)

The first act, joint resolution of April 12, 1892 (27 Stat. 395) made it possible for qualified students to use Government collections and various types of scientific material under such rules and regulations as the head of the department saw fit to establish. The second act, Deficiency Act of March 3, 1901 (31 Stat. 1039), considerably broadened the first act making it possible for the use of Government facilities by "scientific investigators and duly-qualified individuals, students, and graduates of institutions of learning in the several States and Territories as well as in the District of Columbia, under such rules and restrictions as the heads of the departments and bureaus mentioned may prescribe."

The only time that this matter has ever been questioned was in a memorandum from the Comptroller General of the United States under date of September 3, 1931, addressed to the Secretary of Agriculture, in which the Comptroller General called attention to the graduate school and asked for advice as to the authority under which the school was being conducted. That letter was replied to by the Acting Secretary of Agriculture under date of October 8, 1931, citing these acts and our operations under them. No objection to the procedure set forth in the Acting Secretary's letter was ever raised by the Comptroller General. This correspondence was not included in the report of the Acting Comptroller General, but was printed in the CONGRESSIONAL RECORD of April 16, 1940, pages 4587–4589.

The long-continued interpretation of these acts by the Government officials who are charged with their administration should be given the most careful consideration.

These acts do not specify the exact types of work for which facilities of the Government may be used. They leave the matter to the discretion of the heads of departments, and in the case of the graduate school of the Department of Agriculture, this discretion was delegated first to the Assistant Secretary of Agriculture, then to the director of scientific work, who had the status of an Assistant Secretary, and later, when this position was abolished and the Director of Scientific Work became Principal Pathologist, Bureau of Plant Industry, he was requested by the Secretary to continue the direction of the school. When he retired from the Government service a committee appointed by the Secretary made a careful study of the school's program and recommended that the directorship of the school be continued under an administrative committee headed by the Director of Personnel.

On page 3 of the Acting Comptroller General's report, the last two lines of the fourth paragraph state that "no accounting has ever been made to the Government for any of the school's funds." This is true, of course, so far as the General Accounting Office is concerned, because the funds are not Government funds. Accounting has been made by the treasurer of the school to the director each year, from the beginning of the school to the present time. Since 1934 monthly financial reports are filed with the Director of Personnel of the Department, who is chairman of the administrative committee representing the Secretary of Agriculture. These accounts and records were thrown open to the investigators from the General Accounting Office and are always open for inspection by properly authorized individuals.

On page 12, the Director is quoted as saying that the school has 5,000 students enrolled. The number last year (1938–39) was 4,409—2,361 in the regular semester courses and 2,048 in the lecture courses. This year (1939–40) there are approximately 3,000 in the regular semester courses and about 600 in the lecture courses.

On page 13, fourth paragraph, it is stated that "the school is operating in connection with the Council of Personnel Administration under the provisions of Executive Order No. 7916 of June 24, 1938." We have, of course, endeavored to cooperate, as far as possible, with all authorized Government agencies, but the school is not operating in any special connection with the Council of Personnel Administration.

On page 15, under paragraph (f), relating to giving instructions to persons preparing for civil-service examinations, it should be noted that the graduate school has always been extremely careful in this matter, and teachers in its courses have been instructed not to give work with special reference to any civil-service examination. The procedure in this respect has been, from time to time, discussed with representatives of the Civil Service Commission and has been informally approved.

On the same page in the first paragraph quoting Dr. Kaufman, the last two lines are italicized. Evidently they were misunderstood. They refer to in-service training work given during official hours as a part of the official program with which the graduate school has nothing to do.

On page 31, beginning of the last paragraph, it is stated there may be, and probably is, "a tie-in between these lectures and the now well-known and clearly defined movement called union now." The graduate school has no such "tie-in."

The Acting Comptroller General in his letter has not clearly distinguished between strictly in-service training courses, largely given during official hours for training of employees at Government expense for the better performance of their official duties, and the courses in our graduate school given after official hours at the expense of the students.

It is true that these courses are in most cases designed to increase the efficiency of the employee and give him a broader concept of his work and its relation to public welfare. At the same time, also, the student at his own expense is advancing his educational program for academic recognition. Under such circumstances the employee feels that his future development is up to him. He is better satisfied with his job and works to improve himself.

Whatever indirect cost there may be in using Government facilities after official hours is more than offset by the advantages in improved interest and efficiency in official work.

The school serves a valuable purpose to this Department and the Government departments generally and should be continued without interruption.

I hope that it may have the approval of the Committees on Expenditures in the Executive Departments, though no Government expenditures are involved.

Sincerely yours,

H. A. WALLACE, *Secretary.*

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., May 10, 1940.

Hon. JOHN J. COCHRAN,
Chairman, Committee on Expenditures in the Executive Departments, House of Representatives, Washington, D. C.

DEAR MR. COCHRAN: Senate Document No. 182 (76th Cong., 3d sess.), containing a reprint of the report on "Schools and training courses in Government departments" transmitted by the Acting Comptroller General of the United States to the President of the United States Senate and the Speaker of the House of Representatives, and referred to the committees of which you and Senator VAN NUYS are chairmen, has recently been called to my attention. On page 11 of this document appear certain statements and views ascribed to me which are seriously at variance with the statements I made to the investigators of the General Accounting Office at the time of their visit to my office. I should like to correct the record so far as this particular portion of the report is concerned.

It is difficult to understand how anything I said could have been misconstrued to the extent indicated by the text of the report. No written record of the conversation was made, however, at the time of the interview, and it is barely possible that impressions gained from it were later colored by someone else's views or information gained from other sources by the investigators.

It is interesting to note that the report is in error in other respects, noticeably in the evident confusion in the minds of the authors with respect to the Society for Personnel Administration and the newly organized Society for Public Administration.

Specifically, the errors which exist in the remarks and opinions ascribed to me are the following:

I have never thought of the President's Executive order of June 24, 1938, as having had any direct relationship or bearing upon the Department of Agriculture's graduate school, particularly with respect to any expansion which it may have had, or in relationship to the clarification of the legal authority for its existence. I do not believe, and I am sure I did not say, that this order itself has been responsible for any expansion of the activities of the graduate school which may have taken place since June 1938, except insofar as the order may have stimulated among employees greater interest in training activities. I am certain that I did not express myself with respect to the degree to which the Executive order may have clarified the authority for the existence of the graduate school.

The last paragraph of that portion of the report dealing with my interview by the investigators reveals a complete misunderstanding or misrepresentation of the views which I expressed in that interview. In the first place, I did not say that "schools have multiplied," nor did I refer to Executive Order No. 7916 as "the Executive order creating the Council of Personnel Administration." I did state that the Executive order had increased already existing interest in employee training, and that that increased interest was evidenced by the development of certain new activities and by the making of plans for the expansion of programs already in operation.

It is not clear whether the second clause of this paragraph refers to the purpose of the schools mentioned in the first clause or to the Executive order. In any event, no statement was made by me that could have been construed to mean that the object of training activities is "ultimately to bring all personnel matters, classifications, reclassifications, promotions, and control of personnel under the new personnel management set-up."

The statement which is most seriously at variance with the facts is contained in the last sentence of this paragraph. It is difficult to understand how anything I may have said, even in answer to a leading question, could have been interpreted to mean what is contained in this sentence, "He conceded this would, to a great extent, deprive supervisory and operating management of control over employees of the Government." Here again it is not clear whether the "this" in the sentence quoted refers to schools, the Executive order, or the Council of Personnel Administration. No matter what interpretation might be placed upon the sentence as a whole, I would not subscribe, and have never subscribed, to the sentiment expressed. Even if reference is made to the organizational relationship indicated in the Executive order, the statement is still at variance with my views because of the continuing staff relationship of personnel divisions to management.

I regret the necessity of submitting this letter for your consideration, but feel that not to do so would leave the record incorrect and would be likely to cause embarrassment to the Civil Service Commission.

A copy of this letter is being sent to Senator VAN NUYS.

Very respectfully yours,

WINSTON B. STEPHENS,
Coordinator and Director of Training.

Humanitarian Democracy

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1940

ADDRESS BY HON. PAUL V. McNUTT

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by the Honorable Paul V. McNutt, Federal Security Administrator, at the Southern Democratic rally held in Los Angeles, California, May 11, 1940:

Humanitarian democracy is on trial. It is on trial in California, in Indiana, and in every State throughout this Nation.

The issue is crystal clear. Will America uphold the magnificent record of a liberal, progressive party which has rescued the Nation from the hopeless despair to which it had been reduced in 1932? Or is this country to be turned back to the hard-boiled, selfish, do-nothing party which wrecked it in 1929?

That party is doing everything within its power to mislead the voters. It is doing everything possible to cloud the issue. Empty phrases and phony arguments, pious pledges, and scurrilous charges cannot obscure the one outstanding, glaring fact that in 1940 the people again face the ancient choice between a party which has traditionally defended the privileges of entrenched wealth and has bitterly opposed every social reform for a hundred years and a party which has championed the cause of the people—the people who do the work of the country—the farmer, the laborer, the businessman.

That was the issue in 1932. It was the issue in 1936. And it is again the issue in 1940.

Look at the record of the New Deal years and compare it with the record of the old deal years.

On which record do you find genuine efforts to relieve the hardships of the aged and the unemployed, to mitigate the sufferings of the sick and physically handicapped, to check the unbridled greed and avarice of the racketeers of finance and monopoly?

The Republicans point with brazen pride to what they called prosperity and normalcy during the twenties. But no move was made during that shameful epoch in speculation and inflation to afford anything like social security to the people.

Then as now we had the aged with us, unable to take care of themselves in their declining years. They had to go to the poorhouse or rely upon the charity of struggling youth.

Then as now we had the victims of the machine—technological and seasonal unemployment. They had to borrow money at ruinous rates of interest and let the installments go on the automobile and furniture.

Then as now there were farmers with an unequal share of the national income, with gullies in their fields, the land blowing away at the rate of a farm a day and washing down the Ohio and Mississippi Rivers at the rate of a farm every hour. They had to fight pests at their own expense, and when the land was barren and the topsoil blown away, abandon their investment at ruinous prices and go in debt for another farm at inflated prices.

Then as now there were the blind and crippled children, the sick, and the diseased. They had to suffer, many of them with inadequate medical care and insufficient hospital facilities.

The Republicans had their chance. With all their normalcy and prosperity the Republican administration made not one move to humanize the Government of the United States or to equalize among its citizens what the uneven hand of privilege, birth, and luck had brought about.

But since 1933 the history of this country has been reversed. Three billion dollars have been used since that time to give the farmers a chance to save themselves and their land from economic and physical deterioration.

Eleven billion dollars have been utilized for work relief and for social security.

Two billion dollars have been granted to business concerns to give them a chance to put themselves on a sound financial basis during periods of readjustment.

A billion and a half has gone to home owners, to clear away the filth and disease of city slums and to give clean, sanitary housing to sharecroppers and rural tenants.

Right here in California you have received from the Federal Government grants which need not be repaid of more than a billion and a half dollars, in addition to many millions more in loans at low interest rates.

This money, let it be understood, has not been spent. It has been invested. And it has been invested in securities that will pay far greater dividends than the bogus stock and sour bonds into which widows and old people and farmers and businessmen sunk their savings during those snorting, roaring, booming inflated 20's.

This money has been invested in things the citizens in this country can use and enjoy and benefit from. It was used for highways and streets—$4,000,000,000 of it. For conservation, reclamation, and flood control—four and one-half billion of it. For sewers and waterworks and power plants—a billion of it. For school houses, colleges, and other educational buildings—another billion. For parks and playgrounds, housing and slum clearance, the draining of malaria-infested swamps and the planting of shelterbelts. And finally, it was invested in the happiness and security of the people of California and Indiana, and every other State in this rich, free democratic country of ours.

All this in 7 years—a record in social pioneering and democracy unequaled in any like period of our history.

When Mr. Dewey tells us that a Republican administration would not abandon the social legislation of the last 7 years, we enjoy his youthful exuberance and boyish idealism. And when Mr. VANDENBERG tells us that the Republicans will save the New Deal, we rejoice in the Senator's big, generous, humanitarian heart. But we can be pardoned for a smile at the quaint credulity with which a hundred years of Republican history can be disregarded and the party leaders and money raisers ignored.

And when Mr. TAFT tells us that he, too, has a soul that throbs for the common man, but that he wants to "turn relief back to the States," we look at the record of Governor Bricker's relief administration during the past winter and realize how well both Governor Bricker and Senator Taft are living up to the time-honored traditions of their party.

The Republican Party has always been the party of reaction and it is still the party of reaction. Whatever the platform may be—whatever the candidates may say, the Government which the people would get from a Republican administration would be the same.

Do you remember when Herbert Hoover made a noise like a great liberal humanitarian that was heard round the world? Do you remember when the Lion of Idaho proclaimed him as the great progressive of his day? You may also remember how quick he was to respond to the demands to feed the starving hogs owned by starving farmers in the Southwest during the drought of 1932. But his political conscience was shocked at the thought of feeding the farmers themselves and their starving families. "That," he claimed, "would be playing politics with human misery."

I don't see how you can put in charge of a liberal program a party and a group of men who have consistently opposed that program for 7 years and then expect anything dazzling in the way of success.

Mr. Dewey recently took occasion while in California to discuss the problem of social security, and on that occasion to point out what he regarded as the shortcomings of the Social Security Act and the incompetency of its administration.

No one, I think, who has studied the question of social security will contend that our present laws are adequate. Certainly no member of the Democratic administration would make such a contention. On the other hand, their inadequacy is obvious to all familiar with the needs of the aged, the unemployed, and the physically handicapped. There are two points about the social-security program upon which all leaders of the Roosevelt administration agree. First, not enough people are included in the benefit structure. Second, individual benefits are inadequate.

We can go further and say more. The administrative and research machinery of the Democratic administration are giving constant and continuous study to these two problems to the end that security for all the aged may be attained and that that security will be adequate.

We are thus in agreement with Mr. Dewey that there are defects in the present system of old-age and unemployment security.

Now let us examine Mr. Dewey's charge that the old-age insurance program has been incompetently administered. It is said that over 250,000,000 tax payments (wage items) have been made up to the present time, of which, for the years 1937 and 1938, 7,000,000 are unidentified, also, that including tax payments (wage items) for 1939, the unidentified items will doubtless reach as high as 12,000,000.

Now for the facts. As of April 1940, there has been reported a total of 300,000,000 employee wage items. There still remains in suspense for the year 1937 and 1938 a total of six and one-half million wage items. For the entire period (i. e., from January 1937 through April 1940) the incompletely and incorrectly reported items total ten and one-half million. Mr. Dewey is thus in error by several million items on both figures.

Mr. Dewey says that these incomplete items are wholly unidentified.

The great majority of them are in fact identified by the proper name of the employee to whose credit they should be posted. But because the employer who reported the payment failed to identify it with the employee's social security account number, it has been impossible to post to the proper account with complete assurance of the accuracy upon which we insist. No posting is made until the item has been further identified by reference either to the several existing files, or to the employer or employee.

Mr. Dewey declared that workers will find when they become eligible and in need of their benefits that there is no record of the payments which were taken from them on the promise of protection in their old age. This is pure fabrication.

As of April 15, 1940, over 539,000 claims had been paid without a single question being raised by the worker or his survivors as to the accuracy of his recorded earnings. These unidentified items remain in a suspense file and are regularly referred to whenever a worker's claim for benefit is filed. They are also referred to when a worker inquires as to the status of his wage record.

Up to the present time over 300,000 workers have inquired concerning the status of their accounts, and statements have been sent to them promptly. These statements would appear to have been accurate and fully satisfactory to the worker, as no further questions were evoked from them. To our knowledge, no worker has yet found, upon becoming eligible for and in need of his old-age insurance, that he has been denied all or any part of his benefits because of an inadequate record of the wages upon which he paid taxes.

The significant index as to the adequacy of these wage records is not the number of individual employee items now in suspense, but rather the proportion of all of the wages reported by employers, and upon which work workers' benefits will be based, which have been positively identified. As of April 18, 1940, a total of $85,000,000,000 in wages had been reported by employers for the entire period since January 1, 1937. Of this total, 99.01 percent had been properly identified to the individual worker's accounts. The amount not completely identified for the entire 3 years totals an average of exactly 8 cents per worker—and the amount is being constantly reduced.

The charge that the administration of the old-age survivors' insurance program has been incompetent is the exact opposite to the conclusion of the House Appropriations Committee, to which the Bureau of Old Age Survivors' Insurance willingly presented all of the facts relative to the maintenance of the wage records. The conclusion reached by the House Appropriations Committee, after careful consideration, was as follows: "The committee can see nothing in this picture that is deserving of any adverse criticism; on the contrary, considering the novelty and magnitude of the program that was undertaken, it would seem quite remarkable that such a small percentage of the total collection is still in suspense. It should be pointed out that the amount of tax thus in suspense is being reduced from day to day as the Board is able to establish the identity of individual items."

In this same connection, Congressman ALBERT J. ENGEL, ranking Republican member of the subcommittee which considered this question, personally took time to visit the offices of the Bureau of Old Age and Survivors Insurance, both in Washington and Baltimore.

In further discussing this matter on the floor of the House of Representatives, he stated, "I went through the offices, visiting every nook and corner, examining the files, records, and methods of doing business. I was in every building, including the Baltimore office. I said then, and I say now, that they have an efficient organization. I think the Baltimore office is operating as efficiently as it would be were it a private insurance company. I believe the same can be said more or less of the entire Board's operations."

These charges of incompetency in administration are based upon as many half truths as a half-completed district attorney's investigation.

I do not know how competent Mr. Dewey is as a prosecuting officer or how efficient and thorough the organization of his office may be. I am, however, perfectly willing to give him the benefit of the doubt and assume that, as a prosecuting attorney, he is entirely adequate.

If I have not been overgenerous, then Mr. Dewey would, under no circumstances, conduct a prosecution of a racketeer without a thorough and complete investigation of all the facts.

But he has brought charges of incompetency against the only administration that has ever given the people of this country a chance to construct for themselves a system of social security. These charges are based upon inadequate information, half-truths, and an utter failure to take account of discoverable facts. The result has been a complete misrepresentation of the existing system of old-age insurance, and wholly unsubstantiated charges against those responsible for its operation.

The American people want social security, and they are going to have it. They want adequate old-age benefits, and the country is rich enough to afford it.

But they will never obtain it if they rely upon the Republican Party to obtain it for them. The Republican Party has never been a liberal party, or a humanitarian party. Every social reform which the people ever obtained has been secured through the agency of the Democratic Party. And if the Social Security Act is to be improved and modified and extended in coverage until it provides security for all, as I believe it should, this will be accomplished not through the age-old party of reaction and special privilege, but through the liberal, progressive, humanitarian Democratic Party.

The Republican Party has given the aged nothing but promises.

The Democratic Party, in 1935, gave them a start toward old-age security.

In 1939 it made vast improvements in that law.

In 1941 it will give them adequate security against the terrors of economic want during their declining years.

Amendment To Be Proposed by Mr. Taber to Relief Bill

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

TEXT OF AMENDMENT BY MR. TABER, OF NEW YORK

Mr. TABER. Mr. Speaker, I submit herewith an amendment I propose to offer to the relief bill for the information of the Members:

SECTION 1. (a) In order to continue to provide relief and work for needy persons on useful public projects in the United States and its Territories and possessions, there is hereby appropriated to the Work Projects Administration, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1941, $975,650,000, together with all balances of appropriations under section 1 (a) of the Emergency Relief Appropriation Act of 1939 which remain unobligated on June 30, 1940, including such unobligated balances of funds transferred to other Federal agencies for nonconstruction projects under the provisions of section 11 (a) of such act of 1939 or set aside for specific purposes in accordance with other law: *Provided*, That notwithstanding any other provision of law, funds heretofore irrevocably set aside for the completion of Federal construction projects under authority of the Emergency Relief Appropriation Acts of 1938 and 1939 shall remain available until June 30, 1941, for such completion, and any such funds which remain unobligated by reason of the completion or abandonment of any such Federal construction project shall be returned to this appropriation.

(b) The funds provided in this section shall be available:

(1) For administration, the sum of $3,000,000, of which not to exceed $300,000 shall be available for personal services in the District of Columbia. Apportionment shall be made monthly on the first day of each month, so that the sum available under this paragraph will be apportioned over the entire 12 months of the fiscal year 1941.

(2) For grants to cities, villages, towns, and boroughs not a portion of a city, and the portion of towns outside of cities and villages, for relief and relief employment prosecuted by them, the sum of $600,000,000. Such sum shall be allotted on the basis of population of the municipalities applying therefor. In the case of counties where relief is administered on a county-wide basis, grants under this paragraph shall be made to the county in lieu of the city, village, or town, but the county may allot the proceeds of such grants to cities, towns, and villages within the county for prosecution of work-relief projects.

(3) For grants to cities having a population of 100,000 or more, for relief and relief employment prosecuted by them, the sum of $372,650,000. Such sum shall be allotted one-half on the basis of population of such cities and one-half on the number of people on relief and relief employment in the municipalities applying therefor. In the case of counties where relief is administered on a county-wide basis, grants under this paragraph shall be made to the county in lieu of the city, but the county may allot the proceeds of such grants to cities within the county for prosecution of work-relief projects.

(A) Distribution of sums in pursuance of allotments made under paragraphs (2) and (3) of this subsection shall not exceed for each of the following months the percentage set forth in the following table:

Month:	*Percentage of total*
July	7
August	7
September	7
October	8
November	9
December	10
January	10
February	10
March	10
April	9
May	7
June	6

(B) Grants made in pursuance of paragraph (2) or (3) of this subsection shall be made on the basis of a contribution by the United States of 75 percent and a contribution by the grantee, in cash, of 25 percent of the cost of the relief or relief employment with respect to which the grant is made.

(C) Grants for any month shall be made under paragraphs (2) and (3) only to applicants who have applied to the Commissioner of Work Projects, and the application shall set forth a statement of the current relief load of the applicant and the probable financial burden which relief will represent for the month for which application is made, and also an obligation of the applicant to contribute from its own funds or funds of the State 25 percent of the total amount which will be devoted by the applicant to such relief for such month. No such grant shall be made in excess of the amount applied for or required for the purposes of relief and relief employment.

(D) If the amount of any grant made under paragraph (2) or (3) of this subsection which is required to be expended or obligated by the grantee in any month is not expended or obligated during such month, an amount equal to such remainder, and any amount of Federal funds not matched during such month, shall be deducted and withheld from any grant which is made to the grantee with respect to the second succeeding month thereafter, and shall be used to increase the amount available under the paragraph under which the grant was made for grants for December and succeeding months.

Advertising—The Spark Plug of Recovery

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, BEFORE ADVERTISING AFFILIATION CONVENTION IN BUFFALO, N. Y.

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Ohio [Mr. TAFT] before the Advertising Affiliation Convention in Buffalo, N. Y., on Friday, May 3, on the subject Advertising: The Spark Plug of Recovery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Members of the profession of advertising, it is an honor and a privilege to come to Buffalo to address the Advertising Affiliation. I hope that I may profit by what I can learn from members of your profession. Politics and advertising are not quite the same, but any politician who wishes to be successful certainly will have to learn all there is to know about advertising.

Until recently there hasn't been much doubt in anyone's mind as to the contribution which advertising makes to prosperity and the improvement of living conditions. It was almost 14 years ago, in October 1926, that President Coolidge delivered an address at the Tenth Annual Meeting of the American Association of Advertising Agencies. I should like to use one of the thoughts expressed by him on that occasion as a text, if you please, for my talk today.

President Coolidge said: "Advertising creates and changes that foundation of all popular action, public sentiment or public opinion. It is the most potent influence in adopting and changing the habits and modes of life, affecting what we eat, what we wear, and the work and play of the whole Nation. * * * It informs its readers of the existence and nature of commodities by explaining the advantages to be derived from their use and creates for them a wider demand. It makes new thoughts, new desires, and new actions. By changing the attitude of mind it changes the material condition of the people."

But since the depression of 1929 we have been subjected to all kinds of new economic theories, and one of them is definitely hostile to advertising. It was natural that there should be a revolution in economic theory. We thought we had developed a system which would work perfectly, which would insure a job to every man who wanted one, and give him a wage sufficient to take care of his old age and provide for his family. We found that we were subject to the same old hard times which we had seen at intervals before, and that perhaps these times might be just a little harder as the economic system became more complex.

The cause of the depression is still obscure. I have my own view of it, but it probably isn't any better than that of anyone else. But it is perfectly clear that there was a descending spiral of unemployment and purchasing power. As men were thrown out of work, their purchasing power decreased, the demand for raw materials and manufactured products decreased, and this resulted in still more unemployment and still more hardship on the farm.

Ever since we reached the bottom in 1932, we have been trying to find the formula for putting Humpty Dumpty together again. Again it is perfectly obvious that if production increases, employment increases, the workmen have more purchasing power, which in turn produces greater production. The administration has been obsessed with the view that the way to set the cycle of prosperity going is to increase purchasing power by Government doles to the consumers, and by arbitrarily raising wages. There was a time when I thought this method of priming the pump might work. There seems to be no reason why you can't begin at one point in the cycle as well as any other. But we have actually tried the Government method, and it has not worked. There are still 9,000,000 people unemployed. Farm prices are little higher than they were in 1933. Relief rolls have increased beyond our wildest imaginings. The national income is still far below the national income of 1928, and there are 10,000,000 more people now among whom that income must be divided. The Government has a deficit of $4,000,000,000 a year, not because it is impossible to balance the Budget, but because the administration still believes in Government spending as a means of recovery. Surely if we have not set the machinery going by borrowing and spending over $20,000,000,000, there is no reason to hope that we can restore prosperity by a continued deficit of $4,000,000,000 and a direct payment to consumers in the neighborhood of $3,000,000,000 a year.

For whatever reason, the only way back to prosperity appears to be a stimulation of production rather than of purchasing power. Additional production will produce jobs, and that kind of purchasing power will stimulate production. Advertising is the spark plug, because without it you can't stimulate production.

After all, if we look back at history, we find that America has grown prosperous through the growth of production rather than through any direct artificial stimulation of purchasing power. We have grown because there has been a constant supply of new enterprises; making new things or making old things in a new way. The genius and the energy of the American people have exceeded that of any other nation. Little industries, beginning with one or two men in a machine shop, have grown to great factories employing hundreds of thousands of men. A man has a new idea. He makes a new product. He advertises his product to his neighbors. He builds up his production and the number of his workmen until their demands increase the consumer's purchasing power of the United States and increase it permanently.

The obsession of the Government with its own method of producing prosperity has led to a determined hostility to the sound and historical method. It has undoubtedly led to a hostility to advertising because that is part of the process which the New Deal has abhorred from the beginning. The New Deal has accepted the general attack on advertising begun by Stuart Chase and Frederick J. Schlink in 1927. It has supported the general attack made on advertising by consumer editors. Mr. Tugwell himself has written a textbook attacking advertising as an aspect of competitive profit seeking, involving enormous waste and fraud on consumers. Mr. Ickes took a shot at advertising in 1934. Attorney General Arnold in 1938, before the T. N. E. C., attacked advertising as either a waste or an aid to monopoly. The Federal Trade Commission has sought power to investigate the cost of distribution, the place of advertising in distribution, and whether or not advertising is rendering a disservice to distribution. It is subjecting all advertising today to a carping and meticulous criticism.

Of course, no one will deny that there has been a good deal of misleading advertising. I think the advertisers themselves should be grateful to the consumers' councils for insisting on fair advertising and debunking some of the worst claims. But the acts of the present administration indicate a yearning for Government control and regulation of advertising. The leading characteristic of the New Deal is its desire to regulate everything, and advertising certainly presents a field in which they can exercise this yearning on the ground that the people must be protected against fraud. Personally, I don't think that the people are fooled by advertising. They accept it as advertising, and their fingers are crossed until they try out the product and see whether it lives up to its advance notices. The American people are intelligent enough so that they don't need a wet nurse. The danger to the whole country from Government control of advertising is much greater than the danger that any considerable number of people are going to be fooled by advertising.

The danger is that Government control in this industry, as in many others, will so tie down and delay the whole process of running the machinery that the machinery won't run at all. We have seen a recent example in the attempt of the Federal Communications Commission to stop the sale of television sets because they are not yet sufficiently perfected. What would have happened to the radio industry if some Government agency had prohibited the advertising of crystal sets and other early radio developments simply because they were imperfect and would probably have to be superseded shortly by other instruments? What would have happened if some Government agency had refused to permit the advertising of the early automobiles?

Furthermore, we have found before that you can't regulate one feature of an industry without regulating it all. If the Government gets power to tell every newspaper what it shall put in its advertising columns, it is only a short step before it will be telling every newspaper what it shall put in its news columns and in its editorial columns. The resentment of the new dealers against advertising seems to be part of their general resentment against all the newspapers for the criticism which has been showered on so many experiments.

I have been a good deal interested in the difference between commercial advertising and political advertising. Some advertising agencies would have you believe that they can sell a candidate to the people of a State the way they can sell a cake of soap. But it seems to me that there is a fundamental difference. Advertising, after all, does not finally sell even a commercial product. It calls the people's attention to the product. It induces them to go down to the store and look it over. It may sell a sample. The actual selling is finally done by a salesman and by the quality of the product itself. Political advertising attempts something much more ambitious. It attempts to convince the people of a whole State that one candidate is better than another. It must convince a majority of all the people. Most of the people never see the candidate, and advertising does no more than call a name to their attention, which they would find anyway on the ballot. In the end, people form their political judgment, I believe, not so much from advertising, but from a combination of the opinions of their friends, the opinions of various newspapers, and the acts or words of the candidate himself. Advertising plays an important part in politics, but I doubt whether it can ever play the same part which it does in commercial business. Perhaps it is just as well that it should not. If money and skill in advertising alone could choose for us our public officials, the mistakes likely to be made would affect the whole public welfare and create conditions from which the State or county could never recover.

There is another parallel which I think is a bad one. I don't believe a government should go into the advertising business itself. We have in Washington today a Government advertising to a greater extent than any other administration in our history, or, I think, any other government in any other country. The extent to which this Government has gone into advertising itself makes an interesting story. Few people realize that employees of the Federal Government, whose salaries total millions of dollars each year, are devoting all or the major part of their time to publicizing the activities of the Government. This publicity takes the form of press releases, press conferences, pamphlets, radio programs, motion pictures, exhibits, posters, and other media. Undoubtedly much of this publicity is justified, but there is much of it that is not. The farmers' bulletins and other informational publications of this nature may be highly desirable and perform a useful function, but it has been estimated that the output of Government printed and duplicated material has increased threefold since 1933. The Agricultural Adjustment Administration, the W. P. A., the P. W. A., the Farm Security Administration, the United States Housing Authority, the Social Security Board, the Federal Housing Administration, and the Rural Electrification Administration are the more outstanding examples of agencies which have been responsible for this large increase. Many of these functions of government are of a controversial nature, and the administration has undertaken to sell its program to the public and defend it from its critics.

Almost everyone will agree that it is a legitimate activity of government to give out purely factual information about its decisions and activities. It is necessary to keep the public informed about the rulings and decisions of Government boards and commissions. It is decidedly helpful to have the public informed of the various research activities of the Government in the fields of agriculture and commerce and industry.

The more questionable types of advertising take a very different form. Here we have expensive and purely descriptive literature, radio programs, and motion pictures designed solely for the purpose of selling the public on some new function of government. In some of this publicity the critics of the program have been rebuked, and the advantages of the policy in question have been described in the most glowing terms.

I don't care what kind of administration you have, if it indulges in advertising, it is bound to indulge in propaganda. In effect the bureaus of the Government then are really lobbying with the public to get them to come to Congress and insist upon the continuation or expansion of the bureaus' activities. I don't believe any such propaganda is necessary. If Government activities undertaken with the people's money are not such as attract merit

to themselves without advertising, then I don't believe Government money should be spent for that purpose. The Government's spending programs are particularly subject to propaganda. Highly persuasive publicity has been sent out to induce cities and school districts all over the country to launch public-works projects, to induce private citizens to build homes, to induce farmers to accept payments. A publicity program not only helps to get the money out faster, but it has fostered the growth of pressure groups to lobby with Congress for bigger and better spending programs. Certainly it is foolish for Congress to appropriate money to finance lobbying with Congress itself, to do the very things which it should do, if they are good things, without lobbying. In 1913 Congress passed a law forbidding the expenditure of public money for the compensation of any "publicity expert" unless specifically authorized for that purpose. This is still the law (U. S. C., title 5, sec. 54). This law perhaps accounts to some extent for the difficulty in determining how much is being spent for publicity purposes. Many persons who are actually engaged in publicity work are carried on the rolls as editors, statisticians, and other similar designations like information specialist, information adviser, or information clerk. In some agencies they are called radio script writers or special writers.

It has been estimated that a minimum of 1,700 employees of the Federal Government are engaged in the various types of information and publicity work. Their total annual salaries amount to approximately $5,000,000. This estimate includes clerical help and applies to editing, publishing, exhibits, motion pictures, and radio, as well as to press relations. It should be remembered, too, that these figures probably represent a minimum and include only those whose duties are most obviously concerned with publicity. Most of these experts are well paid. In 1936 a survey by the Brookings Institution found that salaries of over $5,000 were being paid to 47 persons engaged wholly or in part in publicity work. This survey by Brookings also found that in the 3 months' period ending September 30, 1936, Federal agencies (not including W. P. A.) issued 4,794 public releases with 7,139,457 copies. On October 1, 1936, the various agencies had 3,004 mailing lists in use containing 2,280,983 names.

The increase in penalty or franked mail is also a good index of the increase in Government advertising. In the fiscal year 1932 the departments and agencies of the Federal Government (exclusive of the Post Office Department) sent out free mail which would have brought in revenue totaling $9,151,899. In the fiscal year 1938 the free mail sent out would have brought in revenue totaling $35,690,807. This is an increase of almost 300 percent.

No; the best function of advertising is to increase production, to put more men to work in private industry, and thus build up a consuming power and a national income which will lead to a continuously happier people. There isn't any doubt in my mind that the increase of production is the key to the whole situation, and that advertising is one of the things which is essential. There are some others. We must encourage men to go ahead with confidence that the Government will not regulate them to death by fixing all wages, hours, prices, and practices, or by taking away in taxes all the money which may be made in profits. There must be some incentive for a man to save and some incentive to put those savings into permanent capital from which he may be reasonably certain of a long-term income. But advertising and salesmanship are still the spark plugs. Suppose tomorrow all advertising came suddenly to an end. We would probably see a deflation and a downward spiral that would make 1933 look like Coolidge prosperity. I have talked to large manufacturers who would like to save the expense of advertising and have tried it. They don't quite know why, but the actual fact is that when they stop advertising their sales rapidly fall off no matter how essential their products.

The cost of advertising is not excessive. Let us take the automobile industry, for example. Less than 40 years ago the automobile was virtually unknown. In 1910 the automobile industry sold 172,557 cars. The total sale price of these cars was $272,200,000. The average price per car was $1,580. There appear to be no statistics at that time to show how much was spent for advertising. The total expenditure was doubtless small, but it is safe to estimate that the cost per car was high because automobiles were new and sales resistance was high.

In 1939 the advertising bill alone for the automobile industry was $39,000,000, or over one-seventh of the entire amount paid for automobiles in 1910. And yet the cost of this advertising took only 2 cents of every dollar spent for automobiles, because in 1939 2,702,120 cars were sold at a total cost of $2,216,000,000. The average price of each car was $820, slightly more than half of what it was in 1910. Where do you suppose this industry would be today if it were not for advertising?

And the same story could be told about scores of other industries. Radio, textiles, plastics, television are only a few, and some of these are only beginning to grow. Of course, there are some industries where the percentage is much higher. I don't mean to say that it may not in some cases be too high, as in proprietary medicines, drugs, and toilet articles. But the faults of advertising are insignificant compared to the tremendous good that it can do. It can put the spark of life into our whole economy, which the T. N. E. C. last July said was "stalled on dead center." The American people have succeeded before. They are the same people. This is the same country. We have come out of every past depression by working hard, saving money, and building up our private industries. If we throw away the Government spending fallacy and stimulate production by the use of advertising and other policies, we should go steadily on to a better national income; to a higher standard of life than we have ever enjoyed; and to a condition in which every man who wants a job can get a job.

National Defense

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

EDITORIALS FROM THE NEW YORK TIMES AND THE BALTIMORE SUN

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD two admirable editorials on the subject of national defense, one from the New York Times entitled "A National Defense Program" and one from the Baltimore Sun entitled "An Adequate Defense Program Is the Paramount Issue."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 15, 1940]

A NATIONAL-DEFENSE PROGRAM—1. THE CHARACTER OF THE PROBLEM

The first step on our part that the events of the last few weeks in Europe now makes imperative is an immediate reexamination of the whole state of our defenses. It is not merely a question of whether Congress should vote more money for that purpose. That is the easiest thing that Congress does. The question is to decide precisely at what points such money is needed and, quite as important, from what other points money should be deflected.

For the problem of defense is intimately related to the problem of the Budget. They cannot be dealt with in separate categories, each to be solved by those who pay no attention to the other. This is because they are both merely special aspects of a problem broader than either of them—that of the most efficient use of our national resources.

That has always been the basic problem when considering such a question as a balanced budget. A balanced budget is a requirement of all sound finance under normal and even under somewhat abnormal conditions. In insisting upon this much the Budget balancers have been altogether correct. The New Dealers, on their side, have been right in maintaining that under certain very abnormal circumstances, or to meet some special crisis, an unbalanced Budget may be unavoidable. The real question is one of practical judgment in view of all the circumstances.

Now, the grave error of the New Deal has been, not that it allowed the Budget to remain unbalanced for a few years when that may have been unavoidable, but that it never worked conscientiously and determinedly toward conserving the national resources, using that term in its broadest sense. It has never convinced the people that all the huge expenditures that it has made, totaling more than $58,000,000,000, have been necessary or wise. In the perspective of the situation of today the judgment must be that it has spent an appallingly large part of this sum in a frivolous, wasteful, and irresponsible manner. It has been spending not only far more than it has been raising through taxation but far more than it would even be possible to raise by taxation without either seriously injuring business and reducing the national production or moving toward an iron governmental control. If we had watched our expenditures closely until now, we would have today far greater potential reserves to draw upon for increased defense. But we have already allowed the Budget to get out of hand, we have strained the national credit, we have built up a formidable army of pensioners and subsidy beneficiaries, we have formed demoralizing public spending habits. We have seriously impaired the resiliency that our Budget should have had to meet the critical situation today.

A small nation with very limited resources quickly learns that it is vital for its spending to be concentrated at those points where spending counts most; and that its other needs must all give way before this necessity. We have been so wealthy that we have not really learned even the principle involved here. The principle is simply that what is spent for one thing cannot be spent for another; that the national resources—the man power and materials—deflected to one activity must be withdrawn from another.

The United States is potentially the greatest military power in the world. But it is only potentially so, not automatically, not actually. It can become so only by a concentration and direction of its strength. We cannot afford to scatter our resources, even our defense resources, recklessly in every direction. We need a strong Navy, as we need a strong air force; but as the total

amount that we can spend on defense has its limits, we must remember that whatever is spent in one direction must be withdrawn from the other; that another 35,000-ton battleship, for example, may mean 2,500 fewer pursuit planes.

Under the leadership of the President, important gains in our defenses have already been made. The Regular Army has increased in size from 188,000 officers and men last June to 242,000 today; the Navy has been altered from a somewhat nondescript collection of old and new ships 10 years ago to a strong and formidable fleet; our air forces in the past 5 years have been materially strengthened. Some $10,000,000,000 has been appropriated for the national defense in the fiscal years from 1934 to 1941, and the annual defense budget is already well over $2,000,000,000.

But it is a mistake to think that mere money outlays give an assurance of adequate defense. It is of the utmost importance to decide at exactly what points our expenditure and efforts are most essential. Our great need is for a well-rounded and balanced defense without serious gaps or bottlenecks. That is precisely the kind of defense that we lack today. What we have had is a series of uncoordinated appropriations recommended by separate and often rival committees. We have a great many technical needs that are difficult to dramatize, though they may be much more vital than some needs much easier to dramatize.

More important even than so many ships and airplanes and antiaircraft guns, for example, is an expansion of our industrial capacity for instantly turning out all this and other military equipment in a huge and continuous stream. It is precisely here that our sales to the Allied nations are of such vital importance to us. It would be the height of folly if we should take any impulsive action now to withhold or restrict these sales, in a short-sighted belief that by doing so we were helping our own defenses. On the contrary, not merely is a continuation of these sales the one effective step we can take at the moment to halt the aggressor nations or to delay their threat to our own national interests; these sales also have the great merit, from the most narrowly selfish point of view, that they expand our own industrial capacity for producing military goods, and do so at a minimum of cost to ourselves.

The problem is one of the utmost urgency, and yet it also requires careful study. This means that Congress should take some measures immediately, and that during adjournment a joint congressional committee, or a special committee of experts, should review the problem in detail and in broad perspective. In a series of editorials, of which this is the first, the Times proposes to examine a few of the gaps and bottlenecks, administrative, industrial, and otherwise, which obstruct our defense program, and demand immediate attention.

[From the Baltimore Sun of May 15, 1940]

AN ADEQUATE DEFENSE PROGRAM IS THE PARAMOUNT ISSUE

This week the President will deliver a supplemental defense message to the Congress. It is assured of a generally sympathetic reception by legislators and public, for there is no one today who will deny the urgency of national-defense issues.

But precisely because these issues have acquired overriding importance they require unemotional thinking, and unemotional thinking ought to be critical thinking. Urgency is neither reason nor excuse for a hysterical haste mistaken for genuine progress. On the other hand, progress is not to be had by unduly protracting debate on clearly fundamental needs, nor by obscuring the candid recognition of those needs through introduction of extraneous themes.

The elements of our national defense may be complex in detail, but the essence of them can be stated briefly. As a Nation we are fortunate enough to possess the chief material factors upon which security can be built. We have great wealth. We have rich and varied natural resources, virtually all of them in a high state of development. We have enormous industrial capacity. We have a geographical insularity that for the time being shields us against effective direct attack by sea or air. And to these things we have added a considerable and efficient Navy, capable, certainly in the present balance of forces on other continents, of insuring that any effort to seize footholds in this hemisphere by force of arms would involve terrible risks for the nation making the attempt.

But these things, valuable and essential as they are, are not enough. History is currently being made at such a tempo that we can no longer be content simply with a single defense service that is adequate for the time being, plus our potential strength. Gold, iron ore, productive power are not to be magically transmuted into armor plate and howitzers; factories are not geared overnight to furnish 11-ton tanks in place of convertible coupes. And while it is true that the war in Europe seems to be undoing military traditions and writing new military lessons at ever-accelerating rates, it is also true that this speed-up of history has reached a point at which we can no longer safely wait to read the very last chapter of the handbook or to hedge against obsolescence. The importance of the machine in war, of the tactics based upon it and perfected only by practice with it, and of the skilled technicians who use and service it, has become so clear that we must accept it as one basis for modernizing and expanding our defense establishment.

Several months past Mr. Mark S. Watson pointed out in a series of articles on this page that despite careful planning we were still some 18 months removed from the day when our existing initial protective force of 500,000 men (Regular Army and National Guard) would be fully equipped with the new arms designed for it; that there were many important items, such as a type of truck, that could be supplied in quantity only after 6 months' delay; and that in the case of other vital items (1,200 of them) no large American factory was prepared to produce in masses. As for the air, official comment was that "work on our planes is ahead of schedule." However, in view of the picture Europe presents we must ask ourselves now whether either that schedule or the program for which it was worked out is any longer sufficient.

It would seem that we now need both a long-range plan that will begin at once the preparations for large-scale industrial production of essential arms and also a short-range plan aiming at immediate correction of deficiencies in the equipment and supply of our existing forces.

Obviously this would entail heavy expenditures. We cannot be deterred by that fact. What we ought to insure is that these expenditures are planned with all of the intelligence we can muster and applied with the utmost efficiency. Senator Vandenberg made a real point Monday when he recalled that in 8 years he had "voted for at least $10,000,000,000 for the Army and Navy and each time we were solemnly assured * * * that this was enough to put our national defenses at par on land and sea." He did not, of course, take account of the fact that "par" has been rapidly changed from time to time throughout those 8 years. For instance, it is quite possible that we now need a two-ocean navy. But it is true that from 1935 up through the estimates for 1940 and 1941 expenditures on national defense have totaled $7,305,000,000, and that, considering the vast size of this sum, we have rather less than might be expected to show for it. However, it must be remembered that much of what seems a big appropriation for, let us say, the Army is devoted simply to maintenance of the existing forces, small as they may be. Take for example the year 1939. In that year we spent $540,704,000 on the Army, of which $258,433,000 went for War Department salaries, Army pay and subsistence, civil functions of the Army, operation of the Panama Canal, etc.

It costs heavily to maintain armies, air fleets, and navies. It costs even more to enlarge and implement them. We must face that. But in facing it we must also demand that the money spent be wisely spent, not so much for the sake of economy as for the sake of security. If reckless discussion and indefinite theorizing have no right place in the present picture, neither has a failure to come swiftly to grips with those immediate needs of defense toward the meeting of which we might take rapid strides. Now as at the time of President Roosevelt's first inauguration it is necessary to put first things first—to see them in their true order of importance and to deal with them in that order.

Plain Economics

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ARTICLE BY JOHN T. FLYNN

Mr. REYNOLDS. Mr. President, before me there is a clipping which I cut from the Washington Daily News almost 1 month ago. I was so impressed by the closing paragraph of this article, reading "Little by little emotions are inflamed and reason leaves us," that I retained this article by the pen of Mr. John T. Flynn.

And so it is. Little by little, emotions are inflamed and reason leaves us. May God grant that reason will not now leave us to the extent of our so thoroughly forgetting our own here at home that we will permit ourselves to be sucked into the wars that rage in Europe and Asia.

I therefore, Mr. President, ask unanimous consent that the article to which I refer be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of April 20, 1940]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, April 20.—The demand for economy in Government goes on to the accompaniment of a rat-tat-tat of bigger and better appropriations and demands for the same.

We are slowly moving to June 30, the end of the present fiscal year. To date we have a deficit of about $3,000,000,000, which is

about $300,000,000 more than last year. But we are not done. Additional funds may be provided for relief so that the deficit may be as much as half a billion more than last year.

Now we are busy talking about appropriations for the coming fiscal year which begins July 1. At the rate Congress is going it is difficult to believe that the deficit will not be greater next year. But those interested in this subject will do well to keep an eye on the Government. It seems determined to use every kind of stratagem to disguise the size of this deficit.

For instance, when the President's message on the Budget was sent to Congress in January he pointed out how the deficit could be cut down by using some of the funds in the Treasury's cash balance as well as the funds in the various Government corporations.

Of course that is a mere fiscal trick. The deficit is the difference between what the Government pays out and what it collects. You cannot alter that figure by subtracting from the amount you use out of your assets. But it now appears that there isn't very much in surplus funds that can really be used.

But now a new stratagem is proposed. It is suggested that we appropriate $985,000,000 for relief next year but permit the Government to spend it in 8 months. That is just fooling ourselves.

Thus, while every effort is being made to produce economy and everybody is talking about it, we plunge headlong into ever higher and higher deficits.

The Norwegian episode is instantly seized on to demand still vaster appropriations for naval construction and Army preparedness. Every event in Europe is taken as a text for scaring the people in order to lead them to spend more and more money on military preparedness as a means of recovery.

In spite of the difficulties of Germany and England in landing armies on a coast only a few hundred miles away, we are led to believe that the danger of enemies landing men on our coast three and four thousand miles away are increased.

One day we are told that we must get ready to protect Greenland; the next, that Japan is about to spring a brace of mystery battleships on us; the next, we are faced with the possibility of a war to see who shall own East Indies Islands—Japan, Germany, or Holland.

Another day the commander of the Navy warns the American people that we face a crisis. And whatever happens at home or abroad it is the ready excuse to spend more millions or billions.

Little by little emotions are inflamed and reason leaves us.

Keep America Out of War

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. DENNIS CHAVEZ, OF NEW MEXICO

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague, Mr. CHAVEZ, at the convention of United Postal Employees of New Mexico, at Tucumcari, N. Mex., on May 11, 1940, on the subject Keep America Out of War.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful to the officials of the United Postal Employees of New Mexico for the kind invitation to meet with you and for the privilege of addressing you this evening. Needless to say, I am deeply honored by the invitation which I wanted to accept immediately, but as it came in the midst of a busy and trying session of Congress, I thought perhaps I would have to deny myself the pleasure of coming here and being with you. However, as luck would have it, the convention is at the end of a week and with modern convenience of travel by air, I was able to leave Washington last evening and arrive here in time not only to be with you this evening but to stop and visit along the way from Albuquerque to Tucumcari.

I am particularly pleased to be here because of the high regard which I hold for the United States Postal Service. I doubt if there is a corresponding group of employees, either private or governmental, which enjoys the respect and confidence of the public as much as the United States postal employees.

My experience, I believe, makes me a fair judge of you and your problems. I was a Member of Congress for two terms, during which time I came into daily contact with the Post Office Department concerning innumerable problems affecting the post offices and postal employees in New Mexico. I enjoyed the work and value the experience, for it made me acquainted with a fine, outstanding, patriotic, loyal, and efficient group of people.

Since I have been in the Senate, I have been privileged to be a member of the Post Offices and Post Roads Committee, where again the problems of the Postal Service are matters of constant concern.

I see before me many familiar faces. I find this a friendly and sympathetic gathering. In spite of being the biggest and most efficient business organization in the world, the Postal Service has a record of public service and public approval unequalled anywhere. Your boss, my good friend the Postmaster General, recently spoke to the convention of the Illinois Chapter of the National Association of Postmasters, in which he called attention to the size of the postal business, and in addition said that the organization was not too big to be friendly. That is the main reason why I am here today. I wanted to be with you, and as good fortune would have it, circumstances gave expression to my desires.

In searching for a subject to discuss, innumerable questions came to my mind. I had to brush them all aside but two, not for fear, I must insist, of recent legislation concerning the activities of Government employees but because I consider these the most important problems of the day and feel that you are interested in them, as everyone else is and should be.

These problems are, Keeping America out of war and promoting domestic security.

The second problem, I know, will be carefully debated in the campaign this summer and fall. Some of us will be allowed to express our opinions in various ways. All of us, however, unless they change the law, will have liberty of conscience and the privilege of expression, at least through the ballot.

But the first problem, which is of equal importance, that of keeping the United States out of war, is not apt to be discussed, as public officials, for some unknown reason, are afraid to talk about it.

I have been criticized many times for being too outspoken. The press in New Mexico takes me to task because I take stands which do not coincide with its opinion. Criticism from the press used to bother me; now I take it as a matter of course, and to tell you the truth, I rather enjoy giving them so much opportunity for discussion by my presence. Incidentally, for their information, I take this opportunity of stating that I have no intentions of accepting either a judgeship or ambassadorship to Patagonia in order to soothe their sensibilities with my silence. I plan to stay in New Mexico, and as long as I am there the people will know how I stand on every issue.

The press can never criticize me for failure to let the people of New Mexico know how I feel or intend to vote on public questions. I want my stand on this issue to be made public.

The problem of keeping out of war, in my opinion, is the most important question confronting us today, and it is one on which public officials should make their views known. I am for keeping out of war 100 percent. My views on this question are unequivocal.

Believe me, as long as I am in the United States Senate, no American boy will be sent to Europe to die on its battlefields by my vote. I want my position to be clear on this point.

The problem of keeping out of war is vital. It is one on which the American people have on many occasions expressed their feelings. It is one in which the outspoken desires of the American people for peace have been crystallized into legislation and law. In spite of the unanimous desire for peace and the declaration of our neutrality by law, indirect and subtle means of propaganda urging our participation in the war unfortunately represent a grave threat to our national security and happiness.

Let's look at the record for a moment. After the last war the American people were a disillusioned lot. We entered the war to make the world safe for democracy and got nothing but contempt and scorn from those whom we had helped, and democracy was still as scarce a commodity on the European continent as before the war. The debts which the American people had taken upon themselves in order to prosecute the war themselves and to finance the expenses of the Allies and to aid in the rehabilitation of war-torn Europe after the war were never repaid, and when we asked them to honor their obligations we were laughed away with contempt and called Uncle Shylock.

We learned a lesson from the last war. We learned from that bitter experience that Europe's thousand-year-old problems are not our problems. In trying to solve Europe's problems we were badly burned, but we came out of it with a treasure of experience which may have been worth the price. The American people learned that in Europe lasting peace is apparently impossible.

Then came the attempts to lead the American people into Europe's problems through the back door. The American people did not want the League of Nations; they did not want the World Court; and when Senator JOHNSON of California presented his bill to bar credits to European nations which had defaulted in their war debts to the United States it received the overwhelming approval of the House and Senate, and it is today the law of the land. The Congress which approved that legislation knew full well that the time would come when the nations which had refused to pay just debts to their former allies would again want their friendship and assistance. I was privileged to be a Member of that Congress and to support the Johnson bill. I believed in its principles then and I am for its provisions today.

Through the critical period of the early 1930's, the menace of war in Europe became more and more apparent. All Europe threatened to become engulfed. The American people were fearful lest we become involved. Congress again, noting the anxiety of the people and cognizant of the unanimous demand that we stay out of Europe's quarrels, passed the original Neutrality Act and placed an embargo on the export of arms to Spain. I voted for the original embargo law. I have always felt that trade in munitions contributed materially toward our entrance in the last war and I did not want to see it repeated.

The sky became more ominous—all the signs pointed to war. I feared the consequences of a European war, for I knew that there would be grave danger of our participation. My record is clear on this score.

Before the war broke out, I felt that it was my duty, as representative from New Mexico, a State at the crossroads of two civilizations—where Spanish and Anglo-Saxon cultures have met and merged, to advocate such a program of friendly relations with Latin America on every occasion possible. I said then that in order to cultivate the friendship of Latin America that it would not be enough to give evidence of our friendship by the operation of the good-neighbor policy alone; that the overbearing and swaggering attitude, both official and commercial, which characterized our relations with these nations in the past left sores too deep to be healed simply by extending the hand of friendship; that it behooved us to show these nations that we appreciate a culture which is in many ways totally different from our own.

It was easy for me to see the problem, just as I know it is easy for people who live in New Mexico to appreciate it, because we know that it is possible for two different peoples, living side by side, to get along without strife and entanglements. Just as in New Mexico, where we are divided racially about equally but where we are united 100 percent in Americanism, it is possible on a larger scale for the United States to work with the Latin-American countries for the development of a Western Hemisphere defense. I advocated then that the United States start immediately toward the development of closer ties to insure ourselves against becoming involved in the coming European strife.

In August 1937, when we were originally trying to get an appropriation for the Coronado Cuarto Centennial, I made a speech in the United States Senate in which I called attention to the importance of developing our ties with South America then, in order to cushion the effect of an Europeon conflagration which I felt was inevitable. I knew then that if we did not cultivate markets and friendships with all nations which were to be neutral, that our economic interests in case of war would tend to draw us in.

In 1938 I had an idea that a governmental radio station broadcasting to Latin America would be a good thing for promoting better relations and stronger ties with South America. I spoke over the National Broadcasting Co. system and urged the development of friendly relations with our neighbors to the south. I said then that the United States could not live in complete isolation; that there is an essential difference between economic and political isolation. From Europe I wanted political isolation; economic isolation I knew would come inevitably with the outbreak of the war. For South America I advocated the strongest possible political and economic ties in order that Western Hemisphere defense be organized to such an extent that it could not be assaulted from any other section of the globe, either by military invasion, economic warfare, or by an ideological onslaught incompatible with our concepts of freedom and democracy.

The Spanish civil war came to an end. On March 1, 1939, in the Senate, I urged the recognition of the Franco government on the basis of our historical policy of neutrality and recognition. I thought then that questions of sympathy and ideology were not concerned; that the interests of the United States could best be served by following a consistent and traditional policy of neutrality toward nations and peoples, and that ideology should be reserved for personal discussions and sentiments, but not for official manifestations of national policy. In that speech I traced our historical policy of neutrality beginning with Washington, who, in his Farewell Address to the people of the United States, said:

"The jealousy of a free people ought to be constantly awake; since history and experience prove, that foreign influence is one of the most baneful foes of republican government. * * * Excessive partiality for one foreign nation and excessive dislike for another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other."

Washington's plea was for no foreign entanglements. He advocated and insisted upon law and peace and Americanism at home as a safeguard for our Republic. In other words, he advocated then that our foreign policy, and certainly the domestic policies of foreign nations, should be considered entirely from the single standpoint of our own welfare.

I agree with this philosophy; I hold the further conviction that becoming involved or sympathizing too greatly with the domestic affairs of foreign countries will automatically lead us to war. Selfish, perhaps, but certainly just plain, common, ordinary Americanism of the stamp advocated by the Father of his Country.

Again on May 11, 1939, over a national radio hook-up, in a speech entitled "Pan Americanism Versus European Meddling," I said that we had two choices—first, meddling in European affairs, the price of which was war and disaster; or, second, the development of our ties with Latin America. Let me quote from that speech. What I said then I believe holds true today.

"Pan-Americanism is vitally important to us because it offers a solution for the problem of isolation. It represents a haven in which the people of the United States and of this continent can seek refuge from the international tyranny of the world. It is absolutely necessary that we devote all our energy toward developing our relations with the Latin Americans.

"Meddling in the affairs of Europe can have but one result. It will lead to war and disaster.

"Pan-Americanism, on the other hand, tends toward peace. The choice between these two will have to be made. To me the choice is simple. Pan-Americanism is the answer. It creates for us a barrier more extensive than our own shores to the hatred and bitterness of Europe. Toward it we can strive with joyous hearts, because it leads to peace."

Finally, on September 1, 1939, came the event that everyone had predicted: Germany invaded Poland and the war was on. Immediately arose the question of preserving American neutrality. Americans everywhere were worried; our fears mounted. During this period we had one comforting thought, President Roosevelt's solemn declaration on several occasions that while he was in the White House he never expected to see American troops sent abroad.

Immediately there arose the problem of the Neutrality Act. Congress, which previously had refused to amend the law in its regular session, was summoned into a special session last fall and a new neutrality bill was presented.

Originally, we are told, the State Department proposed a law revoking the Neutrality Act and returning to principles of free action, but congressional reaction to this proposal was too strong. Congressional leaders advised the State Department that the people were demanding at the very least the rigid provision of cash-and-carry and a restriction of our merchant vessels. Congressmen and Senators had heard from the people back home, and the answer was clear and impressive. The people wanted to stay out of it.

The debates in the Congress were long and tedious. Spokesmen arose in the Senate and in the House of Representatives and over the radio and from public platforms and acknowledged that it was the intention of the American people that this country should stay out of the war. Senator PITTMAN, one of the leading advocates of the revision of the Neutrality Act, declared in Senate debate that he would never vote to send American troops to Europe.

In my speech on that occasion I said that the experiences gleaned from the last European war would reinforce the determination of our citizens to remain aloof from participation in a struggle which we had neither created nor fostered. I traced the traditional national policy of complete, effective, and absolute neutrality toward all belligerents. I asked on that occasion that we remember that we are Americans first and last, and that when this country was founded and its democracy established we had shaken from our feet the blood-trampled dust of Europe with the primary purpose of escaping from racial hatreds, undying animosities, ever-recurring conflicts, and the utter inability of peace to survive on the European continent.

In my second speech on the Senate floor I again reiterated my declaration to vote against the revision of the Neutrality Act and the proposed lifting of the arms embargo and I offered an alternative to the anticipated profits which proponents of the measure told us would come from the sale of our munitions to Europe. I proposed to substitute the formula "profits out of peace" for "profits out of war." Let me repeat my proposals:

"First. Develop our national defense—at peacetime prices for labor and materials—to such a point that no nation or combination of nations would dare attack us.

"Second. Cultivate our economic relations with Latin America, if necessary by subsidizing our shipping.

"Third. Enlarge the facilities of the Panama Canal.

"Fourth. Provide funds for the construction of a Nicaraguan Canal and possibly the Mexican-Tehuantepec Canal.

"Fifth. Build addition transcontinental highways to and through Latin America comparable to the projected Pan-American Highway.

"Sixth. Under suitable guaranties, arrange for tong-term investments in Latin America, improvements of a permanent nature, such as utilities, including transportation facilities, communications, and water-power resources."

I said in this connection:

"An expenditure of $10,000,000,000 in peacetimes would make possible the development of this program. Such a sum is only one-tenth of the estimated cost of our participation in the European conflict, and will involve no loss of life and no destruction, as an aftermath, of our present political system. If we must have profits, let them be legitimate."

The Congress passed the bill and the sale of arms to Europe was made legitimate, but rigid restrictions were incorporated into the act.

The Neutrality Act as it now stands accomplishes two great results; it restricts the presence of American vessels in European war zones. From the beginning of the war up to date we have suffered not one single casualty as the result of the sinking of an American ship, for the simple reason that American vessels are not permitted to enter the war zones of Europe. The second contribution of the Neutrality Act is the cash-and-carry provision. Though I was opposed to the revision of the original Neutrality Act, if it was to be

revised and the sale of munitions permitted, I favored cash-and-carry. I was in favor of this not because it seemed to me that paying in cash was more defensible than paying by credit, but because it served as a limitation to our participation in the European conflict.

What is our situation today? The latest news from Europe tells us that the war becomes more terrible and widespread every day. Now, more than ever, should we strengthen our determination to stay out.

There are rumors that certain foreign agencies have been trying to make arrangements for buying on credit. This is a point with which all of us should be familiar, because when we speak of buying with credit, immediately the Johnson Act and the cash provisions of the Neutrality Act stand diametrically in the way. In other words, to arrange for credit means that the Neutrality Act must be amended, and, second, that the Johnson Act must be repealed, and both of these acts have been endorsed by the American people.

After the last war, through the disillusionment of the twenties and the apprehension of the thirties, when war threatened to engulf the world, we inserted into the law of our land a declaration that we would never again repeat the mistake of selling to the warring nations on credit.

The dance of death of the last war is very familiar to us. The steps then were simple—there was sympathy; there was profit, followed by credit, followed by the desire for the protection of our investments, and then, notwithstanding solemn promises and election campaigns based on the slogan "He kept us out of war," we found ourselves ready to give one side of the conflict only naval and economic assistance. But it does not stop with that. The next step was the American Expeditionary Force—the doughboys were over there.

The American people know today that when you have a credit interest in war you are economically hog-tied to the cause and victory of those to whom the credit has been extended. The heart is often where the pocketbook is. It is time for us to do some serious thinking about this problem. We must be familiar with all of its meanings, if we are to remain at peace.

In the first place, the question of credit for the Allies must be analyzed. There is no question but that the sympathies of the American people are on one side of the conflict. Equally true is our determination to stay out of war. But in spite of these points, do the Allies need credit to beat Germany?

In the 7 months of the war it has cost the Allies some four billion dollars, but only a small fraction of this was spent in the United States, and this mostly for munitions. The Allies have been buying from us only what they could not get from their own systems. The French and English have some ten billion dollars in the United States with which they can purchase war materials. This is in the form of investments, bank deposits, and gold reserves. In addition, their gold mines alone produce $800,000,000 worth a year. These funds are now available. In other words, at the present rate of purchase, the Allies should be able to carry on at least until 1943.

We have placed at the disposal of the Allies our entire industrial machinery. Our latest designs in airplanes go to supply their needs rather than to fill our own orders at a time when our national defense is so important. The Allies are getting help from the United States in every way short of war. What they need now is not credit from the United States, or, for that matter, even our soldiers—they need leadership. Leadership capable of making decisions and carrying them through. This the United States cannot supply. This they must furnish themselves.

In spite of the above obvious fact, the pressure for revision is becoming stronger every day. Therefore we must familiarize ourselves with the arguments which we will soon hear advocating the repeal of the Johnson Act and the revision of the present Neutrality Act.

Soon we will be told that not to give credit will shut off business and will be dangerous; that unemployment will increase and that industry will be disrupted; then the next thing we will be told is that our own preparedness will be undermined by depriving our Army and Navy of a going war industry if we do not give credit. Then the farmers will be told that they are the victims of the cash provisions of the Neutrality Act because the Allies have been forced to use their resources for war planes and that they must purchase agricultural products elsewhere, and that only if they are given loans can the American farmer get his product to their markets. Other arguments besides these will be presented to the American people. They will be told that the fate of the Allies will be decided by whether or not the American people will stand for revising the two acts to allow credit. To bolster these arguments, America will be told that she must decide whether she wants the dictatorships or democracy to rule in Europe.

We must remember that the question of credit for the warring nations of Europe has already been answered by the American people. There should be only one consideration at this time and that is our own national self-interest. Let us not talk in terms of who is responsible for winning or losing the European war. Let us talk in terms of what is good for America and what the people of this country want. The American people want peace and it is no answer for the defeatists to tell us that sooner or later we will have to be in it. I say that we do not have to be in, now or later. I say that it is against our interests to be in it at any time. American participation in Europe's war does not solve a thing. It merely buys us a greater interest in European quarrels for the rest of time. It means that every 25 years we have to send our boys to hold things down for them over there. It means that in the meantime we exhaust our resources, and tax ourselves to death to pay for wars which are not ours, wars which we do not start, wars which we cannot stop unless we embark on a policy of policing the world, and wars from which we derive nothing but suffering and misery for our people.

Think of our position today. We in Tucumcari, as everyone else in this glorious country of ours, are enjoying the untrammeled benefits of peace. Abroad, the nations of the world are at war. A new world is being formed. Where the victory will lie, we do not know. What the new world will look like is difficult to see, but we know what kind of a world we live in here. We know that we love and cherish our institutions, and our liberties, and our peace. We have our own situation to think of. As I have said before, there should be only one consideration and that is our own national self-interest.

My opinion today is the same as it was in 1937. I think that our interests are intimately tied up with the economic and military defense of the Western Hemisphere. I think we have enough to do at home in saving ourselves without going abroad to save anyone else. In the first place, America does not want war. The American people have been polled, and the answer is always, "Peace." In the second place, the American people are not going to be fooled by thoughts of military invasion of this country, or for that matter, of other places in the Western Hemisphere. I know that we hear that Greenland, Mexico, and South America will be threatened should the outcome of the present conflict be a certain way. But one has only to reflect on the difficulties encountered in transporting troops a few hundred miles to Norway in the recent conflict to be assured of the absurdity of a military invasion of the Western Hemisphere. This does not mean, however, that we should relax our defense. On the contrary, our Navy must be built and maintained to a degree second to none. We must have an air force as good as any on this earth in order to defend our own interests. Along with this we have the task of organizing the economic defense of the Western Hemisphere.

Whenever peace comes to unhappy Europe, one thing can be assured, irrespective of the outcome, whether the Allies or Germany win, there will follow an economic invasion of the neutral markets of the world. The markets which England and France on one side and Germany on the other have lost in South America and the few other remaining neutral portions of the world will witness bitter economic conflict. The economic methods of the dictatorships, which we despise, will be adopted by the Allies out of sheer necessity, should they win. The period after the war will be one of fierce economic rivalry, and to make matters worse, the rivalry will be encouraged and subsidized by governments. Every government in the world by high-pressure trade tactics or other closed exchange arrangements will fight for markets and sources of raw materials.

It will not be to our interests to see such tactics used in the Western Hemisphere and we will be defenseless against them unless we build now. If we are indifferent now, Latin America will be indifferent then.

My program for peace is simple. I think we should maintain a strong determination to stay out of war. We should guard against back-door methods of getting in, such as proposals which will inevitably be made to revise the Neutrality Act to allow the purchase of munitions by credit, and the revocation of the Johnson Act preventing credit to nations in default of their war debts to the United States. Next we must insist on the adequacy of our national defense. Then we should demand of our public officials, especially those elected as our representatives, that they pledge themselves to work for peace. Along with this, I think that the United States should sponsor the development of a strong hemispheric defense. The Americas must be united in a military, economic, and cultural defense and throw about them impregnable walls behind which we can be safe from the onslaughts of Europe or Asia.

It is impossible for us to close our eyes to what is going on in Europe. Modern communications bring us the news as soon as the event has taken place. Friday morning the newspapers told us in boxed headlines the story of the ruthless invasion of peaceful Belgium, Holland, and Luxembourg. We must learn to expect this. War is and always has been terrible, and the new implements of destruction which science devised for us make the destruction of modern warfare even more terrible than in the past. This war will grow, but the more it spreads, the more terrible it becomes, the stronger must be our determination to stay out. The task ahead of us, if we are to stay out, is difficult. We will be reviled and insulted by those who want our assistance. We will be scorned and rebuked by those in this country who want us to participate in the war. We will be tempted by alluring baits, such as rich farm markets. We will be threatened by the disaster which will overtake us if we don't help. We must be prepared to go through all of this if we are to have peace. Noting the days ahead, realizing the difficulties, but confident of what the majority of the American people want, I am convinced that we will stay out.

Activities of the Labor Department

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SECRETARY PERKINS BEFORE NATIONAL INSTITUTE OF GOVERMENT

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered on May 4, 1940, by the Secretary of Labor, Miss Frances Perkins, before the National Institute of Government.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure to have the opportunity to report on the activities of the United States Labor Department during the past year and to review some of its accomplishments since the launching of a comprehensive economic and social program in 1933. Substantial improvement in the lot of wage earners has been brought about through more numerous opportunities for employment, increases in wages, decreases in maximum hours of work, and safer and more healthful physical conditions of work. These and other benefits are the cumulative result of a far-reaching 7-year program designed not only to aid workers but to better conditions for farmers, to increase the earnings of business, and to make safer and more profitable the holdings of investors.

The following concrete figures will show you direct economic gains made since 1933: Total nonagricultural employment in the United States was 33,928,000 in March this year. In March 1933 it was 26,086,000. In other words, there were nearly 8,000,000 more men and women drawing pay envelopes last March than in March 1933. This does not include an additional approximately 2,500,000 persons who had work on W. P. A., C. C. C., and N. Y. A. Weekly factory pay rolls rose from $72,697,000 in March 1933 to $185,818,000 last month. This is an increase of more than $113,000,000.

These gains have been accompanied by social advances made through legislation designed primarily to benefit the wage earner, but also in the public interest, and the combination has operated to promote the general well-being of this generation and those to come.

Among the programs designed since 1933, to overcome unemployment which have emanated out of the Department of Labor's continuous study of this problem are the following:

1. An immediate recommendation early in 1933 that there be some quick relief in the way of Federal appropriations to assist the States and localities in meeting the primary relief needs of the people who were then unemployed and had been unemployed for a long time in the emergency of general depression.

2. A program of straight public works and the conception of finding special work for those who could not be absorbed on straight public works.

3. The Wagner-Peyser Act, which established well-equipped, free public employment offices as a method of taking care of the effective placement of persons looking for work where there was work to be had, so reducing the loss and waste of poor placement of those seeking jobs.

4. The Public Contracts Act, which required not over 40 hours and a fair minimum pay on Government contracts in manufacturing.

5. The Wage and Hour Act, which was the first effort to establish on a Federal basis a floor to wages and a ceiling to hours.

6. Unemployment compensation, which is an adjustment for the loss of wages due to the accident of unemployment.

7. Contributory old-age insurance for the future and Federal assistance to the States for providing old-age assistance to aged needy persons. These programs were adopted partly to enable the elderly to leave the labor market and so offer more employment to persons at the peak load of their responsibilities.

8. Limitation on the employment of young persons under 16 years in the National Industrial Recovery Act, and later in the Public Contracts Act and the Wage and Hour Act. These provisions were aimed partly at keeping the immature workers out of the labor market and so offering more jobs to those in middle life.

9. The development of the Civilian Conservation Corps as a form of constructive educational employment for young men.

The various programs to shorten hours have been aimed at providing more job opportunities in industry and programs for lifting the wage minimums have been aimed at creating a new purchasing power, which would in turn, by its demand for goods and services create new employment opportunities.

All these programs are in operation and have greatly improved the total picture of unemployment both quantitatively and qualitatively. The purchasing power developed by some of these programs and the reemployment both private and public, brought about by others have notably improved the situation and relieved the strain. The effects will be noted increasingly.

The new frontiers which always have been looked to in our system to develop opportunities for new industry are not closed. They are not necessarily geographical. The new frontiers rest on improvement in the standard of living, not only of the people of the United States but of the whole world. Gradual improvement and increase in the standard of living, and therefore the opportunity to buy the products of manufacture and farm, is one of the things to which we must look in the future for the expansion of opportunity for industries and for employment.

There is a steady building up of employment and increase of pay rolls, which also show that more people are working full time, and therefore have more money and spend it. However, the fact that the index of employment is up does not mean that everybody who wants work is working. It does not take account of all of the additional population of working age who want to crowd into industry. Part of this additional population has now acquired the habit of going to school and college. Unemployment, however, is spotty and variable, not static.

Some industries now employ more people than they ever employed in their history and other industries are employing fewer. Technological changes are taking place in some industries at a very rapid rate and in other industries such changes seem to have reached their peak or not yet to have arrived.

Of all factors involved in the stabilization of employment and bettering the terms under which it is carried on, none is more important than the relationship between employer and employees, and in this connection I can report that there was continued improvement in orderly, effective industrial relations between these two groups last year. This is reflected in the character of the work performed by the Conciliation Service of the United States Department of Labor, which reports that the emphasis and time charge is shifting from the adjustment of strikes to the prevention of strikes and lock-outs. Ninety percent of all the controversies brought to its attention before an actual strike had taken place resulted in a settlement. Moreover, there has been a great increase in the number of cases where either employers or workers called these situations to the attention of the Labor Department in ample time to make adjustments before the necessity of stoppage of work, and the adjustments, of course, were made by the simple process of conciliation. There also has been an increase in the number of arbitrations voluntarily agreed to and requested by both parties, and a great increase in the number of formal conferences participated in by conciliators, which solved problems that might otherwise have led to industrial disputes.

The Department of Labor is operating through many activities to fulfill its purpose as set forth by law. For instance, it is now concentrating, through the Federal Committee on Apprentice Training, on developing proper standards and suitable opportunities for true apprentice training of younger people. The first objective is to provide proper training for those young people now employed in skilled occupations and to establish the necessary standards and organizations to provide full training for other young men and women as they are needed.

The plan is taking hold and gives every promise of proving of high value to many young people and to employers as well. A year ago our apprenticeship staff had a difficult time convincing people that apprenticeship standards should be set up. It was necessary to point out that skilled workers could not be trained in most cases in less than 4 years. It was emphasized that employers and labor groups should get together so that young employed workers might be given thorough training, both through their work and through supplemental instructions in subjects related to their trades. There was no need for training more workers than there would be jobs. This is still true, but there is need for the highest possible quality training job that can be done, and it is toward this end the Department is striving.

The United States Department of Labor itself, as an operating enterprise, has been considerably overhauled since 1933 with the view to making it more effective for carrying out the underlying purpose as expressed in the basic act—to foster, promote, and develop the welfare of the wage earner of the United States. Procedures have been simplified, duplication of effort and responsibilities has been eliminated, bureaus having different functions but utilizing the same material for their information have learned the art of having one common pool for statistical and economic information. Inspection and investigation services also have been pooled so that no duplication of effort or waste motion takes place. Business management has been centralized, and all this has been planned for the purpose of getting the best and most complete results on the small amount of money spent, but functional organization and approaches have been maintained.

Even the close relationship of the Department with the activities of the Social Security Board in the field of unemployment compensation and old-age insurance has been developed on a cooperative basis. So has that with the Labor Relations Board.

Two types of activity are appearing clearly in the work of the Department of Labor. One deals with the investigation of situations that appear unfavorable to working people, reporting upon these findings and devising a program with consultation and advice to overcome the disadvantages found under the investigation. For these services the Department's personnel should be sympathetic, alert, and imaginative to find and foresee those conditions which are adverse to the life of wage earners and can be corrected. The other type of activity lies in the field of the enforcement of statutes—the Public Contracts Act, the Bacon-Davis Act, the Wage and Hour Act, and the immigration laws. In all of these the spirit and purpose of the law must be fairly and justly interpreted and applied, with every opportunity to all parties to have their grievance or their objection fairly and judicially considered.

One type of activity in the Department of Labor strengthens the other. The realistic necessities of enforcement and administrative work serve to make the research and investigations more realistic and more practical. While the unfavorable conditions found during investigation serve to illuminate and humanize the administration and enforcement of statutes, the effort throughout is to build gradually a democratic system of order based on truth, cooperation, and justice, out of which peace and freedom in this important sector of human affairs will establish themselves.

Citizenship Day

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

LETTER FROM JUDGE ALBERT H. SCHMIDT

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Judge Albert H. Schmidt, of Manitowoc, Wis., relative to the origination of Citizenship Day in the United States.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MANITOWOC SCHOOL OF VOCATIONAL AND ADULT EDUCATION,
Manitowoc, Wis., May 9, 1940.

Senator ALEXANDER WILEY,
Washington, D. C.

MY DEAR SENATOR: It has come to my attention that Los Angeles and other places claim the credit for originating Citizenship Day in the United States. The credit rightly belongs to Manitowoc County, Wis., and I trust and I know you will zealously defend that right and let no one, high or low, deprive us of that honor.

The Manitowoc County plan and program was the first of its kind inaugurated and carried into execution in the United States, with a well-planned course of study by qualified instructors for those who arrived at the age of 21 during the past year for each town, village, and city ward in the county, with appropriate spiritual services in all the churches, and impressive and dramatic public induction ceremonies, with oath administered and appropriate certificates presented to the new electors, preceded by a colorful parade that graphically and dramatically pictured the Bill of Rights of the United States Constitution and the origin and progress of our form of government. In other words, it was different, distinctive, outstanding, and alone in its merits and completeness from any other plan or program ever suggested and actually carried out.

People were here from all parts of the country, from as far away as Boston and Montana, and all said there was never anything like it in America. If that were not really true, would the Manitowoc plan have attracted the favorable comment and opinion of the press and the people of the entire country, hailing it enthusiastically as something new and really worth while in America? Would the National Broadcasting Co. have come here and given us a coast-to-coast hook-up as it did? Would the Radio Guide of that week have carried its leading front page, plus article on the Manitowoc plan? Would newspaper editorials, including the country's leading metropolitan newspapers, like the New York Times, the Boston Transcript, the Christian Science Monitor, the Chicago Tribune, California newspapers, news commentators, news syndicates, and magazines everywhere have endorsed it as both new, important, and promising? And would all the big sound news reels have been here last year? Would the Manitowoc parade and ceremonies have been shown on all news films in the movie houses in the United States?

For years others talked of the idea, but nobody did anything about it. Furthermore, the Manitowoc Plan was the first plan of its kind to be planned as a county community project, and was planned from the very start in 1938, not just as a local program, but as a national movement. And I know whereof I speak. I need but direct your attention to the statement in red ink and underlined at the top of our official letterhead, which I personally suggested and designed, towit: "Our aim is to set a pattern for a permanent National Citizenship Day." Yes, from the very outset, I pictured and treated it by speech and newspaper articles here and elsewhere as a national movement and insisted that it be so considered. And my insistence bore fruit and my prophecies came true. Naturally, I am deeply interested. In fact, it was I who, practically single-handed at the start, took the idea out of the realm of mere ideas and put it into the realm of realities. This took time, effort, and enthusiastic persistency, for as usual, there was considerable doubt, indifference, and even opposition; some of it even within our executive committee. Some scoffed and many laughed, even telling me to my face I was crazy, all of which caused me only to redouble my efforts and my interest.

Please do not misconstrue these remarks. I claim nor seek no personal or special credit. I am merely frankly stating the facts. And I cite these only to show that Citizenship Day didn't take form and life and spring into being of its own volition. It took lots of work, and the entire county, as a community, cooperated in fine shape. I was and still am interested only in the success of the movement, and that Manitowoc, Wis., gets its due reward and credit.

Again, where did the idea to have Congress, by joint resolution, establish Citizenship Day as a permanent national day of observance come from? From Manitowoc, Wis. Again I know whereof I speak. For it was I who first conceived the idea of a joint resolution by Congress in 1938, and I didn't only think or dream or talk about it, but I put it into actual execution last year. I personally drafted the joint resolution passed by the Wisconsin Legislature last year (May 10, 1939), and I took pains, without having anyone else suggest it to me, to embody in it a direction that the legislature memorialize Congress to establish Citizenship Day nationally. I also personally drafted and had passed at the National Convention of the Fraternal Order of Eagles, last year, a resolution endorsing the Manitowoc County Citizenship Day plan, and calling on all its Aeries and 700,000 members to actively participate in such ceremonies and programs, as well as memorializing the Congress of the United States to establish it as a permanent national day of observance. As a result a joint resolution was introduced in Congress last year, but did not reach passage. A joint resolution was again introduced in Congress this year. Where did that originate? Again in Manitowoc. All of the above was given wide publicity, both last year and this year.

As to the claim of Los Angeles and the "I Am an American" Panegyric Foundation. I was in Los Angeles in March, 1939. A leading Los Angeles newspaper carried an extended interview with me on the Manitowoc Plan, and ran a three-column cut of me. Through the efforts of the Los Angeles Rotary Club, I delivered a Mutual System radio address on the Manitowoc Plan, and upon request opened my address with these words: "This is the beginning of a movement for a national Citizenship Day in the West." This address received much favorable comment. As an example, I enclose a most remarkable letter dated May 8, 1939, from Venice, Calif., received after I reached home (exhibit E).

Another letter I received from a Los Angeles resident, mature and reliable: "Los Angeles, May 13, 1939. Dear Judge: I had a nice visit with Mr. Benjamin E. Neal, general chairman of the 'panegyric foundation,' and he was glad to know of the progress made at Manitowoc and the coming 'induction ceremonies' for the 1,200 new voters on Sunday, the 21st (May 21, 1939). He as well as many others will be 'listening in' and later scanning the newspaper reports to learn all about your 'affair' and hopes it will be a big success. I learned from him yesterday that their 'panegyric foundation' was established early last fall but that they had not got 'under way' and had not lined up as yet a real 'public program,' although they had had in mind the so-called 'young Americans.' He said that Luther Mack, one of their general committee, had talked of their getting busy over a year ago. Their June 12, 1939, 'I Am an American' day will be followed out along the lines of the 'Wisconsin-Manitowoc citizenship idea' as advocated by Professor Colbert and made clear by yourself over the radio (here in Los Angeles). I told him Professor Colbert first advocated the idea 3 years ago and that you 'took off your coat and hat' early last fall (1938) and got busy. I showed him your correspondence and news clippings to me, which he read with great interest, and I told him of your standing in the Middle West and in university circles and your political and radio experience. All to which he listened carefully. He told me that he expected to say some nice things in re the Manitowoc work and said he hoped 'we could work in close cooperation with Los Angeles at one end and Manitowoc at the other.' I think you made a 'scoop' when you came here in March. Mr. Neal intimated we must have worked pretty fast."

My radio address at Los Angeles in March 1939, which was entitled "National Citizenship Day—Its Origin and Significance," the Manitowoc plan, brought wide and favorable comment as something new and of vital importance by many prominent people in Los Angeles and the West, including even some committee members of the panegyric foundation. No claim, assertion, or intimation was heard that it was something old in Los Angeles or had originated there. Even the radio announcer and one of the Los

Angeles papers were fascinated by the Manitowoc plan. I am enclosing the telegram dated May 20, 1939, from Mark F. Jones, Los Angeles (marked "Exhibit A"). Furthermore, my address and that of President Dykstra and Chief Justice Rosenberry were read into the United States Senate RECORD last year. Nobody disputed our statements. I enclose a letter, marked "Exhibit B," from a prominent Los Angeles gentleman, who is a member of the Los Angeles Panegyric Foundation.

And yet, in the face of all of the above facts, in the face of the wide, favorable, Nation-wide publicity which the Manitowoc plan received for months, even in California, and is still receiving, including expressions from outstanding men and women from all parts of the United States, all in behalf of the Manitowoc County Citizenship Day plan movement, Mr. Edward Arnold, of Los Angeles, has the hardihood to write me under date of April 27, 1940: "We are much elated over the interest that the entire Nation seems to be taking in the 'I Am an American' movement, and communities like yours who have pioneered in citizenship recognition are deserving of our sincere appreciation."

How can anyone rightly assert as he does, "The interest that the entire Nation seems to be taking in the 'I Am an American.' when since September 1938, newspapers, magazines, commentators, and prominent men and women were pouring out favorable publicity as to the Manitowoc plan and nowhere referring to the Los Angeles program, which at most, though it was not like our plan, was still only an idea and not put into execution until June 12, 1939.

Yes; we insist that to Manitowoc, Wis., rightfully belongs the credit and the honor, and we shall defend that claim to the last and permit no one to deprive her thereof, and we shall be everlastingly grateful if you will constantly be on guard so that no one, by any possible means or method, either fair or foul, shall be able to impair the good name of Manitowoc County, Wis., or deprive her of the honor she justly deserves. I thought it only fair to advise you of the facts so that you could intelligently and successfully perform your full duty in the premises—all, of course, without any ill-will or envy toward any other group, community, or organization—but Wisconsin must always be vigilant lest others take that which justly belongs to her. We ask no more and no less than we are rightfully entitled to.

We feel confident that with your experience and sound judgment you will know what to do, and how and when to do, whatever may be wise and necessary in the premises.

With every good wish,

Sincerely yours,

Judge ALBERT H. SCHMIDT,
Program Chairman.

N. B.: As a part hereof I enclose our official 1939 program, marked "Exhibit C," and all the addresses at our public induction ceremonies Sunday, May 21, 1939, marked "Exhibit D."

A. H. S.

The Meaning of Democracy

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ADDRESSES BY MRS. THOMAS F. MCALLISTER AND MRS. FRANKLIN D. ROOSEVELT BEFORE NATIONAL INSTITUTE OF GOVERNMENT

Mr. BARKLEY. Mr. President, I ask that there be inserted in the CONGRESSIONAL RECORD the remarks of Mrs. Thomas F. McAllister, director of the women's division of the Democratic National Committee, introducing Mrs. Franklin D. Roosevelt, and the remarks of Mrs. Roosevelt, on the occasion of the final session of the National Institute of Government, held in Washington on May 4, 1940, which was attended by 5,000 women from 48 States and Puerto Rico.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF MRS. THOMAS M'ALLISTER

In America there is a citizen who has courageously espoused the cause of freedom—freedom of speech, freedom of assembly, the right of people to live under a government of their own choosing—who has used every effort to advance the cause of women in the Nation and in affairs of government, and whose helping hand has always supported our youth, our aged, the disinherited, the dispossessed—the beloved wife of our President, Eleanor Roosevelt.

This inspiring meeting of so many thousands of Democratic women, who have come from remote and distant places in our country, is a tribute of affection and admiration to Mrs. Roosevelt.

It is a mark of recognition of what she has done for the democratic way of life, for the Democratic Party, and for the cause of women in a democracy.

In affection and devotion, I have the honor to present Mrs. Roosevelt.

ADDRESS BY MRS. FRANKLIN D. ROOSEVELT

Madam Chairman, Mrs. McAllister, Miss Dewson, madam secretary, and ladies, I don't really know at this late hour when you have been hearing so many things that there is much left that you want to hear so I am going to tell you at the outset that it is going to be very brief. There is just one thing which I have been hearing from a number of old-time politicians in our party. They have been saying the last day or two, "What is the political significance in the coming of all these women?"

Well, the last time I was here it was not quite as peaceful as it is now. You all look very peaceful to me, because on that occasion I was being bombarded with questions, and it was much more crowded. Everybody sat on the floor everywhere, all around. But that also was a citizenship institute, and I suppose that had a political significance, just as this institute has.

I wonder what it reveals. I think it reveals the need that we all have for the reassurance we get when we come in contact with each other, and when we have a feeling of confidence which comes to us from meeting those in authority in our Government, having an opportunity to hear from them, and realizing that together we are facing the problems of the world today, and that we do it cooperatively and not alone.

Alone we might be afraid. Together, young and old, men and women, we can meet those problems. What are those problems? They are going to make our platform. You have been told by the other people the main things that they gather you want in the platform.

You all agree you want peace. I imagine all the world wants peace, except perhaps a very few men, and yet a great part of the world is at war. You have got to do more than just want peace. You have got to think through what you really mean when you say you want peace, what you think will keep peace, what you think will serve the cause of more permanent peace in the future, because just to have peace tomorrow as we had it in 1918 will simply mean again a pause in preparation for another war, perhaps. We have to think through, young and old alike, all of us together, what we really mean and what we are going to do, not only in war but in peace, to really obtain something more permanent when we have the opportunity.

And we want to find the answer to unemployment. There isn't anyone anywhere in the world, I imagine, who doesn't want to find that answer. I don't know just what it is going to be, and I think there are a great many people in other countries besides our own who would like to know what the answer is. But I am quite sure of one thing—I am quite sure that we are never going to find the answer until we all work together. It is a question again of cooperation.

I am quite sure, too, that the gentleman who said to me only today, "I hate to look into the future; I dread the future for my children," isn't going about finding that answer in the right way. I don't dread looking into the future. I am not a bit afraid of the future for my children or my grandchildren.

Somehow or other I have faith, faith that eventually we will work together. I don't just mean confidence in the Government; I don't just mean confidence in any particular group of people. I have confidence in the power that the people of this country have, once they wake up to what is meant to be a citizen in a democracy. Many of us have been asleep. Many of us have taken for granted the things democracy gave us.

We haven't realized what democracy meant. It doesn't just mean having freedom, having a certain amount of personal liberty. It doesn't just mean that you repeat "the right to life, liberty, and the pursuit of happiness." Democracy means that you give of your service unselfishly, day by day, that you use your ballot, that you join the political party that you believe in and that you will work in that political party to get better candidates, not to complain about them, to get the very best representatives you can from top to bottom in your communities, in your States, on your national ticket, that you work—and now you as women, if you obtain the opportunity which I think you will have of serving on a platform committee, you will carry the same responsibility to see that you say in your platform things you really mean.

And, for heaven's sake, say it briefly, those of you who serve on the platform committee. I have read so many platforms, and wondered if half the people would ever understand what they meant, and if it really would ever dawn on people that simple things didn't require a tremendous amount of verbiage.

You can really say things you mean in very simple words, and I think perhaps that is a contribution that the women, who are always said to talk so much, can bring to the platform committee. They may talk a great deal, but I hope they will put down very little and it will be simple.

These are the things that democracy means. They mean that you set to work and understand what these problems are that you are facing; that you bring them down into your communities;

that you see what your communities by themselves can solve; and that, having seen that, you then proceed to see what you need from your State government, what you need from your National Government, from a basis of facts that you know. And then you will know what you are back for, you will know what you want in a platform. You will know what you are ready to work for, you will know what you want to ask your representatives to stand for, and you will not just ask them before election; you will watch them, because citizenship doesn't mean just the use of a ballot on election day.

Citizenship is serving every day of the year in a democracy. It is knowing what the problems are as they come up and how they progress, and whether the thing you tried didn't work so well, and how you think it ought to be changed, and whether you think it hasn't had a real trial, and ought to be tried for a longer time, or ought to be really worked out in a different way. Your representatives will represent the kind of citizenship that you give. In other places I often tell a story, and I think I am going to tell it here, though I may have told it to many of you before, but it will illustrate just what I mean by getting the kind of service that you give as a citizen. You know, many of our legislators are very much interested in the farm question, and it isn't confined to any one party. Both parties are enormously interested in the farm question. It happened one evening that two gentlemen of opposite political faiths sat either side of me at dinner, and each of them in turn told me how they wanted to make rural life in America so perfect that every youngster would dream of living in a rural area, and making farm life a way of life, a satisfactory way of life. It happened at that time that we had for some 2 weeks a rural-arts exhibition in the patio of the Department of Agriculture, and it illustrated better than anything I had seen what the rural way of life might be, and so I asked my gentlemen if they had seen the rural-arts exhibit, and each one of them said: "Rural-arts exhibit? What is that? Rural-arts exhibit? Never heard of it." And finally we asked the gentlemen all around us, and 8 or 10 of them, all of them, said "no," they had never heard of the rural-arts exhibit. One man had heard of the rural-arts exhibit.

He wasn't so different from all the others. He came from a constituency where he knew that when he went home someone was going to say to him, "What about that rural-arts exhibit? What did you think of it? What suggestions did you find in that that might help us?"

You see, it was the man back home that counted. It's the votes and what you do as a citizen day by day that counts in what a democracy does for its people.

Now, if you really mean to make democracy work, and you are the people who have got to make democracy work, there is less and less opportunity for anybody else to make democracy work today, so it is a pretty heavy responsibility on all of us. We make democracy work or it fails, and democracy is a curious thing. It works slowly because it demands that the people shall have a free expression of opinion and that they shall make up their own minds and have a right to express any opinion that they may hold. It doesn't mean that if your neighbor does not agree with you, you put him in a concentration camp tomorrow morning. It means that you listen and weigh his opinions against your own and that you abide by the rule of the majority.

Now, the majority is sometimes wrong, but in time, if we stick to the rule of doing our job as citizens, learning by experience and working from what we know on out, the majority opinion has usually proved to be right. One thing we worry about today, and that is whether we can wake up fast enough to really do our job as citizens. Well, I think we can, because the young people came to a citizenship institute. Oh, they didn't all say and do the things you wanted them to say and do. But they came, and they talked about their needs, and you came, the women of the Democratic Party came, and came in great numbers at their own expense, and very often making sacrifices to come. That means you have wanted to know and you have learned and, having learned, you are going to take responsibility.

And that is the most heartening thing that can happen to us in this country. Then you needn't be afraid that your representatives won't represent you. Then you needn't be afraid that your government won't be responsive to you, because you are going to hold it in your hands. It is really going to be a government of the majority of the people based on a knowledge of your communities and your needs and on the determination that you will have leaders who will truly represent you.

I am not sure but what today carries just the same challenge in a different way as the challenge that came to our pioneering ancestors. If they had been afraid to come across in the little boats of their day, across an unknown ocean, if they had been afraid to land in an unknown land, there would be no United States today.

Now, we don't know the answers to many of our problems, but I have an idea that if we are not afraid to adventure, and if those of us who have had security are not afraid to join the great majority of our nation that have never known security, we can make this a real adventure for the good of this country, and let us hope in the future, perhaps, a torchlight and hope to the world which will certainly need it.

Relief for Army Aviators

EXTENSION OF REMARKS
OF
HON. CHAN GURNEY
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ARTICLE BY JOHN G. NORRIS

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the Washington Post last Sunday, May 12, entitled "Veteran Army Pilots Demand 'Break.'"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 12, 1940]

VETERAN ARMY RESERVE PILOTS DEMAND "BREAK"—MEN WHO ARE CARRYING BURDEN OF AIR EXPANSION PROGRAM ARE BARRED BY LAW FROM COMMISSIONS; PLEA TAKEN TO CONGRESS

(By John G. Norris)

A handful of veteran Army pilots drifted into town last week, landing at Bolling Field after hitch-hiking by plane from scattered Air Corps posts.

They came with a final plea to the Army high command and Congress that something be done for about 175 aviators of long experience who now hold Army flying billets, but who have no future in the military service. Too old, under the law, to be appointed as regular officers, they have been helping carry the burden of the vast Army expansion program, hoping all the while something would be done to give them permanent jobs.

Told by ranking Air Corps officers on one hand to "stay on, we need you, something will be done" and meeting the continued opposition of the War Department on the other hand to every suggestion of legislation to give them permanent rank in the Army, the "forgotten airmen" are asking for a show-down.

Through the Air Reserve Association headquarters here, the group said in effect last week:

"We have given the best years of our life to the Army. We want to stay in it, but under present prospects we can hang on only 2 or 3 more years as Reserve officers on active duty and then have to go out and make a place for ourselves in civil life. We may then be too old.

THEY'RE UP AGAINST "ACCENT ON YOUTH"

"You say our experience is needed with so many green young pilots coming in, especially during the expansion period. If we are to be kicked out in 2 or 3 years, however, for our own good, we should get out now while we are still young enough to start a new career. Play fair, give us some promise of permanency, or we quit now."

Unfortunately, their case runs counter to long-established War Department policy and to an even more potent barrier—an emphasis-on-youth policy laid down by President Roosevelt himself.

With the President's backing, the Army is pushing legislation to retire overage officers, and at the same time appointments to high rank are being extended to younger and younger officers.

Present law limits original appointments in the Regular Army to men under 30. Normally such appointees are about 24. The plight of the 175 pilots who are seeking permanent commissions comes about as a result of a condition several years ago, when but few Kelly Field graduates were taken into the Regular Army.

At the present time larger numbers of Kelly Field graduates are being given regular commissions, but the Army high command so far has been unwilling to agree to any change in law to permit the older men to come in, either as second lieutenants or as special flight officers.

"Men over 30 years of age are too old for appointment into the Regular Army Air Corps," Secretary Woodring declared, and that has been that.

But the men affected and many of the Army's ranking flying officers think differently. Many of the group have more than 4,000 hours in the air. They are qualified to fly the big ships, the bombers, transports, etc., which may be handled only by veteran pilots. Some of them are flying instructors.

Capt. Corley P. McDarment, a retired Army pilot, told Congress recently that the flyers in question had a much better foundation than the "youngsters will have who are being shoved through the flying schools so rapidly now."

MANY CASUALTIES MAY RESULT

"When they come out and start in with this high-powered equipment now coming into the Air Corps," he continued, "I am afraid there will be a lot of casualties resulting strictly because of lack of proper supervision and the kind of supervision that these men who are represented in this bill can give.

"I know that the War Department policy is centered on youth. And that is all right. That is good. But you cannot have both youth and experience at the same time. The idea is not to go too much to the extreme in either direction but to try to get a middle ground. In aviation, of all branches of the service, experience counts more than anything else, and individual experience at that, because it is the individual who flies these planes."

Lt. James M. Treweek, an instructor at Randolph Field and one of the group seeking a regular commission, told the same congressional committee that pilots turned out of the Air Corps training center are by no means finished military pilots.

"I do not think emphasis should be placed upon youth and that those who do not have it should be discarded, which is what it amounts to," he stated. "I believe from my experience at the flying school and in the service that the ability to fly an airplane is directly proportionate to experience. There is no substitute for experience. It would take someone else 4,300 hours, 7 years as a pilot, to be where I am today."

ARMY WANTS TO KEEP THEM

Brig. Gen. Barton K. Yount, Assistant Chief of Air Corps in charge of training and personnel matters, told the writer last week that the Army wanted to keep the older flyers.

"We need them badly," he said, "and are trying to find some way of keeping them in service that will not discriminate against those now in the service. We opposed the legislation before Congress because it would have jumped them over officers already in service.

"The General Staff is now working on the problem in an attempt to find a satisfactory solution. We all want to find an acceptable plan."

But, as General Yount indicated, it is the General Staff and not the Air Corps which passes on such problems, and there is little sign that the Staff and the high command has changed its views expressed a year ago to the Senate Military Affairs Committee.

MATTER SEEMS TO BE DEADLOCKED

Congress, of course, lays down policy and it can override the War Department, but at present the matter seems deadlocked. The Senate has passed legislation to give permanent posts to the veterans, but the House Military Affairs Committee has sided with the War Department and pigeonholed the bill.

It looks like the flyers will have to go back home and tell their fellow pilots to start ringing doorbells for jobs unless someone in high estate takes up their cause and changes the mind of the Army high command.

Veterans' Widows and Orphans Bill

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. TIBBOTT. Mr. Speaker, in giving my support to this bill I do so because I believe the Government owes our veterans, their widows and orphans, just and reasonable compensation. When our soldiers were sent to France in 1917 to help win the World War they were turned into fields and forests of disease and slaughter. When these boys marched away to foreign soil our zeal for them was outstanding. They were promised everything upon their return to our shores. The World War should not have been our war. We were told that our entrance into it was to save democracy. If our boys fought for democracy, to protect us and our future, why then is it not our duty to recognize our obligations to the veterans, their widows and orphans? Certainly they are a very large part of our democracy.

I do not subscribe to the philosophy that the passage of this bill would be a raid on the Treasury. It is a shame to think that our veterans, their widows and orphans, who honorably served their country, should be forced to seek relief rolls in order to get enough to eat. If by giving our worthy veterans and their dependents sufficient to have enough to eat, to have clothing and shelter is a raid on the Treasury, then I am willing to go down as one in favor of this so-called raid. It might be well for our friends who are opposing those who are supporting this bill to turn their talents in another direction insofar as raiding the Treasury is concerned. If they were to direct their talent toward stopping the squandering of our money their efforts would serve a useful purpose. We are told by those in authority that our country can stand the amount called for under this bill.

In all fairness to the veterans who made the sacrifice for our country I believe this bill should pass. The enactment of it would, in my opinion, remove some of the now existing inequalities.

The care of the Nation's veterans and their dependents is a part of the cost of our national defense.

I am heartily in favor of the bill and will vote for its passage.

Rural Electrification in Southwest Washington

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1940

Mr. SMITH of Washington. Mr. Speaker, Saturday, May 11, was the fifth anniversary of the creation of the Rural Electrification Administration. Having actively supported this splendid activity of the Administration from its very inception, I deem this an appropriate time to review briefly its accomplishments and benefits to the citizens residing in the rural areas in my congressional district in southwest Washington.

The first R. E. A. project established was at Quinault, in Grays Harbor County, for which funds of $75,000 were allotted for construction and $4,000 for working capital, totaling $79,000, for a total mileage to be energized as estimated in the construction-loan contract of 23 miles, and now serving over 100 consumers. Mr. John D. Carmody personally visited the Quinault project when he was Administrator of the R. E. A. and told me that he considered it to be one of the finest projects of its size in the entire Nation. It has been most gratifying to me to listen to the citizens at Quinault express their elation and satisfaction with their plant and the service they are receiving, made possible by the Federal Government. I am naturally happy that I had an important part in bringing this worthy project to Quinault.

The Cowlitz County project sponsored by Public Utility District No. 1 of Cowlitz County received an allotment of $141,000 for construction and $5,000 for working capital, totaling $146,000, for a total mileage to be energized as estimated in the construction-loan contract of 187 miles, of which 63 miles have been energized and construction on the balance of which is moving forward. There are 391 consumers, and the estimated maximum number is 751, making this one of the outstanding single rural electrification projects in the State. On my visits to Cowlitz County I have had several meetings with the utility district commissioners and it has been a pleasure to note their enthusiasm and progressive spirit. This project demonstrates the desirability and scundness of the R. E. A. program in bringing electricity and its manifold blessings to the farming population.

Public utility district No. 1 in Lewis County has received an allotment of $69,000 for construction, with $2,000 for working capital, totaling $71,000, together with $27,400 for generating plant and $3,600 for working capital, totaling an additional $31,000, making a grand total of $102,000, to serve an estimated mileage of 74 miles, and 277 consumers. The

Lewis County project, the same in Cowlitz County, is designed to render available to rural home owners all the comforts and conveniences of electrification.

Skamania County public utility district No. 1, with headquarters at Carson, to serve 342 consumers, and Mason County, with headquarters at Shelton, to serve 250 consumers, will be 2 more outstanding R. E. A. projects in southwest Washington.

In addition to the direct service and benefits to the families residing in the rural areas, the program acts as a business stimulant to the local merchants and business firms in the vicinity who sell electrical equipment—radios, washing machines, flatirons, electric refrigerators, vacuum cleaners, and similar appliances, thereby giving employment and increasing the money in circulation in those communities.

Our colleague the gentleman from Mississippi [Mr. RANKIN], who is recognized as the leading exponent of public power and rural electrification in Congress, has written me the following letter:

UNITED STATES HOUSE OF REPRESENTATIVES,
Washington, D. C., May 11, 1940.

Hon. MARTIN F. SMITH,
Member of Congress, House of Representatives,
Washington, D. C.

DEAR MARTIN: Today is the fifth anniversary of the creation of the Rural Electrification Administration, and I did not want to let this occasion pass without taking advantage of the opportunity to thank you for and congratulate you on your splendid work in behalf of our R. E. A. program.

As you know, I regard this as the greatest program in the interest of the farmer that our Government has ever sponsored, and I want you to know that I appreciate the splendid cooperation and enthusiastic support that you have given me at all times in my efforts to bring justice to the power consumers of the Nation.

Your work on the Bonneville project has been outstanding. I also want to congratulate you on the five splendid R. E. A. projects in your district. You have labored diligently and courageously to get power to your people at reasonable rates, and your work has been most effective in all the victories we have won for Bonneville and other projects in that section of the country.

I do not hesitate to say that you are one of the best friends of public power in Congress and that no man from that section has ever worked harder than you have to get electricity to the people at what it is worth, and especially to the farmers of your immediate territory.

Sincerely your friend,

J. E. RANKIN,
Chairman, Public Power Bloc in the House of Representatives.

BONNEVILLE PROJECT

Rapid progress is being made in the construction of new turbines at Bonneville and transmission lines to deliver Bonneville power throughout southwest Washington and our R. E. A. projects will eventually utilize Bonneville power. I shall always be proud of my sponsorship of the original legislation creating the great Bonneville project and my active participation during the years in every step taken to bring its benefits to the citizens and communities of our district. On March 4, 1938, the late John D. Ross, administrator of the Bonneville project, wrote me:

I wish to express my deep appreciation of your efforts in obtaining the Bonneville appropriation through the House. The cooperation which I received while in Washington and since I left has pleased me very much.

Bonneville will always remain a monument to the memory of this sturdy champion of public power for all the people. On March 27, 1939, Charles E. Carey, Acting Administrator, wrote me:

With friends like you in Congress we feel that the future of Bonneville is in very safe hands. We will do everything we can to see that your friends in southwestern Washington are fully advised of your service and active support of the Bonneville project.

In this session of Congress I appeared twice before the Appropriations Committee and testified at length in support of increased appropriations this year, which we succeeded in obtaining so that the work can continue unabated.

As long as I am a Member of Congress, I intend to continue to support whole-heartedly the rural-electrification program and the Bonneville power project because of their merit and soundness and great benefits to all our people in southwest Washington.

Looking at the Record

EXTENSION OF REMARKS
OF
HON. RALPH O. BREWSTER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1940

LETTER FROM HON. RALPH O. BREWSTER, OF MAINE, TO A CONSTITUENT

Mr. BREWSTER. Mr. Speaker, I appreciate the opportunity to insert in the RECORD a letter which I have forwarded to a constituent in response to a request for my record:

LOOKING AT THE RECORD

Your request for my record in connection with the coming elections is an evidence that in America and particularly in Maine citizens are taking careful thought as to current problems.

EDUCATION

I grew up in Dexter, a medium sized town in the geographical center of Maine. I went to the Dexter schools like all the other boys and girls and helped in my father's grocery store in the summer.

Bowdoin College continued my education and gave me a Phi Beta Kappa key. A year as principal of Castine High School enabled me to save enough money to go to Harvard Law School where I earned most of my own way waiting on tables and tutoring other law students and was made an editor of the Harvard Law Review.

LEGISLATIVE AND EXECUTIVE EXPERIENCE

Practicing law in Portland for the next 12 years left me enough spare time to serve 6 years on the school committee and 6 years in the Maine Legislature as a representative and senator.

Four years as Governor of Maine gave me a considerable insight into the resources and possibilities of Maine. I sponsored the creation of the Maine Development Commission and the Maine publicity campaign, which has brought such gratifying results.

Under my administration as Governor the State affairs were conducted on a pay-as-you-go basis; the State tax was reduced about 10 percent, or approximately $1,000,000 a year; and a reserve of $1,000,000 in cash was accumulated in the State treasury.

At my request, Walter B. Brockway, chief accountant of the Brown Co., of Portland, made an exhaustive survey of the State finances without expense to the State. His report of the condition of the State finances was published under the title "A Business Man Looks at the Finances of Maine." Mr. Brockway became nationally recognized as an authority on State finances and was one of the principal speakers on this subject before the Conference of Governors in Wyoming in 1926.

After 4 years of my administration as Governor of Maine the Republican Party in Maine received the greatest majority in its history, forecasting the Nation-wide Republican sweep in the following November.

WASHINGTON EXPERIENCE

In Washington during the past 6 years I have served on the House Committees on Naval Affairs, Agriculture, Merchant Marine and Fisheries, Invalid Pensions, and District of Columbia. This experience has given me a considerable insight into the problems of the country as well as of Maine.

I continue to stand for a balanced Budget and a pay-as-you-go policy. The country cannot much longer continue to borrow from Peter to pay Paul. Peter is going to peter out. "Pay as you go" must apply to all the activities of the Government—old as well as new—defense, social services, and old-age assistance.

NATIONAL DEFENSE

As a veteran of the last war and a member of the American Legion, I have always believed in an adequate defense. Six billions have been spent for defense in the past 6 years, with evidently most unsatisfactory results. Apparently the money has gone for the wrong things.

Two years ago I pointed out to the House as a member of the Committee on Naval Affairs that aeronautical development was being woefully neglected and that "other countries were spending 10 times what we were for aeronautical research for defense." My voice was then unheeded.

At the same time, I pointed out the grave shortages in the construction of destroyers and submarines and urged action to remedy this deficiency.

Congress will be wise to find out why $6,000,000,000 has left us so inadequately prepared. Additional billions must not be wasted. Blind voting is as bad as blind flying.

PROTECTION FOR MAINE

Protection for America has been my major interest in Washington. That means protection from attacks of any character. That means protection for American labor and the American farmer and the American fisherman.

Maine can only prosper when Maine products are protected from unfair competition from the output of the pauper labor of other countries with far lower living standards.

In the Senate of the United States I should hope to continue this battle for a square deal for Maine and for America.

Local Filling Station Operators Should Have No Additional Tax Burden Put Upon Them

EXTENSION OF REMARKS
OF
HON. SAM C. MASSINGALE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1940

Mr. MASSINGALE. Mr. Speaker, the Ways and Means Committee has had under consideration for several days H. R. 1, referred to as the anti-chain-store bill or as a bill to protect the local merchant against the chain-store monopoly. On May 10, 1940, I appeared before the Ways and Means Committee in opposition to an amendment that was being considered which would impose an additional heavy tax on every person that runs a filling station. My testimony before the Ways and Means Committee was as follows:

Mr. MASSINGALE. Mr. Chairman, and gentlemen of the committee, there is just one phase of this chain-store bill, or Patman chain-store bill, that I wish to discuss with the committee. That involves the question of what it takes to constitute a store within the meaning of the bill.

Now, I will state that generally I am in sympathy with the principles of H. R. 1, because I believe that it is necessary for the welfare of the local home merchant that he be given some protection in a manner similar at least to the provisions of H. R. 1.

The effort on the part of the author of H. R. 1 to eliminate from the list of exemptions the filling-station operator is a matter that I want to discuss very briefly and give you my views on.

I desire to discuss only whether the provisions of the Patman bill, H. R. 1, for the protection of local merchants, local retail merchants, should exempt from the operation of the bill the local distributor of filling-station products.

The definition, as the Standard dictionary gives it, of a store is as follows:

"A place where commodities are stored, a warehouse. In the United States and some British colonies it is a place where merchandise of any kind is kept for sale. A shop."

I don't believe the thought has ever gained foothold in this country that a filling station is a store in the sense in which it is commonly used here. The filling-station operator does not carry a stock of various articles of merchandise to supply the needs of the community. He is only what might be termed a service agent. He carries no general stock of goods. Usually he carries only gasoline and fuel oil and Coca-Cola for sale. The place of business that he operates is almost always owned by someone else. He generally rents the filling station, and the chief thing that gets him his business is courtesy to those customers who want to buy gasoline. If you take away the individual service that he renders, and such free service as wiping off spots of grease and splashes of mud from the car and from the windshield, he would practically be without business.

To put an additional tax on him by refusing to exempt him from the operation of the Patman bill would be an injustice and would in effect prohibit the free service that everybody receives when they go to his filling station.

The filling-station operator is unlike a man engaged in the business of selling all kinds of wares and merchandise, or the selling of all kinds of food products, household necessities, and the like. The store owner, as we know him, owns a stock of goods. He pays taxes on that stock, local taxes, and keeps replenishing that stock, and he gets his business largely because he has on exhibition various wares that he offers to the public.

It is not so with the filling-station operator, and it occurs to me that if you look at it in a common-sense way, in no sense of the word is the filling-station operator a storekeeper.

When a person drives into a filling station he stops only to get that one thing without which he cannot make the next town, gasoline. It is a road service and not a store service that the filling-station operator is rendering.

The suggestion by the author of the bill that the exemption from the operation of the Patman bill of the filling station be stricken would, in my judgment, work a manifest injustice on the filling-station operator, and is almost the equivalent of imposing a tax against a man whose sole business is rendering good, efficient, and courteous public service.

He renders this service, not only to the traveler going through the country but he renders another and a distinct service to the Government of the United States. He is in the field as a tax gatherer or tax collector, and that is a valuable service to the revenue department of the Government of the United States.

Now, then, we are going to tax him, if I understand the effect of this amendment—we are going to tax him simply because he happens to rent a little building or filling station and has no stock of goods from which he derives a profit on its sale.

I don't think there is any resemblance between the business of a filling-station operator and the operator of a store or place where merchandise is bought and sold to the public.

If the exemption is not granted, as I said a while ago, it would be the equivalent, in my judgment, of taxing an occupation only, not taxing a man who runs a store, certainly, because he does not run any. He keeps no stock on hand except what the wagon brings him that morning as a rule to meet the daily demand made upon him by persons traveling through the country on business or on pleasure. He cannot be regarded as a storekeeper under the definition I have just given you that I have taken from the standard dictionary.

Now, I don't believe that I should attempt to go into a discussion of what the record discloses in regard to the revenue that the Government receives through this man, but I think it might be taken for granted, and it is true, that all the revenue that these filling-station operators collect is of immense value to the revenue department of each State in this Union.

In Oklahoma for last year the Federal revenue from lubricating oil amounted to $2,423,850.59, and the Federal revenue from gasoline in that State during the year 1939 amounted to $23,075,794.27; the revenue for the same year in the United States from lubricating oil amounted to $30,000,000 plus, and the Federal revenue from gasoline throughout the United States amounted to $207,000,000 plus.

In addition to that Oklahoma has a State tax on gasoline of 4 cents a gallon, and the State derived in gasoline taxes alone in 1938, $13,905,000. There are other taxes in Oklahoma on the oil industry about which I am not much concerned, but I mention these things simply for the purpose of showing that if there is any industry or the products of any industry that are already heavily taxed in Oklahoma it is the petroleum industry.

Mr. DINGELL. How much tax do you pay per gallon in your State?

Mr. MASSINGALE. Four cents.

Are there any further questions?

Mr. MCCORMACK. I think you have made a very fine contribution. It is something I have never thought of before; that is, the distinction between a store and a gasoline station, and I want to compliment you.

Mr. MASSINGALE. I thank the chairman very much.

Mr. Speaker, in addition to the foregoing statement made by me before the Ways and Means Committee, I wish to say that the chain-store taxes proposed in H. R. 1, which is the bill known as the Patman bill, and designed to protect the local merchant against unfair competition of the great chain-store systems, is a matter of much concern to every community in the United States. As the bill now reads, there is an exemption clause in it relieving the ordinary filling station operators from the payment of any tax that the bill levies against the chain-store systems. The author of the bill is endeavoring to cut out this exemption and to make all filling stations pay a tax, whatever it might amount to, known as the chain-store tax.

I am opposed to this amendment being made in the bill. I do not want to take any position that would cripple the purposes that the author of the bill seeks to obtain by the passage of his bill. As stated above, the purpose of this bill is to give protection to local merchants, that is, local retail merchants, against the great chain-store systems. In my opinion, these local merchants cannot compete with these great systems when it comes to buying. The chain stores buy in great quantities, and, of course, at a less price than the individual country merchant can buy. The chain-store merchant may have several hundred stores in the State of Oklahoma, and he is a direct competitor in every community with the local merchant.

The chain-store owner pays only a small ad valorem tax on his stock of goods, and he can run this down to suit his convenience, if he is disposed to dodge taxes. He has no

permanent investment in the community where he operates, while the country merchant has all of his worldly possessions tied up in and around his little store. The country merchant is a fixture. He pays taxes on his stock of goods as well as on his land, residence, and other properties. He contributes to every kind of community program, from building churches and school buildings and all kinds of relief, to the poor and unfortunate, and there is hardly any escape for him from such contributions.

The chain-store operator as a rule escapes all such contributions, or if he gives anything it is a small amount. However kindly disposed the manager of the chain store may be, he is rarely allowed to contribute to the hundreds of matters that the local merchant is called upon to do, unless the committee that waits on him will give the manager of the chain store time to write to New York City about the contribution and get an authorization to make it. These are matters of practical experience, and nearly every person interested in community affairs knows it.

The methods of transacting the business of the local merchant and of the chain-store merchant are very different. The local merchant has for years extended credit to workers of all kinds and farmers in the community where he lives. This kind of service on the part of the chain-store operators is unknown.

The local merchant is part and parcel of the material and spiritual lives of the community where his store is located, and he must go along and carry his part of the community burden. All these conditions make for the local merchant a very unfair kind of competition from the chain systems, and I believe that these great systems ought to have imposed upon them some additional taxes that will enable the local merchant to have more of an even break in competition with the chain-store man.

A glimpse down Main Street in most any small town in Oklahoma or elsewhere presents a sad aspect. You will find that the store in which Tom Jones, the local grocer, has done business for 40 to 50 years has been closed up. It was not closed because Tom did not have business judgment enough about him to run a store, for he proved that he had this judgment by remaining in business for 30 to 40 years making a go of it. But since the advent of the chain store the picture has changed. Tom has had to go out of business, or his doors have been closed and his building taken over by his creditors. This condition is not conducive to the proper kind of feeling in a community. It is not going to help the country merchant to place a tax on the filling-station operators, because the two are not in competition with each other. In fact, the filling-station operator and the country merchant are just about in the same category. Both are local men, and neither of them is in a monopolistic business. If my information is correct, the tax that would be imposed upon the filling-station operators, if they have to pay their part of the chain-store tax, would in many instances amount to more than the gross sales of the thousands of little filling stations scattered throughout the country. Of course, nobody would be in favor of that kind of treatment; and, in view of the difference that is so marked and so well known between a store and a filling station, I cannot see why any person would want to place on the backs of the filling-station operators the anti-chain-store tax which was intended to give protection for the local merchant against a chain-store monopoly.

The Appropriation to Combat Venereal Diseases

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1940

Mr. LUDLOW. Mr. Speaker, in approving the item of $6,200,000 for Federal participation in the Nation-wide venereal-disease-control program I would like to call attention to the friendly attitude of the Members of the House as well as of the Senate to this sound and effective program for which $7,000,000 was authorized by the act of May 24, 1938, and voted by the Senate for 1941. Only the exigencies of present financial limitations have prevented appropriation of the full amount. This was clearly indicated in the subcommittee's excellent report on this important item.

I make this statement now because I think our colleagues in Congress and the people throughout the States who are cooperating with their health and medical professions should know how carefully and with what concern for the best interests of the program this matter has been considered. I hope that next year the full amount approved by the Senate, or a larger sum, can be appropriated for carrying on this greatly needed work.

Mr. Speaker, I addressed the House in behalf of the full authorization March 11, 1941. I ask that the arguments I presented at that time, together with the statements of other Members of Congress and the committee reports and documented testimony be kept in mind by all concerned with planning the Budget for 1942.

Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Milwaukee Journal of May 9, 1940, entitled "The Fight for Air Safety."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of May 9, 1940]

THE FIGHT FOR AIR SAFETY

President Roosevelt's order to destroy the independence of the Civil Aeronautics Authority by putting it under the political control of the Department of Commerce is half defeated by action of the House of Representatives. The House voted its disapproval by a marked majority not along partisan lines.

But there is need to remember that the defeat is only partial. The Senate also has to disapprove within the statutory time of 60 days allowed by the reorganization law or the Presidential order will go into effect on June 11.

The Senate will disapprove if it hears the voice of the country. For condemnation of the Presidential action is widespread. The country just does not see why an agency that brought the air lines out of disaster and gave them safety—408 days of flying without a fatality as contrasted to the almost weekly toll that was taken under political air administration—should now be put under the tutelage of Harry Hopkins.

It is easy to see why the New Deal leaders fight for the Presidential order. It is not only to save the President's face, regardless of the error he made, but it is apparently to restore the favorite New Deal doctrine that a Government agency should combine the functions of prosecutor, jury, and judge. Congress separated these functions in its set-up to govern aviation. That is one reason the C. A. A. worked so well. The President recombined them in his order.

This is how it is. Under the old Department of Commerce plan, the Air Service Bureau not only supervised flying and provided the inspection, but it also investigated accidents. It was, of course, after each accident, investigating its own supervision and its own inspection. And accidents did not decrease.

In the new air law, Congress created a board to lay down flying rules and policies and an administrator to carry out these policies. It then created a separate organization, the Air Safety Board to check on accidents. The judge and the jury functions were separated. And that ended the accidents.

It is this very Board—the Air Safety Board—that President Roosevelt proposes to abolish as he orders the aviation set-up back under the Department of Commerce.

There is a big principle involved here, as well as the practical consideration of saving lives. The Senate ought to hit this reorganization just as hard as the House did.

Coinage of 50-Cent Pieces in Commemoration of Arrival of Marquis de Lafayette

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

Mr. JOHN L. McMILLAN. Mr. Speaker, I want to take this opportunity to ask the House of Representatives and especially the Committee on Coinage, Weights, and Measures, to give us a favorable report on H. R. 8941, introduced by my colleague the gentleman from South Carolina [Mr. FULMER].

This bill called for the coinage of fifty thousand 50-cent pieces in commemoration of the arrival of Marquis de Lafayette. General Lafayette landed in my district near Georgetown, S. C., on June 14, 1777, and we are anxious to show our appreciation of the inestimable aid General Lafayette gave our Army, both financial and physical, by erecting a statue or monument at the point where he landed in America. I feel that we are due this great general this honor and I will personally appreciate it if the House of Representatives will assist in having H. R. 8941 enacted into a law before Congress adjourns.

I ask for unanimous consent to have a copy of the resolution passed by the South Carolina Legislature printed in the CONGRESSIONAL RECORD.

The resolution is as follows:

Concurrent resolution requesting the passage of a bill in Congress authorizing the coinage of 50-cent pieces in commemoration of the arrival of the Marquis de Lafayette near Georgetown, S. C., on June 14, 1777, and known as H. R. 8941

Whereas on June 14, 1777, that eminent Frenchman, Marie Jean Paul Ives Roch Gilbert du Motier, Marquis de Lafayette, and other French officers landed on North Island near Georgetown in this State for the purpose of assisting the Colonies in the Revolutionary War against England; and

Whereas Lafayette thereafter in July 1777 entered the American Army as major general and fought with the Amercian Army until the war closed and the independence of America had become an established fact; and

Whereas Lafayette not only gave his personal services in accomplishing this end, but also spent many thousand dollars of his private funds in assisting the Colonies in the war; and

Whereas in commemoration of the arrival of the Marquis de Lafayette at North Island, as aforesaid, a bill has been introduced in the Congress of the United States, known as H. R. 8941, authorizing the coinage of not exceeding 50,000 silver 50-cent pieces; and

Whereas said bill has been referred to the Committee on Coinage, Weights, and measures, and is now before said committee; and

Whereas one of the purposes of securing the coinage of said 50-cent pieces is to provide a means by which the landing of Marquis de Lafayette may be properly and permanently commemorated, to the end that the future generations may know and realize the great services that this eminent Frenchman rendered to the United States in its beginning: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Members of the House of Representatives from South Carolina in the Congress of the United States be, and they are hereby, asked to request the Committee on Coinage, Weights, and Measures to report upon said bill as early as possible to the end that same may be acted upon during the present session of the Congress of the United States, and the said Representatives and the Senators from South Carolina in the Congress of the United States are requested to exert every effort toward securing the passage of said bill: Be it further

Resolved, That copies of this resolution be forwarded to each Member of the Senate and the House of Representatives from South Carolina in the Congress of the United States.

G. O. P. Fairy Tales for Farmers

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address delivered over the radio last Monday night by the senior Senator from Illinois [Mr. LUCAS], entitled "G. O. P. Fairy Tales for Farmers."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In these days when war news from abroad is so exciting as to absorb popular interest, it is difficult to get attention for matters close at home which are extremely important for us but devoid of the spectacular. Nevertheless, we are on the threshold of a political campaign the outcome of which will be vital to us as American citizens, and it behooves us as such not to let our minds be diverted from the domestic issues which confront us.

Already a motley array of Republican candidates for President and other Republican spellbinders have been touring the country in an effort to persuade the public that the Roosevelt administration has been a failure and to entrust their party, in spite of its frightful past failures, with the powers of government. One of the principal points of attack in this campaign is the Roosevelt administration's farm program. Not only have all the candidates been trying to convince farmers that they should return to the good old days of Hoover and Coolidge, but the Republican leadership in Congress set up a special committee to go about the country to collect testimony from farmers to support their claims. They held hearings in Illinois and other States.

The committee was so unsuccessful in this effort that at the conclusion of its tour the sense of its report was that the Roosevelt administration's farm program was working to the general satisfaction of most farmers, but what was really needed for its complete success was to put the Republican Party back in office.

One of the most violent denunciators of the New Deal farm program has been that sturdy, horny-handed Fifth Avenue farmer, District Attorney Dewey, of New York. He has boiled over with anger at the terrible plight into which the Roosevelt administration has plunged the farmers, but never with more virulence than in a recent speech at Marshalltown, Iowa. Since this speech is another fine example of his utter irresponsibility and of the general line of Republican attack, it seems desirable in the interest of actuality and truth to devote some consideration to his various misstatements.

"You, in the Corn Belt," Mr. Dewey told Iowa corn growers, "have 1 acre of every 4 out of production, while the acreage in States outside the Corn Belt has actually increased," but the Iowa farmers knew that with cribs bulging with corn held under the 57-cent New Deal corn loan, the price of corn on local markets was advancing steadily toward parity, and had exceeded the loan value at many points in the Corn Belt. Those cooperating in the A. A. A. program also knew that 1 acre out of every 4 of corn land was not "out of production" but was being profitably used in growing pasture and meadow crops, alfalfa and sweet clover, and other soil-conserving crops.

Many of these Iowa farmers and others in the Midwestern section who heard this speech knew that in 1932 10 Southern States planted 29,491,000 acres of corn, or almost 2,000,000 more than they planted in 1939, under the A. A. A. program. They also knew that in the 10 principal cotton States there were harvested in 1939, 388,964,000 bushels of corn, while the average yield for the Republican years, 1928–32, in those same States, was 405,247,000 bushels.

My friends, a misquotation of basic figures by a Presidential candidate is a dangerous symptom. Young Mr. Dewey's Marshalltown speech dealing with the corn farmer and his problems was based upon ignorance or deception, either of which carries virile germs of destruction. Having laid down a false premise, he followed through with statements that had only one purpose, namely, to prejudice the Midwest corn farmer against the cotton farmers of the South. This is Dewey at his best. And yet, it is nothing more than can be expected of one whose experience has been confined to one section of the country and who not only fails to grasp the farmers' problem but underestimates their intelligence.

In view of his total unfamiliarity with economic problems affecting domestic issues, we shudder to think what he would do about international issues in a world so filled with chaos and turmoil.

It is just too bad that the farm advisers of the G. O. P. are serving Mr. Dewey so poorly. They have been filling young Tom with misinformation and sending him out with so-called G. O. P. farm facts to convince the farmers that they don't know how to run their own program—a program which they finally won when the New Deal came into power after long years of fruitless efforts by farmers to get the Republicans to do something for the farmer.

It is no wonder that Mr. Dewey, in announcing his eight-point farm program, borrowed all eight points right out of the A. A. A. program of the New Deal.

Tom should come all the way over, and not let those G. O. P. city slickers load him up with a 1936 line of G. O. P. farm hokum. In that Marshalltown speech they had him saying: "Compare the total farm income of the 7 lean years of the New Deal with the farm income of the 7 last Republican years," and that "the farmer was better off during the Republican years than during the New Deal, in spite of its farm program." They forgot to tell him about the dark days of 1932, when corn got as low as 6 cents per bushel and was not salable in Iowa, hogs and cattle sold at 3 cents per pound, and Iowa farmers were being forced in droves from the richest land in the world; when money was so hard to get that Iowa farmers met at barter sales to trade among themselves.

The farmers of the Nation in 1932—the last Republican year—struck rock bottom with a total farm income of four and two-thirds billion dollars. This has been raised to nearly double under the New Deal, and the 1939 income was about eight and one-half billion dollars—yet Mr. Dewey told Iowa farmers that "in spite of all the money the New Deal has spent on farm payments, the farmer was better off during the Republican years."

In commenting editorially on Mr. Dewey's Marshalltown speech, the Des Moines (Iowa) Register of May 5 stated that "the great trouble with men conditioned by almost exclusively city experience when they suddenly have to deal with a question like that of American agriculture is that they start without real knowledge of the problem and fail to grasp the complexity of it before they get committed to answers that are shallow and unreasoning. Mostly they tend to counsel with spokesmen for agriculture who are political-minded, not economic-minded, and all the advice of these gentlemen looks not to deeply grounded economic solutions but to the mere 'appeasing' of the farm vote. He—Mr. Dewey—has 'missed the bus' in his approach to the farm problem as far as Iowa, at least, is concerned."

Now that the promising season for Republican candidates is on, let's look back on the record of Republican promises to the farmer and Republican performance.

In 1920, after a half century of fooling the farmer by expounding the idea that high protective tariffs in some way helped the farmer, the Republicans, in answer to the farmers' pleas for relief from tariff burdens, referred to the farmers in their 1920 platform as the backbone of the Nation, and then in 1924 forgot their promises and proceeded to inflict upon the farmers of our Nation the iniquitous Fordney-McCumber tariff that forced farmers to pay high protective-tariff prices for manufactured goods needed in farm production and farm living.

They came back in 1924 with more promises, and with the help of Democrats they did, indeed, pass the McNary-Haugen bill that would have increased our farm exports at that time, but the Republican President, Calvin Coolidge, vetoed that bill in February 1927, terming it "unsound economically." Again in 1928 Congress passed this bill, and President Coolidge vetoed it.

In 1928 the Republican National Convention at Kansas City virtually kicked the farmers out of the door when they pleaded for an effective farm plank in the Republican platform.

What they did thereafter was to enact the most disastrous legislation of all times for American agriculture—the Smoot-Hawley Tariff Act, which increased immeasurably the disparity between industry and agriculture; and then the Republicans handed the farmers that famous gold brick, the Federal Farm Board, whose operations broke the farmer's back in 1932 and cost the taxpayers nearly a half billion dollars.

Now the G. O. P. spokesmen are again promising the farmer—and Keynoter Stassen offers as his major contribution—that same old McNary-Haugen principle which a Republican President repudiated. Yes; it is the same old story; nothing new in the way of constructive thinking in the Republican ranks.

Another point worthy of mention was recently discussed by the Secretary of Agriculture, the Honorable Henry A. Wallace, when he said:

"Now that war has broken out in Europe, farmers need their program more than ever. The new war has resulted suddenly in cutting off a large portion of the export market for farm products.

"In the period of readjustment which inevitably lies ahead, the national farm program, as developed by the Roosevelt administration, will be even more vital to our national welfare than it has been the last 7 years."

No better appraisal of the value of Mr. Dewey's agricultural ideas could be made than that given in an editorial in the Lincoln (Nebr.) Star, which I should like to quote in part and which I am sure ably expresses the opinions of all intelligent farmers throughout the Middle West. After saying that Dewey's Marshalltown speech was "a bunch of malarkey" the editorial continues:

"The farmers in Iowa are still too close to 10-cent corn in 1932 and to conditions which existed on Iowa farms during the closing years of the Hoover administration, and a 12-year Republican regime to let any man who was just then leaving law school come out and pull the wool over their eyes with flippant words.

"Too many farmers in both Iowa and Nebraska are on their land as a result of the Roosevelt farm program to relish the indictment which Tom Dewey endeavors to bring against it. Too many would have lost through foreclosure except through loans; too many would have failed except through the corn loan and the corn program; too many were at the end of their rope and dangling perilously to heed Dewey's blistering words. To admit Mr. Dewey knows anything about the facts would be to stamp him as insincere. He's simply ignorant of the conditions in the past.

"That does not help his case a great deal, but it does make it possible for farm men and farm women to adopt a more tolerant attitude toward his outbursts. Hundreds of thousands of farmers know the Roosevelt farm program saved them in these last 7 years, and it was all that did save them. If it was 'bungling,' then it was the most inspired and humanitarian bungling that has taken place in the country's history."

What is true of Iowa and Nebraska farmers is equally true of the farmers of Illinois, Indiana, Missouri, and all other farmers in the commercial corn-producing section.

War and the International Situation

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ARTICLES BY LUDWELL DENNY, RAYMOND CLAPPER, AND GEN. HUGH S. JOHNSON, AND AN EDITORIAL FROM THE NEW YORK DAILY NEWS AND THE WASHINGTON TIMES-HERALD

Mr. WHEELER. Mr. President, I ask unanimous consent to insert in the RECORD certain columnists' comments on war and the international situation, and an editorial. Mr. Ludwell Denny, Mr. Raymond Clapper, and Mr. Hugh Johnson are all nationally known and respected newspapermen. The editorial I ask to have inserted in the RECORD is from the New York Daily News of May 14 and the Washington Times-Herald of May 15, 1940.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

POP-GUN DEFENSE

(By Ludwell Denny)

More borrowed billions down the brass hat sink rather than belated streamlining of our pop-gun defense is in prospect unless a special congressional and public committee is given power to rescue the air force from the admirals and generals.

President Roosevelt, acting largely as his own Navy Secretary and War Secretary, in the last 7 years has used about $7,000,000,000 and budgeted two billion more this year to produce results which his own experts now say are inadequate.

So this week he will ask for a half billion or so more. The excuse is that German air and motor superiority in Scandinavia and the low countries has suddenly revealed our weakness.

That, of course, is nonsense. Ever since the days of Billy Mitchell, who was crucified by the admirals and generals, the "dumb public" and the "armchair strategists" have suspected the truth which the Army and Navy "experts" denied. And for several years the reports on German aviation by real experts, such as Maj. Al Williams (now a civilian who can talk), have convinced most of the country except its defense chiefs.

Even the European war itself did not convince the President and his favorite admirals and generals. Like Neville (Too Late) Chamberlain, they were unwilling to shift the defense budget weight to air power even after Poland and Finland. The deadly German use of planes, parachutists, and swift mechanized troops today in Holland and Belgium is not new.

The American press reported it in great detail last September when Hitler swept Poland. But in his new defense budget the President merely upped the ante breathtakingly without changing balance from ships to planes.

Thus there is nothing which the President can propose now that he could not have proposed years ago, or at least last fall. Even

now it is extremely unlikely that the President will shift the balance from ships and old-style troops to planes and mechanized troops.

For to make that shift he would have to take away some of that budgeted $2,000,000,000 from the admirals and old generals (and Congressmen who insist on keeping useless Army Indian "forts" in their States) and give it to aviation and mechanization.

The anticipated half billion request will not begin to strike a fair balance between the old and new weapons of warfare. Worse, it probably will go in part for more old-style methods.

Of course the admirals and generals will accept more for aviation, provided they first get more for their old pet methods.

Two things are said of the President, who bears such a heavy responsibility:

One is that he has had so many other governmental and political duties it has been impossible for him to function well as his own defense secretary; he has thus been the victim, even more than his predecessors, of the Army-Navy bureaucracy. That is the price of one-man rule.

The other is that his sincere pro-Ally policy led him to give priority in American aviation production to Allied orders at the expense of our own. Unfortunately, the Allies double-crossed him. Instead of placing heavy orders last autumn, permitting large plant expansion and bottleneck breaking, the Allies have not placed heavy orders here even yet.

So when Chamberlain missed this bus he also made Roosevelt miss it. And now when the Allies at last are ready—or almost—to use American industry, up jumps public opinion demanding that we cancel a few warship plans in favor of an American air fleet.

Thanks to the Chamberlain-Roosevelt delay in aircraft orders, our plants and trained mechanic supply at this late date are still very small. Our production capacity is only 500 a month, compared with Germany's 3,000. From 1 to 3 years of industrial expansion will be required, after big orders are placed, before they can be filled promptly.

In antiaircraft guns we are even worse off. After spending about $8,500,000,000 of borrowed money on defenses in the last 9 years, we now have a grand total of less than 300 antiaircraft guns—but we have lots of unprotected ships. Likewise, there is a shortage of pilots, mechanics, and training facilities.

To correct these and similar weaknesses there are two proposals:

One is to give more vast sums to the same old system.

The other is to provide a special congressional and public committee to attempt the job in which the admirals and generals have failed—a New Deal for enlarged aviation, with a unified Air Corps equal to the Army and Navy.

So far as known, the President is still for the old discredited system.

[From the Washington Daily News]

THE CRISIS

(By Ludwell Denny)

The United States was brought closer to war today by Germany's invasion of the low countries.

Dutch possessions in this hemisphere are near the Panama Canal, naval life line of the United States. Any Nazi claim to those strategic areas would be a violation of the Monroe Doctrine, and undoubtedly would be challenged by this Government—by force of arms if necessary.

Those territories are Dutch Guiana and the Dutch West Indies. The latter group of six islands off the Venezuelan coast, in addition to their naval and air-base importance, have the chief oil refineries and storage facilities of Latin America.

Moreover, the Dutch East Indies have just been brought under quasi protective relationship by the unilateral assertion of the United States Government opposing any change in their status. They are a strategic key to the Philippines, and to the British and French far eastern empires.

They are also the chief source of tin and rubber upon which American peace and war industries depend.

Any danger of seizure of that eastern territory, so vital to the United States and to the Allies, presumably would come from Japan, which has been driving in that direction.

The recent Washington warning apparently sobered Japan and pleased the Allies, but was received coldly by the Netherland Government. Despite the threat of Nazi invasion then present, Holland declared that she could protect her eastern possessions without help from anyone else. That proud declaration, however, was generally interpreted as a necessary diplomatic gesture of confidence rather than as a final policy in case of emergency.

Of the two dangers of United States' involvement, that in the Far East causes even more concern here than that in the Panama Canal area.

Germany at the moment is less able to attempt seizure of the Dutch West Indies or Guiana than is Japan to try a quick grab at the Dutch East Indies. Apart from the fact that most of his navy is engaged in Scandinavian waters or bottled up in home bases by the British Fleet, Hitler has given no indication that he wants to add the United States to the alliance against him.

Thus the policy question which faces President Roosevelt today, regarding the Dutch possessions within the Monroe Doctrine zone, is not so much whether to prepare to fight Germany now or whether to take so-called preventive action.

That in turn raises this related question:

Should such action be by the United States alone as the owner of the Panama Canal, or in cooperation with other pan-American nations?

In any event, the United States is not likely to act without obtaining the consent of Holland—unless, indeed, a situation is created by the German blitzkrieg under which the Dutch Government is not free to act responsibly.

The greatly increased danger in the Far East, resulting from Hitler's move today, was foreseen by President Roosevelt. He not only sent virtually the entire United States Fleet to the far Pacific for "maneuvers," but the day before Hitler struck Holland the President ordered the American Fleet to remain between Hawaii and Japan.

In addition to these two major diplomatic and military repercussions here, there is also the immediate effect on this country as an Allied supply source. Now that Nazi planes are in closer bombing range of the English coast, and the Allies are exposed again in all their aerial inferiority, they will increase their rush orders for American planes and other equipment.

More important—and more incalculable—is the psychological effect of all this on the Washington Government and the American public. As for the administration, there is not much it can do to be more pro-Ally short of actual fighting. But in this campaign period, on the eve of the national conventions and with an isolationist Congress still in session, the President must move carefully.

Nobody knows whether this will be considered by him "the crisis," which his close friends have said would be necessary to induce him to run for a third term. Of course the third-termites are certain this is it.

It is too soon to get indications here for the effect on American opinion, except the obvious shock of this latest expected but dreaded advance of Hitler toward the Atlantic. Will it begin to crack that vast 98-percent majority opposed to United States' involvement?

Probably the answer will be determined more by what Hitler and the Japanese do next than by the wishes of America.

[From the Washington Daily News]

AN EFFECTIVE ANSWER

(By Raymond Clapper)

Although it was not his purpose to do so, Winston Churchill has given a most effective answer to those Americans who are saying that we ought to get into this war to save the Allies.

The answer is carried in these revealing words of Churchill in the House of Commons: "Our numerical deficiency in the air—in spite of our superiority in quality, both of men and materials—condemns us, and will condemn us for some time to come, to a great deal of difficulty, suffering, and danger, which we must endure with firmness until more favorable conditions can be established—as they assuredly will."

Time and again Churchill came back to that point, emphasizing Allied weakness in the air, and the time that will be required to overcome it. Without control of the air, the British could not use their Navy to cut off the Germans in Norway. Sir Samuel Hoare, air secretary, described how when the British succeeded in establishing an airdrome in Norway, a mass of 80 Nazi bombers swept over and destroyed it within a few hours.

The Allies have man power and they have overwhelming superiority in sea power. But warfare has changed so that, until they can command the air, their other factors of greater strength are held latent.

So, as was pointed out here recently, what more can we do for the Allies than we are doing? We have placed our entire aircraft industry at their disposal. American Army and Navy orders give way to Allied orders. The Allies can have the latest models that are in production. They have ample funds with which to buy these planes. Our production capacity is expanding almost miraculously. One authority says it is now at the rate of 17,000 planes a year and by the end of 1940 will reach an annual rate of 25,000 planes. Other estimates are lower, but in any case our capacity is considerably ahead of Allied purchasing.

So when Winston Churchill says the reason the Allies do not have the initiative "is our failure in the last 5 years to maintain, or regain, air parity with Germany," he points in the very direction in which the United States is helping the Allies to the limit.

For many months, long before war broke out, President Roosevelt engaged in a bitter battle with Congress over his determination to throw our aircraft industry into the service of the Allies. You recall the French plane incident. Before the war broke out, Mr. Roosevelt urged Congress to repeal the arms embargo so that planes might be shipped to the Allies. Losing the first battle, he returned to it after war broke out and succeeded in repealing the embargo.

That is the record with respect to American aid to the Allies, the kind of aid of which they are in most need. Could we do any more with regard to supplying planes if we went into the war?

As the Allies control the sea, their essential commerce moves with little difficulty. Our Navy would be of little use to the British, because they already have an overwhelming preponderance, but owing to lack of air strength can make only limited use of it. Not even a frontal land attack, even if the British and French were willing to make the sacrifice in men that would be required, could hope to

succeed without command of the air, or at least a fighting chance for it.

Judging by Churchill's analysis, the Allies expect to wait some months until they achieve greater strength in the air and then try to turn the tide. Some reliable authorities estimate that this point should be reached next fall, with the aid which is being given through the American aircraft industry.

If that is the situation, and it appears to be, debate as to whether we should enter the war is beside the point.

[From the Washington Daily News]

ONE MAN'S OPINION

(By Hugh S. Johnson)

This is the way to get mixed up in other peoples' wars: First you sell them your goods. They become your "best customer." They make jobs for your unemployed and dividends for your stocks. When their purchases have become an important part of your economy they run out of cash.

Your business is threatened. They ask for credits. Some old boat rockers begin to croak about this. Some say, "Where your treasure is, there will your heart be also. This will surely compel you to send armies to protect your dollars."

Your politicans reply, "We shall never send an American mother's son to bleed on foreign shores." Your best customers add: "We don't want your military assistance. You are too far away. Your efforts to equip and transport armies would interfere with your value to us as a base of supplies."

The assurance of repayment of such loans is so slender that no private funds are available. No one person wants to risk, but if Congress authorizes the Treasury to loan, all the people will be forced to risk collectively what nobody would be willing to risk individually.

That is reckless statesmanship, but by this time hysteria and emotion have ousted both prudence and judgment.

From the beginning of this sequence there has been growing a sloganeering stupidity. "They are fighting our war. They are paying in blood. We shall only pay in dollars. It is the least we can do." When we opened a credit of $3,000,000,000 to the Allies in the World War the votes in the committees of the House and the Senate were unanimous. To the suggestion that Allied bonds were selling below par the answer was: "All the more necessary to loan them this money at the lowest possible rate of interest." When one Congressman said, "They will use it to retire private loans elsewhere." Answer was: "Do not limit or qualify the use of this money." When mutual guarantees among borrowers was suggested the reply was (prophetically): "If we get this money back at all * * * we shall get off cheap."

Thus we buy an interest in a war we are going to fight with goods and dollars but not with blood—"just a few divisions as a token and a symbol to show the flag."

Then the going gets tough. We are in to the eyebrows on the economic and sympathetic side. Our friends' backs are "at the wall." The whole tune changes. "Send us men. If they haven't equipment, send them in their undershirts."

The demands on us become almost insulting to abandon our organizations and commands and conscript men to fight under foreign flags and officers.

So we finance most of the cost of the war from this point out for ourselves and our Allies. We pack men by the millions like sardines into transports and send them untrained into battle. We are cursed for tardiness, stinginess, and timidity. Then comes victory—maybe—and we learn that we have been fooled on the war's objectives. The victors didn't share our ideals, and under secret treaties they take all and leave us nothing—and then repudiate all debts and vilify us for even asking for repayment.

This is our actual World War experience, neither distorted nor exaggerated. We are going through it again step by chuckleheaded step. We have now reached the stage of "we don't want your men, only your dollars," and "they are fighting our battles," and "we will help them by everything short of war, but not an American mother's son will be sent abroad."

"As a dog returneth to his vomit, so a fool returneth to his folly" (Proverbs XXVI: 11).

[From the New York Daily News of May 14 and the Washington Times-Herald of May 15, 1940]

IF WE INTERVENE

Yesterday we heard Miss Martha Breckenridge broadcast over C. B. S. the heartrending stories of various Belgian and Dutch refugee children in Paris—how some of them were wounded, how others had lost parents or older brothers and sisters in the blitzkreig, how all of them were miserable little victims of war.

Whether intentionally or not, this is the best kind of interventionist propaganda, because it is aimed at the heart of America. So was the President's speech last Friday night, so was his cable to King Leopold of Belgium, so were Secretary of State Hull's Monday denunciations of the German aggressors. The Breckenridge broadcast, incidentally, reminded us of W. L. White's Finn-Russ war broadcasts from Helsinki, said to have inspired Robert E. Sherwood's interventionist play, There Shall Be No Night, a play with a different point of view from Mr. Sherwood's Idiot's Delight.

So it may come to pass that our sympathies and indignation will be worked up to such a pitch against the hell of war that we shall decide to go into the hell ourselves.

TAXES AND MEN

If we do, it is to be hoped we will all bear in mind two things: (1) That we must expect to take a load of taxation which will make present taxes seem like child's play, and (2) that we can intervene effectively only with fighting men, using the latest in scientific weapons. It won't help the Allies for us to send them merely sympathy.

But whether we intervene in Europe or whether we are cool and wise enough to escape, still we shall need a much bigger and much better Army than we now have.

If Hitler wins he may be too busy licking his wounds to attack us next. On the other hand, he may be drunk enough with the wine of victory to do that very thing, with Japan helping him. For insurance we need, as fast as we can create it, an army of 1,000,000 mechanic-sergeants. Among these should be 40,000 or 50,000 pilots.

Senator Burton K. Wheeler

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HAMILTON BASSO

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article by Mr. Hamilton Basso entitled "BURTON the Bronc," which appeared in the April 22 issue of the New Republic. This analysis of the character of one of our colleagues will doubtless prove interesting to the readers of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New Republic of April 22, 1940]

BURTON THE BRONC

FIFTH IN A SERIES OF "HATS IN THE RING"

The WHEELER household, ordinarily as tranquil as most, is sometimes disturbed by one recurring argument—whether or not the Senator from Montana should retire from politics. The lone affirmative voice is that of Mr. WHEELER himself. Like a sea captain growling against the sea, like a painter threatening to be a plumber, so does the Senator occasionally fume against the life of officialdom and protest that he wants to get away from it all. These periods are short-lived, totally forgotten by the time the next meeting of the Senate convenes, and Mrs. Wheeler is quite correct in saying that were he to carry out his threat he would be one of the unhappiest people in the world.

Politics has a different meaning for different men—a means to power, a way to social or business advancement, a chance for a soft job, even a lark. It may also be a method of personal expression: An instrument, as valid as any of the arts, with which a man might seek to impose his own view—his inner vision, if you like—upon the world. The administrations of Jefferson and Lincoln, of Theodore Roosevelt and Woodrow Wilson, were such personal expressions; and the political phenomenon called the New Deal cannot and will not be understood until it is related to the character and personality of Franklin D. Roosevelt.

To BURTON KENDALL WHEELER, a New England Yankee with the breezy manners of a westerner, politics is also a means of personal expression. Let us assume that each phase of Mr. WHEELER'S career is a book and that we are examining the collected works of a writer whose name has been nominated for the Nobel Prize. We would find that through this work of a lifetime there runs a consistent central theme: A willingness to forswear the immediate advantage for the ultimate good and a battling independence that does not mind sticking its neck out. We would also find a colorful picture of our times and the portrait of a man who may be called the forgotten liberal of American politics.

Book I. Go West, Young Man, Go West: Hudson, Mass., where BURTON WHEELER was born on February 27, 1882, is one of those New England towns which have developed economically and politically (to filch from Mr. William Allen White's biography of Coolidge) in accordance with the Puritan thesis which Jonathan Edwards and Cotton Mather preached as a religious faith. "To work and to save,"

Mr. White has written, "were the highest human virtues. The Hamiltonian doctrine of the right of the property class to rule was translated into the shibboleth of the times—brains win."

Mr. WHEELER lived in Hudson until he was 20 years old, going to the public schools there and attending a business college. These were formative years—yet, while the mark of New England is upon him, his political and social outlook is singularly unfettered by that propertied philosophy which Calvin Coolidge held to his heart to the end of his days. In one respect, however, the two men may be said to be alike—their mutual tendency to take the long view. This, perhaps, is part of the New England character—finding expression in such phrases as "looking to the morrow" and, more obliquely, "good fences make good neighbors." From a half year's experience in that part of the world I would judge it to be. Should this surmise be correct, BURTON WHEELER'S principal inheritance from New England is the long view. The other dominant trait of his character, his rough-and-tumble independence, is as western as a gulch.

After completing his business-school education, Mr. WHEELER worked as a clerk and stenographer until he saved enough money to go to college. He selected Ann Arbor and enrolled in the Michigan Law School. For a New Englander raised in the heart of the academic belt, where you can't throw a rock without hitting a Ph. D., this in itself was no mean kicking over of traces. It was the squire of Northampton's proudest boast, for example, that "no Coolidge ever went West." Mr. WHEELER, however, was no Coolidge and no squire. It is even possible that he was not altogether happy in Hudson, for, as the French say in a proverb, happy people never emigrate.

Law-student WHEELER, in good American fashion, worked his way through college by waiting on tables and hiring himself out as stenographer to the dean. During vacation time, to support himself further, he peddled one of those native one-volume encyclopedias that tell you how to do everything from boiling an egg to curing a horse of heaves. Orders were taken on foot in the summer and the books delivered in the early fall.

This phase of Mr. WHEELER'S life recalls a similar episode in the career of another Senator—the late Huey P. Long. The Kingfish, it will be recalled, was at one time a lard salesman, and, before he had taken to the habit of having reporters on the paper I worked for thrown out of his room, he once told a group of us that a large measure of his political success was due to the knowledge he gained of people during those salesman years. Mr. WHEELER gained similar knowledge and, in addition, a wife. He met Mrs. Wheeler, the daughter of an Illinois farmer, while trying to sell her father a book. They now have six children.

Graduating from law school in 1905, Mr. WHEELER pushed farther westward to Telluride, Colo., where he went to work in a law office. Not quite content, anxious to have an office of his own, he soon moved on to Montana and to Butte. There he was offered a job in another law office at $50 a month but declined. He was thinking of going elsewhere, possibly back East, when there occurred one of those trivial accidents which are sometimes more influential in shaping a man's life than major events. He got into a poker game and was thoroughly fleeced. Broke, shorn, perhaps more grim than he now remembers, he went around to the law office and took the $50-a-month job. Butte has been his home ever since.

Book II. Meet the Interests: As cotton quotations are to the South, as the corn and hog market is to the Middle West, so is the price of copper to the citizens of Butte. And copper, in Butte, is a synonym for Anaconda. The story of Anaconda, a subject for a book, cannot be compressed into a paragraph. Its chief essence, however, is distilled in the tale that tells how it got its name. Mike Hickey, the discoverer of the Anaconda mine in Butte, was much impressed by a dispatch that told of the last military phase of the Civil War. "Grant's army encircled the Confederates like a giant anaconda." The symbolism, in relation to the economic history of Montana, is almost too apt.

Butte was general headquarters for the copper kings who, in the early part of the century, were still warring for the right to exploit the mineral wealth of Montana. The smell of politics was almost as noxious as the sulfur dioxide burned from the ore before it was sent to the smelter. Lawyer WHEELER would have no part of it until, in 1910, he was nominated on a "reform" ticket and elected to the State legislature. Then, in his first attempt to use politics as an instrument of personal expression, out stuck the neck.

Thomas J. Walsh was one of those men who, like Senator GEORGE NORRIS, help to justify American democracy. He was bitterly opposed to the copper interests and the copper interests were logically opposed to him. WHEELER was warned that if he supported Walsh for the United States Senate, he might as well leave Montana. He was told that his political career would be over, that his law practice would disappear, that he would be driven out of Butte. Walsh, however, was the hero of Mr. WHEELER'S early manhood. The threats only served to get his mad up—and BURTON WHEELER is somebody to reckon with when he is on the prod. He campaigned for Walsh, and started bucking the interests, and he and the interests have had a vendetta ever since.

Walsh was defeated but in the next election he swept everything before him. Mr. WHEELER, however, had tougher sledding. Running for attorney general, he made a dismal showing. It looked like curtains, and the interests scratched his name off their list of public enemies, but Senator Walsh had taken a deep liking for the young lawyer and in 1913 induced President Wilson to appoint him United States District Attorney for Montana.

The shoe was now on the other foot and the shoe pinched plenty. WHEELER brought as many indictments as have been brought recently in Louisiana. As a lawyer he is what other lawyers call a born prosecutor. This, it will be remembered, was during the time when the I. W. W. first came into prominence. It was also a time of steadily mounting war hysteria. WHEELER by refusing to take action against pacifists and the militant leaders of labor fired a hatred in Montana even more intense than that ignited by Mr. Roosevelt. (The President, for example, has never been accused of being a spy and wanting to introduce free love.)

The blaze of hatred shot so high that Senator Walsh, whose term of office had almost expired, was told that all hope of his reelection was gone unless WHEELER were sacked. Unwilling to jeopardize Walsh's career, Mr. WHEELER resigned. Almost immediately he was offered a Federal judgeship. He declined, saying he wanted "to fight it out with the people of Montana." The long view again.

In 1920 (when Franklin D. Roosevelt was running for Vice President on the Cox ticket) Mr. WHEELER ran for Governor, backed by the Non-Partisan League and the Labor League. Every weapon was used against him except the Anaconda smokestack. It seems unlikely that he could have been elected that year under any circumstances but, to make it more difficult, the country was voting itself back to "normalcy." WHEELER, like nearly every other non-Republican candidate, was snowed under. He made, however, a deep impression on the people of Montana. Two years later, in 1922, he was sent to the Senate for his first term. He has been in the Senate ever since.

Book III. Brand Blotting: One of the puzzles of the moment is how Mr. WHEELER'S reputation as a liberal managed to become blurred. Yet in circles that ought to know better, his right to the title is sometimes questioned. Here is a man who ran for Vice President on the La Follette Progressive ticket (while Franklin D. Roosevelt was supporting John W. Davis), who was one of the spearheads in the drive that led to the exposure of the Teapot Dome scandal, who has always championed the rights of labor and fought vigorously in defense of civil liberties—well, what is a liberal? one is tempted to ask.

The truth of the matter is that Mr. WHEELER has been the victim of what Montana cowpunchers call "brand blotting." This is the phrase used to describe the method by which a brand is made indistinct by applying heat through a wet sack or blanket. The heat, in Mr. WHEELER'S case, was turned on by the professional new dealers; the blanket was the Supreme Court fight.

While the term "liberal" has always been a vague one, never has it been quite so blurry as at present. In Washington, and especially in the inner New Deal circles, the ultimate test of liberalism seems to be a willingness to pledge complete fealty to President Roosevelt. This tendency—and I hope it is not so pronounced as I believe—first became noticeably manifest in the Supreme Court fight. The Court bill was used as a kind of litmus paper to type a man as either "reactionary" or "liberal." There could be no intermediate shadings. Senator WHEELER, one of President Roosevelt's earliest backers, a defender of the New Deal as a whole, once again found himself with his neck out.

The story begins with Teapot Dome and former Attorney General Harry M. Daugherty. In January 1924, after the scandal had been broken, Senator WHEELER introduced a resolution calling upon President Coolidge to ask Daugherty to resign. He also demanded a full investigation of the Department of Justice. These activities, in time, forced the resignation of Daugherty, but not before he put Private Detective Burns on WHEELER'S trail and sent a small army of Department of Justice agents into Montana to "get a case." These agents spent several months in Montana and some $250,000, and finally WHEELER was indicted on a charge of unlawfully receiving money as a retainer fee to influence the issuance of oil- and gas-prospecting permits.

The case was too flimsy to stand up. A Senate committee headed by the late William E. Borah reported no foundation for the charge, and when the case came to court it was the Department of Justice, rather than WHEELER, that was on trial. WHEELER was acquitted in 10 minutes, but to this day his dossier remains in the Department of Justice files.

This experience was deeply influential in determining his position relative to the Court plan. It so happens that in the hullabaloo raised over the Supreme Court, lesser details of the court bill were largely overlooked. WHEELER was against the method proposed to enlarge the Supreme Court, but he was even more opposed to one section relating to the lower courts. This would have permitted any administration to send special hand-picked judges anywhere in the country to try cases in which the Government was interested. Senator WHEELER puts his side of the argument very simply, "Where would I be today," he asks, "if Daugherty had had the power to send a hand-picked judge to try me? Where would anybody's civil liberties be? A weapon like this, in the hands of some other President, could well be an instrument of destruction—cutting down our guarantees of liberty and extinguishing our rights to freedom of speech, of action, and of religion."

This, it may be held, was another example of his tendency to take the long view—but long views, in Congress during the Court

fight, were at a discount. Then, too, Senator WHEELER found himself in the curious position of being a hero to the very groups and interests that had previously damned him as a "red." Such groups and interests found his liberalism most handy for their purpose. "If a liberal like WHEELER is against this bill," the argument went, "it must be a dangerous proposition." So, since politics is politics, it was good strategy, even imperative strategy, for the administration to blot the WHEELER brand.

There are political fashions in Washington as there are intellectual fashions in New York—and hangers-on. In the wake of the whale that is F. D. R., in the lesser wakes of the inner circle, thousands of little minnows are happy to follow. Let the whale lash its flukes, or blow its spout, and all the minnows dart off to speed the news—via gossip, via dinner tables, via typewriters. This is what is generally called being on the "inside." So, when the brand blotting started, it became a political fashion to point out that BURTON WHEELER's past career had been done with mirrors and that he really was a "reactionary" at heart. This fashion has run its course (the coup de grace being the White House's admission that Senator WHEELER would be acceptable as a Vice-Presidential candidate), but it was sufficiently popular a few months ago to cause some people to discover in Mr. WHEELER's vote for a tax on foreign copper a sign that he had "sold out" to Anaconda—though, as the president of the International Union of Mine, Mill, and Smelter Workers testified, he cast his vote upon "information supporting our contentions that there should be no reduction in the tariff on copper."

Book IV: The Chicago Cup. The odds against Mr. WHEELER in the July classic are being quoted at 30 to 1. Under different circumstances, they might not be so high because any handicapper would be compelled to list the following advantages: A liberal record, the friendship of both houses of labor, a comprehensive knowledge of domestic affairs gained through the chairmanship of the Senate Committee on Interstate Commerce, plus his long and concentrated study of the railroad problem, a strong and well-reasoned stand against intervention in Europe.

A bookmaker prejudiced in Mr. WHEELER's favor would be tempted to add one thing more—the long view. Most of official Washington is as hypnotized by November 1940 as a Hindu fakir is by his navel. This is understandable; and Mr. WHEELER is also glancing at the calendar. But he takes considerable time out, as any study of his recent addresses and writings will reveal, to look into the future. "The biggest job in the next 10 or 15 years," he understands, "is the preservation of American democracy. Everything we do now ought to be examined with that in mind."

I am in no position to state Mr. WHEELER's economic pilosophy in full. That, properly, is his job. I would assume, however, that it is infused with the basic morality of the New Deal and that his domestic program would be a renewed effort to drive further in the direction of economic democracy. I would also assume that while he might be willing to bargain nonessentials to gain essentials, to use the democratic instrument of compromise, his hard-headed independence would frequently discomfit his foes and sometimes his friends. I would further assume that his long-time defense of civil liberties has been a sincere expression of personal belief and that, as President, this expression would continue. And I would not be surprised to find him, should he spend 4 years in the White House, as admired—and as hated—as Franklin D. Roosevelt.

BURTON WHEELER would like to be President. (He is totally disinterested in the Vice Presidency and has given me permission to say that he will not accept it under any circumstances.) The Senator, however, is under no illusions. He knows that if Mr. Roosevelt turns thumbs down on his candidacy, thumbs down it will be. It is not to be concluded, though, that should the thumb turn down it will be because he is not a liberal. Politics is not conducted in an emotional vacuum; men have personal relationships. As for Mr. WHEELER's liberalism, his career is his best testimonial—and the liberal forces of this country should not make the unforgivable mistake of denying one of their own kind.

HAMILTON BASSO.

Continuance in Public Office of President Roosevelt and Secretary of State Hull Means War for the United States

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

Mr. TINKHAM. Mr. Speaker, startling new evidence has come to light this past week of the war intentions of the present administration. It is convincing proof that continuance in public office of President Roosevelt and Secretary of State Hull means war for the United States.

Testimony at an Interstate Commerce Commission hearing in New York last week disclosed that plans had been formulated by the administration for the transportation of troops overseas via the port of New York. The witness, the chairman of the General Committee of Port Traffic of the Association of American Railroads, a man of high probity, in discussing questions of congestion in New York harbor, said:

> Plans at present are set up for the possible transportation of troops.

This disclosure, taken in conjunction with the fact that legislation for the conscription of man power, for the conscription of business and wealth, for the imposition of confiscatory taxes, and for censorship and espionage, has already been drafted and is embodied in bills pending in the Congress, can in no way be reconciled with the repeated assertions of President Roosevelt and Secretary Hull that American participation in European war is not contemplated. It is a complete contradiction of such assertions. It proves such assertions to be mendacious and intended to deceive the American people. The American people should be made aware of their danger and be made to realize that those now in charge of our Government are bent on war. In order to avoid war, they must remove from leadership President Roosevelt and Secretary Hull.

Menu Illustrating Dinner on Which W. P. A. Worker Has to Subsist

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

MENU WORKED OUT BY BUREAU OF HOME ECONOMICS

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

RELIEF DINNER

National Press Club, Washington, D. C.

May 14, 1940, 6:30 P. M.

MENU

	Cents
Beef stew:	
2 ounces beef at 19 cents per pound	2.37
¼ carrot at 12 for 13 cents	.39
¼ onion at 24 for 20 cents	.21
½ potato at 20 for 16 cents	.40
½ slice of bread at 7 cents per loaf	.20
Coffee at 12 cents per pound	.52
1 teaspoon sugar at 10 pounds for 47 cents	.18
Canned milk at 4 cans for 25 cents	.20
1 pat oleomargarine	.25
1 canned prune	.28
Total cost	5.00

This meal is based upon the budget of the average woman worker on W. P. A., who receives a monthly wage of $44, of which $16.91 is spent for food. Assuming she has an average family (3.7 for W. P. A. and relief workers, according to W. P. A.), she can spend 5 cents per person per meal.

This figure was also used by Mr. Milo Perkins, President of the Federal Surplus Commodities Corporation, in his pamphlet The Challenge of Underconsumption as the average per capita per meal budget of relief families.

The menu was worked out by the Bureau of Home Economics, United States Department of Agriculture.

America and the Allies

EXTENSION OF REMARKS
OF
HON. ERNEST LUNDEEN
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 15 (legislative day of Wednesday, April 24), 1940

EDITORIALS FROM THE WASHINGTON DAILY NEWS AND THE WASHINGTON TIMES-HERALD

Mr. LUNDEEN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD two editorials, one under the heading "Swap," published in the Washington News of today, which refers to negotiations for the British and French West Indies to apply on defaulted debts now past due and owing from the great British Empire and the powerful French Empire. Why not? Uncle Sam's taxpayers want to know—why not?

The other editorial refers to Jimmie Gerard, Knight of the Bath, member of the British nobility, who urges the United States to enter the European war, which is perfectly natural, coming from a man who holds a title at the hands of the British King. The latter editorial is published in the Washington Times-Herald of today.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 15, 1940]

SWAP

Already agitation has begun for changes in the Johnson Act and the Neutrality Act, in order to permit loans to the Allies.

If we learned anything from the last time it is that we must never again lend to nations at war, unless we are reconciled to defaults and to such recriminations as have poisoned American-European relations for two decades.

Yet, if Germany's air power does not win this war within a few weeks or months; if this is to become a war of exhaustion—which is the only type of war the Allies can hope to win—then it is inevitable that the United States and other American republics will come to grips with the issue of Allied financing.

If we made outright gifts of money or war supplies, we would be on the thin ice of belligerent partisanship, which might involve another A. E. F.

If we lent the money, the same thing might happen; and, human nature being what it is, we would once again become the maligned and embittered creditor in post-war years. "Loan oft loses both itself and friend."

Would the only alternative be to choke off supplies, even if German victory were thereby guaranteed?

No; we think the Allies have a better 'ole.

And we think the Americans have a happier choice than to sit idle while the dictators overrun the nations of western Europe, nations whose defeat would intimately involve the geography and politics of this hemisphere because of their numerous colonial outposts in our waters.

When a private individual is out of money and unable to borrow, he cashes in some of his assets to meet the emergency.

There is no reason why nations shouldn't do the same. If the Allies get hard pressed they can relinquish sovereignty over their Western Hemisphere holdings—at a fair price—and use the proceeds for the planes and other equipment they need.

And it would be only enlightened self-interest for the American republics to pay that fair price—even a good price, as friendly buyers—and run up a pan-American flag over the British, French, and Dutch possessions in and around the Caribbean.

We suggest this as a project to be undertaken by all interested American republics—the islands and possessions to be governed under a pan-American mandate.

The United States itself has no imperial ambitions. It is not looking for more real estate. "Manifest destiny" is a dead phrase here.

But in common with our sister republics we do have a vital stake in securing the defense of this hemisphere. And therein lies the tremendous value to us of these strategic holdings: The British Bermudas, 580 miles off North Carolina; the British Bahamas, east of Florida; British Jamaica, south of Cuba; the Windward and Leeward Islands of the Lesser Antilles (principally owned by Britain and France), which form a circle protecting the northern coast of South America and the Panama Canal; the Dutch islands of Curacao and Aruba, closer still to the Canal; the British, French, and Dutch Guianas, on the South American mainland; British Honduras, north of the Canal.

Some of these holdings, like Dutch Curacao and British Trinidad, are economically important; others are white elephants; they would be economic liabilities like our Virgin Islands and Puerto Rico. But they would be worth a big price because of their importance to the naval and aerial defense of the Americas.

These possessions have no military value to Britain, France, and Holland, who contemplate no aggression in this hemisphere. But to the Americas, to the United States in particular, their intrinsic worth would be greatly augmented by their strategic value in the naval and aerial defense of the Panama Canal. Consider the cost of doubling our Navy, which would be a plain necessity if the swift acceleration of aggressive technique were to make the present defensive outposts of the Panama Canal inadequate.

The best definition we ever heard of trade was this: The process by which two men get what each wants, both parting with what neither needs, both profiting by what neither loses.

The trade here proposed, where the Allies would get what they must have to defend themselves and where the Americas would secure these defensive outposts against the possibility of a Nazi claim, would be just such a deal.

[From the Washington Times-Herald of May 15, 1940]

SUPPOSE WE MIND OUR OWN BUSINESS, HONORABLE JIMMIE

The Honorable James W. Gerard, World War Ambassador to Germany, recently emerged from a luncheon with President Roosevelt all full of pep and ginger.

Said the Honorable James:

"We can't let Germany win the war.

"A German victory would be a great danger to this country."

Everyone is shocked at the excesses of war.

Everyone is horrified at the useless and unnecessary slaughter.

But how can we improve this deplorable situation by plunging our people into this maelstrom of murder?

We must not proceed recklessly and impulsively in such an important matter so vital to the welfare of our people and perhaps to the existence of our country.

Perhaps this European war is our war; and perhaps it is not.

Perhaps the last European war was properly our war; and perhaps it was not.

Maybe every European war is our war; and maybe it is not.

Maybe every Asiatic war is our war.

Maybe we should participate in every conflict everywhere and decide when and how and by whom it shall be won; or maybe we should mind our own American business and look after our own peace and our own people.

Maybe it is a great danger to this country not to interfere in foreign conflicts; and maybe it is a much greater danger to be a perpetual and pernicious busybody, meddling in things we cannot help and in which we might do much harm—bringing death and disaster to our own country and our own people, and unnecessarily inviting invasion and destruction here at home.

Let us consider carefully what we got out of the last war before we rush into another, and let us figure out accurately how much strength and resource, how much money and manpower we are going to have left to defend our own country if we have dissipated everything we possess mixing in the quarrels of others.

Furthermore, Honorable James, what do you mean by "we" when you say:

"We can't let Germany win the war."

You certainly cannot mean yourself and the President, or you would have said so—and he would have said so.

Maybe you mean by "we" the Honorable James Gerard and the Honorable James Cromwell, the two honorable Jimmies?

Both are important, both are impulsive, both are belligerent.

The Honorable Cromwell also is intensely anxious that "we" should save the world again for democracy; but neither does he explain who "we" are.

Nobody has heard of his doing any personal saving.

Nobody has heard of his enlisting in the Foreign Legion or anything like that.

He is too busy running for Senator from New Jersey to attend to such trivial details.

He is too dignified and too prosperous to get mussed up in the disagreeable mud and blood of battle.

No; "we" cannot mean the Honorable James Gerard and the Honorable James Cromwell.

There will probably be no ambassadorial escadrille formed in which these two bellicose gentlemen will participate.

Jimmie Cromwell is too busy, and, Jimmie Gerard, you are too old.

You were too old to enlist in the last war, and you are a quarter of a century older now.

You did your part, to be sure. You were a good Ambassador, and you wrote a good book on the Kaiser and sold it to Warner Bros. for a good propaganda picture.

But you did not actually get down in the trenches, and you do not repose under one of those little rented white crosses in France, and you are perfectly sound in wind and limb, with no bullet holes through you.

So, obviously, "we" does not mean you.

Well, whom does it mean?

It means the young blood of America.

It means the mothers' boys, from 18 to 20.

It means the young men just starting out in life, from 20 to 25.

It means the young fellows from 25 to 30, who have got good jobs and good prospects, and who are making their way in the world, hopefully and helpfully.

It means the strong, healthy, happy youth of America, who must take their health and strength across the seas and come back—if they do come back—broken in body and mind—lame perhaps, blind perhaps, bedridden perhaps, wounded or shell-shocked; nerves gone, health gone, strength gone, hope gone, prospects gone, jobs filled, sweethearts married—wholly spent in spirit and handicapped in life—utterly sacrificed to a sordid quarrel that is not theirs.

A quarrel that has been going on for centuries, and will go on for centuries.

A quarrel our ancestors came to this new land to avoid.

A quarrel we abolished here when they made the separate, conflicting Colonies all one harmonious Nation.

A quarrel we can never solve over there, but which can ruin our country and our people if we become involved in it.

No, "we" doe not mean all but withered last leaves upon the tree—like you, Jimmie, and like the writer of this column.

It means the useful, hopeful, valuable youth of this country, whom we in our older wisdom—our accumulated experience and our sincere patriotism, if we have any—should protect against the folly and futility of war, and should preserve for their own happiness and welfare, and for worthy services to their native land.

And finally, Jimmie—a familiar appellation which 40 years of friendship permits—what harm will it do this country if either of these misguided combatants wins in this war or another?

If England wins, we will get along with her as amicably in the future as we have in the past.

She controls Canada and British Columbia and British Guiana and many of the West Indies on this hemisphere, but that does not in the least prevent amicable relations.

We have only had two wars with her in 160 years.

If Germany wins, we will maintain friendly relations with her if we want to.

She controls two large provinces in South America, say you.

What of it? She has controlled them for many years, and nothing disadvantageous to us has happened there.

We have had only one war with Germany in a century and a half—and that one a war that we went into of our own volition and initiative.

The only thing which would prevent our getting along with other nations is not minding our own business.

The only thing which prevents those other nations from getting along with each other is not minding their own business.

Suppose, Jimmie, that we—you and I—mind our own business.

Suppose, too, that "we"—the real youth of America, who would have to fight this war—also be allowed to mind their own business, and to have some business, some happiness, some peace and prosperity, some security for home and family and country to mind.

Pertinent Thoughts Bearing on the Campaign Issues of 1940

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following pertinent thoughts bearing on the campaign issues of 1940, taken from my Weekly News Letters:

RECIPROCAL-TRADE PROGRAM

The tariff act of 1934 transferred the tariff-making power from Congress to the President, and the President in turn delegated the power to that outstanding free-trader, Cordell Hull, Secretary of State. Mr. Hull is thoroughly convinced that the best way to preserve peace is to let down all trade barriers so that there may be free and unrestricted exchange of commodities between nations. The low tariff base upon which this Nation is now operating is one of the causes of our prolonged depression. It virtually amounts to free trade, and free trade and jobs do not go together. Organized labor understands this and opposes the reciprocal-trade program.

FARM EXPORTS DECREASE, FARM IMPORTS INCREASE

During 1939 our competitive farm imports were greatly increased over the farm imports of 1938, and our farm exports were almost cut in half during the same time. The American farmer should be his own judge as to whether he has been helped or injured by the reciprocal-trade agreements. How many times have you gone into a store and found crowding the shelves manufactured articles labeled "Made in Japan," "Made in Germany," or "Argentine beef"? This is the direct result of the failure to protect our own market for our own people. The continuance of the reciprocal-trade agreements will mean a continued increase in our farm imports, and a continued decrease in our farm exports.

PLAIN COMMON SENSE

Admission into America of foreign-grown products which compete directly with American farm products can serve no useful purpose. It can only have the effect of increasing our surpluses, reducing our prices, forcing more American land out of production, and driving more American farmers from the land. Any tariff revision made through a reciprocal-trade agreement that affects agriculture should be made with the greatest of care at any time, but never should it be made during a time when prices are already depressed. The very uncertainty or doubt concerning the effect of the tariff revision further depresses the prices, and the farmers' pocketbook is bound to suffer.

FAILURE AFTER 7 YEARS

The theory under which the New Deal took over and regimented farm operations was that supply would be controlled to meet demand; that prices would be stable and the farmer would make a profit on his operations. Instead of making a profit, he is getting a hand-out from the Federal Treasury. Experiments that defy the laws of nature and of supply and demand and then make up to the victims by "a gentle rain of checks" from Washington are not getting the farmer anywhere. Market prices last October, before war was declared, were lower than when the visionaries took charge. What the American farmer wants is stability and progress, not checks for acting as agricultural guinea pigs for a lot of socialistic theorists.

CATTLEMEN BURNED UP

The fact that the President used the White House sounding board to disparage American beef, and, in effect, urged the country to patronize Argentine beef because it was better and cheaper has neither been forgotten nor forgiven. The huge increases in imports of both cattle and wool, shown by the official figures of the Department of Commerce, are now adding fuel to the fire. During the first 6 months of 1938 cattle imports into the United States totaled 242,584 head, valued at $4,087,205, while during the first 6 months of 1939 cattle imports totaled 486,497 head, valued at $11,688,106. During the first 6 months of 1938 wool imports totaled 25,415,500 pounds, while during the first 6 months of 1939 wool imports totaled 116,801,000 pounds. It is no use telling the American cattlemen that these huge increases in cattle imports do not hurt them, because they know these imports have a depressing effect upon prices and deprive them of a market that rightfully belongs to them. The cattlemen of the West have become tired of being made the goat in a good-neighbor policy of doubtful value.

FARMERS TAKE NOTICE

Argentina is a direct competitor in beef, mutton, pork, poultry, wheat, corn, oats, barley, rye, and flax production with our American farmers. In fact, Argentina is an agricultural country, pure and simple; yet our State Department tried its best to enter into a trade agreement with Argentina the result of which could only mean imports of agricultural products to compete with the products of American farms in exchange for American manufactured products. Our farmers should feel relieved that the negotiations with Argentina have been broken off temporarily.

HOW LONG?

How long can we expect the American farmer—and I care not whether he lives in Florida or Illinois—to continue to sell the products of his land labor below cost of production be-

cause of forced competition with peon labor, many of whom go barefoot the year round and whose sole wardrobe consists of a cotton shirt and a pair of patched overalls? We simply cannot compete with him unless we get down to his living levels.

HE GETS IT COMING AND GOING

Under the former high protective tariff the American farmer was penalized so the American manufacturer could have the domestic market. Under the present reciprocal-trade agreements the American farmer is being penalized so the American manufacturer can build up his foreign market. The American farmer therefore has been getting it both coming and going. When the Reciprocal Trade Agreements Act was passed 6 years ago the American farmer was promised that the American market would be preserved for him and that the agreements would furnish him a larger export market. Now what does the record show? According to the Department of Agriculture reports the average annual imports of competitive farm products for the 5-year period before the agreements amounted to $495,000,000 per year, while the average annual imports of competive farm imports for the 5-year period since the agreements has been $616,000,000 per year. The average yearly value of farm exports for the 5 years before the agreements was $982,000,000, and the average yearly value of farm exports for the 5 years since the agreements was $784,000,000. Therefore, according to the Department of Agriculture's own figures, the American farmer has been getting it both coming and going.

THE REAL ANSWER TO THE FARM PROBLEM

"Farm chemurgy" means the use of farm products as raw materials in the manufacturing industries. Farm chemurgy seeks new uses for crops we now grow, the establishment of new crops for new uses or old, and the profitable utilization of farm byproducts and waste. Agriculture, industry, and science have combined in farm chemurgy to answer the cry of the unemployed for work and, at the same time, increase the farmer's income. Farm chemurgy is the real solution, the only permanent solution of our pressing farm problem.

TWENTY YEARS LATE

The Government of the United States has recently appropriated money for the establishment of four agricultural laboratories to study new uses for surplus farm products. One of these laboratories is located at Peoria. Private industry has been hard at work on this problem for a long time, and has made remarkable progress. Great laboratories, manned by the best chemists in the country, are maintained by Ford, Du Pont, General Motors, and others, finding new uses for farm products. The results read like a fairy tale:

FARM PRODUCTS IN FORD V-8

Into the construction of every million Ford V-8's today goes: Eighty-nine million pounds of cotton, the crop from 558,000 acres, for making upholstery, brake linings, timing gears, and safety glass; 500,000 bushels of corn, the harvest of 11,280 acres, for rubber substitutes, butyl alcohol and solvents; 2,400,000 pounds of linseed oil, the yield of 17,500 acres of flax, for making paints, core oil, soft soap, and glycerin; 2,500,000 gallons of molasses, from 12,500 acres of sugarcane, for making antifreeze, shock absorber fluids, and solvents; 3,200,000 pounds of wool, from 800,000 head of sheep, which go to make upholstery, gaskets, antirust, floor coverings, and lubricants; 1,500,000 square feet of leather, from 30,000 head of cattle, for making upholstery and hide glues; 20,000 hogs to supply 1,000,000 pounds of lard for lubricants, oleic acid, and bristles for brushes; 350,000 pounds of mohair, from 87,500 goats, for making pile fabrics for upholstery; 2,000,000 pounds of soybean oil, from the crop of 10,000 acres, for making the lustrous and long-wearing enamel.

This is farm chemurgy in operation.

ALCOHOL FROM FARM PRODUCTS

A 5-percent blend in auto gasoline would require 15,000,000 acres of corn or its equivalent; a 10-percent blend would require 30,000,000 acres—which is the acreage declared surplus by the Agricultural Department—and a 20-percent blend, which can be used without changing the carburetors or the engine of any of the cars now made, would require 60,000,000 acres. Sixty million acres devoted to the production of alcohol would probably compel us to go on an importing basis for our foodstuffs. Chemists are rather frank in saying that we have been bungling with the farm problem long enough and that the solution lies in raising more rather than less. This fits in with the gospel that Henry Ford has been preaching for years, "All wealth comes from creative labor."

A Warning

EXTENSION OF REMARKS

OF

HON. JOHN J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

LETTER FROM HENDRIK WILLEM VAN LOON

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in today's New York Herald Tribune:

[From the New York Herald Tribune of May 15, 1940]

A WARNING BY HENDRIK VAN LOON—BASEST TREACHERY BETRAYED GERMANY'S PREY AND IMPERILS UNITED STATES

To the New York Herald Tribune:

The news is telling its own relentless story and America sleeps. Norway destroyed; Finland is lamed; Belgium destroyed; Holland blown to pieces; Czechoslovakia murdered; Poland annihilated, and America sits by and sweetly says: "Oh, yes, that is too bad, but it is all very far away and it can never happen over here. We must send them a bundle of old clothes and do a little more moral rearming. For we are safe and it can never happen over here."

Until the day it does happen—and then it will be too late—and the hideous part of it all will be this, that we had warnings, endless warnings, warnings which stood in bold black print ever since It came into power.

For this is what It wrote and said just before It came to power, as anyone may read for himself who will stop following the baseball scores just long enough to contemplate his own possible fate should he let It go Its way unmolested, to bring about the universal kingdom of Its Aryan Herrenmenschen:

"When I start to make war, I shall suddenly and in the midst of peace let my troops appear in Paris. They will come wearing French uniforms. They will march through the streets and in clear daylight. Nobody will dream of stopping them. Everything will have been prepared long beforehand and in the minutest details. These troops will march to the buildings of the French general staff and before anybody knows what has happened they will have occupied all the Ministries and Parliament.

"By the use of such methods, within a few minutes' time, Austria, France, Poland, or any other country will be at my mercy. All its leading personalities will be in custody. The people will be an army without officers. The confusion will be indescribable. But long before my men have come I shall have established contact with certain local personalities who will then come forward and will establish a new government, a government which will do as I bid it do.

"We need not buy them. Why should we? They will come to me out of their own free will, driven by ambition or through sheer blindness. And we shall have peace before we have had a war. For that which is held to be impossible must invariably succeed. My own Storm Troopers, disguised as peaceful visitors, will have filtered in long beforehand and nobody will see anything in them except just peaceful travelers, bound on a little holiday.

"Today nobody will believe me when I speak this way, but I will do just exactly that, and I will also send soldiers by ordinary commercial airplane. So what do I care about a Maginot line? My purpose will be to destroy the enemy from within and not from without. And it is my duty to destroy the morale of the people I intend to attack long before I attack them and to demoralize them so thoroughly that they won't even be able to think of the possibility of defending themselves.

"Any one of us who has been at the front and who knows what war means will agree that this makes sense—that everything is permissible as long as it saves one single drop of our valuable German blood, and, therefore, panic has to be my most important method of attack—a panic which will cause such a confusion of ideas and sentiments that all idea of resistance will be lamed.

"All this, I confess it, I have learned from the Bolsheviks, for one always learns most of all from one's enemies. Keep this in mind and then you will know what you have to do when the time comes. Does anybody really think that I am such a fool as to want to start a war the way it was done by those idiots of the year of

1914? No; the trouble is that most people high up in government are completely lacking in imagination. I am not, and this, therefore, is what I will do."

There is the story. The gangster who tells the bank at just what hour he will attack the vaults and in what disguise he will make his appearance. But the bank does not believe him, for the thing is unbelievable. But it is true. Because in that demented brain there is only one truth—the truth (now visible in the ruined villages of the whole of Europe) of a hate which surpasses human understanding as the love of God used to do in another and happier day.

But America won't believe. America, the next victim, talks prettily about amiable theories fit for an imaginary world, intones harmless incantations about a common brotherhood which includes all men, even Nazis, and awaits the knife of the murderer, smiling all the while at that poor misguided man who will not harm us if we will treat him with kindness and talk to him about his mother.

Listen, America, here is something you ought to know: After the last war the people of the Netherlands took care of half a million German children, received them in their homes, fed them, clothed them, and kept them for 1, 2, or 4 years, that they might be restored to normal health.

And 20 years later those nice, dear children, speaking, of course, perfect Dutch (had they not been full-fledged members of a Dutch household for many years?), returned to the land of their hospitality garbed in one of those 50,000 Dutch uniforms (about which our correspondents have been cabling for 3 months), but again nobody would believe them, and thusly disguised those grateful little Germans, now completely contaminated with the Nazi virus, burned down the houses that had been their homes and struck down the hands that had fed them and saved their lives.

But America won't listen and America won't believe. Until it will be too late and the vermin has eaten its way into the fabric of our own edifice of state.

And for this letter I will be called a warmonger and the Nazi boys will smile slyly and say, "Just because we burned down his own birthplace he is perhaps just a little hysterical." Which God forbid. I am merely conscious of a duty toward my adopted country. I am no German and do not intend to betray my own benefactors. I want to save them. I want to save them from a fate which has just overtaken others who talked and reasoned the way we did and do. I want to save them from the fate of being destroyed by their own kindness, their own decency, their own inability to believe in a vileness beyond any of the words found in Dr. Roget's helpful little volume. I want them to wake up before they, too, are dead.

HENDRIK WILLEM VAN LOON.

OLD GREENWICH, CONN., *May 13, 1940.*

The Poll Tax

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1940

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I reproduce a letter written by a minister of the Gospel in a small Alabama town. As instances have come to my attention of reprisals being meted out against those who publicly favor real democracy by abolishing the barriers to voting, I have refrained from either mentioning the name of the town or the name of the writer. This is also according to his request. I believe this is only just to the writer, in view of the recent outrages of the Ku Klux Klan in certain sections of the Southland.

This letter is typical of many that are coming to my office daily:

——, ALA, *May 1, 1940.*

Hon. LEE E. GEYER,
Washington, D. C.

DEAR CONGRESSMAN GEYER: I saw your bill to abolish the poll tax in the eight Southern States mentioned in our local paper. Congressman GEYER, I want to congratulate you on your bill and your ability and your principles. I bid you Godspeed and pray to God that you will push the bill through, not for my personal benefit, nor for my people—my wife is 68 years old, and always we kept our poll tax paid up until we were too old—but I have seen poor laboring white men suffer at the hand of these political sharks until it makes my blood run cold. The officeholders here in Alabama are elected by about 30 percent of the citizens, for about 70 percent of the men and women in Alabama have no vote for lack of $1.50 to pay the poll tax. This is shameful. I myself am a voter, a white man, and a minister of the Gospel.

Please do all that you can for the helpless in the South. I think that it would be useless to call on our Congressman to do anything for the common masses of the people so I call on you to help us.

Thanking you and thanking the Lord for the start that you have made, I remain,

Sincerely yours,

Reverend ——.

The Relief Problem

EXTENSION OF REMARKS
OF
HON. NOBLE J. JOHNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1940

Mr. JOHNSON of Indiana. Mr. Speaker, this Congress should devote its energy to solving the many serious domestic problems confronting our Government. We should not let the war divert our attention entirely to foreign affairs, as many think an effort is being made to do. Our first duty is to solve our domestic problems. We are confronted with serious facts, not theories. Our national debt is at the $45,000,000,000 debt limit. Farmers are able to live only by reason of governmental grants and appropriations. Business has lost all confidence in the present administration. Many millions of our citizens are unemployed. In fact, we are in a worse condition today than we were in March 1933.

In a few days we will have the relief bill for the coming year before us for consideration. Relief work should be continued as long as it is needed, but I feel that, while we are providing relief work, we should be devoting our energies at the same time to bringing about a condition wherein relief work will not be needed, a condition wherein the unemployed and those working on relief can be employed in regular employment at regular American wages.

W. P. A. has been used as a political set-up instead of one wholly for relief of those needing relief. It has been subject to many abuses. Much of the money heretofore appropriated for relief work has been used to employ nonrelief workers, to pay large administrative costs, exorbitant amounts for travel expenses, telephone and telegraph, and wasted in many ways. Congress should write into the law provisions which will compel those administering this law to expend the money to employ those needing relief and providing that politics should be completely taken out of relief.

I have been unable to learn how many nonrelief workers are employed and being paid from funds appropriated for relief. Those in authority will not give out this information. I introduced a resolution in Congress providing that Congress be advised as to the names and salaries of all nonrelief workers being employed and paid from relief funds, but the committee has not reported the resolution. It seems to me that when Congress appropriates money, the Members should be informed how that money is expended, and how many people who do not need relief are being employed and paid from relief money. Also, the taxpayer whose money is used for this purpose is entitled to know how his money is being spent, but there seems to be no way to find out. Those administering the law will not tell and Congress will not make them tell.

When hearings were held on the last relief bill, Colonel Harrington, W. P. A. Administrator, advocated $1,477,000,000 be appropriated for the fiscal year 1940, which was the full amount asked by the President. The Governor of Indiana, apparently for political purposes, has written letters to people saying that W. P. A. could not employ them because Congress failed to appropriate as much as the President asked for, Congress appropriated $1,477,000,000, the full amount asked.

Colonel Harrington further advocated that the legislation provide that persons employed on W. P. A. be required to work 130 hours per month. I quote from Colonel Harring-

ton's testimony, which appears on page 20 of the hearings. He said:

It is my recommendation that persons employed on projects of the W. P. A. be required to work 130 hours per month, and that the earnings of such persons be on a monthly basis, with the requirement that substantially the present national average labor cost be maintained.

Still W. P. A. bosses have been telling W. P. A. workers that the Republicans are responsible for the 130-hour work month. Of course, everyone knows this is not true.

In an attempt to get the money appropriated for relief to be expended to employ those needing relief, I offered the following amendment:

Provided, That no person whose need for employment has not been certified as provided in section 16, subsection (d), shall be employed as timekeeper, boss, or supervisor on any Work Projects Administration works project if there are persons unemployed whose need for employment has been certified as provided in said section 16, subsection (d), who are qualified and capable of performing the duties of timekeepers, bosses, or supervisors.

This amendment was voted down, the amendment receiving no Democratic support.

I also offered the following amendment:

Provided, That the Work Projects Administration shall not employ any person whose need for employment has not been certified as provided in section 16, subsection (d), in any position, if there are available for employment persons whose need for employment has been certified as provided in section 16, subsection (d), and who are capable and qualified to perform the duties of said positions.

This amendment was also voted down, it receiving no Democratic support.

There is no question but that W. P. A. is seething with politics and favoritism. In today's mail I received a letter saying:

The same power here that caused me to be layed off will see that I do not get back on as long as I stand where I have for a year and a half.

Recently I received a letter advising that in one township "19 men were put to work 1 day; all 19 were Democrats and several were single men, while several men with large families who were in destitute circumstances could not get this work." I made a protest against wholesale lay-off of workmen with large families and much in need of the work, and received reply from the district director containing the following:

The relative-need basis that you referred to was not considered in these reductions; the selection of the people for these reductions was made in the district office by the employment staff composed mostly of young ladies who did not know whether a man was white or black, married or single, or any other circumstances about him.

Just think, people laid off W. P. A. without the question of need even being considered, when, as a matter of fact, relief work was started and has been maintained for the sole purpose of providing for those who are in need. Without this need there would have been no W. P. A. It is also very queer that in these lay-offs they always managed to avoid laying off any of the nonrelief workers.

Much of the relief money is being expended to employ publicity agents. The Washington office has quite a staff, and each State has its publicity division, called the division of information. They have particular officials listed as director, division of information; special representative, senior information writer; senior information specialist; information specialist; and assistant information specialist, all drawing fat salaries and none of them needing relief.

Our Democratic friends are now trying to dodge the responsibility for the provisions in the relief legislation. In the Senate there are 69 Democrats, 23 Republicans, and 4 representing other parties. In the House there are 260 Democrats, 167 Republicans, and 4 representing other parties, and 4 vacancies, so it is apparent that the Democrats have an overwhelming majority in both the Senate and the House, and there are not enough Republicans in Congress to pass any legislation. One hundred and sixty-seven Republicans in the House cannot outvote 260 Democrats, and 23 Republicans in the Senate cannot outvote 69 Democrats. Then, of course, the President has the power to veto any legislation which he does not approve. He approved and signed the relief bill. Our Democratic friends cannot escape responsibility for the legislation passed by this Congress. They claim, and are entitled to, credit for all legislation which is good and meets with public favor, and they cannot escape responsibility for that which is bad and fails to meet with public favor.

In January 1939, W. P. A. had 32,670 administrative employees; this does not include timekeepers, foremen, superintendents, supervisors, and so forth, who are carried on the pay rolls and paid out of relief funds.

In 1936, just before election, W. P. A. employed 105,000 in Indiana, but immediately after election began to lay workmen off until, in 1937, employment reached a low of 40,000. In 1938 they began to reemploy until right before election 101,374 were employed. Immediately after election they again began to lay off, and by December 1938, 84,704 were employed, and in January 1939 this number was reduced to 82,545. During 1939 and the early part of 1940 they lacked about 8,000 of employing the quota in Indiana, although they had available money for employing the full quota. In 1938, right before election, they had a total of 3,334,567 employed on W. P. A. Many of those laid off immediately following the election were told it was because they voted wrong.

In December 1938 there was a total employed of 3,161,080; in January 1939, 3,021,546; in February 1939, 2,996,460. I wonder what is the excuse for having more employed in November than were employed in December of 1938 and in January and February 1939, when everyone knows the greatest need is in December, January, and February. We can again expect increased employment from now on up to election day in November, and no doubt immediately after election they will again begin laying the men off as they did in 1936 and 1938. Apparently, they do not realize that people get as hungry after election as they do before election, and that they need work just as much after election as they do before election, and that Republicans get hungry and need relief work just as much as Democrats do.

A few days ago I received a letter advising that the W. P. A. boss asked the men on one project if they were going to vote the Democratic ticket. Some of the men told him that they would do as they saw fit and were immediately assigned to extra heavy work.

I hope this relief bill will take politics completely out of W. P. A. and will cause the money appropriated for relief to be expended to employ those needing relief. Timekeepers, bosses, supervisors, and so forth, should be taken from the relief rolls and not from the political rolls. There are thousands of highly educated men who are well qualified to fill any position in the relief set-up, who are unemployed and in need of relief work; they are thoroughly competent and should be employed to fill these positions. Waste and useless expenditures should not be permitted; exorbitant salaries and employment of nonrelief persons on relief projects should be stopped.

For 7½ years the present administration has failed to solve a single governmental problem. Our public debt has mounted to the sum of $45,000,000,000; we still have over 10,000,000 unemployed; agriculture and industry are paralyzed and the administration has no solution for all these problems to offer—nothing except continued deficits in an apparent effort to spend and spend, tax and tax, and elect and elect.

American Imports and Unemployment

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

Mr. McGREGOR. Mr. Speaker, the preservation of our American markets for our American agriculture, labor, and

industry, to the end that unemployment and the burdens of our people may be reduced, is the aim of all.

It is impossible to serve two masters. No Member of Congress can serve cheap labor in foreign lands and at the same time serve our 10,000,000 unemployed working men and women who want jobs and cannot find them.

Last year the excess of agriculture imports over exports was approximately $462,207,000.

In 1931 we imported 335,000 bushels of corn; in 1936, 86,000,000 bushels. In 1938 we imported 7,183 bushels of oats; in 1939, 4,293,000 bushels. In 1938 we imported 3,829,000 bushels of wheat; in 1939, 10,747,000 bushels. In 1934 we imported 59,000 head of cattle; in 1939, 753,570 head. In 1932 we imported 34,000 pounds of pork; in 1937, 16,500,000 pounds.

Let us compare prices received by all farmers in the United States which show the effect of trade agreements:

Commodity	Average price, Feb. 15, 1937	Average price, Feb. 15, 1940
Alfalfa hay, per ton	$13.98	$9.38
Apples, per bushel	1.30	.81
Butterfat, per pound	.339	.297
Chickens, per pound	.169	.122
Clover and timothy hay, mixed, per ton	13.55	10.02
Corn, per bushel	1.036	.547
Hogs, per 100 pounds	9.19	4.97
Oats, per bushel	.537	.377
Potatoes, per bushel	1.303	.752
Wheat, per bushel	1.249	.841

Data taken from U. S. Department of Agriculture, vol. 17, No. 3.

Cash income received by all United States farmers

	1937	1939	Farmers' loss in 1939
Meat animals	$2,329,000,000	$2,262,000,000	$67,000,000
Poultry and eggs	832,000,000	722,000,000	110,000,000
Dairy products	1,532,000,000	1,354,000,000	178,000,000
Wool	117,000,000	85,000,000	32,000,000
Wheat	605,000,000	397,000,000	208,000,000
Potatoes	184,000,000	157,000,000	27,000,000
Hay	96,000,000	65,000,000	31,000,000

Cash income received by all farmers in Ohio

1937	$360,000,000
1939	314,000,000
Ohio farmers' loss in 1939	46,000,000

Data taken from U. S. Department of Agriculture, vol. 17, No. 1.

It is my contention that the power given the State Department in the Reciprocal Trade Agreements Act has been used, not to protect our American farmer, but, on the contrary, to encourage imports of farm commodities of which we ourselves produce surpluses. Under this policy the Federal Surplus Commodities Corporation buys surplus farm products for distribution among relief clients, while at the same time we encourage the importation of additional quantities of such commodities in larger amounts than the Surplus Commodities Corporation buys.

In effect, through the State Department we subsidize farmers of foreign lands to produce more for the American market, while through the Department of Agriculture we subsidize the American farmer to produce less for the American market and to throw away what foreign market he had left. During years 1938–39 the Surplus Commodities Corporation spent over $30,000,000 in purchase of 20 different farm products in an effort to raise prices by removing surpluses. During the same period $92,298,000 worth of the same commodities were imported from abroad.

The pottery industry is very important in my district. Let us see how it is affected by our present reciprocal-trade program. More than 60 percent of the total cost of pottery is the labor cost. The average wage paid in American pottery is 75 cents per hour. The chief competitor in American markets of the American pottery industry is Japan where the Japanese potter is paid an average of 4 cents per hour. How can we expect to keep our potteries going and our potters employed if we continue the present program of reciprocal-trade agreements?

Under our trade agreement with Russia, that country is permitted to ship in, duty-free, to compete with our coal miners and coal operators, 400,000 tons of coal per year.

In this day we are pursuing a high-price, high-wage level—the American standard of living. If these prices, these wages, are to be maintained, we cannot, in all seriousness, carry on at the same time a foreign-trade policy which provides for imports of commodities produced under conditions such as low wages, long hours, and a low standard of living.

The American market belongs to the American farmer, the American worker, and the American manufacturer. Our markets are the best in the world; they are a prize; they belong to the people who developed them—the American people.

In Memoriam—To Our American War Dead

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

EXCERPTS FROM NATIONAL DEFENSE

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following poems appropriate to Decoration Day, May 30, 1940, which appeared in the May 1940 issue of National Defense, a monthly magazine published at Arcadia, Calif.:

[From National Defense for May 1940]

IN MEMORIAM—TO OUR AMERICAN WAR DEAD, DECORATION DAY, MAY 30, 1940

THE SENTRY'S REVERIE

The sentry paced with measured tread
Before the unknown's tomb,
Is that cold clay he thought with dread
To be my awful doom?

Shall mothers kneel at some cold stone,
In some day soon to be
And, praying, think I am their own?
Is there no hope for boys like me?

Kings have laid their wreaths of flowers
Upon your resting place,
Sad, lonely folks stand by the hour,
Each with a tear-stained face.

Buddy, I'm glad you cannot know
What goes on in these lands.
How children pass by, to and fro,
With gas masks in their hands.

How bells of hell ring out once more,
Once more we're called to school
To learn the awful hymn of hate
And not the golden rule.

Mars quaffs his ruddy cup of gore,
And smacks his bloody lips,
The four horsemen ride as of yore,
Starvation cracks his whip.

They have not kept your gift of peace
You fought and died in vain.
Will human slaughter never cease?
Buddy! What did they gain?

—*Reute.*

COMMENTS ON THE SENTRY'S REVERIE

"What did they gain?" This question as expressed by the author of the above poem, the daughter of a retired soldier, is one which should challenge the minds of all Americans. Those who gave their lives gained the acclaim of our Nation while the war mongers and international bankers (who sent them forth to die) gained an immense profit—a profit which the surviving veterans and all citizens continue to pay to this group whose patriotism is secondary to war profiteering, and who, in peace and in war, evade their just share of the costs of government, and correspondingly add to the burden of the masses, by investment in interest-bearing, tax-exempt bonds.

Kings and rulers, who send our youth forth to die, reserve for themselves the front lines when it is a matter of decorating the graves of the dead. They reserve for themselves the front lines of observation when our boys march forth to die, and loudly applaud their courage and sacrifice—but these superpatriots are singularly absent from the front-line trenches. And in war's inevitable aftermath of suffering and poverty, when the battle is for sound economic readjustment in the interest of all the people, they are conspicuous by their absence from the front lines of unselfish endeavor.

These same superpatriots who sent our youth forth to die have recently indicated that citizens who declare (in reference to Europe's wars) that the Yanks are not coming should be classed with Communists. Emboldened by their success in 1917, they would again send our youth to foreign battlefields to protect the financial interests of the international money racketeers. Recently in California, the students at the University declared: "Let God save the king." In the light of our past experience, this is also the viewpoint of your editor.

We are proud of the efforts of the American Legion and other true American organizations in opposition to American involvement in the European capitalistic war. Let those who control the world's gold fight their own battles to protect their ill-gotten wealth, and let our American youth remain here at home to develop and build a greater and a better United States of America.

We owe nothing to royalty, plutocracy, or any ocracy except democracy. We have problems here at home, with 10,000,000 unemployed and with two-thirds of our population constantly going into debt for the necessities of life. Therefore, it seems to us that our first duty, as Americans, is to our own citizens—that is, to relieve the poverty and unemployment in our Nation and to bring prosperity and contentment to our people.

Let us honor our Unknown Soldier and our American dead, who died believing they were making the world safe for democracy, by dedicating ourselves on this day and every day to the resolution that we will never again have an unknown American soldier to sacrifice his life on foreign soil—that never again will we go forth to battle in foreign lands to save the kings of finance and their nobles.

"FLANDERS PRAYER

"In Flanders' Fields, where poppies grow
We've slept in peace—each silent row,
For twenty long and quiet years,
Unmindful of life's joys and fears.

"But now the war lords' greed and lust
Bring protest from our mouldering dust,
And to Almighty God on high
We raise our weak, sepulchral cry.

"Must din of war and battles roar
Bring chaos to our land once more?
Or has our sacrifice been in vain—
Must mothers' hearts break and bleed again?

"Dear Lord, we plead, we beg, we pray,
Help men keep peace along life's way;
Let not war's grief, sobs, and tears,
Disturb our rest—down the years.

"But let us peacefully sleep again
Where poppies bloom, mid sun and rain,
Where marble crosses, vigil keep—
We're brothers all, in our last sleep."

—L. L Sextan, Company I, First Infantry, Camp Jackson, S. C.

The Lakes Region of Minnesota

EXTENSION OF REMARKS
OF
HON. OSCAR YOUNGDAHL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1940

LETTER FROM THE MINNEAPOLIS CIVIC AND COMMERCE ASSOCIATION

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MINNEAPOLIS CIVIC AND COMMERCE ASSOCIATION,
May 13, 1940.

Hon. OSCAR YOUNGDAHL,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: Once again, with the approach of the summer season, the State of Minnesota and the city of Minneapolis are issuing a hearty invitation to the vacationists to plan on a visit to this land of the sky-blue waters.

Never have the 10,000 lakes of this Commonwealth, the streams, and forest lands offered a more attractive respite from our daily activities than now.

This State offers to the vacationists an excellent system of hard-surface highways which will lead them to modern cities, attractive retreats, or into the very heart of the wilderness itself.

This summer, in addition, there is an opportunity for the visitor to take in the many attractions of the aquatennial, which will be held in Minneapolis July 20 to 28. Outdoor and indoor spectacles and every manner of water sport will be available to the visitor here, as a spectator or participant.

Through you we would like to extend our heartiest invitation to every Member of Congress to visit Minneapolis and Minnesota's 10,000 lakes region. You may assure them that the heartiest of welcome awaits them in Minneapolis.

Cordially yours,

D. W. ONAN, *President.*

A Day for Arkansas

EXTENSION OF REMARKS
OF
HON. CLYDE T. ELLIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1940

ADDRESS OF HON. LYLE H. BOREN, OF OKLAHOMA, ON ARKANSAS DAY AT HOLDENVILLE, OKLA.

Mr. ELLIS. Mr. Speaker, on May 11, the gentleman from Oklahoma, Representative LYLE H. BOREN, one of the ablest Members of this House, delivered by electrical transcription on Arkansas Day at Holdenville, Okla., in one of those rare gems of oratory, an address eloquently portraying those sacred bonds which so closely bind the great Sooner State to her proud mother State of Arkansas. I take great pleasure in quoting it in full:

Friends all, with unusual pleasure and particular pride I extend greetings to all Oklahomans whose original heritage is rooted in the soil of Arkansas.

It is most fitting that there be set aside in Oklahoma an Arkansas Day.

Oklahoma is a child of the Union; her parents are Arkansas and Texas, her grandparents were the Old Dominion, and she is joined in cousinship and brotherhood to Tennessee and Alabama and all the younger States of the Union. One of the youngest, Oklahoma has inherited the gifts of all. Strong in intellectual and physical endowments, vigorous in resources of power and energy, we have begun a journey to incomparable greatness, and our beginnings are made possible entirely by endowments of wisdom and experience from our more than 40 ancestors who have found their way into the hall of fame in less than 2 centuries.

In the veins of Oklahoma courses blood of Arkansas and Texas, of Tennessee and Alabama, of Virginia and Kentucky. The glorious dawn of the east, the magnificent sunset of the west, the cool and spirited breeze of the north, the gentle and fragrant winds of the south we have combined to make Oklahoma's Indian summer. We owe a great debt for our endowments to many States, but Arkansas has contributed most bountifully to our richest inheritance—our people.

From Arkansas's broad and quiet rivers, from the rice fields of the east and the Ozarks of the north, the brave and strong have found their way to Oklahoma. We love the State of Arkansas for giving us men generous and tolerant, for giving us women beautiful, good, and kind; and children strong, courageous, and ambitious.

Arkansas is one of the greatest States. It is located in the center of the Union and is the keystone to the arch of the great Southwest. Her head rests in the lap of the Ozarks; her feet splash in the mightest of rivers. Of the 68 useful minerals known to American geologists, Arkansas produces all save one. Her minerals fill every division of the English alphabet from agate to zinc. Aluminum, coal, glass, iron, lead, and pearl share in the list of valuables stored in the vaults of her hills and vales. Her 33,610,000 acres have never known a total crop failure or a famine. A land of rice and corn, of melons, fruits, and berries, she is the one State that annually reproduces its invested capital. Her products annually exceed the value of all her property. She is indeed the wonder State.

Her ash, her hickory, and her oak supplies the handles for the tools of the world.

Two thousand miles of navigable rivers join her swift mountain streams and many springs of life-giving and health-restoring waters.

To Arkansas belongs the first national park in America. A million gallons of radio-active water daily bubbles from its 48 thermal springs.

Arkansas, whose history dates from DeSoto's exploration, will, on the 15th day of June, celebrate her 104th birthday as a State of the Union. The history of her past is glorious, but the history of her future will undoubtedly be greater than any of her past though you delve into the 50,000 feet of sedimentary rock that is the foundation under her soil and has recorded in its layers leaf after leaf of her most ancient history.

The Congress that determined on statehood for Arkansas was the immortal Congress whose membership was shared by Henry Clay, Calhoun, Webster, and John Q. Adams. The voices of Caleb Cushing, Thomas Harte Benton, Crittenden, Buchanan, and Martin Van Buren were also raised in historic discussion. The bill presented by the last delegate that Arkansas sent to Congress, the Honorable Ambrose Sevier, was signed by the hand of Old Hickory. On September 13, 1836, William S. Fulton, the last of the territorial governors, handed over the mace of authority to James S. Conway, the first governor of the new State.

On July 4, 1836, the twenty-fifth star was added to the flag of the Union.

At the 1837 session of Congress, the last Delegate and the last Territorial Governor, Sevier and Fulton, took their places in the United States Senate to represent for the first time in that body the new-born State; and Archibald Yell, who resigned his seat in Congress to volunteer in the Mexican War some 10 years later, and for whom was named the great county from whence some of you have come, was the first to represent the State in the lower House of Congress.

Since the day that Arkansas sent those three Representatives to share in shaping the destiny of the Nation, the State has given many illustrious sons and daughters to national service too broad to limit by the boundaries of the State. Arkansas is the parent of Albert Pike, Augustus H. Garland, Clifton R. Breckenridge, Edgar A. McCulloch, Joseph T. Robinson, Dr. Clegg, and Mary McCormick. Admirals, generals, Cabinet officers, a Vice President, President of the Senate, many illustrious statesmen, musicians, authors, religious leaders, and leaders of industry have been given to the United States by the State of Arkansas.

The abundance of her natural resources, her majestic mountains, her sparkling springs, her placid rivers, her many grotesque caves, her long season of frostless days stir our admiration and appreciation, but there is a grander and greater resource than all these—the people. Religious, moral, 2,000,000 people of character and intelligence with vigor and enterprise make up the greatest resource of our neighbor State.

It is the people that Arkansas has given to Oklahoma that makes us love her best—as pure a stream of Anglo-Saxon blood as flows in the veins of any American State, a tolerant, noble, and hospitable people who hang the latch string of generous hospitality on the outside of their hearts and homes.

To every man and woman who is now in Oklahoma from Arkansas we extend a hand of friendship and affection. May this land of your adoption bountifully reward you for the fine intellect, the strong character, and generous hearts which you have brought for our endowment. Arkansas Day is a significant and important day in Oklahoma. Long live this day and all for whom it is set aside to honor.

Veterans' Bureau Facility, Baltimore, Md.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

Mr. COLE of Maryland. Mr. Speaker, under date of April 18, 1940, I extended my remarks in the CONGRESSIONAL RECORD and gave a short résumé of the interest the Maryland delegation in Congress has taken in the erection of a new Veterans' Bureau facility in or near Baltimore, Md. At that time, I included a letter which I had received from the President in reference to the situation and I am today in receipt of the following letter from General Hines which would seem to indicate the matter is now in the hands of the Bureau of the Budget for final determination:

MAY 14, 1940.

Hon. WILLIAM P. COLE, JR.,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: In the program of future construction for the Veterans' Administration for accomplishment from year to year within the period of the next 10 years, recommended by the Federal Board of Hospitalization to the President and approved in principle by the President on May 9th, there is included a new Veterans' Administration general facility of 300 beds for the Maryland area.

Immediate consultation is contemplated with the Director of the Bureau of the Budget to determine upon how funds may best be made available to undertake necessary preliminary work, such as the selection of site and preparation of plans.

Very truly yours,

FRANK T. HINES, *Chairman.*

In view of the urgent need we have for additional hospital facilities and the fact Maryland has for a considerable time been at the top of the list of approved veterans' hospitals, I sincerely hope it will be possible to include the amount needed for the construction of this new hospital in the final deficiency appropriation bill which is now being considered by the Committee on Appropriations and which will soon be reported to the House.

The Oregonian, of Portland, Oreg., Receives an Award for Distinguished Service in Journalism

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

Mr. ANGELL. Mr. Speaker, the University of Missouri School of Journalism has given its award for distinguished service in journalism for the year 1940 to the Oregonian, published in Portland, Oreg. This is a well-deserved recognition of a newspaper which has played an important role down through the years in the building of a great community, the Pacific Northwest.

The Oregonian was established by the late Henry L. Pittock in 1850. It was the days of the covered wagon and ox teams, when thousands of Americans were turning their eyes toward the Pacific coast and joining in the great migration on to Oregon. Not long after the founding of the Oregonian, Harvey W. Scott joined the staff, and through a long period of eventful years in the development of the Northwest, H. L. Pittock and Harvey W. Scott combined their great talents in building for community service an outstanding publication. Through a long span of years the editorial page of the Oregonian, fashioned by the hand and brain of Harvey W. Scott, commanded an outstanding position in editorial work in our Nation.

The Pulitzer prize for editorial work on the Oregonian during the year 1938 was awarded to Ronald Glenn Callvert, its associate editor. Mr. Calvert's editorial My Country, 'Tis of Thee, published in October of that year, was a masterpiece of editorial work and no doubt played an important part in securing for him this award. I included this editorial in an extension of my remarks in the CONGRESSIONAL RECORD of May 8, 1939.

In these critical days of our Nation's history, when the map of the world is being remade and ideologies destroyed overnight, and many of the revered underlying foundation stones of civilization are being destroyed, clear thinking and unselfish devotion to the welfare of our country are necessary. In the modern world, with the dissemination of knowledge and information so effective and immediate through the radio, airplane, and other rapid communications, it is important that the purveyors of news keep the bloodstream of information pure and undefiled. Propaganda unfortunately plays a large part in the formation of public opinion. A newspaper under these conditions is in a position to wield an important influence in preserving our civilization and our ideals.

That the award of the University of Missouri School of Journalism was merited is evidenced by the sincere and frank recognition by the Oregonian of its duties and obligations by reason of the trust imposed on it in publishing a daily news-

paper going into the homes of the people of the Northwest. It said editorially, on May 7, 1940, with reference to the award:

OUR AWARD FOR DISTINGUISHED SERVICE

Selection of the Oregonian by the University of Missouri School of Journalism for the 1940 honor award as a distinguished American newspaper is, in the very nature of such recognition, a tribute which finds its recipient to be somewhat at loss for words. These come readily enough on other occasions, for the printed word is the implement of the craft and the calling, but there is a difficulty in acknowledging the laurels that are for oneself. There is, on analysis, not only a reaction of gratification, but one of humility, too.

Our many readers, some of whom have read the Oregonian for the greater part of a long lifetime, and who have both approved and disputed, are commonly agreed, by recurrent testimony, that this newspaper has maintained the tradition of service and sincerity. In effect this also is the authoritative finding which prompted the present award—the fidelity of the Oregonian to its obligations in handling the news, and its continued vigor of editorial utterances, in a day, as the citation declares, "when other editorial pages have lapsed into the commonplace or have swung to commercial timidity." The confidence our readers have so often expressed, and which the Oregonian has striven to deserve, is phrased by the donors of the award.

It is with something of reluctance that this page directs attention to the citation for distinguished service in the American newspaper field—but the words are not ours, neither are they promotional. In every department of the Oregonian there is pleasure in this recognition—a pleasure which, somehow, we feel our readers share with us. Those whose daily task and privilege it is to prepare and print the Oregonian have ever been convinced that they are employed on no common publication—and naturally they are gratified by this verification of their opinion. They feel that recognition of the sustained usefulness and sincerity of their newspaper is, in a sense, their garland, too.

Pending the formal presentation of the award to the Oregonian, our gratefulness to the University of Missouri School of Journalism is acknowledged, while our pledge is given that the Oregonian shall continue to be deserving of the confidence so generously expressed in the text of the citation. It shall continue to be, as of long fidelity, "a part of the life of the region"—for this is the work and the service to which it was long since dedicated.

The significance of this award is noteworthy when it is considered that only about 20 newspapers have been so honored since the award was founded in 1930. Among others receiving the award in past years are: The London Times, La Prensa of Buenos Aires, the Montreal Star, the Times of India, New York Times, New York Herald Tribune, St. Louis Post-Dispatch, and Baltimore Sun.

Mr. E. Palmer Hoyt, publisher of the Oregonian, very aptly said, in accepting this award on behalf of the Oregonian:

It is a healthy sign that newspapers of today are increasingly conscious of the functions of a newspaper in a democracy. It seems to me that this function can be described in three simple sentences: One, to print the news; two, to comment adequately thereon; three, never to allow these to mingle.

Mr. Speaker, I ask leave in the extension of my remarks to include the editorial above referred to and the address of Mr. Hoyt in accepting this award. The address follows:

President Williams, ladies and gentlemen, it is indeed a high privilege to be here to receive for the Oregonian the great honor and distinction which you have this day conferred.

The award is particularly pleasing to us who operate the Oregonian, because it is in effect a seal of approval—a very highly cherished seal of approval—upon new methods which we have been trying to introduce into journalism. We have attempted to keep pace with modern trends—in fact, in the forefront of modern trends—without sacrifice of the high ideals in which the Oregonian was clothed by those remarkable men who founded it.

NEW PRACTICES NECESSITATED

To understand the full significance of this award to myself and my associates, it is necessary to think back a few years, to that time when it suddenly became apparent to students of journalistic change that there was need for altered practices so far as the daily newspapers were concerned. Circulation was dropping in many cases; advertising was falling off. The pressure was great. There was little time for study. And under that pressure a few newspapers became panicky. They thought they could save themselves by cheapening themselves.

Other newspapers faced the problem with less of panic, and in the end, I think, more logically. I know that we on the Oregonian deliberately decided that what the public wanted was not a cheapened newspaper but a better newspaper. They wanted a newspaper which, without sacrificing either the strength of its editorial opinion or the breadth of its news coverage, could make itself part and parcel of the streamlined age in which we live.

I feel today—here and in this place—that we have held fast to that ideal. The Oregonian during the 90 years of its existence has been a truly important factor in the cultural life of the Pacific Northwest. Today, it is the oldest business institution in that section—in the three great States of Oregon, Washington, and Idaho. And yet you tell us, by your award, that we have kept pace with the changed and increased tempo of the times.

TEMPO SPEEDED UP

It will be of interest, I take it, exactly what we did do. We shortened our stories, demanding a higher skill of our copy readers, in order that the same facts might be given in fewer words. We adopted a type face enough larger to make reading easier and faster. We found these innovations helpful in holding the ever-decreasing segment of audience potential which was available to the modern newspaper. We found also, that elimination of "breaks" from page 1 was helpful. It aided in our effort to make every page a front page. Proper departmentalizations gained immediate response from our readers. By these new techniques, and others of like nature, we were able to give the subscriber what he considers an adequate picture of the day's events.

And, of course, the changes that have been made necessary by modern developments are by no means all typographical. They are editorial also. There are changed public attitudes since the days of Harvey W. Scott, the late great editor of The Oregonian; Marse Henry Watterson, of the Courier-Journal; and those other great whose names are forever blazoned in the history of the so-called golden age of journalism.

NEWS, OPINION DIVORCED

And, I think that if these famous editors were back here with us today they would join with this great university in placing the full stamp of approval upon the Oregonian for its strict separation of the news columns and the editorial page. That is one of the things specifically mentioned in the citation of award. I am happy that it was. The Oregonian has followed, and led, in a national trend against the intermingling of straight news and editorial opinion. It is a healthy sign that newspapers of today are increasingly conscious of the function of a newspaper in democracy.

It seems to me that this function can be described in three simple sentences: One, to print the news; two, to comment adequately thereon; three, never to allow these to mingle. If there are exceptions to this general theorem in the high places in journalism it is a matter of regret, and it is even more a matter of regret that some of those who are worst violators of the sacred objectivity of news howl loudest for the preservation of freedom of the press. It is good to know, however, that those who best serve the people's right to know profit most; and, as I say, if there are exceptions, the rising tide of practical democracy will some day overtake them.

Never before has editorial integrity paid such a premium in the box office. And this fact, it seems to me, is the best proof of the mounting literacy and intelligence of our people—the best-informed people in the history of civilization.

That is well. It is well that there is increasing literacy, increasing intelligence. There also are increasing strains. In these modern days there are so many things demanding the attention and the time of Mr. Average Citizen. Suppose we envision the attention potential of Mr. Average Citizen as a complete circle. Suppose, then, we divide the circle into segments, giving to each segment a name—labeling them "movies," "radio," "news magazines," "picture magazines," "the automobile," "new books" (coming in floods from the presses), and many, many other distracting items.

Fifty years ago the circle was free of many of these intruding segments. The newspaper was able to demand and expect a greater share of the circle than it can today.

And yet, there is the remarkable—and, to us, very heartening—fact that the lessening of time available for newspaper reading has meant no lessening of interest in the newspapers. Quite the contrary. The need for them is real and permanent, as evidenced by the vastly increased circulations during the past 20 years.

Here we have it in cold figures. Editor and Publisher reports that daily newspaper circulations increased 42.7 percent in the past 20 years. Sunday newspaper circulations increased 84.5 percent. These increases should be compared with a population rise of but 24.3 percent. It is highly significant also that the combined circulation of 1,888 dailies in 1939 was 39,670,682, as compared with 27,690,656 for 2,042 dailies in 1920.

"FITTEST" SURVIVE STRAIN

Thus we have the paradox of mounting reader interest, as reflected in the steady increase in newspaper circulations, and yet with the total number of newspapers going down. Quite obviously, it is the application of the old law of the "survival of the fittest." And in this case "fittest" means those newspapers which have streamlined themselves in order to meet the readers' time requirements—and which, at the same time, have maintained their editorial ideals.

I think this phase of our brief discussion should not be closed without one more admonishment. Let no newspaper publisher, even in this streamlined age, forget that a newspaper must be just that—a news paper. This is particularly important in an

age when there is a somewhat regrettable tendency toward "department store" journalism.

Permit me to mention again some of the markers on the highway of editorial progress which you have noted in making this award: Divorcement of news and editorials, to insure fair presentation of news, greater readability, through larger type, more pictures, proper utilization of that great development, wirephoto; practical departmentalization; effective mechanical presentation, through improved type and printing; proper commentative writing, clearly and indisputably marked as such. And, lastly, a rededication of the broader philosophy of objective news reporting and presentation.

EARLY HISTORY RECALLED

At this point I would like to review briefly for you the history of our paper. It was December 4, 1850, that the first issue of The Oregonian, then a weekly, appeared. Portland was a village of 700 persons, cut out of the forest. The editor was Thomas J. Dryer, a young New Yorker seeking his fortune in the West. Henry L. Pittock joined the staff in 1853, after arriving from across the plains. Mr. Pittock slept on a cot in the office. In 1860 Mr. Dryer turned The Oregonian over to Mr. Pittock in lieu of back wages. A year later the new owner boldly determined to make or break. He would change the weekly into a daily. He did, and survived. And in 1865 he demonstrated that insight into character and ability which characterized him throughout life by selecting Harvey W. Scott to fill the editorial chair. With a single interim of 5 years in the 1870's, Mr. Scott directed the editorial policies of The Oregonian until his death in 1910. He made the paper famous throughout the country by the force and logic of his utterances.

OREGONIAN GROWS WITH CITY

Portland has grown from a village of 700 to a city of 300,000, and The Oregonian with it. And we who operate the paper today believe we have kept the faith with the founders. You have testified to it by your award here today.

In closing this acceptance, may I say again that we of The Oregonian feel very humble in the face of this high honor and that we do rededicate ourselves to those basic ideals of newspaper practice as established by those distinguished men who built and shaped this newspaper—Henry L. Pittock and Harvey W. Scott.

Our Relation to the War

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

LETTER FROM DR. GEORGE HUDSON GILMER

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter received from Dr. George H. Gilmer, of Dublin, Va., in which he sets forth his views with respect to our relation to the war.

I might add that Dr. Gilmer is one of the strong men in the Southern Presbyterian Church. He is endowed with a strong, brilliant mind, is a man of great erudition, has been a lifelong student of history, and I am sure great respect will be given to his views by the House.

Dr. Gilmer is the grandson of Hon. Thomas Walker Gilmer, who was Secretary of the Navy under President Tyler. His letter follows:

DRAPER, VA., *May 14, 1940.*

Hon. JOHN W. FLANNAGAN, Jr.,
Washington, D. C.

DEAR MR. FLANNAGAN: I wonder if it would be possible for you to get the subject matter below before the President. There is a strong sentiment, constantly growing, in this section for some change in our relation to the war. I would suggest, if I may do so, the following:

1. Abandonment of neutrality for a benevolent nonbelligerency favoring the Allies.
2. Furnish food and arms for the Allies.
3. Open the way for volunteers to aid the Allies.

It may be said that would get us into the war. I do not think so. It is largely the policy Italy has pursued, and she has not gotten in, and will not do so till the Allies are greatly weakened, if then. Something should be done and done quickly. Civilization is at stake. I know lots of men who would volunteer if given a chance to do so. Incidentally, that would relieve the unemployment situation, which is very grave, in spite of all the administration has done.

The buying up of food would help the farmer in a much better way than that in which he is being helped now.

Such a nonbelligerent policy would, I believe, turn the victory to the Allies. Certainly the President and Congress must do something, and do it quickly, before that madman in Germany goes any farther.

With all good wishes, I remain,
Cordially yours,

GEO. H. GILMER.

What America Needs

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

ADDRESS BY FRANK GANNETT DELIVERED AT FORT WORTH, TEX., MAY 13, 1940

Mr. O'BRIEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Frank Gannett, made at Fort Worth, Tex., May 13, 1940:

The question confronting us tonight is what power will pull the wagon of prosperity in which we all hope to ride? What power will there be when business is completely butchered and national credit is finally bled to death?

If American private enterprise didn't have tremendous vitality, it would have been dead long ago. For 7 years it has been hamstrung and roasted by the New Deal. But, thank God, it is still alive!

National credit has been bled by the New Deal to the tune of more than $20,000,000,000 of added debt. Federal Government agencies have borrowed nearly $45,000,000,000. Still national credit lives and can be saved. But its life won't be saved until we drive the wasters and spenders out of Washington.

Only in the dictator countries does government attempt to manage the lives of everybody. Everybody there becomes a slave of government. We don't want that in America. The call of the Republican Party is a call to return to sanity.

Part of the educational job of the Republican Party is to awaken people to the realization that "taxes are paid in the sweat of every man who labors." Franklin Roosevelt said that was true in 1932—and then he proceeded to make his followers forget it.

Mr. Roosevelt, in the same speech, made a solemn covenant with the taxpayers of the United States. He promised never to stop preaching the duty to reduce taxes, to increase the efficiency of government, and to get the utmost of public service for every dollar paid in taxation. Then he proceeded to give us the most wasteful administration this country has ever known.

HITS INVISIBLE TAXES

I propose to stop that waste. I can carry out Franklin Roosevelt's forgotten pledge of 1932. I can reduce tax rates with the cooperation of a Republican House and a Senate, with the Republicans and constitutional Democrats forming a pro-American majority.

Part of our job is to educate those people who don't think about taxes to the realization that no man, woman, or child, no matter how poor, can ever escape taxation. It is added invisibly to the cost of everything they buy.

We can credit to this wonderful reform known as the New Deal this fact: We have gone backward. Every man, woman, and child, on the average, has lost one-sixth of the income which was his or her right. Going backward! The richest Nation on earth!

I propose that we turn around and go forward.

America would have gone forward if the New Deal had not put obstacles in its way. President Roosevelt has been too busy listening to crackpot schemes, too busy grabbing for unconstitutional power, to think of recovery. Like the dictators of Europe, the new dealers have moved in to "protect" one group after another. And when they once move in, they refuse to move out. The only way to release agriculture and labor is to get rid of the New Deal.

If we go on flirting with communism, which degrades the spiritual concept of life, our civilization will degenerate to the level of the wild beasts that are ravaging Europe. The American ideal gave birth to freedom; it recognized the divine right of the individual citizen, and denied the divine right of kings. The dictator countries are suppressing the individual's rights, denying God and making the state their God.

There is need in America for spiritual regeneration as well as need for economic rehabilitation.

It is easy to criticize. We must have something more than that; we must have a sound constructive policy.

First, let me say that if I should be nominated, I will be elected. The next President must be a Republican.

MUST SHUN WAR

If I were President, I would do this:

Use all the influence and powers of the Presidency to assure the public beyond any question or doubt that this country would not become involved in this war, or any other foreign war. I say we must not send any American youth to fight on foreign battlefields; they should fight only in defense of our country in case it should be attacked.

We must keep out of this war.

One of the most important things is to restore prosperity for the farmer, restore his normal income. Fifty-five millions of our people depend directly or indirectly on agriculture. You can't have a prosperous country unless you have a prosperous agriculture.

We should set up a monetary authority under mandate of Congress and give to it the task of providing for us an honest dollar, a dollar of stable purchasing power, and entrust to it the task of protecting our monetary system.

To solve the unemployment problem, so that every willing worker would have a job at a fair wage, I would first put into our Government the same business management and sound business principles that are used in the management of any successful business.

I am for putting business brains and experience into government and for taking political muddlers and meddlers out of business.

Next, we must reduce tax rates that kill initiative. We have reached a point of diminishing returns in our taxation. Lower tax rates will stimulate business and produce more revenue for the Government than the high rates now in force.

Fire the present Labor Board at once. Rewrite or repeal the Wagner Act. I would appoint a Secretary of Labor who will not be in sympathy with communistic ideas or sit-down strikes.

URGES RIGID ECONOMY

Encourage the sharing of profits with employees in one way or another, so that the largest possible reward will go to the workers after fair wages, a fair return to capital, and a just reward for social management.

Pending the increase in business activities which would result from restoring agricultural income, we must take care of the unfortunate now unemployed and on relief. But we can better provide for those on relief without additional cost to the Government if we will cut out politics, waste, and corruption from our relief program. Fumigate relief.

Cut out the great waste in our defense programs by coordinating the various departments so that we may have the most effective defense at the lowest possible cost, and base our plans for the Army and Navy solely on a defense basis, not on the expectation of waging a foreign war, as I fear we are now doing.

Introduce rigid economy into all departments of government and reduce expenses everywhere.

Stop the extension of Federal control and regulation over everything and everybody and restore to the States the rights and privileges of managing their affairs without interference from Washington.

Take away from the President all those vast extraordinary powers he now holds which should rest with Congress, but which came into his hands when he declared an emergency, though no emergency existed.

Guard carefully the independence of the three departments of government so that we shall be sure that our Constitution, our freedom, and liberties will be protected and preserved.

Promote better international relations and leave the people of other countries the right to determine for themselves their form of government without scolding and criticism from us. Stop deliberately making enemies of other nations.

WOULD LIMIT TENURE

Adopt a constitutional amendment limiting the term of office of the President to 8 years.

Withdraw the Government from private business and from competition with private enterprise.

Promote a policy of abundance instead of a policy of scarcity.

Bring into government service able, successful businessmen, leaders of agriculture and of labor. Today there isn't a successful businessman within a mile of the White House—or in the White House either.

As soon as possible, without restricting recovery by higher taxes or by arbitrary curtailment of relief, balance the Budget. Even a move in that direction will help to restore confidence and aid recovery.

We must begin to live within our income and stop sinking deeper and deeper into debt.

Let's get this great Nation out of the ditch and start it going again on a solid, safe road.

The situation today is the most critical since our Republic was founded. The questions transcend party lines. The decision will affect the lives of everyone. There are only 176 days before election. In that short time the voters of this country must be aroused to the grave dangers that confront us.

A Timely and Forceful Plea for Immediate and Adequate National Defense

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

EDITORIAL FROM THE OKLAHOMA CITY OKLAHOMAN

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave granted me, I am pleased to present herewith, for the special benefit and consideration of Members of Congress, a very timely, forceful, and informative front-page editorial appearing this week in the Daily Oklahoman, published at Oklahoma City, on the general subject of national defense. The editorial follows:

IT CAN HAPPEN HERE

Apparently hordes of German troops will overrun Holland in a brief time—possibly a matter of days, at most a few weeks. Other German troops have already outflanked and captured part of the first-line defense and the strongest forts of Belgium. Unless Belgium's secondary defenses are stronger than represented, German troops will push back both French and Belgian troops, and 30 days may see a clean-up of all Belgian territory.

German power in the air may soon be overwhelming. Germany might lose 100 planes a day and the Allies lose only 50, but if that ratio were kept up for 60 days, Germany, instead of having two planes to the Allies' one, would doubtless have at least three to their one. As the Allied defense of the air diminishes, Germany's air offensive will increase.

With Germany in complete possession of Holland, Hitler's air force can strike at England, reaching London in less than 1 hour's time. She can mass planes at the Dutch airports and attack furiously all British shipping and send swarms of planes over the British naval fleet.

In England there is a "fifth column," just as there was in Holland and Norway, and just as there has been in Austria, Czechoslovakia, and Poland.

Hilter may elect to hold France at bay behind the Maginot line and attack England and the British Fleet before coming to grips with France. British merchant vessels will have great difficulty in reaching England when flocks of German bombers are flying out of Holland.

With British sea power broken, there would be no hope for France. Italy would then join with Germany in attacking France on all fronts.

If England and France are conquered, it may be accomplished within 90 days. If they are not overrun in 3 months, they possibly will be within 6 months. If England and France are conquered, all British and French ships in all neutral ports will be turned over to Germany. She can mount guns on them and, with the German Fleet, the Italian Fleet, and the remnants of the French and British Fleets, she would have a force which might easily overwhelm the American Navy.

Germany has 250,000 aircraft pilots. The United States has 45,000. Germany has 20,000 planes and is making them faster every day than England and the United States combined.

Huge bombers now carry loads of 40,000 pounds. It would take but few bombs to destroy the aqueducts which bring water to New York City. A suitcase full of dynamite would blow up the Holland Tunnel. Comparatively few bombs could wreck the New York subways. The United States hasn't sufficient antiaircraft guns to defend New York City, let alone Philiadelphia, Boston, Washington, or Chicago. Our stock of airplanes and air equipment is a bagatelle compared with the air forces of Germany and Italy.

The United States has an Army of 400,000 men, 235,000 being militia. She does not have sufficient rifles, let alone other equipment to arm this small Army. She has not adequate artillery to properly defend any of our seaports, and many have no defense whatever.

Unfortunately, we have the largest "fifth column" of Nazi sympathizers and Communists now existing in any country.

In the face of this situation, Congress is about to adjourn. Congressmen and Senators want to spend the summer stumping their States for reelection.

There is no time now to build a new navy. An army of 1,000,000 men could not be equipped within 1 year from date. Artillery defenses cannot be created within 2 years. It requires 4 years to build a battleship.

America ought to form a council of defense. It ought to call for 100,000 youths to volunteer for training as pilots. It ought to advance the money to airplane factories to quadruple their production. It ought to arrange that automobile factories manufacture airplane motors and parts. Airplane designs should be furnished

to all automobile manufacturers who could undertake production of planes. The only possible quick means of defense for the United States is a vast expansion of air forces and equipment.

It is silly to say the United States is in no danger. We have two-thirds of the world's gold buried in Kentucky hills. In resources this country is rotten rich. In defense it is a baby in arms. With England and France out of the way, our riches would be a feast for Germans and Japanese.

Why not wire our Congressmen and Senators to stay on the job and get busy?

Military Training for C. C. C.

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

Mr. RICHARDS. Mr. Speaker, I rise before this House once again to urge the passage of my bill, H. R. 3598, introduced at the last session of Congress and which provides that enrollees of C. C. C. camps be instructed in military tactics and drill during 6 hours of each week.

For 2 years mine has been a voice crying in the wilderness for 1 hour per day military training for enrollees of these camps. Now, at this tragic hour in world affairs I have hopes that I may be heard.

Hitler has given bloody evidence to the world, through the mangled remains of defenseless women and children, that it is utter folly for any nation to remain in a state of unpreparedness in a world gone mad.

During the last 7 years this Congress has appropriated about $8,000,000,000 for national defense, of which about $7,000,000,000 has been used to date. A lot of this money has gone into rat holes while admirals and generals have argued about the relative merits of their arms of the service, about the number and type of planes the Army and Navy each should have, or about one branch of the service encroaching on the other's prerogatives. Out of it all has come a fair kind of Navy, with about 3,200 up-to-date planes with 100 trained pilots turned out each month. Still the Navy needs many more planes and pilots.

The Army has been about doubled in size, has added less than one-fourth of the planes needed, less than one-fifth of the tanks needed, has only a few hundred antitank guns, and only a few hundred antiaircraft guns to protect our almost endless coast line. The all-important immediate need is for a central defense planning board to present a coordinated plan of national defense, a survey of industrial facilities, with a coordinated and central purchasing office. The amount of money wasted now through overlapping Army, Navy, and air force agencies is astounding.

This is a day of mechanized warfare. The Nation with the machinery and facilities for producing it has a great advantage to start with. Germany's Army and air force prove that. We must have more airplanes, more tanks, more mobile artillery, more antiaircraft guns, but behind it all must be trained manpower, and the C. C. C. with its enrollees receiving no military training is evidence of a peace-loving nation gone to sleep. During the past 7 years over 2,000,000 of our young men have been enrolled in C. C. C. camps. The cost to the Government per enrollee is $1,000 per year. The annual cost per soldier in the Regular Army averages only $853.33. The C. C. C. camp enrollees, other than war veterans, range between 17 and 23 years of age. These are the boys who will first be called to the service in case of our involvement in war. We now have approximately 275,000 enrollees in our C. C. C. camps. The average length of service in the C. C. C. is 10 months. If we had given these boys 1 hour military training per day during their service, we would have had a nucleus of over 2,000,000 young men already partly trained in the rudiments of warfare. Every soldier must be first trained in ordinary tactics and drill before he is ready for assignments to a specialized branch of the service, such as artillery, air force, tank service, and so forth. We would thus have saved this Government over $2,000,000,000 in case we become involved in war.

I do not mean that the original purposes of the C. C. C. must be abandoned—these camps have done a great work in soil conservation, forestry, and National and State parks. This work should continue to be their primary duty, and the 1 hour per day military training which my bill suggests would not detract one whit from the work they are now doing. In fact, the increased efficiency of the enrollees, because of this limited military training and the added discipline it would bring, would enhance the value and the volume of his work in the conservation field. I do not propose that it should serve a twofold purpose—one, conservation, the other, a link in our national-defense system.

It must be remembered, too, that this military training for C. C. C. enrollees would not cost our sorely harassed taxpayers an additional dollar. The camps are already there, the uniforms are there, the food is there, the Reserve officers to train them are there, and the physically fit manhood of our country is there. All that will still be needed are the rifles, and the United States Army now has enough obsolete military rifles to take care of that need.

The Army General Staff takes the position that it wants no part of military training in the C. C. C. They say soldiering is a full-time job. The Director of the C. C. C. wants no part of military training for the C. C. C. He says military training has no place in the C. C. C. camps. They fiddle around with mutual jealousies while civilization burns, while our taxpayers pour out additional millions for national defense, while our mothers, sisters, and wives weep for peace, with no means in sight to preserve it.

We Must Not Delay

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

ARTICLE FROM THE WASHINGTON POST

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Gen. John J. Pershing, which appears in today's issue of the Washington Post:

[From the Washington Post of May 15, 1940]

"WE MUST NOT DELAY"—PERSHING PLEADS WITH NATION TO SPEED UP ITS DEFENSES

Gen. John J. Pershing last night issued on his own initiative the following statement on the Nation's defenses:

"Preparedness is as necessary today as it was for us when war was declared in 1917, and we find ourselves in practically the same condition. Congress has made certain appropriations for matériel, but that is far short of what I think America must do.

"Every energy in this country should be devoted to the idea of putting the United States in a condition of thorough preparedness against the possibility of war.

"None of us can tell when we may become involved in the struggle now raging with such tremendous fury in Europe. In my opinion, the very life of this Republic depends on the energy and determination with which our people undertake the task of placing the United States in a state of thorough preparation in both men and equipment.

"The time factor should be the dominant consideration. In 1917 I sailed for Europe with nothing material available other than the will to do and a hasty plan as the basis for doing it.

"Our Allies protected us during more than a year of preparation. They provided us with the matériel.

"Today the situation is utterly different. This great country must, within itself, be prepared for whatever instant action is required for our security. We must not delay longer in our preparations."

Senator Byrd Again

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 15, 1940

EDITORIAL FROM THE LYNCHBURG (VA.) NEWS

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lynchburg News:

SENATOR BYRD AGAIN

The time limit for announcement of candidacy for the Democratic nomination for the United States Senate from Virginia has passed and the only name filed is that of HARRY FLOOD BYRD, junior United States Senator.

This means, of course, that Senator BYRD will have no opposition in the Democratic primary and is the party nominee. It will mean also, of course, his continuance in office for another 6 years. Republican or independent opposition in the November election, if any, will be nominal only.

The people of Virginia will approve overwhelmingly. The fact that no one ventured to enter the race in opposition to the incumbent Senator is evidence enough of that. Recognition of the futility of the effort to unseat him was universal.

The honor that is paid Senator BYRD of an uncontested nomination is a deserved honor. It is a tribute to independence and to courage and to patriotism as well as to ability. Senator BYRD has not always spoken or voted in accordance with the prejudices, or even the convictions, of a large number of Virginians. His opposition to many phases of the New Deal has irritated some of them. At times there have been muttered threats of defeat. But when the time came no man cared to lead any such fight.

And that is because the people of Virginia do not wish their representatives in the Congress of the United States to be mere agents, subservient to a temporary majority, with ears to the ground and no convictions of their own. They wish a man who values his convictions more than he values votes. And so this time, as so often in Virginia in the past, we have the paradox of a man whose defiance of demagogy wins him more than demagogs can ever hope to win, of a man who braves the wrath of his constituents and earns their support. Or is it a paradox?

Record of the Democratic Party

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by Hon. James A. Farley at a dinner of the Duckworth Democratic Club, in the city of Cincinnati, on May 10, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ohio is always an interesting State to visit on a mission like this because it is my understanding that you never have a closed season on politics. Not only that, but you cherish your political independence to such a degree that usually you are able to disguise which party is going to get the Ohio electoral vote until the ballots are in and the count is under way.

The old adage that every American boy has a right to aspire to the Presidency is taken seriously in Ohio. I can hardly recall a national election in which the State has failed to offer one of her distinguished sons as a candidate for the Presidency. This year, you are doing better than ever—you have two prospective candidates who are willing to make the supreme sacrifice if the call comes. I sympathize with their aspirations even though, under the circumstances, it would be improper for me to pledge my assistance in furthering their ambitions.

I suppose every voter here is accustomed to hearing each succeeding national election described as the most important since George Washington's day, or at least since Abraham Lincoln's. The American public likes to have things bigger and better, and campaign orators are usually willing to oblige. No party has a monopoly on viewing with alarm, and the charge that the Constitution will be destroyed and the American way undermined if the opposition gets into power is an old story by this time.

Being an optimist by nature, it is not my purpose to compete with those who make a habit of looking on the dark side of things. Yet leaving aside campaign exaggeration, I think you will agree with me that the next 4 years will be of paramount importance in world affairs, and that the United States will be deeply affected by what happens abroad and also here at home.

The man who assumes the burdens of the White House will have to contend with something more than the ordinary problems and trials. He will be forced to pursue the twin goals of peace and prosperity in a world shaken by wars so widespread and terrible that no human being is wise enough to foresee the outcome. In other words, the next President must possess to an unusual degree the statesmanlike qualities of wisdom, prudence, courage, and judgment. A front-porch President who deceives himself into thinking that events will take care of themselves will hardly fit the bill.

The question then to decide is which party is better equipped to provide the Nation with safe and progressive leadership. The Republican Party was turned out of power in 1932 because in the face of a great domestic emergency it was unable to provide the leadership to pull us through. A short time ago that statement was denounced as a political libel invented by conniving Democrats with a sinister purpose. But in recent times it has been said so often by responsible and honest Republican leaders that I think its accuracy may no longer be questioned.

The Democratic Party has been in control of the Federal Government for a little more than 7 years. It has been a period of abnormal happenings in both domestic and foreign affairs. In the face of such a situation the party did not sit back and let things drift. That course would have been a daring and reckless gamble with national well-being and security. On the contrary, the party has made a sincere and honest effort to deal in realistic fashion with economic, social, and foreign problems.

Has the Democratic Party lived up to the solemn responsibilities which it assumed in 1933? Has the Republican Party recovered itself and is it now fit and ready to take over the heavy duties of national leadership in this critical period of world upheaval?

Suppose we look at the domestic picture first. The finest program of constructive legislation in our times has been enacted into law at Washington under the wise direction of the Roosevelt administration. The banking system has been stabilized, bank deposits insured, social security translated into reality, the issuance of wildcat securities halted, and agriculture aided against the double threat of glutted markets and ruinous prices. The unemployed have been given work on useful projects, the C. C. C. camps have provided a means of gainful employment for more than 2,500,000 young men, and hundreds of thousands of home owners have been saved from eviction by the Home Owners' Loan Corporation. An excellent start has been made on the great problem of preserving the Nation's natural resources. A sensible plan for stopping the erosion of valuable farm land has been put in operation, and water power has been developed to help lighten the burden of toil for the farming population.

Labor has been guaranteed the right of collective bargaining and standards have been fixed to put a floor under wages and a ceiling over hours of labor. The list of worth-while enactments could be extended indefinitely, but I think most of you are well enough acquainted with the record to make a lengthy review unnecessary.

When these measures were before Congress the task of writing them into law rested almost exclusively on the Democratic leadership. A few Republicans, who were able to rise above partisanship, gave their support to individual measures. But most of the G. O. P. stalwarts were still clinging to bits of wreckage left floating from the disaster of the ill-fated Hoover regime. You recall that for want of a better reason, they denounced these forward-looking measures, including the social-security program, as un-American and socialistic. They wanted no part of the twentieth-century approach to social and economic problems, and they did everything in their power to block the Roosevelt program.

A great light has since dawned on the Republican leaders. Facing another Presidential election, they have awakened to the painful conclusion that the American people want these reforms continued and that the political party which advocates their repeal is doomed again to disaster at the polls. Unpleasant as the prospect may be, they have decided to put a grudging stamp of approval on the achievements of a Democratic administration. They argue now that the program is excellent, but to secure the most efficient execution of these laws, the Republican Party should be given the work of administering them.

The new technique in G. P. O. salesmanship reached its highest peak in the report of Dr. Glenn Frank's program committee, which spent 2 years or more trying to think up a workable substitute for what the Democrats had already done. Dr. Frank finally reached the sensible conclusion that the wisest course was to borrow his major planks from the Democrats and simply add that the Republicans would like the job.

It would be idle to deny that in the paper-profits era of the twenties, the public frequently believed the oft-repeated assertion that the Republicans were better businessmen and hence were able

to administer the affairs of government in more efficient fashion. It was a myth that remained in good standing along with the stories about the full dinner pail and two cars in every garage. In fact, with the stock ticker going ever upward, it was a hardy soul who dared to challenge its accuracy.

Yet I doubt if anyone today is innocent enough to be taken in by the Republican assertion that they can carry on Uncle Sam's affairs with a higher degree of honesty and efficiency and with less waste and red tape. The reply to that argument—final, complete, and unanswerable—was given by President Franklin D. Roosevelt in one paragraph of his recent radio talk from Warm Springs, Ga. I hope all of you heard it, but for those who didn't I am going to repeat that paragraph: "Second, they are telling you that many of the measures of the past 7 years are good, but that they would carry them out with greater efficiency if they were in power. I do not think that we can swallow that assertion, because quite aside from millions of fine citizens who normally vote the Republican ticket year in and year out, we and they must acknowledge that practically every serious Government scandal since the Civil War has occurred under a Republican administration, and that the underlying Republican leadership—the groups and cliques which have always owned the Republican Party—are still just as much in the saddle of ownership as they were in the old days."

I thought that spokesmen for the Republican Party, concerned about its reputation, would rise in wrath to protest and dispute the President's statement that their record of Federal administration has been unsavory almost since the party was founded. I was mistaken. Evidently, with a lively memory of Teapot Dome, the little black bag, and other scandals of a few years past, these Republican apologists were able to restrain their indignation. Not a single Republican candidate for the Presidency has seen fit to answer this challenging remark of the President. The reason is that truth and history speak too strongly against them.

We Democrats are proud of the fact that despite the magnitude of the program which had to be initiated and carried through in the short space of a few years the work has been accomplished with a fidelity to principle and a degree of honesty which have awakened the admiration of the American people. There have been mistakes, because mistakes were inevitable in a program of that size. But, compared to what happened in the preceding Republican administrations, the record stands forth clean and unassailable. If the American people expect greater honesty and efficiency, certainly they will not turn to the Republican Party.

Having given up the idea of undermining the Democratic program as too dangerous the Republican candidates are now concerned over the state of the Nation's business. They charge that the Roosevelt administration has failed to bring back prosperity, that it has shackled business, and taken the profits out of industry. They charge the administration with retarding, instead of advancing, the processes of recovery. One of these candidates, well known in Ohio, said that national income in 1939 amounted only to $68,000,000,000, whereas, to use his phrase, "for 2 or 3 years prior to 1929 it got up to $80,000,000,000."

Now, just to keep the record straight, and to correct his figures, the estimated national income reached $80,000,000,000 in the year 1929 only, and that year was the stepping-off place for the worst economic disaster in the history of this or any other country. There is no disputing the fact that income in 1929 was swollen and bloated by the outburst of mad speculation which swept over the country, encouraged and abetted by the short-sighted policies of the Republican administration which was then in power in Washington. We want that volume of national income back again in this country, and we think it can be attained, but we certainly don't want the reckless inflation of values which accompanied it.

I realize that in this age everyone seems to be an economic wizard. Presidential candidates, whose talents no one suspected, are now blossoming forth as full-fledged economists who know all the figures about big business, little business, and whatever kind of business comes in between. Unfortunately, I am just a businessman who has never had the happy distinction of becoming a self-made economist. Therefore, I shall use figures coming from sources which are usually looked upon as reliable and nonpartisan as well.

The Magazine of Wall Street can hardly be called a radical Roosevelt organ. In its April issue, this magazine carried an article by a well-known authority, which said, and I quote: "The significant fact is that we approximated our 1929 income in both 1936 and 1937, that we exceeded it in 1939, and that we have a good chance of exceeding it again this year.

"Of course, we are not talking of national income in terms of dollars. With the cost of living at one level, an income of $50 a week can have a purchasing power as great as an income of $75 a week would have at a higher level of living costs."

Here, then, is an authority who says that in real purchasing power the American people have already achieved a level of prosperity equal to that which prevailed in the most prosperous year of the wildly speculative 1920's. To express his idea in other words, the same degree of prosperity has been realized without the price inflation. Surely his opinion is worth that of our Republican lawyer friends who are now running for office on the strength of their own home-made business statistics.

Has this administration taken the profits out of business? This same writer in the Magazine of Wall Street said that 100 corporations listed on the exchange earned greater profits in 1939 than they did in the so-called boom year of 1929. The Associated Press recently reported that the first 250 corporations to report for the initial quarter of 1940 showed earnings 50 percent above those for the like period of last year. And excluding the American Telephone & Telegraph Co., one of the group reporting, the Associated Press said the increase for the remaining companies was actually 60 percent. That, my friends, is what the opposition calls taking the profit-motive out of industry.

One self-sponsored candidate for the G. O. P. nomination is a newspaper publisher. His newspapers recently reported a net profit of $1,302,320 for 1939, a substantial increase over the profits for the previous year. About the time this report was made public the candidate made a speech in which he said the New Deal was ruining business. A fellow publisher printed the story under the caption A Candidate Amid the Ruins.

I see no purpose in quoting you figures to the point of boredom. The truth is that, considering the industrial stagnation which pertained when this administration came to power and the chaotic world conditions which have continued since, the record of the Roosevelt administration in restoring business and raising national income is unsurpassed. The proof of this statement is so evident in the daily newspapers that it defies dispute. Industry is in excellent shape today and far healthier than it was in the years of phoney Republican prosperity which preceded the collapse.

There are one or two points concerning the conduct of foreign affairs about which I should like to comment briefly. In the whole history of the country there has never been a time when prudence, caution, judgment, and foresight were more needed than they are today in the handling of international problems. A single rash act or statement may have a vital effect upon the welfare of the Nation.

The administration to date has carried on its foreign negotiations in superb fashion while at the same time protecting the country's interests against the danger of rude shocks from abroad. The public has been told what to expect without any effort to work up an undue state of alarm. A sensible neutrality policy has been enacted, as a result of which not a single American life has been lost in belligerent waters. Thus the incidents which might arouse popular feeling have been avoided. The record is one of which every American citizen, regardless of party, may feel proud.

Last spring, a candidate for the Republican Presidential nomination accused the administration of ballyhooing the foreign situation—I use his phrase—to distract attention from domestic conditions. The gentleman was wrong on two counts. He apparently thought there would be no war in Europe and he overlooked the fact that the administration had a solemn duty to take into account the probable happenings on that troubled continent. I trust that by this time the candidate is convinced of his error.

It is to be hoped that in the difficult months ahead, there will be no effort made to create political capital by giving a false impression of American foreign policy. The idea that some individual, utterly lacking in experience, has a patented formula for keeping the country out of war, is too absurd to be taken seriously. I think every sincere man who aspires to the Presidency should be ready to concede that the other spokesmen of his party, and those of the opposition party, are just as anxious as he is to preserve the blessings of peace for America. The safety of the Nation should not be made a political pawn.

The United States has come a long way in the past 7 years. There are problems remaining, of course, but these are slight compared to the economic ills which afflicted the country when this administration assumed office. For those who had no responsibility in the work of rebuilding, criticism comes easy, despite the fact that they are still unable to put together a sane and workable program of their own.

The arguments of the opposition have a familiar ring. They are fond of saying that the present administration promised far more than it has been able to perform. Optimism is an old American virtue and it may be true that the administration has failed to achieve its objective in every instance. The failing, however, is not ours alone. I recall a Presidential candidate who, in 1928, promised that poverty was about to be banished from the Nation—provided the Republicans were retained in power. This still remains the all-time high in political promising.

The Democratic Party has done a remarkable job of administering the affairs of the country under the most trying circumstances. I am content to rest our case with the American people.

Orderly Control in a World of Conflict

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ELBERT D. THOMAS OF UTAH

Mr. WAGNER. Mr. President, at the thirty-fourth annual banquet of the American Society of International Law

the junior Senator from Utah [Mr. THOMAS] delivered an address entitled Orderly Control in a World of Conflict. Because the address is of general interest, I ask unanimous consent to have it inserted in the Appendix of the RECORD.

When I face an audience as I do tonight two thoughts bring a conflict of emotions. I cannot forget that while Rome burned Nero fiddled. Nor can I forget that when Greek civilization crumbled Plato wrote and Aristotle taught. We cannot be Platos and Aristotles, even if we may assume a crumbling civilization. This I will not because I do not believe it; nor can we stoop to a modern version of fiddling indifference to our burning surroundings.

Only the foolish, with world complications as they are, would dare approach a subject in the spirit of "if I were king" and answer categorically what should be done. One of our wise leaders, upon being asked at one time why he governed his people so successfully, replied, "I merely teach them proper principles and let them govern themselves." Now I am in a box. I dare not give a solution, and yet I have said something about proper principles. Speaking to the American Society of International Law, one must find those principles in the aims of the society itself:

"The object of this society is to foster the study of international law and to promote the establishment and maintenance of international relations on the basis of law and justice."

Broad as those aims are, they have not become world wide, because the system of international law at its broadest has not reached a world-wide characteristic. I say this, even though I must admit that the aim of the League and the International Court of Justice has been universal. The Pact of Paris was almost universally accepted, and the theory that war was of universal concern brought a momentary condemnation of war as an instrument of national action. Thus, in a condemnation of war international law reached its broadest aspect in theory. In one sense, then, modern international law had its origin in a definition of rights in peace and war, and evolved to the position where it actually condemned war as a legal instrument. Still it is not all embracing, as, for example, the aim of the Rockefeller Foundation, which exists to promote the well-being of mankind throughout the world.

In this statement of international law's broadening movement I must not lose sight of the theory of natural law as being universal or rather almost inherent among men in society wherever they may have lived; but even when this universal theory is accepted it was accepted by groups who thought of slaves by nature, of the contrasts between Greeks and barbarians, between the Chinese and the Hunsi, and when Indians attempted the democracy of man under the great Buddha the attempt was crushed by the castes of the Hindus. When the early Christian asked the question, Are we not all children of God and brothers? he was met on one side by the concept of the chosen people and on the other by those who had rights because they, like Paul, were born under Roman law.

Law has always been and will always be corrective in its aim and in its nature. That is its worth. What international law we had in our ancient world became coherent as a means of overcoming conflicts. The only time anything like international law evolved in ancient China, occurred during the period of the warring states. If modern international law started with Grotius, or just before his time, both were periods of conflict. Each aspect of the Monroe Doctrine in its changing growth from a unilateral idea to a multilateral concept is a peaceful stand against what might be termed a warlike threat.

Please note, even when we take illustrations from many times and many places, we still have not recognized the world-wide concept that is essential if we are to make our concept of law as wide as are the facts of our world. For the world, whether we like it or not, is a physical and economic unit. It took the tobacco habit about a century to circle the globe. Gold and silver as money are habits which no one needs to be taught anywhere except among some foolish persons in America who assume that both articles are worthless as money because they have lost control of them. Habits in law and habits in religion have been so strikingly world-wide that men everywhere have an idiom equivalent to our "that's natural." St. Xavier is said to have thought when he met some religious practices much like his own that the devil had preceded him in teaching the people the truth in order to deceive them.

Despite Europe's and Asia's wars, the fundamental problems remain primarily the same. Viewed broadly, on the basis of a world-wide adjustment, the three great unknowns are still the great surging revolutions, spiritual, political, and economic, of those parts of the world where socially the mass of mankind is and economically where the ultimate consumer is bound to remain. There is a unity in the three great revolutions of Russia, China, and India. In each of these we have the same fundamental economic facts, we have the same resurgence of political and social protest. It does not do violence to the thought of anyone who views the world as a unit—and it will be a unit to those who come a thousand years from now, for they will look at our times just as we look at the times of the great Han dynasty in China or the Roman Empire. Those who were the victims or the beneficiaries of these great human surges never thought of them as units; still in the economy of time they are that. All three are rebelling against 400 years of the white man's spread over the globe. Hitler's alliance with Russia makes him momentarily an ally of this great movement, for he is in rebellion against one of the results of the white man's spread. Can I justify myself in linking Germany with the three great revolutions of the East in her present struggle? Let us see what made the alliance logical.

What drove Germany and Russia into an understanding for cooperative action? It was Hitler's pronouncement, that the territorial provisions of the treaty of Versailles, and therefore of the other treaties incident to the World War, no longer existed. This pronouncement was an extremely satisfying one to Russia and since it was not challenged, Russia in accepting it found herself in agreement with Germany in the attainment of those objectives which would wipe out the territorial provisions of the after-war treaties. That gave her excuse enough for her actions against Finland and the Baltic States, it gives her excuse enough for her probable future actions in the Balkans. Not only were Germany and Russia allied in purpose as a result of Hitler's announcement, but when Germany moved into Czechoslovakia, Hungary, and Poland accepted the theory and repossessed treaty-taken territory. In Poland's case the irony of her action invited her own destruction, for while the logic of Hitler's pronouncement appealed to her in satisfying her own purposes, she failed to realize that when she accepted the same doctrine for the recovery of land that she though was hers she invited her own end. From a military standpoint Poland is no more.

The force of this unchallenged pronouncement hangs like a sword over the present Balkan States. The pressure from both the east and the west for adjustment, with the rivalry from within, provides a challenge to what is the outstanding contribution toward a unity of purpose on the part of neighbors which resulted from the war treaties, unity in the Balkans with the recognition of these states' interdependence. That interdependence theory assumed in the Balkans today is a healthful reaction to a condition which will preserve the entity of these small states. But if the small states today take upon themselves the doctrine which the major states have accepted as being paramount, namely, the theory of self-sufficiency and the need for keeping themselves self-sufficient, the end of small nations must come and the unity such as we have in the Balkan countries will be broken.

We, ourselves, today, through national acts, for one of which I must assume responsibility, are attempting to make the idea of self-sufficiency a national objective; and to an extent we have made it a national policy by the adoption of the Strategic Materials Act. If the spirit of this act becomes the all-engrossing aim of our Nation and is not tempered by such policies or reciprocal agreements, the restraining influence of Pan American unity and good neighborliness, America may find herself in the position of taking a stand wherein we may declare certain contingencies which we would not tolerate. I may suggest one: If America lives on rubber and out of tin cans, will she tolerate a stopping of the lanes of trade with the tin- and rubber-producing countries?

I have hinted at the three revolutions in China, India, and Russia, and now Germany with them, as being a unity. Is it proper for me to do this? If we consider the British control of the sea the great fact of the modern world and the outstanding culmination of the 400-year struggle of the white man in his spread over the earth, Germany is as much in rebellion as is the East, and Japan's new order in Asia is merely another aspect of this fact. Each strikes in its particular way at something that has been imposed from without. There may not be unity of action, but there is a unity of the factors that compel the actions.

China, Russia, and India are three civilizations made up primarily of small land-cultivating peasants, persons whose standard of life is each year so close to mere subsistence that thousands of them die from actual want. Those who are their temporary allies fighting for temporary advantage are exhausting themselves to where they, too, must become one with the great group of ultimate consumers at the level of mere subsistence. Thus, the problem, in spite of war, in spite of conflict, in spite of adjustments, remains exactly the same problem as it has been since these revolutions were started. The ultimate consumer in any economic unit holds the key to the economic welfare of the whole, for it is on him that the responsibility of taking the surplus of the more fortunate rests. Profit from this surplus raises the subsistence level. The continuous production of a surplus without an outlet means stagnation of economic life.

These are the factors essential to the continuous grinding of the world's economic processes so that surpluses will be taken, wealth will be increased, standards of living the world over will constantly rise, increasing the demand and keeping the supply near at hand. It sounds as if I am about to attempt to solve the problems of this world by simply saying that if we will bring about those conditions where the ordinary rules of supply and demand will be allowed to function, our troubles will be over. No; civilization has become too complicated for this. Life on this planet is so full of checks, curbs, urges, personal and national advantage-taking that even a universal acceptance of any simple economic principle will not solve much.

We must not turn our backs to essential first principles. War is not a new experience, but almost universal revolution is new. It is its widespread unity that is so challenging today. The World War was more extensive. Our Civil War was almost simultaneous with the Tai Ping Rebellion in China, where loss of life was probably greater than that of the World War, but they were not related movements. Today each conflict has aspects very much bigger than those of the parties to the conflict. Assume that Japan will be successful in establishing the new order in Asia,

will not the Mikado cult have a place in the thinking of millions of yellow men in the earth? Turn this cult into a war cry; you may have the equivalent of a second Mohammedan surge. Let the economic theories of Russia become the reason for action in all war-wasted lands and your bank account, big as it is, or mine, little as it is, will have a changed aspect. Let the single-willed state theories become dominant in the world, and political, religious, and economic democracy which we in America have known for 150 years may become a thing of the past. While the single will idea has grown in other places, in America the political liberty gained for us by the founding fathers has now grown to a demand that liberty shall be freedom for property, freedom for the mind, freedom for the soul, as well as freedom for the body. Now comes the assertion that we must streamline our liberty in order to conserve it in competition with those States which work as all-embracing wholes because of the single-willed concept. Can this be done? When we fight fire with fire, both sides must get burned.

My interpretation of the world as it is today reflects the concept of a great world unity. While I consider the three major revolutions of protest as being antiwestern, I do not accept the theory that they mark the decline of the West, for these reasons: Part of the West has joined them, and in each of the three the genius of their rising power has come from the West. The industrial aspect of present-day Russia is western. The nationalistic thought of China is western. Japan likes to speak of her new order for Asia as the Monroe Doctrine of the Far East.

Germany is fighting for a place in the sun. Italy's imperialism is western. England and France are seeking security by cooperative action. Thus there is anything but a decline of the western political thought. There may be an exhaustion of the west, but Asia is more greatly exhausted. Even if western Europe goes, there is still the Western Hemisphere, which when we think of the world as a unit while it will find its standards reduced by decline anywhere, its onward march will only be retarded in terms of world decline. Disorder incident to money economy may come any time because the invention of money came to be used in times of free action. But we must never forget that throughout history gold and silver as money have survived war, destruction, pestilence, and famine; they have been the saving factors whenever all other things have been depressed and destroyed. All other money is a medium only by common consent, and if conditions arise which remove common consent, money loses its most important characteristic. This one fact should cause those who assume debt to be the greatest evil to realize that there is something worse than debt and that that something is the loss of the medium whereby debt is measured and paid.

Having accepted the thesis of world economic unity and having attempted to show that the declines which may come from war waste and depression's exhaustion will not be the west's in contradistinction to the east's, but world-wide declines, there remains for me to attempt to present a series of thoughts about our country's probable contribution toward orderly processes in today's lack of respect for international good behavior and tomorrow's turmoil incident to disorder.

During the last 5 or 6 years, America has reacted true to form as a democracy. By that I mean that in a democracy the standards of right and wrong are not measured by governmental act. Under our system of government, there are certain standards of action in treatment of persons and of foreign States which are the controlling motives behind governmental action. In a single-willed state this need not be the case, and in practice it is not. States directed by these contrasting motives will act for different reasons. One will be guided by expediency, knowing that that which it does will be the only standard of right. The other will show restraint to the extent of measuring its actions by what it terms fundamental rules of behavior. In an international sense, state lines and national independence must be respected, or the fundamental on which a state's very existence depends will be destroyed.

Our country entered the World War in defense of what it considered fundamental rights. Our action came as a result of a sense of outraged justice. Having entered the war on a very high moral plane, it was inevitable that we should compare actions on the part of men and nations, whether friendly or enemy, with our moral sentiments. As all things did not seem perfectly in harmony with our high motives of April 6, 1917, we began to feel that we had been tricked. This fact contributed to two outstanding deductions: first, a condemnation of war; and second, a feeling that we should not pass judgment on the actions of others. Both deductions may prove healthful; they have had an interesting byproduct. The right and wrong of a warlike act has become none of our business.

So completely have we failed to recognize a right and wrong act on the part of warring states that we will not accept a definition of a wrongdoer. We insist upon treating aggressor and victim alike. Thus we have failed to recognize that nonaction may be as one-sided as action. So completely have we refused to take a stand in defense of what we deemed a right that our people and our ships are forbidden to enjoy what we have always thought to be their rights and privileges. We believe that that which has been done will turn out to be for the best. The future only will tell.

If we remain consistent with what is now our national policy, America cannot, without completely reversing her policy, enter either the war to the east or the one to the west. It is best that we should not. Some factors in relation to both the war in Europe and that in Asia are actually larger than the military success our entrance might give to any one of the four major sides we might take. While we have retreated from the position of a neutral standing upon all our rights, America still at peace is very much more important for all concerned than America would be as a belligerent. Our position is a philosophical one; but must not nations, like men, learn from experience? No group of people can be forced into a conversion to peace any more than an individual can be forced into repentance. Some things must come from within. Helping to keep the peace in all the vast extent of the earth where our responsibility lies is a task which will test us. Then, too, we have joined with more than a score of sister nations in an endeavor to develop a community of interest through neighborliness and peaceful processes. While in part of the world we have withdrawn from an insistence on certain rights, we have in another part taken on obligations which may carry with them grave responsibilities. Our new inter-Americanism is not mere sentimentality. Again, considering the world as a unit, we are not going backward but forward in orderly processes.

When the days for peace come, the more belligerents there are sitting around the peace table the worse will be the peace. The more nations of the world there are at peace the greater will be their influence for a temperate peace. If she can keep the lamp of peace lighted, America will cure more black-outs than she will if she attempts to light the lamp of peace again after destroying half of the black-outs. In all matters relating to concepts of federation or voluntary multilateral activities, America, through her actual Federal experience and her inter-American activities, can contribute much to the technique of peaceful process and joint action. America, too, both internally and by her attitude to her neighbors and their attitude to us and one another, is setting an example and proving herself profitable to all concerned. This is a contribution of great magnitude toward better world order.

America is acquiring new experiences which are causing her to understand better the processes of law in their relations to the weaknesses and the caprice of men. Law is finding its proper place. The tyranny both of law and of men is learning new curbs. This may be an added contribution of great worth. America, though, due to circumstances which are by no means all of her own making, is a tremendous power for economic stability and recovery for the whole world. I cannot bring myself to believe that the money habits which men the world over have learned to respect and which have always persisted regardless of political, social, and economic failure will be lost.

The strength behind our gold and silver is possible of immeasurable good. When the proper time comes, these two metals will flow back to the peoples of the world carrying the blessings of a higher standard of living quite as readily as they came to us. These metals will not have to be given away, they will not have to be loaned, they will not have to be wasted, they will not have to be carried arbitrarily, but they will flow quite naturally, giving security to profit and stability to property everywhere. All we need to do is to resume our promises to pay when the time comes. Thus will be reestablished a free gold and a free silver market. The only safeguard we need to place upon this resumption is that there shall be left the power, say, in our Secretary of the Treasury, to decide with which metal the payments shall be made. For ordinary business that which is asked for can be given. If, though, there should be an unnatural and a deliberate run upon our Treasury, it can be stopped by the substitution of the Treasury's way of paying instead of the way of the person who asks for that payment. For this great day of world-wide recovery, America is better prepared, comparatively speaking, than any nation has ever been in the history of money throughout all time. This is indeed worthy of note.

One more word about the three great world revolutions, and then I am through. This word, too, will be entirely philosophical. The social, political, and economic revolutions that exist in the world today can contribute toward the advancement of mankind if the masters of those revolutions will maintain what I shall call a student attitude.

China invented paper at a very early date. India, her neighbor, from whom China was learning everything that she could, turned her back on the little which she thought China might teach. The growth and development of Indian culture stopped; China's went on. Not only did the advantages which have come to the world in the wake of the use of paper stop, but they were retarded from spreading to other parts of the world because India refused to learn a new habit. Three or four hundred years afterward, with the rise of another great culture, the Arabian, paper was introduced into Europe.

In this world of force—and I do not belittle force, since all government rests on it—can we not continue to put faith in those processes which, while probably backed by force, move so that force need never be resorted to? Surely one aim should be ours. This aim should be that the diplomatic agencies of our Government should so act that the agencies of the Army and the Navy need not be called on.

Since we have spoken of America's probable contributions, can we not offer our society's actual contribution by presenting to the world the president of the American Society of International Law as a man of character who has shown his worth by so guiding the affairs of his great office that only the diplomatic and the peaceful processes of our Government have been used when carrying out America's purposes and contributions to world order? Mr. Hull, we salute you.

Science for Peace

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

ADDRESS BY THE SECRETARY OF STATE BEFORE EIGHTH AMERICAN SCIENTIFIC CONGRESS

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the address of welcome of Hon. Cordell Hull, Secretary of State, at the first plenary session of the Eighth American Scientific Congress at the Pan American Union, Washington, D. C., May 13, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On behalf of the Government and people of the United States, I take great pleasure in extending the warmest welcome to the Eighth American Scientific Congress. Your selection of Washington as the seat of your meetings is an honor of which the United States is proud. We hope that the distinguished delegates from our sister republics will find their stay in this country wholly pleasurable. We are confident that your deliberations will be useful and stimulating to you and productive of results beneficial to the American nations and to the whole of mankind.

Individually you represent various branches of science which have evolved into distinct and rigorous disciplines through the unremitting labors of succeeding generations of scientists. Collectively you represent the entire body of science, which has been one of the most powerful forces in the advancement of the human race.

No single mind can grasp the entirety of scientific achievement that has already become the heritage of mankind. No human mind can envisage all the possibilities of further achievement. Meetings like this, with the opportunities which they provide for impact of mind on mind and of branch of science upon branch of science, are of immense value for appraising and correlating the results attained and for stimulating further advances.

We cannot foresee the limits of scientific progress. But we do know, through records of the past and through our own experience, that each new discovery opens new vistas and possibilities. We do know that things have been discovered, invented, and developed—and are today being taken for granted—which not long ago belonged in the realm of fantasy or were not revealed to the human mind even in the shadowy province of dreams. One of the most substantial bases for hope in the future is the never-ending onward march of scientific achievement.

You scientists place at the disposal of society the means wherewith life can be made fuller and richer. From your physical, chemical, biological, and other laboratories come the discoveries which enable mankind to multiply the production of useful goods and services, to make it possible for the luxuries of yesterday to become the standard necessities of today; to improve living conditions; to conserve health; to make life more worth living. From your halls of learning and from your workshops of study and research come the ideas which enable society to understand and to master its own ever-increasing complexities, to develop the science of government, and to achieve social progress in general.

Unfortunately, scientific progress does not always go hand in hand with social and moral progress. The results of the scientist's quest for truth become sometimes the instrument of ignoble or selfish aims and sometimes the means of promoting human welfare and happiness. Secrets wrested from nature by the devotees of the physical sciences may serve to create means of destruction or may serve to raise and improve the standards of life. The laws of human behavior and the techniques of social organization discovered and expounded by social scientists may be made to serve destructive or to serve constructive ends.

Today we witness a stark demonstration of the possibilities of antisocial and antimoral use of the achievements of science. Weapons made possible by great scientific discoveries and by marvelous technological development have been created, and are being created and wielded, by some nations in pursuit of policies of aggression and aggrandizement. This compels other nations to create and wield similar weapons in defense or in preparation for defense. In some nations, science has been reduced to the sorry estate of a handmaiden of oppression and brute force.

This is not your fault. This should not—and, I am certain, will not—impair the vigor or diminish the scope of scientific endeavor. But this creates problems for mankind which must be faced squarely and courageously.

The creation of conditions in which the progress of science will, at least predominantly, service constructive rather than destructive social and moral ends is the task of responsible citizenship. This is a task for all mankind. For neither social organization directed toward insuring the greatest good for the greatest numbers nor the cultural and spiritual values which the overwhelming majority of mankind prizes and cherishes, nor science itself, can be expected to survive a too protracted and too widespread abuse of the achievements of science for antisocial and antimoral ends.

Such abuse inevitably creates conditions in which thought is shackled, and science cannot flourish where freedom of thought does not exist. Science cannot advance when it is not permitted to extend its exploratory activities wherever the quest for truth may lead. Human progress is impossible without a strong moral and spiritual foundation. A nation which curbs freedom of thought or denies the dignity of the human soul dooms itself inevitably to decadence.

Science cannot flourish when it is forced into the narrow confines of national frontiers. Its progress is founded upon a universal fellowship that knows no distinctions of race or creed or nationality, of class, or of group. That fellowship is one of the finest and most striking examples of the numerous and varied international relationships in every phase of life which have so enriched the human race—materially, intellectually, and spiritually.

Your Congress is a part of the observance throughout the Americas of the fiftieth anniversary of the Pan American Union. Together with the other phases of that observance, it symbolizes the unity of purpose which actuates the American nations: Preservation of peace within and without; untiring concern for the well-being of the individual; unshakable determination to safeguard personal freedom and to preserve the dignity of the human soul; full recognition of the great mutual benefits to be secured from fruitful relationships between government and government, group and group, individual and individual, who, though separated by national frontiers, have much to learn from each other and much to contribute to the whole of mankind.

For half a century, through the Pan American Union and through numerous other agencies, our nations have sought to give substance and reality to these great purposes. We are determined to go forward along these paths.

We deeply deplore the fact that a blighting shadow of cultural eclipse has temporarily fallen on so many countries in other parts of the world. We are supremely fortunate that in this hemisphere thought is still free, and science is still untrammeled. It is for us to see to it that they remain so—for our own sakes and for the sake of all humanity.

Each of our nations has its own problems and its own preoccupations. Each of you, as a citizen, has a loyalty to your own country and a concern for its needs and problems. But as scientists, in your quest for truth, you have one great common loyalty—loyalty to the human race and to the destiny of man. It is in the spirit of this loyalty, I am confident, that you, free scientists of the free Americas, will approach the work of your Congress.

Permit me, again, to bid you welcome and to wish you outstanding success.

National Defense

EXTENSION OF REMARKS
OF
HON. JOSH LEE
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM DAILY OKLAHOMAN

Mr. LEE. Mr. President, in connection with the national defense, I ask unanimous consent that an editorial from the Daily Oklahoman of May 14, may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Daily Oklahoman of May 14, 1940]

IT CAN HAPPEN HERE

Apparently hordes of German troops will overrun Holland in a brief time—possibly a matter of days, at most a few weeks. Other German troops have already outflanked and captured part of the first-line defense and the strongest forts of Belgium. Unless Belgium's secondary defenses are stronger than represented, German troops will push back both French and Belgian troops and 30 days may see a clean-up of all Belgian territory.

German power in the air may soon be overwhelming. Germany might lose 100 planes a day and the Allies lose only 50, but if that ratio were kept up for 60 days, Germany, instead of having 2 planes to the Allies' 1, would doubtless have at least 3 to their 1. As the Allied defense of the air diminishes, Germany's air offensive will increase.

With Germany in complete possession of Holland, Hitler's air force can strike at England, reaching London in less than 1 hour's time. She can mass planes at the Dutch airports and attack furiously all British shipping and send swarms of planes over the British Naval Fleet.

In England there is a "fifth column," just as there was in Holland and Norway and just as there has been in Austria, Czechoslovakia, and Poland.

Hitler may elect to hold France at bay behind the Maginot line and attack England and the British Fleet before coming to grips with France. British merchant vessels will have great difficulty in reaching England when flocks of German bombers are flying out of Holland.

With British sea power broken, there would be no hope for France. Italy would then join with Germany in attacking France on all fronts.

If England and France are conquered, it may be accomplished within 90 days. If they are not overrun in 3 months, they possibly will be within 6 months. If England and France are conquered, all British and French ships in all neutral ports will be turned over to Germany. She can mount guns on them and with the German Fleet, the Italian Fleet, and the remnants of the French and British Fleets, she would have a force which might easily overwhelm the American Navy.

Germany has 250,000 aircraft pilots. The United States has 45,000. Germany has 20,000 planes and is making them faster every day than England and the United States combined.

Huge bombers now carry loads of 40,000 pounds. It would take but few bombs to destroy the aqueducts which bring water to New York City. A suitcase full of dynamite would blow up the Holland Tunnel. Comparatively few bombs could wreck the New York subways. The United States hasn't sufficient antiaircraft guns to defend New York City, let alone Philadelphia, Boston, Washington, or Chicago. Our stock of airplanes and air equipment is a bagatelle compared with the air forces of Germany and Italy.

The United States has an army of 400,000 men, 235,000 being militia. She does not have sufficient rifles, let alone other equipment, to arm this small army. She has not adequate artillery to properly defend any of our seaports, and many have no defense whatever.

Unfortunately, we have the largest "fifth column" of Nazi sympathizers and Communists now existing in any country.

In the face of this situation, Congress is about to adjourn. Congressmen and Senators want to spend the summer stumping their States for reelection.

There is no time now to build a new navy. An Army of 1,000,000 men could not be equipped within 1 year from date. Artillery defenses cannot be created within 2 years. It requires 4 years to build a battleship.

America ought to form a council of defense. It ought to call for 100,000 youths to volunteer for training as pilots. It ought to advance the money to airplane factories to quadruple their production. It ought to arrange that automobile factories manufacture airplane motors and parts. Airplane designs should be furnished to all automobile manufacturers who could undertake production of planes. The only possible quick means of defense for the United States is a vast expansion of air forces and equipment.

It is silly to say the United States is in no danger. We have two-thirds of the world's gold buried in Kentucky hills. In resources this country is rotten rich. In defense, it is a baby in arms. With England and France out of the way our riches would be a feast for Germans and Japs.

Why not wire our Congressmen and Senators to stay on the job and get busy?

Peak Employment at Eastman Kodak Co. Plant

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE ROCHESTER (N. Y.) DEMOCRAT AND CHRONICLE OF APRIL 19, 1940

Mr. MEAD. Mr. President, one of the typical American activities is that of taking pictures. Photography is indulged in by all our citizenship, rich and poor alike. When we find an institution which furnishes material for such an activity flourishing, we know that this institution may be classed as a barometer of our economic conditions.

The report of this barometer is good. Taking of pictures in many instances is what may be styled a semiluxury; one indulging in it is not necessarily doing it as a living, but is upon pleasure bent. A generous taking of pictures indicates a pleasant state of mind, and a monetary condition in America that is wholesome.

The report of the Eastman Kodak Co., which is located in the State I have the honor in part to represent, and which I think is a typical report of many industries, shows a remarkably prosperous condition. Reports of this kind are a tribute to our American governmental policies, to the Roosevelt administration which administers them, and to the men and women of this institution for their enterprise, energy, and efficiency.

It is a pleasure to state that from the standpoint of pictures, they are now pleasing to the eye. The improved economic conditions under the Roosevelt administration are not those of bread lines, riots, foreclosures, or pictures of despair and distress generally, but are pictures showing business and industrial activity, of people comfortably engaged, of people with happy faces and many evidences of enjoying life.

I ask unanimous consent that the article which is from the Democrat and Chronicle of Rochester, N. Y., of the issue of April 19, 1940, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rochester (N. Y.) Democrat and Chronicle of April 19, 1940]

KODAK PAY ROLLS, EMPLOYMENT HIT NEW ALL-TIME HIGH—EMPLOYEES INCREASE 72 PERCENT OVER 1929—EARNINGS ALSO GAIN, ANNUAL REPORT REVEALS

Eastman Kodak Co. employment and pay rolls hit an all-time peak last year, when the company employed 27,000 persons.

This represented a 72-percent increase over the 15,700 predepression peak of 1929, while the 1939 pay roll increased $19,300,000 over a decade ago, according to the illustrated report presented by W. G. Stuber, chairman, and Frank W. Lovejoy, president.

Income also in on the uptrend, the company and wholly-owned subsidiaries reporting a consolidated net profit of $21,537,577, equal to $8.55 per common share, compared with $17,339,408, or $7.54 per share in 1938.

This compares with a net profit of $6,058,749 in 1932, near the depth of the depresson, and a net profit of $22,014,916 in 1929, highest in the history of the company.

Under the subtitle, "A decade of progress, 1929–39,'" the illustrated report discusses employment and the company's efforts to meet the unemployment problem during the last decade. The report stated:

"During the first 3 years of the depression a decline in the company's business necessitated a gradual reduction in the working force and a shortening of the workweek.

"At the low point of the depression, in 1932, the decline from 1929 in the average number of employees was 16 percent, which compares with 37 percent for the country as a whole.

"During the next 6 years Kodak employment more than doubled. In 1938, because of the drop in general business, employment declined in the first part of the year. This decline was more than made up by the recovery that followed, and employment at the close of 1939 reached a new peak—72 percent above the close of 1929. Employment for the country as a whole still is 9 percent below the 1929 level."

Employment increase was credited in the report to reduction of the normal workweek from 48 to 40 hours, expanding sales stimulated by improvement of products, introduction of new products, lower prices, and improved service.

Along with the employment increase has come a steady decline in the prices of the company's products, the report stated.

"The weighted average of prices of all the company's products in the photographic field was 14 percent lower in 1939 than in 1929, and 22 percent lower than in 1915," the report stated. It ends on a note of satisfaction and confidence:

"Thus, the decade of 1929–39 has been one of progress for the company in the face of difficult conditions. The market for its products has been expanded, employment has been substantially increased, the real annual income of its employees has risen, the quality of its products has been improved, prices to the consumer have been reduced, it has contributed to the general improvement of business in the country by substantial increases in its pay roll and large expenditures for new plants, and, in the face of rising expense burden, earnings have been restored almost to the 1929 level."

Endorsement of Hospital Construction Act

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

STATEMENTS BY DR. BERT W. CALDWELL, DR. JOHN P. PETERS, AND EDWARD A. O'NEAL

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix statements which have been submitted to me, endorsing the Hospital Construction Act, as reported by the Senate Committee on Education and Labor, from Dr. Bert W. Caldwell, executive secretary of the American Hospital Association; Dr. John P. Peters, secretary of the Committee of Physicians for the Improvement of Medical Care; and Mr. Edward A. O'Neal, president of the American Farm Bureau Federation.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

CHICAGO, ILL., *May 4, 1940.*

Senator ROBERT WAGNER,
Senate Office Building:

May I extend you the appreciation and congratulations of the American Hospital Association in perfecting the rural hospital law as amended. It is one of the best pieces of legislation that you have introduced. It will be a blessing to many hundreds of thousands of people who are now deprived of hospital care. It can well be accepted as a model law. I want to thank you personally and for the American Hospital Association for the many courtesies you have so generously extended our representatives.

BERT W. CALDWELL, M. D.,
Executive Secretary, American Hospital Association.

NEW HAVEN, CONN., *May 16, 1940.*

Senator ROBERT F. WAGNER,
United States Senate:

In behalf of Committee of Physicians for the Improvement of Medical Care, express earnest hope that Senate may act favorably upon S. 3230 at this session.

JOHN P. PETERS, M. D.

AMERICAN FARM BUREAU FEDERATION,
Washington, D. C., May 15, 1940.

HON. ROBERT F. WAGNER,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I am writing to convey to you the support of the American Farm Bureau Federation of Federal aid to the States for better health and medical services through the construction, improvement, and enlargement of needed hospitals and diagnostic centers in rural areas. This objective is partially carried out in your bill, S. 3230, as reported to the Senate by the Senate Committee on Education and Labor. We therefore hope this bill will receive the approval of the Senate.

We do not regard this legislation as being in any sense a substitute for the broader national health program, which is embodied in your bill, S. 1620, on which extensive hearings have been held by the Senate Committee on Education and Labor and which our organization supported in the main. If Congress approves S. 3230, however, it will make possible at least a small beginning toward carrying out a part of the broader program.

I am enclosing herewith a copy of the resolutions adopted in 1938 with respect to rural health, which were reaffirmed and approved by the voting delegates of the American Farm Bureau Federation at the last annual meeting in December 1939.

Sincerely yours,

EDWARD A. O'NEAL, *President.*

RESOLUTIONS ADOPTED BY ASSOCIATED WOMEN OF AMERICAN FARM BUREAU FEDERATION IN 1938 WITH RESPECT TO RURAL HEALTH, WHICH WERE REAFFIRMED AND APPROVED BY THE LAST ANNUAL MEETING OF THE AMERICAN FARM BUREAU FEDERATION IN DECEMBER 1939

RURAL HEALTH

Since representatives of the American Farm Bureau Federation and Associated Women of the American Farm Bureau Federation attended the National Health Conference, called by the President in Washington, we endorse the principles of the resolutions presented by them at that time.

1. Extension of public health service

Much of the costs entailed by sickness can be averted or reduced by preventive measures. The curtailment of disease is to the betterment of our society, but the costs are beyond the economic resources of many of the people: Therefore be it

Resolved, That the Associated Women of the American Farm Bureau Federation hereby approves and urges the extension of all forms of preventive medicine throughout the country, particularly in the rural areas, and that the Associated Women further recommends a greater appropriation of funds under the Social Security Act for this purpose.

2. Rural hospitals

The protection, conservation, and restoration of the health of the people is a matter in which the Government must be interested for its own welfare. Since adequate hospital facilities are indispensable in the proper care of the sick, and since hospitals are inaccessible to many rural people living in sparsely settled sections of the country: Therefore be it

Resolved, That the Associated Women of American Farm Bureau Federation urges the establishment of hospitalization facilities and provision for adequate medical care, accessible to all of the people at a price within their ability to pay.

3. Medical care in rural areas

It is impossible for the individual to predict the cost of adequate medical care. Attempts to meet this situation are being met by numerous plans providing for prepayment of medical services and hospitalization on an insurance basis. It becomes apparent there is need not only to protect the members of the medical profession from burdensome regulation but to also protect the insured from exploitation: Therefore be it

Resolved, That the Associated Women of American Farm Bureau Federation recognizes this problem and recommends that the several State federations of the American Farm Bureau Federation take action looking forward to the enactment of necessary regulation embodying these principles.

Philippine Independence

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

ADDRESS BY PLACIDO L. MAPA

Mr. GIBSON. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the CONGRESSIONAL RECORD a speech embodying a plea for permanent Philippine independence delivered by Placido L. Mapa, a prominent Filipino, at the convocation of the College of Commerce, Ateneo de Manila, P. I.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have followed with the keenest interest the recent debates on the reexamination of the grant of Philippine independence under the Tydings-McDuffie law. This is easily the most vital and crucial problem now confronting the Philippines, for upon its solution rests the fate of 16,000,000 people, their children, and their children's children. The Filipino people have a right to be fully informed of, and to be attentively heard on, all the angles involved before independence becomes an irrevocable reality, and it is clearly to the best interests of the whole nation to have the matter thoroughly and widely threshed out. For this reason I deem it my duty, as it is that of every Filipino citizen, to contribute anything which might help to clarify the points at issue.

There can be no argument on the fact that all peoples in all climes are desirous of attaining independence as the ideal state for individuals as well as for nations. It is an elemental and a universal urge, and there is no Filipino who does not thrill at the thought of seeing the Filipino national emblem proudly flying and waving over the Luneta and all the public buildings throughout the land, all by itself, without the supervisory presence of another flag, proclaiming the soul-stirring significance that the Filipino people are independent and masters of their own destiny at last, after hundreds of years of struggle and waiting. Of course, we all want freedom and liberty, and they do violence to Nature and slander a whole race who say that there are Filipinos who are opposed to Philippine independence. It savors of an attempt to win adherents by beclouding the issue—something which should have absolutely no place in the consideration of so weighty a

problem. As I see it, the only difference between the two camps now discussing this question is that one group wants complete, absolute independence in 1946, while the other would like to have it postponed until a later date.

Speaker Jose Yulo, who was chairman of the Filipino representation in the Joint Preparatory Committee on Philippine Affairs and is now the spokesman of the legislative department of our government, recently said: "But insurance of good government will not be enough to bring happiness to one's people unless material and economic security can be given to every man, woman, and child living under the mantle of that government." Continuing, he said, "Unfortunately for us, while political independence is assured under the Tydings-McDuffie Act, the economic provisions of the act make it impossible for the Philippines to develop an economy independent of the United States. First, because the period of economic adjustment is too short, and is coupled with conditions tending to liquidate rather than to readjust the industries affected by the cessation of free trade. And, second, because the Philippines is not given the means to develop its own foreign trade, independent of that of the United States. * * * the problem simply becomes so baffling that it admits of no other solution but to lengthen the period of readjustment, after independence, and then only on terms sufficiently generous so as to permit a real readjustment, rather than force a liquidation of our major industries." Not long ago, Secretary of Finance Manuel Roxas, who was a member of the same Joint Preparatory Committee on Philippine Affairs and now chairman of the National Economic Council, spoke from this platform as follows: "The United States considered it necessary to grant the Philippines sufficient time to adjust her economy to a nonpreferential basis. It was thought that 10 years would be sufficient for that purpose. We know now that that period is not enough, not because we are failing to do what we can toward that end, but because it is humanly impossible to effect the adjustment in so short a period." He then went on to say, "* * * if Hawaii and Puerto Rico, for example, were given 10 years or even 20 years to adjust their economy to a nonpreferential basis, * * * their most important industries would collapse and they would revert to the conditions that existed before their annexation to America. Such is our predicament and such might be the result if our trade preferences with the United States were suddenly terminated. * * * A dispassionate study of the situation should convince every thinking Filipino that we are in a highly precarious situation and that our economic problems are both vital and urgent. Unless we solve them correctly we can neither hope to maintain our freedom nor adequately safeguard the welfare and happiness of our people."

Both Speaker Yulo and Secretary Roxas, for whose judgment I have the greatest respect and admiration, are thus agreed (1) that economic security is indispensable to the welfare and happiness of the Filipino people and to the maintenance of Philippine independence; (2) that the loss of the United States preferential market in 1946 will deprive the Filipino people of economic security, because the transition period of 10 years is too short to enable the Philippines to build up a new economic structure that will take the place of the present one; and (3) that the only remedy is to extend the period for economic readjustment. This is an official and the most authoritative opinion on the subject, and I indorse it 100 percent.

In urging the Filipino people to vote for the Philippine economic adjustment law in the plebiscite which was held on October 24, 1939, President Quezon said: "This committee (referring to the Joint Preparatory Committee on Philippine Affairs) found that if the economic provisions of the McDuffie-Tydings law were to take effect in 1941, as they must, unless the law is amended in this respect, our tobacco and coconut-oil products, as well as other minor products such as pearl buttons, embroideries, etc., would have to pay export taxes when shipped to the United States, and the payment of such taxes will prevent their sale in the American market at a profit; and since they cannot compete with similar products in other markets of the world, the industries thus affected would be ruined, resulting in the impoverishment of millions of Filipinos who are engaged in them both in the factories and on the farms." This was the alarm sounded by President Quezon, and yet this is only the beginning because it refers only to a part of the difficulties which we must face.

Now let us consider some of the effects of liquidating all our basic industries in 1946, a situation which will be inevitable, unless the period for our economic readjustment is extended. Our national income and, therefore, the revenues of the Government will be reduced at least 50 percent. To have a proper background for a clear visualization of what this means, let us look briefly at our situation at this time when the Philippines are in comparative prosperity. Thousands upon thousands are anxious to work, but they cannot find employment. We have annual school crises, and thousands of children cannot be accommodated in the public schools. Sanitation and health conditions are not yet what they should be. Roads are still lacking and many of these which are now in existence are not satisfactory. There are labor strikes and other manifestations of unrest and dissatisfaction. This is the picture today, when we are well off.

What will it be when at least one-half is taken away from the national and the government income and, on top of that, the Philippines, as an independent nation, will be compelled to incur additional expenses for the maintenance of a diplomatic and consular service, the expansion of our army and our air force, the establishment of a navy, etc.? Not much imagination is required to see that thousands upon thousands of the present employees in the government and in business firms will lose their jobs precisely at a time when, through the social-justice program, the masses are getting accustomed to higher wages. Hundreds of schools will have to be closed. Sanitary measures will have to be less rigidly enforced and health conditions will grow worse. Many roads will have to be left in disrepair. Worst of all, there will be social upheavals of dangerous proportions, for when people are desperately in need of food and other esesntials of life and cannot satisfy their wants they become easy prey for subversive movements and will do anything. It is the masses and not the so-called economic royalists who will bear the brunt of the suffering. Since their income allows some margin for adjustment, those who are comparatively well to do can manage to dispense with nonessentials; on the other hand, the laboring classes cannot modify their mode of living without affecting their bare necessities.

In the judgment of our best minds, therefore, unless our preferential trade with the United States is continued, independence granted in 1946 cannot be maintained. In view of this, the advocates of independence in 1946 would like to have the continuance after independence of the preferential position which the Philippines holds at present in the United States market. That may be possible, but the first thought that comes to mind is this: Since, as recently pointed out by United States High Commissioner Sayre, "Until their independence is consummated, the Filipino people are an integral part of the American Nation," does it not follow that if American sovereignty over the Philippines is continued our retention of the United States preferential market will be more likely, more secure, and of more sufficient duration than if independence is already granted? We know that after independence takes effect in 1946, benevolent and altruistic as America is, she cannot be expected, in the face of her own multifarious problems, to have the same degree of interest in the Philippines as now. Morever, if we wish to keep on enjoying privileges which normally are grants in consideration of the exercise of sovereignty, the honorable and gracious course would seem to be for us not to consent to depriving the other party of such benefits as by right belong to it, but, rather, insist upon our fulfilling the corresponding obligation by continuing our allegiance to the United States of America for the time being.

We must also bear in mind that independence in 1946 will deprive us of approximately ₱55,000,000 annually, which the United States has been refunding to us from her own collection of the excise tax on coconut oil and the processing tax on sugar and which has been the lifeblood of our present program for economic development. Without this generous financial aid, our economic readjustment will no doubt be retarded. But, assuming that by some miracle we could have all the funds that would be necessary, an even greater drawback will hamper our economic growth after independence in 1946. We all know that rapid economic progress is possible only in an atmosphere of peace and security. And yet, as I shall presently show, such a feeling of uncertainty and anxiety will pervade the country after independence in 1946 that it is extremely doubtful if the projected tempo of economic advancement will materialize. On the other hand, if American sovereignty remains here and stands guard during the entire period which may be required for readjustment prior to independence, the acceleration of our economic preparedness will be surer and greater.

Let us assume that we can obtain the continuation of preferential trade with America after independence in 1946. Everybody realizes that this is not all that independence entails. Besides maintaining our economic position, we have to provide for our safety from external aggression in these times when treaties no longer count for anything, when powerful nations look upon small countries as nothing more than pawns on the international chessboard; and when, at the flimsiest excuse, countries which are rich in natural resources but weak in the instrumentalities of defense are invaded and subjugated. Competent observers are all agreed that the danger from external aggression is indeed very real to an independent Philippines. Former Justice George A. Malcolm voiced the general conviction when he said recently, "As surely as the sun rises tomorrow, it is certain that Japan or a Japanese-Chinese combination will dominate the Orient. Anyone who knows history realizes that it is inevitable. * * * Any mind with reasonable discernment can foretell that the fulfillment of the next phase of Japanese policy will mean a movement to the south, a movement to encompass Hong Kong, French Indo-China, and the Dutch and British East Indies. Within the sphere of that influence will lie the Philippine Islands." But let us not take anybody's word for it. As in the case of individuals, so it is with nations: habit is destiny. The character pattern is revealed not in the protestations of friendship and humility no matter how eloquent and convincing they may be, but rather in the trend of past performances. Formosa, Korea, Manchuria, northern China, and a cluster of small, nearby islands—successively engulfed with the relentlessness of a rising tide—can there be a clearer indication as to the designs and course of Japanese imperialism?

Not being a military man, I cannot, of course, speak with authority on national defense; but there are competent sources which hold the opinion that, at the rate we are going, with the limited resources and equipment at our command, and with the length of our coastline due to our island formation, the most optimistic estimate is that it is extremely doubtful if we can resist the invasion of a modern war machine like Japan's in 1946, or within 10 years thereafter. This is not difficult to believe when we consider that Poland, with a population more than twice our own, with a better equipped army of 1,700,000 men, or over four times as large as what

we figure on having in 1946, and with a very short frontier to defend, was battered and crushed in less than 3 weeks. And we are not alone in this opinion. President Quezon himself in inaugurating the Department of National Defense, expressed the gravest concern over our safety from external aggression when he said, "The lessons of the present war in Europe seem to show that a country small in population and resources cannot expect long to resist the attack of a first-class, well-prepared military power. * * * These are lessons that we cannot overlook. They give us no assurance that the Philippines will not be the victim of aggression, even if we armed every man in our country." Therefore, until our system of national defense becomes truly dependable, or the world situation becomes more auspicious, our only sure and effective protection is the sovereignty of the United States. No less an authority than Paul V. McNutt, at that time the highest representative of America in the Philippines, said that, as long as the American flag flies over our country, we are assured of safety from invasion by another power. If there be those who doubt the truth of this statement, the record of the last 41 years stands as incontrovertible evidence. On the other hand, what is transpiring in China today, where world powers have done practically nothing to obtain redress for their nationals who have suffered at the hands of Japanese soldiers, is a clear warning that it is idle to expect a third party to come to our rescue once we have our independence. If we precipitate independence in 1946, unless all signs fail, the freedom that we will get will just be a brief transition period from the benign sovereignty of America to another one which we know to be oppressive and which the Filipinos do not want.

Why, then, should we be in such a hurry for independence under these conditions? If we are simply to be placed again under the sovereignty of another nation, we should, by all means, remain under the United States flag, which to us during the last 41 years has meant benevolence, peace, order, security, prosperity, liberty, opportunity, and a host of other advantages. Twice we have fought for independence and twice we had to give up to superior force. Let us profit from this lesson of the past and set up ample precautions this time so that when independence comes we will never lose it. Let us not be so particular about a further delay. We have already waited many years. There will be no harm in waiting a while longer. After all, as President Quezon once said, what are 20 or 30 years in the life of a nation? Besides, if we are truly eager for independence, as I believe we are, the years will never be able to dim our desire for it. If we really love our country, we should be more concerned about the permanency and stability of our independence rather than with its hasty advent, only to lose it for good.

At any rate, except for the form and symbols of a liberal sovereignty, we now enjoy practically the same measure of internal autonomy as we will ever have under independence. As a matter of fact, we have more liberty than the citizens of many independent countries of the world today.

We cannot just petulantly insist on getting anything simply because we want it, regardless of the cost. Even freedom can have too high a price. Our heroic forbears realized this when they surrendered to superior arms; for, obviously, of what good is freedom if those who want to enjoy it all get exterminated in the quest for it? There is no Filipino that will not sacrifice to the limit for his country, if need be. On numerous occasions the Filipino has proved that he knows how to die for a worthy cause. But why run the risk of subjugation and, perhaps, racial extinction when a little waiting will free us from this danger? Patrick Henry was moved to exclaim, "Give me liberty, or give me death!" because he was really being deprived of his liberty. Washington endured untold hardships at Valley Forge because the American people had serious grievances against England and, what is more, they had a reasonable chance of winning against the British, as in fact they won. In our case, there is no injustice or suffering that warrants our taking any hasty step, which might result in inviting invasion by a first-class power like Japan.

Thus we see that the two groups agree on these points: (1) That independence is desirable, and the Philippines should have it as soon as possible; (2) that if our principal industries are liquidated in 1946, the Philippines will collapse economically and will not be able to maintain its independence; and (3) that if the period for our economic readjustment is sufficiently extended, we shall, after a few years, reach such a degree of development that we can really maintain and defend our independent existence. The two groups differ as follows: One insists on complete and absolute independence in 1946, or before the Philippines is fully prepared economically or militarily, in the hope that we can finish our economic readjustment later; in other words, this group wants to have independence in 1946, run the risk of retarding or paralyzing our economic readjustment, and expose such independence to the imminent danger of being lost almost immediately because of inadequate preparedness. The other group wants independence to come after the completion of our economic and military preparation, believing that in this way the Philippines is sure to retain its preferential position in the United States market, and our economic readjustment will proceed with maximum speed and efficiency in an atmosphere of peace and security that is made possible by the supreme guaranty of the American flag. Those who favor postponement desire Philippine independence just as fervently as anybody else does, but want it to be permanent when it comes; they are just as ready as anybody else to meet hardships, but they do not want perpetual subjugation by another power. So, under the pleasant supervision of the United States, they do not mind waiting a few years longer, while the Filipinos build up a solid guaranty for the security and safety of that independence after it is attained. One group insists on taking great and unnecessary risks, all for a brief and passing independence; the other wants to minimize risks in order to insure a lasting independence.

Far be it from me to say that mine is the only correct opinion, or that it is representative of that of the Filipino people. I do hope, however, that I have succeeded in showing sufficient reasons in support of the plan to have the question reexamined. I believe that so important a problem should be thoroughly explained to, and be directly and separably voted upon by, the people, inasmuch as the plebiscite on the Tydings-McDuffie law was not directly and exclusively intended for it, and since then many acts of international violence have taken place and world conditions have greatly changed. President Quezon himself, who is the highest authority on the subject, admitted in a public speech "that those Filipinos who have been working for independence all these years have not taken pains to discuss this question from the new angle which recent world events suggest." The points advanced by those who favor the postponement of independence are so weighty that they should not be merely brushed aside unceremoniously; at any rate, if the advocates of independence in 1946 are sure of their stand, why should they oppose a plebiscite on the subject? Since 1912, or for over 25 years, all the political parties in the Philippines have been pounding into the electorate the benefits of immediate and absolute independence, so that the people's minds have been regimented into believing that independence will be all milk and honey. In view of this, it becomes the duty of leaders of the Government at least to encourage—as, in fact, President Quezon is doing—the thorough presentation of all aspects of independence before the Filipino people so that they will have a fairly accurate idea of what to expect and will not blame anybody when they later find the going hard.

The question before us is so serious and of such momentous significance that the consideration of it comes to every true Filipino as the challenge and the privilege of a lifetime. As such, it demands the fullest cooperation of all elements and rises far above all attempts at recrimination and at parading one faction as more patriotic and independence-loving than others. It requires of us the calmest deliberation, the straightest and clearest thinking, the most sincere speaking, and the most courageous action. Irrespective of what the final outcome will be, let it not be said of us that we have been recreant to our duty by not exerting our utmost to stimulate and promote the widespread discussion of the various phases of such a decisive problem.

American Airplane Construction

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE CHICAGO DAILY NEWS

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Chicago Daily News of May 13, 1940, relative to the use and production of airplanes by the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News of May 13, 1940]

On the basis of talks with War Department heads, Mr. Leach reports that "in case of serious American emergency" our capacity could probably be increased to 5,000 a month. But this would require full mobilization of all potential factories, plus new ones built under forced draft.

Is there anyone who for a moment doubts that a "serious American emergency" already confronts us, on the basis of these official figures?

The fact that the Nazis have at last begun the long awaited "all-out" war against the Allies, using planes as a primary weapon in the assault, constitutes an American emergency.

The fact that our vital interests in the Pacific are flung into the most dangerous possible jeopardy as a result of the attack on Holland constitutes a serious emergency.

The fact that the aggressor states—today our only potential enemies in a world gone mad—are capable of turning out jointly an overwhelmingly greater quantity of planes than we, constitutes a serious emergency.

We alone are responsible for this emergency, and it devolves upon nobody but ourselves to meet it. We have not been building planes for the Allies primarily to help them, but to save ourselves and increase our productive capacity. If, in their own preservation, they are willing to expand their orders still further, well and good. If they

can't afford to do so, or will not do so, we should not wait an instant upon their delay. It is an hour when we must be ready to meet any threat that can come to us, on land, on sea, in the air. It would be infinitely better to expand our production and simply give some of the ships to the Allies than to sit idle while the aggressors improve their planes, test them in combat, and go on increasing their production rates.

At any costs, despite every obstacle, America should build airplanes. Whether we have an immediate cash market for the output matters not a whit. What we must achieve, and as soon as may be, is productive capacity that will outdo every other nation, or combination of nations, that might use this new and terrible weapon—constantly increasing its range and destructive power—against our country and its essential interests.

W. P. A. Appropriation

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 23, 1940

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON APPROPRIATIONS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me April 18, 1940, before the Committee on Appropriations:

STATEMENT OF HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. WOODRUM. Mr. SMITH, the committee will be glad to hear you at this time.

Mr. SMITH. Mr. Chairman and gentlemen of the committee, I came here this morning prepared to urge the committee to increase the work-relief appropriation to $1,500,000,000; but, according to recent developments, I am advised that this action has been anticipated as a result of a conference held yesterday by the President with members of your committee and the officials of the W. P. A. If I am correct in my understanding, the President is likely to submit these recommendations in a message to Congress today relative to this matter. If that is so, my understanding is that the action taken would really be equivalent to increasing the appropriation to $1,500,000,000 because the projected $975,000,000, which has been recommended, would be allotted over an 8-month period of work, and the 12-month period would be waived; so it really would amount substantially to increasing the appropriation to $1,500,000,000. In view of that fact, I would like to ask, if that action is taken, would it obviate the necessity, as I am sure it would, of reducing the rolls by making the reductions which started at the beginning of this month? That would necessarily follow, would it not?

Mr. WOODRUM. As I understand it, the regular program of the W. P. A. for this fiscal year, which ends on July 1, calls for a reduction of the work load during the summer months.

Mr. SMITH. Yes.

Mr. WOODRUM. And a pick-up during the winter months. Therefore, if the same amount of money were made available for the next fiscal year, it would undoubtedly mean that during the summer months of this year and of next year they would have less employment than during the winter months; so that, regardless of how much was made available, their program would drop off during the summer months and pick up during the winter months. It would necessarily mean that the program would be cut down during the next few months of this fiscal year. If $1,500,000,000 were appropriated for next year, it would still mean some reduction in the rolls during the summer months.

Mr. SMITH. I assume that would be in the hope that industry will provide employment for them, and that they would be taken care of in private employment.

Mr. WOODRUM. It is because this need is seasonal.

Mr. SMITH. If that action upon an 8-month basis is taken, is there a possibility that some of those being dropped off will be reinstated?

Mr. WOODRUM. I think that would depend on whether they were certified by the relief agencies. It would be a question of selecting those most in need. The W. P. A. would have to get their increased work load from relief certification, and that would be largely in the hands of the local relief agencies as to whom they feel like affording relief.

Mr. SMITH. So far as the money being available is concerned, it would be possible for them to do that if they were so disposed and if the certifications justified it?

Mr. CANNON. Of course, during the summer season less is required for clothing, fuel, and so forth.

Mr. SMITH. I think that is probably logical, although there are undoubtedly communities where that is not exactly the case and where, on account of the enforcement of the compulsory 18-month proviso and the dismissal of single men, some real hardship has resulted. That would result even now, with the improved business conditions which are prevalent almost everywhere in the country. There would be cases of hardship unless funds were made available. By providing the 8-month basis instead of the 12-month basis those people could be taken care of.

I have received quite a number of letters from my district, and I will ask to read some of them into the record. I have letters from two boards of county commissioners.

Mr. WOODRUM. You may insert them in the record.

Mr. SMITH. I will do that.

Mr. WOODRUM. I would like to ask you this: What is your view as to whether or not we should appropriate $1,000,000,000 on the 8-month basis, or $1,500,000,000 for the fiscal year?

Mr. SMITH. I would prefer to have $1,500,000,000 for the fiscal year, provided it is spread over 12 months. Of course, I would be inclined to follow the recommendations of the President, in accordance with the message he will send to Congress today, because I know his information is much better than mine. I would not even except the members of this committee, although you probably have almost the same sources of information the President has. However, an ordinary Member of the House, with lesser information, would not be in a position to put his judgment against that of the President or of this committee.

Mr. JOHNSON of West Virginia. You know something about the Woodrum amendment, which requires that the appropriation be spread over a period of 12 months?

Mr. SMITH. Yes, sir.

Mr. JOHNSON of West Virginia. Suppose we should appropriate $975,000,000 and do away with the Woodrum amendment?

Mr. SMITH. I think that would accomplish the same objective. It would make it so flexible that the Administrator of the Work Projects Administration could use his judgment, and in those communities where it was necessary he could take care of the necessary relief load.

Mr. JOHNSON of West Virginia. That would probably run them through 8 months, or until along about the 1st of March. Have you any assurance as to what the complexion of the next Congress may be with reference to W. P. A.?

Mr. SMITH. I have a pretty good idea—according to the Gallup Poll, it is going to remain Democratic.

Mr. JOHNSON of West Virginia. Suppose our good friends at the other end of the table should be successful, what assurance would you have that W. P. A. would continue to any extent at all?

Mr. WOODRUM. That is a very violent assumption, is it not?

Mr. SMITH. I think it is a very violent assumption, and I would not indulge in it. However, if the worst came to the worst—and that would be about the worst thing that could happen, with all due deference to our friends——

Mr. TABER (interposing). It is the only salvation for the country.

Mr. SMITH. Of course, if they should abolish the W. P. A. entirely, as I understand they would, it would throw the entire burden back on the local communities.

Mr. TABER. There has been no suggestion that it would be disposed of entirely, but it would be under a more intelligent management.

Mr. JOHNSON of West Virginia. Then if we should have a Democratic Congress, but by some unforeseen event we should have a Republican President, but not a Republican Congress, what position would W. P. A. be in?

Mr. SMITH. That is very problematical. That is pure speculation, I think.

When I came to Congress, in 1933, I had a plan which I submitted to a number of high officials of the Government, who had just taken office, including Gen. Hugh Johnson and Harry Hopkins and a number of others. I still believe, in view of subsequent events, and in view of what has transpired in the country, that if the plan I then suggested had been followed, it would have been even more successful than the W. P. A. What I had in mind was this, and I think I convinced some of those gentlemen of its soundness, but they were never able to get action along the line I suggested. My idea was to go into every community in the United States and make an industrial survey, a survey of every factory, industry, and employing agency in each community, and ascertain how many men they had been employing in the past, how much wages they had paid, and what their output was. I would then have the Government match funds with those manufacturers on, I suggested, a 55 to 45 basis, or the same as the P. W. A., and thereby start up all those industries, the industries to put back as many persons as they thought it practicable to employ, or that they really needed in order to step up their production to at least 75 percent of what they previously had and to be increased to full 100 percent later as business and market conditions justified. They would be paying, under that plan, the regular going wages. They would be employing mechanics, skilled workers, and common labor, producing all of the products that they were capable of manufacturing. I believe that program would have been successful, and that it would have stimulated the revival of business and of our regular industries. We would not be paying those people on a mere bread-and-butter scale, but we would be paying them the regular going wages. While we have these projects under W. P. A., and most of them are useful and of permanent value to the communities, the trouble is that when the project is completed, the workers have not and are not producing any real tangible wealth such as can be sold or that would bring a price. They have not

produced anything that would result in a further turn-over, and increase the circulation of money and create purchasing power throughout the country. The thing stops right there, but if you manufacture some article of household furniture, clothing, merchandise, or manufacture any of the thousands of article that are manufactured throughout the country, they are sold, and there is a turn-over perhaps, three, four, and more times, through jobbers, brokers, commission merchants, wholesalers, etc., and on through the retail merchants. You would have a process of acceleration there that would affect beneficially and for a continuous period our entire economic structure. By that means, you might really get the country back on a normal basis. I believe if that plan had been adopted, it would have been highly successful. I thank you, Mr. Chairman and gentlemen, for your courtesy and the privilege of appearing before you at this time.

Mr. WOODRUM. We thank you for your statement.

Mr. SMITH. I will submit an additional statement for the record. (The statement referred to is as follows:)

Mr. SMITH. Mr. Chairman and gentlemen of the committee, I appreciate your courtesy in affording me this opportunity to be heard in behalf of increased W. P. A. work-relief appropriations. I favor increasing the amount to $1,500,0000,000, because I believe that sum to be necessary to give employment to those who will be unable to obtain jobs in private industry and also provide purchasing power to maintain and continue the present upward trend in business, industry, and agriculture, as well as construct worth-while projects of permanent value in the local communities. Every break-down of the expenditures made by W. P. A. workers has established the fact that they spend the wages they receive for groceries, meat, foodstuffs, and farm products of all kinds, articles of retail merchandise, rentals for housing, and the necessaries of life and that practically every dollar they receive finds its way into the cash registers of the local merchant and storekeeper and the pockets of the farmer in the communities throughout the country. The materials and supplies used in the construction of the projects increase the income of local sales, supply, and jobbing firms. In other words, there is at least a direct twofold benefit; first, work and an existence for the unemployed and his family; second, an added volume of sales and improved market for business, industry, and agriculture.

I desire to take this occasion, if I may, to compliment your committee on its record during the past 7 years. While the committee has not been as liberal as I have sometimes thought it should be, I believe that this committee has had one of the most difficult and arduous duties to perform of any committee in Congress, and that it has performed its duty conscientiously, fearlessly, and patriotically. The appropriations made by this committee for work relief have been a Godsend to the unemployed people of America and their families, have provided useful, serviceable projects of permanent value in every community in America, and have stimulated business, industry, and agriculture throughout America. Your attitude and policy have been the direct opposite of the Hoover formula of requiring the local municipalities, counties, and States to take care of the unemployed, which would have bankrupted every unit of local government, whereas, as a result of the financial burden in caring for the unemployed and defraying the cost of local improvements having been borne by the Federal Government, most of our cities and counties are at the present time in the soundest financial condition in their history and actually on a cash basis. How many of our critics and political adversaries are fair enough to give us due credit for aiding in bringing about this most desirable status?

However, I want to stress the importance and need of increasing the pending appropriation and know of no better way of doing that than by reading two communications which I have received from the county commissioners of two of the counties in my congressional district in southwest Washington. These gentlemen are in daily touch with the unemployed in their counties and are fully conversant with conditions. I will read first the letter from Mason County. It reads as follows:

MASON COUNTY,
Shelton, Wash., April 1, 1940.

Hon. MARTIN F. SMITH,
United States Representative,
Congressional Office Building, Washington, D. C.

DEAR REPRESENTATIVE SMITH: The joint resolution of the Seventy-sixth Congress concerning work relief provided for assignments to the W. P. A. jobs on the basis of relative needs. The spirit of this section of the resolution we heartily commend, but the administrative interpretation that has been put upon this clause has, in our judgment, gone a step further in the direction of bringing all families dependent on work relief down to a level of absolute destitution.

The procedure works in this way: Persons are classified at present, according to instructions from Colonel Harrington, into two groups: A and B. Those families that can meet less than one-third of their budgetary needs (in this State a budget for a family of four would be approximately $60) are placed in class A. This would mean that a family of four who can gather their own fuel, own their own home, and have a garden would probably go into class B, since their resources would equal more than one-third of their budget. If assignments are limited, such a family would have no chance of getting on W. P. A.

On the other hand, a single person who has made no effort to provide a home, has no dependents, and who has contributed probably very little to the community, would be classed in class A and would be given preference in assignment. If you will stop to consider this arrangement, Mr. Smith, you will see that people are discouraged in trying to provide for their own security by owning a home, by providing their own fuel, or by raising a garden. As we generally find that home ownership and other efforts to maintain something like a decent standard of living are more common with families with children, this ruling really works against the families with children and yet we doubt if anybody would contend that we should give preference to persons without children. Nevertheless, this is exactly what tends to happen under the administrative interpretation of "relative needs."

Here in this State, until recently, the W. P. A. administration provided 3 categories of certified persons. In the A classification went families with some resources such as the family we have described above. Into class C went single persons. The result of this system of classification was that in all instances the family got preference where the W. P. A. quota was not adequate to provide employment for everyone certified. The injustice in this arrangement was far less severe and far less dangerous than the present system of just two classifications. We understand that the Washington State W. P. A. administration was ordered to discontinue the C classification.

As a matter of fact, if the relative-need clause is to be intelligently interpreted it should not be on the basis of whether the family has some resources but on the basis of what the total budgetary deficiency might be. This would operate as follows: The 5-point budget in Washington for a single person is $27; for a second adult the budget is $15, or a total for two adults is $42. The budget for a family of two which had no resources would then be $42. If they owned their own home the housing item would be deducted leaving a budgetary deficiency of $30. This would still make a man and wife eligible prior to the single person with the resources if assignments were made on the basis of relative need since the maximum budgetary deficiency of the single person would be only $27 and the family of two, owning their own home, would be $30.

You can see how this would work in favor of the families with children, even though the family of four, which we first mentioned who had a budget of $60, had housing ($13 allowable), fuel ($6 allowable), and some garden produce ($3 allowable). This family would still have a budgetary deficiency of $39, which would give them preference of assignment over either the single person or the family of two just mentioned. This arrangement does not place such heavy emphasis on resources and does, it seems to us, give encouragement to home ownership and the providing of resources to assure some security and a better standard of living for the family.

We are not arguing that single persons should not be given an opportunity to work on W. P. A. Indeed, we feel that the W. P. A. quota has never been adequate and should certainly not be cut. We see no reason why the W. P. A. quota, as long as the quota exists, should include only a part of the people certified as in need. As regards single people, we do feel that it is unfortunate that W. P. A. pays the same wages to persons with no dependents as it does to a family of 10. This should be corrected somehow so that the family of 10 gets a more adequate budget. This was done under the old F. E. R. A. system of work relief on a budgetary basis.

Very truly yours,

E. J. AHERN, *Chairman,*
VINCENT E. PAUL,
ROBERT TRENCKMANN,
Board of County Commissioners.

The other letter is from Thurston County, in which is located the city of Olympia, our State capital, and it also has a good deal of farming as well as manufacturing and shipping.

The letter is as follows:

OFFICE OF THURSTON COUNTY COMMISSIONERS,
Olympia, Wash., March 27, 1940.

Mr. MARTIN F. SMITH,
United States Representative,
Congressional Office Building, Washington, D. C.

DEAR REPRESENTATIVE SMITH: Recent reports of the proposed W. P. A. cut for the State of Washington, and hints of still further cuts by Congress for next year, are very disturbing to us, as we feel those advocating a cut in the W. P. A. employment rolls this time are either acting on ignorance or ill will toward the unemployed. In spite of recent estimates, reported to have been made by Dorothy Thompson and others, we are still convinced that the unemployed are closer to the figures of the A. F. of L. or C. I. O.

We are positive that W. P. A. in this part of the State has never come anywhere near providing employment for all the needy unemployed. The standards of eligibility have been kept so low that our welfare departments have referred only those people who are near destitution. We talk about an American standard of living, and yet our own national figures show that a very large number of our people are living on a standard of living much below that recommended for health and the general well being of our citizens. This is certainly true here in Thurston County.

The W. P. A. has relieved the worst distress. Even with W. P. A. only part of the job has been done. Recent figures compiled for Thurston County show that of 234 families with children on W. P. A., the average monthly income per individual was $9.66 per person. This means that if these families are not producing any of their own food and are buying what the relief budget shows to be a minimum amount for a family receiving relief over a long period of time, the family has about $2 per month left after buying their food. This $2 per person must cover clothing, fuel, housing, transportation (particularly to and from the W. P. A. job), and all

the other incidentals necessary for normal family life, including such items as money for the children for school activities.

Of course you realize that while $9.66 is the average figure for this large group of families with children, many of the families have less than that amount, and the more children the lower the income per person, and since the W. P. A. wage is only a satisfactory wage for families of 2 or 3, for the very large families the W. P. A. wage means real destitution.

As a matter of fact this same study for Thurston County shows that the average wage for persons without children is $27 per month on W. P. A. If W. P. A. could be provided on at least the same scale it was last year without too much of a drop in quota during the summer months, it would be possible to prevent some of the ugly distress that results from continuous living on a marginal basis since the existence of W. P. A. does at least provide a backlog of security for the low-wage groups and if a normal number of people are kept on W. P. A., the effect is to keep up wages in the very low income groups, and to provide more income in the families depending on irregular employment.

Armaments, war buying, and the so-called upward trend in business have not eliminated the need for W. P. A. As far as we are concerned here we need at least as much W. P. A. employment during the next 12 months as we have had during the past 12 months. We are opposed to heavy cuts in W. P. A. quota each spring. There is nothing in local employment conditions to justify the cuts that are made.

Very truly yours,

RAY CRUIKSHANK,
Chairman.
FRANK PALMER,
JOHN MAGUIRE,
Board of County Commissioners.

With your permission, I would like to append the letter I have received from Hon. Carl W. Smith, acting State administrator, Work Projects Administration, of the State of Washington, relating particularly to my district:

FEDERAL WORKS AGENCY, WORK PROJECTS ADMINISTRATION,
Seattle, Wash., April 1, 1940.

Hon. MARTIN F. SMITH,
United States Congressman,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN SMITH: Reference is made to your telegram of April 1 with regard to the necessary reduction in employment in the State of Washington.

Our quota of employment for the month of March 1940 was 33,230, with a reduction to 30,500 for the month of April 1940, and it is anticipated that additional reductions will be necessary for the months of May and June, but we have no indication as yet of the extent of the contemplated additional necessities.

It is estimated that there will be a reduction of approximately 735 in your congressional district. It is hoped that the major portion of this reduction will be effected by natural separations from the program; that is, persons who leave voluntarily to go into private employment or for other reasons. Additionally, it may be necessary to release a number of those with lesser relative need, but we are unable to base our present opinions on any actual facts until we know better how many people leave of their own accord. It may also be necessary to discontinue less worthy projects or units thereof in order to meet the new figures.

Yours very truly,

CARL W. SMITH,
Acting State Administrator, Work Projects Administration.

In conclusion, I desire to thank you, Mr. Chairman and gentlemen, for your courtesy and know you will give this entire matter sympathetic consideration as you have in the past.

The Civilian Conservation Corps

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

STATEMENT PREPARED FOR HON. ELBERT D. THOMAS OF UTAH

Mr. THOMAS of Utah. Mr. President, probably no agency created by the Government during the last few years has met with such universal and deserved approbation as has the Civilian Conservation Corps. I present a statement which has been prepared concerning the work, activities, and accomplishments of that organization, which I think is well worthy of perusal, and I ask unanimous consent that it may be incorporated in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On March 31 of this year, the Civilian Conservation Corps completed its seventh year as a Federal agency for the conservation of the Nation's jobless youth and natural resources. During the 7 years that have elapsed since the first C. C. C. camp was established in George Washington National Forest in Virginia on April 17, 1933, the C. C. C. has furnished employment to nearly 2,500,000 enrollees and advanced conservation projects in every State of the Union.

These men, the great bulk of them youngsters between 17 and 23 years of age, have worked out of a huge chain of forest, park, and farm camps to build up depleted farm and timber areas, to erase the ravages of overcropping, excessive cuttings, fires, storms, and other despoliations. At the same time, the enrollees themselves have found a chance to receive job training, the lack of which prevented them from obtaining employment prior to their entry into the Corps.

In my opinion the day is not far distant when the C. C. C. will be established as a permanent governmental organization, because it has contributed so much to the conservation and rehabilitation of our natural resources, and because it has had such profound influence on the lives of the hundreds of thousands of youths and war veterans who have enrolled in the corps. Democratic government should give each youth an opportunity to earn an honest living, and the training and job possibilities offered through the C. C. C. is one tried and proved method of achieving this aim.

The late Robert Fechner, first Director of the corps, recognized this fact and continually worked toward a permanent C. C. C. because he believed that "the C. C. C. fills a long-felt want in American life," and that so far as it was economically practical its advantages should be extended to every unemployed youth who was unable to receive proper training by other means. James J. McEntee, his successor and long-time friend and associate, is firmly convinced of the need for an organization like the C. C. C. if the Nation's youth is to be properly employed and if our conservation program is to be advanced on the scale our soil and forest conditions demand.

Records from the office of Director McEntee show that approximately 13,125,000 persons have received direct financial benefits from the C. C. C. program. This includes the families and dependents of the 2,625,000 enrollees and administrative officers. Enrollees allot home $22 out of their monthly wage. In itself this relief phase of the program is extremely significant, as it has meant that more than $575,000,000 has gone into the homes of needy families.

To the whole Nation have come the direct benefits from the improvements in our forests, farm lands, parks, and wildlife.

The measure of corps accomplishments can be demonstrated in fact by actual work done. A few typical items of work completed in the first 7 years of the C. C. C. operations follow:

More than 1,800,000 forest trees have been planted in cut-over and burned forest areas and more than 200,000,000 trees on areas being treated for soil-erosion control; nearly 3,600,000 acres of forest stands have been improved through elimination of excessive growth and poor-quality timber and the clearing of deadwood and undergrowth; fire hazards have been reduced on 2,000,000 acres of forest lands; enrollees have devoted 5,800,000 man-days to fighting forest fires and 5,200,000 man-days on forest-fire prevention and presuppression; they have built 75,000 miles of telephone lines, 114,000 miles of truck trails and minor roads, and 5,550,000 soil-saving check dams to aid in fighting erosion; and they have carried on tree-, plant-, and pest-control operations over 19,350,000 acres.

Enrollees under the experienced technical direction of the conservation services of the Department of the Interior, the Department of Agriculture, and State and local governments engaged in more than 150 types of work and advanced a Nation-wide conservation program which embraced projects in every State in the Union and in Alaska, Puerto Rico, the Virgin Islands, and Hawaii.

The corps worked in such fields as the reforestation of waste lands, the improvement of timber stands to stimulate rapid and healthy growth; the protection of timbered areas from forest fires, tree-attacking diseases and insects, and other forest pests; the improvement and development of forests and parks; the improvement and protection of farm lands endangered by soil erosion and the rehabilitation of drainage ditches in agricultural areas; the improvement of grazing conditions in the national forests and on the public domain; water conservation and flood control and the improvement of conditions for big game, migratory birds, and other forms of wildlife.

The work which the corps is doing in erosion control is proving of great practical value. Working under the supervision of the Soil Conservation Service, enrollees have assisted in conserving soil resources on 13,000,000 acres of farm and grazing lands. They have helped farmers in all sections of the country to control gullies, construct terraces, plant trees, and do many other kinds of work which assist in soil fixation. Much of this work has thus far been done on demonstration areas under the direction of soil-conservation experts with a view to encouraging farmers to adopt similar soil-saving practices on their own land.

Enrollees have improved and expanded recreational facilities in National and State forests and in National and State parks and re-

lated areas. In National and State forests additional camping grounds and facilities have been provided, streams have been improved for fishing and other recreations, and needed buildings have been constructed. In both National and State parks, the work of the C. C. C. has been aimed at protection, conservation, and development for use according to well-laid plans worked out for each area. Projects have been completed for timber protection and improvement, erosion control, stream-bank protection, construction of picnic areas, overnight cabins, horse and foot trails and bridges, dams to impound water for swimming and boating, and various other types of jobs for the general conservation of these areas. All told, the corps has worked in approximately 1,000 National and State parks and related areas.

Government figures show State-park development has been greatly expanded by the C. C. C. Working under the supervision of the National Park Service, which supervises C. C. C. work in park areas, enrollees have built new recreational improvements and facilities in close to 900 State parks.

In addition to its reforestation, erosion control, and recreational development activities, the corps has helped to improve grazing conditions in Western States, aided in the rehabilitation of reclamation projects, carried on valuable flood-control work, the most notable example being the completed Winooski River flood-control project in Vermont, aided farmers by rehabilitating silted drainage ditches, aided the Bureau of Biological Survey in the development of a Nation-wide chain of wildlife refuges, built fish hatcheries and planted more than three-quarters of a billion fingerlings and young fish in lakes, ponds, and streams; spent thousands of days in emergency rescue work, flood relief, searching for lost persons, aiding after automobile accidents; and engaging in other activities of this nature.

A record of some of the major items of work completed during the last 7 years follows:

Structural improvements:		
Bridges, all types	number	47,020
Lookout houses and towers	do	3,910
Fences	rods	20,550,700
Sewage and waste disposal systems	number	3,170
Telephone lines	miles	75,000
Springs, waterholes, small reservoirs	number	21,200
Transportation improvements: Truck trails and minor roads	miles	114,000
Erosion control:		
Check dams	number	5,550,000
Seeding, sodding, tree planting, all types	square yards	938,000,000
Terracing	miles	26,700
Sheet-erosion planting	acres	554,400
Outlet structures	number	383,000
Contour furrows and ridges	miles	94,200
Preparation for strip cropping	acres	165,000
Flood control, irrigation, and drainage:		
Pond and lake sites	do	179,000
Channel and levee clearing and cleaning	square yards	64,200,000
Water-control structures other than dams	number	28,700
Forest culture:		
Trees planted	do	1,800,000,000
Forest-stand improvements	acres	3,550,700
Nurseries	man-days	4,570,000
Tree-seed collection:		
Conifers	bushels	793,000
Hardwoods	pounds	12,800,000
Collection of tree seedlings	number	11,000,000
Forest protection:		
Fighting forest fires	man-days	5,800,000
Firebreaks constructed	miles	64,300
Fire-hazard reduction:		
Roadside and trailside	do	75,000
Other	acres	2,000,000
Fire prevention and presuppression	man-days	5,200,000
Tree- and plant-disease control	acres	7,650,000
Tree insect pest control	do	11,700,000
Landscaping:		
Landscaping, undifferentiated	acres	208,000
Moving and planting trees and shrubs	number	34,700,000
Public camp and picnic-ground improvement	acres	53,400
Range:		
Range revegetation	do	146,700
Pasture sodding	do	146,700
Wildlife:		
Fish-rearing ponds	number	4,600
Food and cover planting	acres	80,000
Fish stocking	number	795,000,000
Wildlife shelters	do	24,000
Miscellaneous activities:		
Emergency work	man-days	470,000
Insect-pest control	acres	5,300,000
Mosquito control	do	223,500
Rodent control	do	36,000,000

Because of the size of the C. C. C. work organization, it has contributed to business improvement, both locally and on a Nation-wide scale. Virtually every industry engaged in the production, processing, and distribution of staple goods, equipment, or services has benefited directly or indirectly from orders contracted for each year by the Corps. Purchase of more than 40,000 pieces of automotive equipment, including trucks, tractors, graders, and bulldozers have added to the backlog of heavy industries. The C. C. C. operates a housekeeping establishment serving nearly a million meals a day, besides supplying the personal needs of from 270,000 to 300,000 men. All this means substantial orders from dealers in soaps, tooth paste, table and cooking equipment, boots, shoes, clothing, and food.

During the month of February the C. C. C. had an enrollment of 300,241, including 262,365 juniors, 26,640 veterans, 6,915 Indians, and 4,321 residents of Hawaii, Alaska, the Virgin Islands, and Puerto Rico. The junior and veteran enrollees were maintained in 1,500 camps. The work projects are supervised by the various bureaus of the Departments of Interior and Agriculture. The War Department has charge of the administration and supply work, including transportation, camp command, feeding, housing, and off-the-job activities.

During the 6-month enrollment period which ended March 31, 485 camps were under the direction of the Department of the Interior. These included 310 camps directed by the National Park Service, operating in national parks and monuments, State and local parks, and in park areas located in the T. V. A. area. The Grazing Service operated 90 camps in 12 western States. Thirty-five camps were under the direction of the Bureau of Biological Survey in wildlife refuges. Forty-four were under the Bureau of Reclamation in 15 western States, and 6 were operated by the General Land Office in Wyoming and Utah.

Of the 1,015 camps under the direction of the Department of Agriculture, 392 of them were directed by the Soil Conservation Service in developing soil-conservation districts and demonstration areas showing the best method of soil-erosion control. The Forest Service operated 321 camps in national forests, 177 in State forests, 100 in private forests, and 18 in forest areas of the Tennessee Valley Authority. One camp was operated by the Bureau of Animal Industry in Montana, one by the Bureau of Entomology and Plant Quarantine in Florida, three by the Agricultural Research Center at Beltsville, Md.; and two by the Bureau of Plant Industry in Wyoming and the District of Columbia.

While the enrollees are learning skills of hand, it is vital, too, that they have the chance to fit themselves better mentally for outside employment. The educational adviser in each camp figures in this important phase. Besides raising the educational level of the enrollees and preparing them to be better citizens, the educational adviser is an important factor in developing camp entertainments and other events to build up and keep up camp morale.

The communities near camps welcome the boys and make them feel as though they "belong." Every effort is made to improve and maintain cordial camp-community relations.

The C. C. C. educational program has proved so popular that more than 90 percent of the enrollees participate in it, even though this participation is entirely voluntary. It is a program that combines practical training on the job with academic instruction in organized classes after the workday is ended.

The educational program is under the direction of the War Department, with the Office of Education acting in an advisory capacity. All camps are now equipped with buildings devoted to educational activities, including two or three classrooms, a work-training shop, a library filled with textbooks, reference works, fiction, and a selection of daily newspapers.

On the work-experience side, C. C. C. supervision differs from ordinary supervision in that it is directed toward development of the worker as much as toward accomplishment of work. Enrollees are taught to get along with others, to follow instructions, to develop proper attitudes toward work supervisors and fellow workers, and to acquire proper work habits and job skills. The variety of jobs at which enrollees have an opportunity to work is shown in a recent survey of camps supervised by the Forest Service, which showed 323 different types of jobs available. The training on the job may be broken into two general divisions: First, the instruction necessary to make the untrained enrollee an efficient producer; and second, supplementary instruction directed toward further vocational development which may not be directly connected with the job at hand.

Training given in organized courses conducted outside the regular workday usually relates to the work and broadens the training being given on the projects if this type of instruction has sound vocational value. But if other subjects of high vocational value not related directly to the C. C. C. work can be taught efficiently in camp, they are also included. The whole camp experience—project work, classwork, living with others, and social relations—all is pointed toward development of the enrollee. The camp commander, the project superintendent, the educational adviser, and the camp chaplain cooperate in helping the enrollee get the most out of his stay in the corps.

Between 30 and 75 training activities or classes are offered in each camp, giving the enrollee a wide choice in selecting studies which will best fit him for a job. They range from reading, writing, and arithmetic for illiterates to subjects suitable for enrollees who have reached the college stage. They include, besides academic work, training in motor repair, cooking and baking, laundry, radio operation, carpentry, stone masonry, cement and concrete work, storekeeping, and dozens of other businesses and trades which go to make up the economic life of a community of 200 persons housed in a C. C. C. camp.

Besides the training received in camp, many schools and colleges located nearby have offered their facilities and teaching personnel for instruction. Others have made scholarships available to enrollees.

As for the health of the enrollee, it has been found that he gains from 8 to 14 pounds during his first few weeks in camp. Under careful supervision of doctors and dentists assigned by the War Department, the building of better bodies among these growing youths has become an important function of the C. C. C.

While the placement of enrollees in jobs outside is not a function for the C. C. C. alone, the personnel of the camps have worked steadily toward development of the enrollee for a job through instilling the basic characteristics of good workers and good citizens. The work habits and attitudes, job skills and productivity, health, general knowledge, and social attitudes have been key factors in developing his employability. This training for jobs has been responsible for an increasing number of private employers looking over the C. C. C. rolls when they have vacancies. They have learned to appreciate the advantage of hiring youths trained to work and to respect authority. As evidence of this, 538,576 enrollees have left the corps before the expiration of their enrollment to accept outside employment. This means that about one-fifth of all those enrolled since the corps was established have been able to take advantage of their improved work skill to get jobs before they completed their enrollment. The rest, or at least a large proportion of them, found work as soon as they left the corps. Some are with airplane-manufacturing companies, some with oil companies, others with construction outfits. The camp cooks have found ready employment in the restaurant field. The camp storekeepers have become clerks or bank tellers. The work training in forests and fields has led many of the enrollees into jobs related to lumbering and agriculture.

To assist in finding jobs for the enrollees, the C. C. C. has worked with State and Federal employment services and through State C. C. C. employment councils. Contacts are made by camp officials and by enrollees with employers in the vicinity of the enrollees' homes and their camps. The camp officials, through their experience with each enrollee, know his capabilities and often are able to direct him into a job that is best fitted for his talents.

I think that Mr. McEntee summarized the aims and purposes of C. C. C. very well in a recent radio speech, when he said:

"From the very beginning the purpose of the C. C. C. program has been to strengthen America by saving young men from the moral erosion caused by unemployment, and by the rebuilding and conserving of our natural resources. These objectives have been attained by establishing a chain of civilian camps where young men follow an orderly and well-routined daily schedule of work, study, and recreation, and where they are taught the old-fashioned virtues of hard work, regular hours, discipline, love of country, and the principles of good citizenship."

American Defense

EXTENSION OF REMARKS

OF

HON. GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1940

EDITORIAL FROM WILMINGTON (DEL.) JOURNAL-EVERY EVENING

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal-Every Evening of Wilmington, Del., for May 15, 1940:

[From the Wilmington (Del.) Journal-Every Evening of May 15, 1940]

AMERICAN DEFENSE

Within the past 48 hours the American people have suddenly become aware of the imperative necessity of looking to the state of this Nation's defenses. We have been brought face to face with the possibility that the war abroad may be decided this summer and that the Allies may be crushed. A great many people are ready to agree with General Pershing's warning of yesterday that "the very life of this republic depends on the energy and determination with which our people undertake a task of placing the United States in a state of thorough preparedness in both men and equipment."

Within a very few hours this issue will be placed before a Congress which is more than willing to spend. It will be put in a new defense message from President Roosevelt which will recommend the appropriation of new hundreds of millions of dollars for our armed forces.

We do not question the importance of wasting no time in reaching a decision. The speed with which the German Army has crushed Holland and thrust its steel fingers into France has made it plain that the issue abroad may be decided before many weeks are gone.

But it is of even more vital importance to realize that spending is not enough. Voting more money is the easiest thing that Congress does. For 7 years now it has been frittering away the Nation's resources to the tune of 58 billion dollars. We are weak now financially, when we should be strong.

What it must learn is to concentrate spending where spending counts the most. We must be sure that whatever is spent from now on is translated directly with the least possible waste into the kind of defensive strength that is most urgently needed.

This will not be an easy thing to do. It calls, first of all, for a calm study by experts to determine where our defense program can and should be improved. It calls also, in view of the badly unbalanced state of Government finances, for diverting money appropriated wastefully and thoughtlessly to more vital requirements. This is no time for scattering and squandering our resources; we must learn, above all things, to husband our strength for the time when it may be desperately needed.

Additional Naval Bases in the Caribbean

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE WASHINGTON DAILY NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Caribbean Bases Urged by Senate Naval Group," written by Thomas L. Stokes, and published in the Washington (D. C.) Daily News of Thursday, May 16, 1940. I am happy to learn that the fine Naval Affairs Committee of the United States Senate recognizes that something should be done about conditions in the Caribbean.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 16, 1940]

CARIBBEAN BASES URGED BY SENATE NAVAL GROUP

(By Thomas L. Stokes)

Serious consideration to acquisition of sites for additional naval bases in the Caribbean area, or to prevent their use as enemy air or submarine bases from which to attack the Panama Canal or continental United States, is recommended to the Senate by its Naval Affairs Committee.

The suggestion is embodied in the comprehensive report accompanying the new naval-expansion bill, a document from which much will be heard henceforth, since it presents a case for the United States remaining absolutely out of the present European war and takes issue, inferentially, with some administration courses of policy.

The recommendation relative to the Caribbean Islands, part of the strictly Western Hemisphere defense system outlined, coincides with renewed suggestions that the United States and other American republics should acquire British and French and Dutch possessions there in exchange for money the Allies may need for war purposes.

FLEET AIR BASE

"A fleet air base in the southeast corner of the Caribbean would undoubtedly add to the security of that area, as well as to the ability of the United States Fleet to insure the integrity of the Monroe Doctrine," the report says.

"The Panama Canal and its approaches must be fortified and protected to such an extent that they cannot be damaged and will be available for the transfer of our fleet from the Atlantic to the Pacific, and vice versa, as necessary.

"The existing submarine and naval air bases there should be extended and improved. It might be desirable to reconsider the question of building a canal across Nicaragua."

TRUE DEFENSE

At another point the committee said:

"So long as our Nation possesses an adequate fleet, an adequate air force, and the necessary number of secure bases from which these forces may operate effectively, there is little chance of a suc-

cessful attack upon us. Our fleet, including the fleet air force, however, must be kept concentrated and must be superior in fighting power to any fleet or combination of fleets which can be brought against us."

The report of the Naval Committee, headed by Senator DAVID I. WALSH (Democrat, Massachusetts) based its case against any involvement in the European war on these grounds:

1. That the United States is not prepared to participate.

2. That if Germany's submarines and aircraft "succeed in overcoming the greatly superior fleets of Great Britain and France and destroying British sea power, there is every reason to infer that they could probably also overcome the United States Fleet if we entered the war and sent our fleet to operate in European waters within ready reach of short-range aircraft and numerous small submarines."

3. This would cripple the United States in its own mission, to protect the United States with its Navy, which could operate effectively from home bases to keep any hostile force far from our shores. This, of itself, the committee held, refutes the argument that the United States must enter the European war to protect itself.

4. Involvement in the war would require creation of a dictatorship in this country.

"An impregnable defense for America will be costly, but infinitely less costly in the long run than engaging in another futile attempt to 'save the world for democracy,' and certainly less costly than conquest and consequent confiscation of resources and enslavement of our people.

"It is believed that the American people are ready and willing to make any sacrifices necessary to protect their birthright and their liberties, but that they are not willing to endure the horrors of war to take part in the age-old quarrels of Europe and the game of power politics."

Let Us Have Peace

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1940

Mr. SPRINGER. Mr. Speaker, the clouds of war are hovering over almost all of Europe. The terrible disaster there appears to be most appalling. Hitler, with one of the greatest war machines of today, has been waging an unrelenting war of aggression against nations both large and small. The invasion of Norway, Holland, Belgium, and Luxembourg by Germany is indefensible. Yet when a dictator who possesses both greed and hate assumes to conquer the weaker nations and by hasty action invades the sacred precincts of those countries, destroying cities and killing noncombatants, it is then necessary that those nations resist to the fullest extent of their power. At this moment all Europe is aflame; the entire world is disturbed because of the unprecedented effort of Hitler to invade and annex a vast portion of Europe; the people everywhere are appalled by the viciousness and the terribleness of this war, and the people throughout the world look upon the atrocities committed with grave and extreme horror. The people in our country are greatly disturbed because of the agitation emanating from the battlefields of Europe. And some of our people are urging that vast sums of money be expended, in addition to those huge amounts which have already been appropriated for national defense at this session of the Congress, immediately for our defense program. All of this great agitation has been created by reason of the unwarranted invasion of neutral nations by Hitler and his forces.

Mr. Speaker, this is one time in the history of our Nation that we must keep our feet upon the ground and act with extreme caution. We must not permit our sympathies to sway our better judgment in this critical period. One false step made by our Nation at this time might cost millions of lives of our men and boys in our Nation, and it might cost our people billions of dollars in the monetary expenditure for war. We must step cautiously as we proceed. We must remember that we have already appropriated approximately $2,000,000,000 for national defense at this session of the Congress. We wonder, as we pause and reflect, what the end will be. Can it be that this money already appropriated, and the huge sums about to be requested by the President, are to be used to equip our Army and Navy for war, and perhaps actual participation in this war? And if the vast sums of money now available for national defense are used for such purposes, and we have no war, then the money will have been wasted. We speak of these highly important matters because we are now reaching the debt limitation in this country of $45,000,000,000, and that limitation will necessarily have to be raised if all of the requests are granted. We now visualize the necessity of new and additional taxes, if the request of the President to be made is granted. We are confronted with this very serious situation in our country. The administration now in power advocates, and with its majority in the House passes, almost any kind of an appropriation bill which will necessitate the expenditure of money. This money which is so ruthlessly spent and squandered is the people's money. It must be repaid by the sweat of the brow. The people of every class will suffer untold hardships by reason of these huge expenditures. It is with this thought in mind that I caution the leaders to act with great care and caution; let us take the time to deliberate over this grave situation, and let us not appropriate and spend any of the taxpayers' money which is not extremely urgent and absolutely necessary.

We have our problems at home, and these must be solved. We have the unemployed, the poor, the aged, and the infirm, the unemployed youth of our land and the staggering problems of agriculture, business, and industry, all of which now confront us, and these domestic problems are urgent; they are susceptible of solution and they must be solved.

Mr. Speaker, great agitation has become apparent that some of our people desire the Johnson Act modified or repealed, and that the Neutrality Act, which we now have, should be modified and changed. Any change in the Johnson Act would be a very great mistake at this time; and, I am convinced that our neutrality law, as the same now exists, should not be further changed while the conflict continues in Europe. I was one who stood four-square for our neutrality law as it existed before the so-called cash-and-carry provisions were adopted; I said then, as I say now, that the adoption of the cash-and-carry provisions in that law was a step in the general direction of this European war. It would be entirely fatal, in my opinion, to either modify or repeal the Johnson Act.

Mr. Speaker, I urge that we stand steadfast for our country, and that we exercise our calm and deliberate judgment in this time of great stress. That we do not act in haste but that our actions be the result of calm reflection and serious deliberation. We must always be pro-American—never pro-Ally or pro-British or pro-French. We must consider ourselves, and our people, first—just as the nations in Europe consider themselves first. A firm determination on our part to keep out of this war is by no means purely selfish. We must remember that when the war is over, and such a terrible carnage cannot long continue, the world will be a tragic place. Unless there is one nation which is still strong and economically sound, one nation with a sympathetic and firm heart as well as a full purse, the distress of want, despair, and starvation will follow in its wake. Let us assume that essential leadership for the days of reconstruction and take our place among the nations of the world.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD, and to include therein a very interesting and important editorial which appeared in the Washington Daily News on Wednesday, May 15, 1940, which editorial follows:

Already agitation has begun for changes in the Johnson Act and the Neutrality Act, in order to permit loans to the Allies.

If we learned anything from the last time it is that we must never again lend to nations at war, unless we are reconciled to defaults and to such recriminations as have poisoned American-European relations for 2 decades.

Yet, if Germany's air power does not win this war within a few weeks or months; if this is to become a war of exhaustion—which is the only type of war the Allies can hope to win—then it is

inevitable that the United States and other American republics will come to grips with the issue of Allied financing.

If we made outright gifts of money or war supplies, we would be on the thin ice of belligerent partisanship, which might involve another A. E. F.

If we lent the money, the same thing might happen; and, human nature being what it is, we would once again become the maligned and embittered creditor in post-war years. "Loan oft loses both itself and friend."

Would the only alternative be to choke off supplies, even if German victory were thereby guaranteed?

No; we think the Allies have a better 'ole.

And we think the Americas have a happier choice than to sit idle while the dictators overrun the nations of western Europe, nations whose defeat would intimately involve the geography and politics of this hemisphere because of their numerous colonial outposts in our waters.

When a private individual is out of money and unable to borrow, he cashes in some of his assets to meet the emergency.

There is no reason why nations shouldn't do the same. If the Allies get hard pressed they can relinquish sovereignty over their Western Hemisphere holdings—at a fair price—and use the proceeds for the planes and other equipment they need.

And it would be only enlightened self-interest for the American republics to pay that fair price—even a good price, as friendly buyers—and run up a pan-American flag over the British, French, and Dutch possessions in and around the Caribbean.

We suggest this as a project to be undertaken by all interested American republics—the islands and possessions to be governed under a Pan-American mandate.

The United States itself has no imperial ambitions. It is not looking for more real estate. "Manifest destiny" is a dead phrase here. But in common with our sister republics we do have a vital stake in securing the defense of this hemisphere. And therein lies the tremendous value to us of these strategic holdings: The British Bermudas, 580 miles off North Carolina; the British Bahamas, east of Florida; British Jamaica, south of Cuba; the Windward and Leeward Islands of the Lesser Antilles (principally owned by Britain and France), which form a circle protecting the northern coast of South America and the Panama Canal; the Dutch islands of Curaçao and Aruba, closer still to the Canal; the British, French, and Dutch Guianas, on the South American mainland; British Honduras, north of the Canal.

Some of these holdings, like Dutch Curaçao and British Trinidad, are economically important; others are white elephants—they would be economic liabilities like our Virgin Islands and Puerto Rico. But they would be worth a big price because of their importance to the naval and aerial defense of the Americas.

These possessions have no military value to Britain, France, and Holland, who contemplate no aggression in this hemisphere. But to the Americas, to the United States in particular, their intrinsic worth would be greatly augmented by their strategic value in the naval and aerial defense of the Panama Canal. Consider the cost of doubling our Navy—which would be a plain necessity if the swift acceleration of aggressive technique were to make the present defensive outposts of the Panama Canal inadequate.

The best definition we ever heard of trade was this—"the process by which two men get what each wants, both parting with what neither needs, both profiting by what neither loses."

The trade here proposed—where the Allies would get what they must have to defend themselves, and where the Americas would secure these defensive outposts against the possibility of a Nazi claim—would be just such a deal.

Return of the Minute Man—A Proposal in National Defense

EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1940

EDITORIAL FROM THE BINGHAMTON (N. Y.) PRESS

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Binghamton Press of May 13, 1940:

[From the Binghamton (N. Y.) Press of May 13, 1940]

RETURN OF THE MINUTEMAN—A PROPOSAL IN NATIONAL DEFENSE

After what has happened in new technique with reference to the invasion of Norway, Belgium, and the Netherlands, it is entirely evident that for countries with any sort of extended coast lines the navy is no longer the first line of defense.

Over last week end we had some interesting first-person narratives from men who had seen what they were talking and writing about, describing the technique employed by the Nazis in landing surprise shock troops, particularly along the Dutch coast, in the vicinity. They were not parachute troops, although they were subsequently reinforced by troops dropped from parachutes. The first contingent came in with 10 Nazi flying boats that swooped down, taxied to the beach, discharged approximately 400 soldiers, each armed with a machine gun, and then were drawn up, to be left there while the detachment went on in a surprise attack on a nearby airdrome. Eventually the 10 transport planes were bombed and destroyed by British airmen. But the interesting point is that they landed in an obscure bay, out of sight of forts and sentries, with only peasants to see what was going on. They wore Dutch uniforms, and no alarm was raised until later when the countryside realized that it had been invaded.

Now Holland is a comparatively small country, fairly well populated. Yet, if those tactics had been carried out in sufficient force, they might well have won the blitzkrieg for Adolf Hitler as far as the Netherlands was concerned.

There is something in this which should be of particular interest to Americans. We have two immensely long and not densely populated coast lines, one on the Pacific and one on the Atlantic. But along those coast lines, outside the centers of population and for some 350 miles deep into the interior United States, there are plenty of young men, middle-aged men, and old men who could and should be organized and trained for minuteman service in their neighborhoods only. The organization should be effected, not as a part of the Regular Army, not even as a fighting segment of the National Guard. It should be in effect a resurrection of the minuteman idea which constituted the first-line defense of the American Colonies before we became a nation.

Because of the function of State lines on the seacoast and because it concerns national defense generally, the plan should be laid out, organized, and carried out by the Federal Government. But the National Guard units of the various States, or their successors in depot units when they are mobilized, should be the agency for the Federal Government in the establishment of these "minute men" units.

A deal of flexibility would be required with respect to the size of the organized unit and the standard of physical requirements. Probably the platoon system would be about the best basis of organization, since there would be numerous seacoast communities where not more than a section or a platoon could be mustered within a reasonable distance of concentration.

Since such an organization would depend for its continuing strength upon men not eligible for first- or second-call military service in the event of war, the age limit should be wholly elastic and the physical requirements merely laid down in terms of ability to get around. Some of the best rifle shots in the United States today are men of 65 years and better.

It is highly probable that discipline would be entirely secondary to watchfulness, effectiveness, and totality of the organization. It is also obvious that wherever possible coastal enterprises such as fishing fleets should be included in this volunteer organization. People with motorboats should be encouraged to be a part of it, and every unit should have at least one "ham" radio operator—two, if possible.

On the question of equipment it is evident that while first training would be in terms of rifles, automatic arms should be supplied as fast as they may be produced and as fast as the units can handle them. Uniforms, we should think, would be a debatable and certainly a secondary consideration. Arm bands might be entirely sufficient. Experience in the lowlands in Norway has shown that uniforms work both ways, and certainly minute men so organized would not be subject to espionage charges if, as, and providing the minute-men organization were established and recognized as a formal branch of national defense.

As to the depth of such organizations from the coastline interiorly, that is also a matter open to considerable discussion. However, we have the notion that if the Federal Government were to set up such a first line of national defense, it would have immediate offer of volunteer organizations in smaller communities throughout the eastern and western United States to a depth of at least 350 miles. And that would be sufficient to take care of parachute troops just as the coastal organization, in conjunction with aerial patrols in time of threat, would be adequate to meet the sort of thing that happened in Holland and Norway.

Probably the organization should be confined to infantry work as far as arms are concerned. Again, because of the average equipment of the average American, it would be self-motorized. One jalopy would certainly be available to each squad. In many coastal sections there would be enough motorboats and privately owned automobiles to take care of the entire unit, whatever its size might be, in case of emergency.

As to training, we are inclined to suspect that it might stop with detailed knowledge of local geography, elementary map making for some, radio for others, and marksmanship with rifles and automatic rifles or machine guns for everybody. Some open-order tactics might be handy. But there would always be a leaven of World War, Spanish War, and even Civil War veterans to take care of any elective "squad righting" and parading that the unit wanted to do.

Since the people of the United States always do in a big way everything they undertake, we have the notion that such an organization would be a complete success from the gun; that it wouldn't cost too much; that it would have the effect of making millions of Americans defense-conscious; that it would be thoroughly traditional, and, perhaps quite importantly, that it would be disastrous to any fifth-column idea which might be designed now or in the future. It would give the Government an excellent excuse for better and more decisive control of amateur radio operations; it would unite the American people on a definite objective, and reestablish the citizen-soldier in the proud status he occupied during the earlier period of the country's history.

And if it were only used once—for one blasting 24 or 48 hours in this Nation's history, it would be worth the price.

So we commend it, as at least the nucleus of an idea, to the patriotism of practical America, which has not forgotten that except for the Minute Man of another day we would not now be what we are.

What Should American Foreign Policy Be Today?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1940

ADDRESS BY HON. WILLIAM R. CASTLE

Mr. REED of New York. Mr. Speaker, I have read the speech made by Hon. William R. Castle, former Under Secretary of State, before the Foreign Policy Association on May 14, 1940, at Worcester, Mass., and I deem it a most able, timely, and temperate presentation touching our foreign affairs. Under leave to extend my remarks, I include it in the RECORD:

Although politics never has and probably never will end at the water line, it is still true that our foreign policies are less affected by periodical changes from one party to the other than our domestic policies. Both parties have to have the chance to "point with pride" and each must minimize the achievements of the other. This sort of thing sometimes causes unnecessary irritation abroad, but so long as the fundamentals of American foreign policy are not touched, no great harm is done. Within both parties, moreover, there is a healthy independence on the part of individuals. This is as it should be, since it leads away from dangerous partisan consideration of primarily nonpartisan issues. Either party, however, drifts away at its peril from the fundamentals, from the traditions established by Washington, and consecrated by Jefferson.

I cannot enumerate the details of foreign policy as held by the Republican Party, because it is a free party whose members have every right to think for themselves. Still less can I define democratic policy, because within the Democratic Party, as between the New Deal and the Jeffersonian Democrats, there are profound differences, profounder even than between Republicans and old-line Democrats. I can only speak as a man who has for years been immersed in the subject of foreign policy. And as such I can deplore the fact that at this immensely critical period in world history we are having an election. The policy of securing votes looms far larger than any other. On certain points which I believe to be fundamental the New Deal, it seems to me, has erred gravely, and these errors injure its ability to give effective leadership in the troubled international waters. For example, the good-neighbor policy has been the basis of American foreign policy since the time of George Washington. Yet at a period of history when rapid communication has made us all neighbors the New Deal has restricted this policy to the Western Hemisphere. In addition, it has made it a one-sided policy, we being responsible for the giving, the others for the taking. The only healthy relationship between nations is one of mutual respect, and this perversion of the good-neighbor policy is destructive of respect on both sides. It has also caused the American Government to throw over the primary tenet of international law which is that the first and sacred duty of any government is to protect its own citizens everywhere.

As illustrating what I mean, the history of our relations with Mexico in the last few years is a dark page in American diplomatic history. The wholesale confiscation of American property under the guise of expropriation has been a disgrace. It has meant the ruin of many an innocent American citizen. The oil seizures were merely a much publicized climax of these thefts, which have continued from month to month. You have heard people say: "Would you go to war over delayed payment for the expropriation of oil property which belonged to American citizens?" The answer is that resort to war would never have been necessary if the American Government had said at the beginning: "Any nation has the right to expropriate on immediate payment of the value of the property taken. If you cannot pay, the property must, under international law, be left in the hands of the owners." If the Mexican Government had persisted the seizure, the American Government could have stopped buying silver. Instead of that, we increased our silver purchases by just about the amount which the Mexican Government lost in taxes on the oil wells. It is true that a few weeks ago the Secretary of State sent an excellent note demanding arbitration, a note which would have been of some value 2 years ago, before the Mexican Government had so deeply committed itself. Today it is useless, as the Mexican answer shows, but this is an election year.

The point in all this is that if property can be confiscated in Mexico, it can be confiscated elsewhere. This has already happened in Bolivia and the disease may spread rapidly. If I owned stock in South American copper mines or indeed had made investments anywhere on the continent, I think I should try to draw out as quickly as possible. But, that is not the point at issue. What strikes me as of extreme importance is that you cannot buy friendship, for friendship is neither gratitude for past favors nor anticipation of new favors. It is the frank and open dealing of equals with each other and must be based on respect. That is why I have spoken of the good-neighbor policy as interpreted today. It has tended to restrict friendship to the Western Hemisphere, and, even there, to build up a false friendship which will collapse at the first strain because it is based on purely material premises. With wars to the east of us and wars to the west of us, we should not try to bribe the nations to the south of us, but should make them understand, rather, that all our interests are identical, that on us all, as individuals in a group of free nations, there may well rest the responsibility for preserving a progressive civilization in this world.

There is little of this idealism in the relationship between the nations of the western world. Such friendship as exists for the United States is founded on exaggerations. For example, 10 years ago it was made quite clear to the nations of Latin America that we considered them our equals, that we believed that they would be fair to Americans doing business there as we should be to their own nationals in the United States, but that even if there seemed to be miscarriage of justice, we should never use force to protect American property. This was not enough for an administration dealing in superlatives. In Montevideo Mr. Hull signed a treaty in which the American nations promised never, at any time or under any circumstances, to use force. Of course, this clause was directed at us. Now, if we live up to the terms of the agreement, we must stand smilingly by even if, in time of revolution or otherwise, American citizens are being massacred. And, if there is enough courage left among us to defend our own people, we shall be hailed throughout Latin America as miserable treaty breakers. In international life, even more than in our domestic life, we must avoid exaggerated or meaningless promises. They only lead to contempt, and misunderstandings, and possible war. We have sold out for a phrase.

There is too much of the guardian attitude in our treatment of the Latin American nations. They are glad to have our money, but they don't want our advice on how to conduct themselves. They feel they have grown up and secretly resent being spoon-fed. We have got to treat them as our equals in sovereignty, but, if we do this, we must expect from them treatment as fair as we give them. Otherwise they cannot fully develop their own natural strength and will be open to all malign influences from abroad. The Germans know how to flatter—know that the best flattery is the appearance of respect. Even with the memory of Poland and Norway and Denmark and Finland still fresh, many a small nation will believe it can deal successfully with Germany and Russia, and the result will be disaster if these nations reach out to the Western Hemisphere.

I have said these things about the Latin American situation because the Monroe Doctrine is still in effect and there is no doubt that we must defend the countries to the south of us against forcible intervention on the part of foreign nations. This being so, we want our neighbors to be as strong in their own right as possible; we want them to feel that it is their privilege, as well as their duty, to share in the protection of the Western Hemisphere. I believe part of our obligation to them consists in not interfering with their legitimate trade with any other nation in the world. Why should the spokesmen of the Department of State emit a wail of sorrow when news comes that the Argentine is making a trade treaty with Japan, or when it is reported that special arrangements for trade have been made with Great Britain? We realize that the more closely we can bind Latin America to us in matters of trade the more we shall all be able to act as a unit when necessary, but we sometimes fail to realize that forced trade is more likely to cause disputes than to encourage friendship. We should repudiate the claim of any nation to dictate channels through which our trade might flow and surely we must treat others as we would be treated. All our relations with Latin America, then, must be aimed at the establishment of a self-respecting, friendly, and understanding group, which will maintain peace among themselves, which will be strong to resist attack from without, which will be an example to the rest of the world.

Your thoughts and minds are turned to the nations at war and you probably wonder why I spend time on Latin America. It is because, if we want to keep out of war ourselves, we must be well protected—must not invite war. If there is real and cordial understanding between all the nations of the Americas, foreign propaganda will have little chance, and it is through propaganda of one

kind or another that we are most likely to be involved. Friendship among our western nations that is based on respect and fair dealing is as much a bulwark against aggression as are fortresses and battleships.

Then let us turn to the world at large. We do not isolate ourselves by minding our own business. Isolation is impossible in the world as it is constructed today. But we should not set ourselves up as censors of other nations. We should not arrogate to ourselves the thankless office of the world policeman. As individuals we loath and detest the form of government in Germany and Russia, but that does not mean that the American Government has the right to tell the Germans and Russians how they ought to be governed. This kind of meddling lays the groundwork for war. We must always remember also that measures, called by the administration, "measures short of war," are in reality measures leading toward war. Too many such measures are being toyed with today. If, as an individual, you want to keep out of a fight, you do not taunt your possible opponent, deprive him of what he believes to be his by right, preach to him about your own virtue—this last is sometimes the most maddening thing you can do. Rather, you leave your opponent alone, carry on as you must, welcome the opportunities of cooperation when your ideas coincide. This is the attitude of a nation which really does not want to get into a fight. But we, today, are playing around the edges of war.

People who understand anything about foreign relations would be with me in asserting that foreign relations should not be conducted in the market place. I can remember many a time, when I was in the Department of State, when foreign diplomatic representatives came to me to complain of things said in Congress or in the press against the nations or the rulers of the nations they represented in Washington. I always told them that we had a free press and free speech in this country, that if Americans did not like the way their countries were conducted they would say so freely and that the Government could and would do nothing to stop them. But, I did not, as seems to be the custom of today, immediately call in the press representatives and repeat the conversation. There could have been no point in this except to curry favor with the American people. Foreign relations ought to be carried on with the aim of protecting the American people by increasing good relations with our neighbors. Publication of private conversations defeats both purposes. I sometimes was compelled to say, again privately, that I regretted inflammatory public statements made by responsible Government officials, this because officials can never speak in their private capacity and have no right to commit the American Government. No Government official, from the highest to the lowest, has any moral right whatever to make statements or to initiate actions which might lead this Nation into war, at least until public opinion demands war and Congress has considered the matter. It is commonly said today that the right to declare war is the only privilege Congress has left. That privilege must not be taken away because we should then be at the mercy of the changing moods of whatever individual happened at the moment to be President of the United States.

This country must not become involved in the war either directly in Europe or through the back door of the Orient. I join with you in deploring the Japanese attack on China and the methods with which the warfare has been carried on. But I also deplore the methods adopted by the administration in continually baiting Japan. If the American Government is willing to say to Japan, with the consent of Congress, "Unless you withdraw from China, we shall go to war with you." I have nothing whatever to say. I should not approve, but the action would at least be straightforward. But for the Government to play with threats and "measures short of war," all the time leading our unconscious country to the brink of war, is a thing none of us should tolerate. For example, when the Wang Ching Wei government was founded in China we naturally could not consider recognition, as we had already recognized the Nationalist Government under Chiang Kai Shek. But why shout abroad that we were not willing to recognize? That sort of thing is contrary to accepted international practice. Wholly unnecessary, otherwise we can hardly escape the reference that the declaration was made solely for the purpose of irritating the Japanese. When the Department of State solemnly proclaimed that there must be no interference with the Dutch East Indies, it did so after it knew that Japan had promised to leave the islands alone unless some other power tried to annex them. What could have been the reason for this statement, again, except to annoy the Japanese? I wonder what Americans, especially bellicose Americans, would think if Japan announced to the world that it could not look on calmly if anybody—meaning the United States—should attempt to annex Greenland. Such a statement would be impertinent, uncalled-for, and provocative. The situations are the same, except that it is our bad luck to be very dependent—as Japan is also—on the tin and the rubber and other products of the Dutch East Indies; whereas Greenland is sterile and, so far as we know, nearly valueless.

Unless we plan to get into the war, this kind of thing must stop, just as the official condemnations of Hitler and Stalin and Mussolini must stop. You and I may say what we please, as we do not speak for the American Government. Practically all of us want to see the Allies win the war. If our participation would assure allied victory, would assure a decent peace, disarmament freedom of speech, and, above all, the recapture by the individual man and woman of that spiritual liberty which has made the democratic world so wonderful—if such results could be assured we might be persuaded to enter the war, to sacrifice the present for the sake of future generations. But they are not assured and they are unlikely. On the contrary, the result might be just the opposite. The people of any nation going to war lose their liberty instantly. This has to be so to insure the efficiency of the state. But the liberty of the people is not easy to recapture when once the leaders have tasted power. We who are middle-aged and old can well remember that we fought one war to save the world for democracy. As a result of the war and of the peace, the world got Hitler and Mussolini and Stalin. Not the cause of democracy, but the cause of dictatorship was served. The dangers will only be intensified, I fear, if we are foolish enough to be led into another war. Are you certain, because I am not, that after another war in which we participate, representative government would survive even in the United States?

People say, especially on the eastern seaboard, that those who want to keep out of the war are selfish, are thinking only of the immediate interests of the United States. Of course, there is a selfish angle to the matter. If we do not look out for our own interests we can be sure that no one else will look out for them. In fact, we must be always pro-American, never pro-Ally, or pro-German. We must consider ourselves first, just as our friends across the water consider themselves first. If they want us in the war they want it for themselves, not for us. I remember once saying to a great advocate of the League of Nations, "When anyone of you is able to say he hopes the United States will join for its own good, not only for the good of the world, I shall begin to be interested." But a determination to stay out of the war is by no means purely selfish. When the war is over, whoever wins, the world will be a tragic place. Unless there can be one nation still strong and economically sound, one nation with a heart as well as a full purse, then truly the black horse of starvation will ride the storm. Few of you realize what it was like in Europe after the last war, when the thousands of those who hungered after bare necessities grew into millions. Few of you can realize what the humanitarian work of Mr. Hoover meant at that time. Few have the prevision that Mr. Hoover has now, when he looks into Poland, balances the food available before the harvest against the mouths which must be filled if death is to be averted. But, this despair and hunger in Poland is only a shadow of what must and will come when the war is finished, especially if it is a long war. If we keep out, as we shall unless the steady pressure of propaganda breaks our morale; if we build up a pan-American solidarity based on respect and common obligations; there is a chance that this half of the world may be able to save the other half when the need becomes desperate.

Many Americans understand this and therefore understand that it is not merely selfish care for our own good which demands immediate and drastic reductions of Government expenditure, the liquidation of unnecessary and extravagant projects, the facing of unpleasant facts in the good old American way. We shall have to tighten our belts, perhaps; we shall have to give up some of the luxuries; we shall have to strive as never before to bring about a unified and determined Nation; we must crush the class rivalry which has been spreading at an alarming rate of speed; we must restore the spirit of self-reliance and independence which has made this Nation great. Unless we do these things we shall be in danger of drifting into the war. Unless we make a beginning now we shall not deserve to keep out. Unless we carry through we shall be incapable of helping the world when the war is over.

People say to me that if Hitler wins the world will be a dreadful place to live in. I agree. I am sure, also, that it is going to be a pretty dreadful place whoever wins. I am certain that it will be no less dreadful if we are dragged in, and probably a great deal more so. Some people will tell you that this war is the dying gasp of civilization. Others will say that it is a necessary illness of the body politic induced by the twin poisons of communism and fascism, that the drastic remedy of war was necessary to restore health, that war is the sulfanilamide that increases temperature and suffering in order to cure. Certain it is that Hitler would not give up if he heard that we were going to be a participant. He is dependent on the United States for nothing. We cannot even help the Allies to close the blockade. American soldiers would have no such places to march forward as they found in 1918 in Chateau Thierry and the Argonne—and anyhow the administration tries to fool us with the idea that somehow we can get into the war when the appropriate time comes and still send no troops abroad. As well go out into a thunder shower and expect not to get wet. War consists in men fighting each other as surely as rain is water.

As a matter of fact, geography has so arranged matters that we can help the Allies without being unneutral. We sell to all who may ask to buy—for this is what neutrality means—but we can have the comfortable feeling that sales to Germany will never get through the blockade. And all the time that we talk about how we can help the Allies we do what we can to injure them in the Orient. We keep on baiting Japan and may succeed finally in driving that nation into the arms of Germany and Russia. That would assure the destruction of the British Empire; it would probably mean that Germany would win the war. It is true that Japan and Russia could not possibly pull long in double harness, their ideals being wholly contradictory, and it is said that this very fact would make a German victory sterile in the end. But it is far too

great a risk to run. We shall do the most good by learning to think things through, by being consistent, by determining in advance whether a certain course of action will bring the result we desire, and then by asking ourselves whether the penalties necessary in achieving the result make the move worth while. I am sure that gradually to incur the enmity of one nation after another is completely bad for us and is eventually bad for the world. That is what we are doing now by permitting our leaders to make promises that will never be fulfilled, because they never should have been made, by permitting them in the name of the Nation to attack verbally whatever in foreign lands displeases them. Nobody is infallible.

Then what can we do in this time of complete uncertainty? We may have to fight because we may be attacked. This is unlikely in the extreme if we are strong. At the moment we almost invite attack because we are unprepared. Our finances are in a deplorable state. We must not further injure them by going into an ill-considered program of military expansion. But there must nevertheless be such expansion and we must cut down along other lines to make it possible. We must build up our agriculture so that it could meet war or world-wide famine. We must take away fear from business so that the Nation will begin to go ahead again in all the arts of manufacture. We must reemphasize the dignity of the individual citizen because it is only a self-confident nation that can refute and drive away the fallacies of communism and nazi-ism. We must have faith in our institutions and in our own ability to improve those institutions as need arises. Is all this remote from foreign affairs and foreign policy? I do not think so. On the contrary, I am sure that only through the development of our national character shall we be able to meet boldly and effectively the problems that face us and the world. This is a time of extreme crisis and crisis means self-sacrifice when necessary, the clear-eyed and clear-thinking study of the questions which will not wait long for answer. It is a time when the narrower aspects of politics, which are always selfish, must be thrown aside. On a wise foreign policy our whole future depends, yet we see that policy today made subservient to the incidences of an election year, subservient to votes and, what is worse, to ignorant and self-seeking votes. Let's get together and clean our own house. Then, truly, we shall be able to help the world.

National Negro Congress

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1940

LETTER FROM NATHAN WATERS

Mr. ALLEN of Pennsylvania. Mr. Speaker, it becomes more and more apparent that the Communist-controlled National Negro Congress is repudiated by our honest, patriotic colored citizens themselves. The large majority of American Negroes disown and condemn the activities of the National Negro Congress. The following letter from an outstanding colored leader in my district confirms the foregoing remarks:

NATIONAL ASSOCIATION FOR THE
ADVANCEMENT OF COLORED PEOPLE,
ALLEGHENY VALLEY BRANCH,
New Kensington, Pa., May 14, 1940.

Hon. ROBERT G. ALLEN,
House of Representatives, Washington, D. C.

DEAR SIR: Dispatches from Washington indicate growing concern over activities of a movement known as the National Negro Congress. It has been intimated that an investigation may be made by the Dies committee, occasioned no doubt by the recent convention of this organization in Washington.

The National Association for the Advancement of Colored People, through its publicity department in New York, keeps its branches informed concerning such spurious movements. Please be advised that the National Negro Congress does not represent the majority of our Negro population, who regard it as being communistic and inimical to their best interests.

We of the Allegheny Valley Branch wish to state our position as one condemning this organization, and urge you to stand behind such action as will bring to light the subversive forces at work therein to the detriment of our race.

Sincerely yours,

NATHAN WATERS, *President.*

Cooperation Between Labor, Industry, and Government

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY DANIEL J. TOBIN

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix a thoughtful and able address, entitled "Cooperation Between Labor, Industry, and Government," delivered by Mr. Daniel J. Tobin, over the Blue Network of the National Broadcasting Co., on May 13, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The world is now in a serious condition, much more serious than the average individual understands, and much more serious than those who do understand desire to admit. Spreading gloom and discouraging pictures will not help us at this time, but it would be foolish for us as a people to refuse to see and understand actual conditions.

Outside of the United States and some South American countries, the rest of the civilized world is in a condition bordering on anarchy. Certainly the civilization of Europe is in great danger of destruction. Because of this condition it is necessary for labor, business, and Government to endeavor to work together as closely as possible, so that by each other's counsel we may continue to maintain a free government and uphold what there is left of our modern civilization, which guarantees freedom of speech, freedom of assembly, and freedom of religion.

If the statements made by our best analysts, that the European and Asiatic struggle will last 2 or 3 years, are to be relied upon, it is dreadful and certainly depressing to realize what will happen even to some of the countries that remain out of war. If England is spending $26,000,000 a day, we can safely say that all the countries involved are spending, as a whole, close to $100,000,000 a day. The question that confronts us is: How long can this condition last? The resources of the whole world—certainly of the countries involved in the war—cannot finance this continued destruction of life and property obtaining from these enormous expenditures; and at the ending of the war where is the economic condition of the world going to be? There is no freedom for labor or business now in any of those countries involved in this struggle. In England, where labor unions are still allowed to function, restrictions are being inaugurated week after week, with the certainty that if the war does continue for 2 years more, all the safeguards of British labor that have been established over half a century may have to be discontinued and set aside by the British Government in order to carry on. The labor conditions in France, Holland, and the Scandinavian countries are at the present time almost entirely eliminated; not because the governments of those countries desired such action, but because they were compelled to put such conditions into effect. The rationing of the inhabitants of those countries has been substantially cut down, restricted, and from week to week other restrictions will be imposed. Corporations doing business in those countries have very little to say as to profits. Governments in both France and England have imposed enormous taxes, so much so that all classes of business and enterprise are now working for the Government, or to save their form of civilization, and profits are practically set aside. It is difficult, therefore, for me to understand the continued groaning of business interests in our country as a result of taxation. The worker in England receiving $3,000 a year, pays about $650 in taxes direct. The married worker in this country receiving $3,000 a year pays practically nothing, especially if he has one child. In France taxation is much higher. Besides this there are several other forms of taxes. Certain corporations in England are now paying in some cases 70 percent of their total net income in taxation. In other words, for every $100 they earn in net profits, $70 goes for taxation. The normal tax is 37½ percent. And still we hear business continually bewailing its fate in this country as a result of taxation, where on net profits the taxation is between 17 and 18 percent.

Labor enjoys more freedom today in the United States than ever before in its whole history, and, as stated before, enjoys much more liberty than labor in any country in the world. Recently every decision on every question involving the rights or freedom of labor by the highest tribunal in our country, the Supreme Court of the United States, has been in favor of labor, where some years

ago every decision was against labor, because most of the membership of the Court was composed of men who before appointment were the paid legal representatives of labor-hating corporations.

Still, recently a national labor official delivered an address over these stations and from one end of it to the other he did nothing but denounce the Government for the conditions under which labor was suffering, and strongly censured capital and business for not carrying on greater agitation to the end that Government interference or regulation would be prevented. Governmental bureaucracies, in accordance with the expression of this gentleman, are the cause of all our suffering. The claim is also very often made that there are 10,000,000 individuals, able and willing to work, who are unemployed. The purpose was to blame the condition on Government regulations of recent years. As a matter of fact, no one knows accurately the number of people unemployed. Personally, I question those figures, because there is no direct method of obtaining an accurate count of the unemployed. Yes; I fully understand that statistical bureaus have been set up and departments of economics have made all kinds of statements; and I answer that a great many of the statements are based on mathematical guesswork, and that until the full returns of the United States census, recently taken, are obtained by the Government, there is no certainty as to the number of unemployed. The one thing that has been stated, I think correctly, coming out of governmental departments in Washington, is that there are more people employed now in our country than there were before the financial break of October 1929. That year was somewhat of a boom year. There is no question but what there is considerable unemployment, but since 1929 we have had perhaps 10,000,000 persons in the United States that have come of working age that we have not been able to entirely absorb in our employments. The large organization which I have the honor to represent, the International Brotherhood of Teamsters and Chauffeurs, is a fair barometer of industry and business.

We have very close to 500,000 paid-up members, and 150,000 of those are running between the States hauling merchandise of every description, and at the present time we have less than one-third the number of individuals out of work that were out of work some 3 or 4 years ago. When the trucks of the Nation are hauling goods it is fair to assume that the wheels of industry are moving. But suppose we have six or seven million persons out of work. That is a condition that unless we relieve it, may become worse. We will have more as time goes on unless we try to step up industry, instead of continually harping and arguing and finding fault with each other. Labor, capital, and Government should put their heads together and try to create some means, or lay some plans, to remedy this situation. If unemployment could be somewhat minimized every year for the next 5 years, we might then be able to overcome this serious situation. It is my judgment that there will always be a chronic condition of unemployment which will perhaps embrace three or four million persons, because we have reached the condition in our country where only those that are most fitted for employment will be continually retained. In other words, because we pay the highest wages of any country in the world, generally speaking, and our workers enjoy the best working conditions when employed, industry and employers demand the best, the top-notch workers, in their employment. We must also remember that each year as time goes on we will continue to have coming to working age the same number, not less than 750,000; and the human brain cannot be crushed or its inventive, creative powers destroyed, so that new machinery will continue as in the past to displace human hands. Consequently, in order to relieve this dangerous condition, not less than 1,250,000 new jobs must be provided each year. It should never be forgotten that hungry men create revolutions and then all classes are destroyed. There should be no hunger, no want, in a country overflowing with plenty. The problem is for us to find a way out. I feel certain it can be done by the great minds of America within capital, labor, and Government. I realize full well, because I am meeting the situation every day, how difficult and how dangerous a continued unemployment condition can be to our country; but I want to emphasize the fact that unemployment is not nearly as bad as it was a few years ago, and that wages have not gone backward in 90 percent of the trades and industries of the Nation; also that conditions for both capital and labor are better than they were and much better than obtain in any country in the civilized world.

Criticism was directed by this labor speaker against employers, industry, big business for failure to protect themselves in Washington against governmental regulations, etc., etc. I am quite closely in touch with what is going on in Washington and have been for the past 30 years, and there never was a time in which capital and industry had stronger forces fighting against everything which would attempt to regulate them than they have in recent years. The trouble is this, as I see it: That anything the Government suggests toward regulation of business is bitterly opposed. Surely our governmental representatives in the House and in the Senate are fully aware that business cannot be destroyed or else the country and its population will perish. Every so-called injustice that the employers say has been heaped upon them by Government has taken place as a result of the abuses by business in the past or in the days before regulation. The national labor relations law would never have been enacted had it not been for the fact that employers, generally large employers, prevented workers from organizing. In other words, the employers are responsible for the national labor relations law. The wage and hour law, which all unprejudiced persons in our country admit is not unreasonable—30 or 35 cents an hour for a worker—why, even that was fought by the employers and their associations step by step. And now industry and employers are endeavoring to so amend the law as to make it practically useless. The result will be that labor, agitating on the other side and with the power of the ballot to elect its friends, will perhaps eventually insist on amendments upward instead of downward.

Intelligent labor officials fully understand that capital must have an honest return on its investment; that capital must make a profit in order to have labor better its conditions. Intelligent labor officials also fully understand that the Government cannot allow business to run wild without regulation, because we all see today that the demoralization in certain industries, especially in the railroad industry, has been due to the fact that for many years the management of those roads were allowed to do as they pleased with the finances and other resources of the roads. Intelligent labor officials, as I understand them, also believe that Government should not paralyze business by unnecessary, unwarranted regulation or by enormous taxation which would make it impossible to find business interests willing to risk their finances.

The time to prepare for the awful demoralization in the world of labor and manufacturing which will obtain at the end of the present life and death struggle going on in Europe and Asia is now. As a result of impoverishment, through the enormous expenditures of governments in other countries, manufactured goods will be dumped on the markets of the world for almost anything that can be obtained. American manufacturers and American labor will be seriously affected. If the war lasts 2 years workers in other countries will be compelled to work for just enough to keep body and soul together, to keep them alive. Therefore, it is my judgment that before that time arrives machinery should be set up establishing a program that will protect our labor and our manufacturing interests in our country against the onslaughts that will be made on our commerce by almost all the other nations of the world. We cannot reach this condition, establish this machinery, or bring about the necessary program without unity of action and without proceeding now to lay the foundation for a better understanding between capital, labor, and Government. After all, with all the grumbling going on from business and labor and from dissatisfied political aspirants, we cannot deny the fact that we are living in a country where freedom and tolerance obtain and where justice is meted out by a jury of one's own peers, and where there is no starvation and cruel suffering such as the people of other countries are now undergoing. We are a self-producing, self-supporting nation, having more than one-half the gold of the world under our control, enjoying overbounteous crops, not crushed with dictators, and with a free government.

Without ever hoping to have complete understanding between capital, labor, and Government, it is my judgment that we can substantially help each other, thereby helping the country as a whole, by working together, endeavoring to reach a better understanding. And it is my judgment that the first step to this end—or at least beginning to bring about this end—should be taken now, immediately, by the creation of a national board consisting of not more than three persons from each division, representing labor, capital, and Government, to the end that some program would be considered; first, for the purpose of laying plans to relieve the unemployment conditions now obtaining; and second, for the purpose of mapping out a program to protect the business and industry of our Nation from demoralization by cutthroat competitors after the ending of the present European and Asiatic wars.

Women Take Leading Part in Aviation

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1940

Mr. GEHRMANN. Mr. Speaker, I have been very much interested in advancement of aviation in this country for a number of years. It is definitely being demonstrated in the war in Europe that the airplane is more essential than battleships. Of course, we need a navy for several reasons, but I do not believe it is necessary to increase it to the extent advocated by Navy officials, by spending over $2,000,000,000 or more in one session of Congress. I believe that a large share of that should be used for aircraft of the most modern type. It has been demonstrated that one modern bomber can de-

stroy a battleship in short order, and that it is very difficult to transport or land troops when the enemy has a sufficient number of modern bombers at their disposal.

I am very happy, therefore, that the women Members of Congress are taking a leading part in the advancement of aviation. The gentlewoman from Massachusetts [Mrs. ROGERS] introduced House Joint Resolution 521, and Senator CARAWAY, of Arkansas, introduced the same resolution in the Senate. I herewith quote from the resolution:

Joint resolution authorizing the recognition of American women's interest in aviation, and directing their attention to, and urging their cooperation with, the coming Nation-wide celebrations of National Aviation Day, on August 19, 1940, and for other purposes

Whereas the development of aviation, both as an important industrial asset and as a strong arm of our national defense, is vitally essential to the welfare of our country; and whereas the partiotism of American women from the very inception of our Republic has been the inspiration of lovers of liberty, respected and admired the entire world over, and whereas today American women have a double interest in the advancement of aviation, first as a potent means of defending their homes against invaders; second, as an increasingly important industrial factor contributing to the pay rolls, and thus aiding recovery and maintaining prosperity: Now, therefore, be it

Resolved, etc., That in recognition of American women's interest in aviation Congress directs their attention to and urges their cooperation with the coming Nation-wide celebrations of National Aviation Day on August 19, 1940.

I am very happy to lend my support to the passage of these resolutions because I have always believed that the women of our country have and always will take a leading part in every advancement of our Nation. The women of America have certainly demonstrated that my fight for granting them suffrage many years before it became a reality was well justified. Therefore I am proud of the fact that Congress recognizes the part that women have and will play in aviation.

They realize aviation as a modern means of our national defense. They have also played a leading part in the splendid safety record reached during recent years in the field of transportation. I feel proud of the fact that the women of my State and my district have always been well represented through the many women's clubs and organizations to which they belong.

I have every confidence that the women of this Nation will be the stabilizing factor in this terrible crisis to keep us from becoming involved to the extent of sending our youth across the water. But they will at the same time see to it that we are so well prepared with the most modern weapons, that none would even dare to think of attacking us or the Western Hemisphere.

Unions Protest Bill to Deport Bridges

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1940

Mr. HAVENNER. Mr. Speaker, I have received the following telegram from the Textile Workers Union of America:

Textile Workers Union of America protests bill for deportation of Harry Bridges by congressional mandate. Bill would override legal and democratic processes which have vindicated Bridges.

In addition, I have received similar telegrams signed by the following: Andrew Vigen, secretary-treasurer, Alaska Fishermen's Union; Germain Bulcke, secretary, San Francisco C. I. O. Council; E. F. Burke, secretary, Marine Cooks and Stewards Association; Henry Schmidt, International Longshoremens and Warehousemens Union, Local 1–10; J. Owens, recording secretary, Warehouse Union, Local 1–6; Charles Irvine, executive secretary, San Francisco-Oakland Newspaper Guild; E. E. Reite, Bridges Defense Committee; O. M. Salisbury, secretary, American Communications Association, Local 9.

The Unemployment Problem

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 16 (legislative day of Wednesday, April 24), 1940

ADDRESS BY MSGR. JOHN A. RYAN, D. D.

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very interesting address entitled "Can Unemployment Be Ended?" delivered by the Right Reverend Monsignor John A. Ryan, D. D., at the regional meeting of the Catholic Conference on Industrial Problems at New Orleans, La., on May 8, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Unemployment has become our worst economic evil and our most baffling economic problem. This statement is almost universally accepted in America today. The situation which it describes is a new one in our history. While we have always had some unemployment, even in times of greatest prosperity, and a great deal of it in periods of depression, it had never before lasted so long nor attained such magnitude as it has since 1929. One of the first books that I read on economic conditions was Socialism and Social Reform, published by Dr. Richard T. Ely in 1894; but this volume does not mention unemployment as one of the problems of social reform. At least three times between 1907 and 1927 I wrote carefully prepared drafts of programs for economic reform by legislation, but in none of them did I stress unemployment. It was not until 1928 that I published a systematic discussion of that subject. Since 1929, I have produced some 30 speeches and magazine articles which dealt either largely or wholly with the unemployment problem, and more than one of these speeches was delivered more than once.

Why has unemployment become so widespread and why has it lasted so long? To this audience I repeat the same answer that I have given to some 50 other audiences during the last 10 years. The answer can be stated in 2 words: "bad distribution." To the question which forms the title of this address, "Can Unemployment Be Ended?" the answer is "yes, if the right methods are adopted and if they are applied over a period of 5 to 10 years."

I. BAD DISTRIBUTION

What do I mean by "bad distribution"? Simply that the actual division of the product of industry among our industrial groups prevents our industrial plant from operating continuously. The actual distribution gives to one group of income receivers more than they can spend for goods of any sort, and to two other groups less than they could and would spend if they had the money. The first group does not want to spend more for consumption goods and cannot spend all their savings for capital goods; that is, in the form of business investments. The second and third groups would like to buy more consumption goods but cannot do so because they have not the requisite purchasing power. The first group is composed of those who receive interest, rent, and profits; the second and third groups comprise, respectively, wage earners and farmers. Speaking generally but not quite accurately, we may say that capital receives too much purchasing power and labor too little.

Another way of stating our economic predicament is to say that too much of the national income is saved and too little spent. Since the great bulk of savings comes from interest, dividends, and profits, the obvious way of correcting the evil is to distribute less of the national product to the owners of capital and more to labor and farmers. If one-half of the national income paid out in the form of dividends and interest were converted into higher wages for labor and higher prices for the farmers, the improvement of business through increased sales of goods would very greatly increase the volume of employment. That too much of the national income can be saved and too little spent is easily shown by a local illustration. Suppose that the one-third of the people of New Orleans who now receive higher incomes than the other two-thirds were to save on the average of one-half of the amount that they now spend for necessaries, comforts, and luxuries. What effect would that conversion of spending into saving have upon the merchants and other classes of businessmen in this city? I do not need to give you the answer. Well, the evil effect of that hypothetical excessive saving by the higher-income classes in New Orleans is actually repeated all over the United States. However, the necessary increases in spending cannot and should not all come from the rich; it should be provided mainly by the wage earners and the farmers who would gladly spend more if they could.

The enormous expansion in business that would occur if the laboring and farming classes could buy their proportionate share of the goods that a productive plant could easily turn out, is indicated in a recent report of the National Resources Board. This report divides the consumer units of the country into three groups of approximately 13,000,000 each. The units in the lowest division had average incomes of less than $780 per year; the members of the second group received between $780 and $1,450, while the incomes of those in the top third ranged from $1,450 to over $1,000,000. Those in the lowest one-third were able to spend only $7,000,000,000 for consumers' goods; those in the middle group expended fourteen billion, and those in the top group twenty-nine billion. Obviously those in the lowest group could readily have expended as much for consumers' goods as did those in the next higher group, if they had the money, while the latter could have raised their expenditures very considerably if they had larger incomes. Recall that the maximum income of this middle group was only $1,450 per unit. If the lowest and the middle groups had money to buy all that they desired and needed, they would add at least $25,000,000,000 and possibly $35,000,000,000 to the amount of goods demanded and sold in the United States. This is merely my own estimate, but it is confirmed by the much more authoritative estimate of Boris Stern of the Bureau of Labor Statistics. In a discussion of the report he says that if all the families with incomes of less than $2,000 had obtained between $2,000 and $2,500 annually, the total expenditures of all the families in the United States for consumption goods would have been increased by more than $22,000,000,000. In other words, the national income would have been expanded by more than 30 percent above what it was last year and more than 12 percent above the figure of 1929.

America has more than adequate natural resources, productive power, and human intelligence to provide all its inhabitants with decent conditions of living. If our underprovided people had sufficient purchasing power their demand for goods would keep our industries going at full capacity and our workers fully employed. Such is the long-standing challenge which our society proclaims and which neither our industrialists nor our statesmen have yet accepted.

II. ADDITIONAL INVESTMENT?

The great majority of American industrialists and statesmen, together with a majority of American economists, reject the greater part of the argument set forth in the preceding paragraphs. They maintain that our great quantity of surplus money and credit could all be profitably used for the expansion of business, the increase of capital goods, and the extension of employment, if only investors and businessmen could obtain that intangible and mysterious thing which they call confidence. Confidence, they assert, has been destroyed by the acts and policies of the present national administration. When these critics are asked to specify just what Government policies have produced this evil result they become vague, incoherent, and unconvincing. Instead of submitting facts and cogent arguments they repeat over and over again false assertions or empty formulas. As a matter of fact, few if any businessmen refuse to extend their operations or expand their plants, and few if any savers refrain from investing their money, merely because they dislike what the Government has done or fear what it will do to business. When either of these groups decline to put their money into new industrial operations, the main reason is that they cannot find a market for the new products. What they are seeking and what they need is not greater confidence, but a larger volume of sales. They cannot sell more goods because the necessary purchasing power is not in the hands of those who desire to buy.

To be sure, there are probably a few industrial and financial executives who refuse to increase their activities or their investments because they are not attracted by the lessened profits which result from heavy taxes or certain forms of Government regulation. For the most part these are very rich men who are not satisfied with fair or moderate profits. Our economy can very well get along without such exponents of avarice. There will be plenty of businessmen and investors left who are willing to continue and extend their activities so long as they see a fair prospect of decent and reasonable gains.

Even if we had full employment, great prosperity, and unlimited confidence, our present rate of saving would still be excessive; for the opportunities of investment today are not nearly as great as they were 50 years or even 20 years ago. There are two main reasons for this changed situation. First is the general fact that in the language of the economists our economic system has come to maturity. As Franklin Roosevelt put it in 1932. Our plant is built." In our most prosperous year, 1929, our industrial plant was operated at only 80 percent of capacity. Today the operating percentage is less than 70 percent. We shall need no additions to our productive plant until the purchasing power of the masses is vastly increased.

The particular cause of the decline in opportunities for investment by individual savers is the practice of great corporations of accumulating depreciation reserves, surpluses, and other funds which constantly provide all the money that they need for replacement, improvement, and expansion. Before the National Emergency Economic Committee (sometimes called the Monopoly Investigating Committee and sometimes Senator O'MAHONEY'S committee) a few months ago appeared, one after another, the heads of some of the greatest corporations in the United States—Stettinius, of United States Steel; Young, of General Electric; Sloan, of General Motors; and several others—each testifying that his company did not need to call upon investment bankers or any other custodians of savings when it desired to improve or increase its plant. The same thing is true of the great majority of the larger corporations. In the 3 years, 1935, 1936, 1937, 92 percent of the amount spent by American business for plant improvement and expansion came from within the concerns themselves.

How do the critics of the doctrine that I am expounding deal with this difficulty of decreased opportunity for investment? Partly by ignoring the facts; partly by indulging in naive hopes for new inventions and new industries. Those who ignore the facts refuse to examine the situation and content themselves with stubborn and empty wishing that adequate opportunities of investment will be found somewhere, sometime. Speaking of the men who take this position, Milo Perkins, head of the Surplus Food Corporation, says: "I find that most businessmen are intimately aware of the lack of opportunities for capital investment in their own particular line, but they do a great deal of wishful thinking about the large number of jobs which could be created in the other fellow's back yard."

Those who fondly hope that new inventions will provide a way out look back wistfully to the immense increase in capital investment which was created by the automobile. The same thing, they say, can happen again. Yes; but will it? In his last speech of the campaign of 1932, Herbert Hoover poured scorn upon the theory that our plant is built, and pontifically proclaimed that there are in the lockers of science, 10,000 potential inventions, which will provide almost unlimited opportunities for investment and employment. It is more than 7 years since that comforting assurance was given to the country, but not one of these 10,000 potential inventions has yet obtained actual existence. As the philosophers would say, potency has not yet been transformed into act.

Typical of this wishful prophesying and fond imagining about new inventions as a remedy for what ails us now is an editorial in Collier's Weekly for April 6. In this production, we are told that although the land frontier has long since disappeared there are great new industrial frontiers which will vastly and indefinitely increase the opportunities for investment and employment. But in a whole column of generalities and irrelevancies, we find not a single fact mentioned to show that new inventions will provide employment for as many as 1,000,000 men in 5 years. True, the editorial has something specific to say about the advances made in synthetic, organic chemistry, and optimistic generalities about possible new inventions in existing industries. This is scarcely an adequate basis for the large hopes expressed in the editorial.

Probably the most naive and unsubstantial of all the recent declarations concerning new frontiers in industry is that made a few months ago by John W. Hanes, then Under Secretary of the Treasury:

"Your group should have no sympathy with the view sometimes expressed that we are suffering from a matured economy; that our economic frontiers have disappeared; that there is not ample room in the national economy for new investments in enterprise. We would be sad indeed if we found this restricted philosophy accepted. It reflects upon the genius of American science and upon the drive and ingenuity of our people; it is inconsistent with our insatiable demand for an ever higher standard of living; it is repudiated by the achievements of the past and the prospects of the future."

Some of those who look for a solution of the unemployment problem through new inventions or increased investment without new inventions, assume that the proportion of the national income expended in the capital-goods industries must become again what it was before 1929 and argue that our main efforts, therefore, should be directed toward restoring this condition and this proportion. Obviously, this thesis is devoid of logic, and completely out of accord with recent developments in our economy. The simple and conclusive answer to it is this, instead of putting as much money into new capital instruments as we invested before 1929, we should transfer a great part of our idle funds to labor and the farmers. They would spend it for consumption goods, thus enabling our plants to operate at full capacity and creating a demand for new capital goods. This procedure would put the horse before the cart. New capital goods, such as factories, stores, banks, and railroads, should not be created until there is a demand for their products; this demand will not be forthcoming until farmers and wage earners obtain more purchasing power.

Giving a great share of the national product or national income to these two classes would not prevent useful new inventions or new investments. On the contrary it would assure a market for their products. It would provide a solid reason instead of a pious wish for hoping that the new products could be sold.

In passing, let me say that I have very little sympathy with the desire for new inventions as a remedy for inadequate employment. Most of the new inventions would probably take the form of higher comforts and luxuries. Far better would it be to engage our unused money and unemployed men in creating the necessaries and the ordinary comforts of life for the millions who are now deprived of these goods. These are the farmers and the wage earners, and their needs can be supplied without any new inventions.

I have presented the two conflicting theories concerning the causes of and remedies for unemployment. According to the one, unemployment can be ended only by transferring purchasing

power from those who cannot or will not exchange it for consumption goods to those who could and would do so if they had the money, namely, farmers and wage earners. According to the other theory, the remedy must come from increased investment and increased production. The great majority of persons who do any thinking on the subject cling to one or the other of these theories. I have given you the reasons why I believe that the first theory is true and the second false.

III. THE PROBLEM OF INCREASED PURCHASING POWER

Three principal methods available to expand the purchasing power of farmers and wage earners are: Lower prices, higher wages, and lower interest rates. In the fourth volume of the very valuable Brookings Institution Series on Income and Economic Progress, Dr. Harold G. Moulton relies upon the lower-price method alone. The present unnecessarily high prices, with their evil effects upon business and employment, constitute, he says, a challenge to the businessmen of America. Unfortunately, that challenge has not yet been accepted. Nevertheless, the situation is not entirely hopeless. The recently adopted methods of the Antitrust Division of the Department of Justice under Thurman Arnold give good reasons for believing that some prices can and will be reduced through the elimination of monopolistic practices. This is particularly true of building trades. When Mr. Arnold has cleaned up this mess, he may find ways to deal with and reduce what are called administered prices. While these are not, in the strict sense, monopoly prices, they reflect the same arbitrary performances and produce the same baneful effects. A substantial reduction in the prices of manufactured goods would principally benefit labor and the farmers, enabling both groups to obtain a greater share of the national income. At the same time the owners of capital would save less and have less to expend in vain investments.

Wages can be increased in various ways. One is through the activities of powerful labor unions. These should be encouraged and extended. A second method would be voluntary increases in wages made by employers who can afford the increases. This program would not only benefit the employees of such employers but would have the powerful indirect effect of compelling competitors to emulate this example. Unfortunately, not many employers are likely to adopt this course which has back of it no other compulsion than conceptions of social justice.

Neither labor-union efforts nor the voluntary action of employers will be adequate. The intervention of government is indispensable. Any intervention by government in the national economy is one form or another of a planned or controlled or regulated economy; and in this connection I would call attention to the amazing tirades against economic planning which we have been hearing from some candidates for public office and from spokesmen for industry and big business. For instance, President Prentiss, of the National Association of Manufacturers, told Virginia industrialists at Richmond that economic planning might eventually lead to the loss of our traditional civil and religious liberties—a perfectly absurd idea, of course—while J. Howard Pew, vice president of the same organization, described economic planners as men who "would have the Government do our thinking for us."

Why all this alarm about economic planning when no proposed kind of economic planning is specified? Economic planning per se is not a bad thing. Industrialists themselves have long had economic planning in their plants and industries. The Tennessee Valley Authority is a great and successful example of an experiment in Government planned and directed economy, and all our pump priming through Government expenditures for public works is another kind of planned economy. I am one who is not to be frightened by any bogeyman monster conjured up by those industrialists, and I would reply to Mr. Pew that perhaps it is high time the Government did do more of the thinking for him and his associates.

The form of economic planning which I suggest for dealing with the wage problem is a far more comprehensive program of minimum-wage legislation by the States and the Federal Government. Some 26 States have already passed such laws and the Federal Government has enacted a maximum-hour and minimum-wage law. All the other States should adopt similar legislation, and the Federal law should be adequately enforced and minimum standards should be raised.

In addition to the minimum-wage and maximum-hour law, in addition to all the feasible devices that may be employed to increase the incomes of the farmers, and in addition to any program of Government spending that is likely to be adopted, there is necessary as quickly as it can be contrived and set up, a comprehensive system of economic planning. This is a very large and complex subject, and it can be only briefly sketched here. Within the last 3 years several bills have been introduced in Congress providing for industrial expansion. The following description of one of the plans is taken from a review in the New Republic, April 19, 1939, of Mordecai Ezekiel's book, Jobs for All:

"The essential features of industrial expansion can be set forth very briefly. Every year a central planning authority would decide upon the minimum national income to be aimed at. It would then calculate the probable output of all major industries assuming such an income level. Finally, contracts calling for the calculated output, and including certain stipulations on maximum prices and minimum wages, would be entered into between Government and industry authorities, the latter composed of representatives of management, labor, consumers, and Government. The Government would agree in these contracts to absorb all surpluses unsold at the end of the year at prices somewhat below the market. Plans for subsequent years would have to provide for the disposal of any stocks which the Government might thus acquire. In this way producers generally would be assured of an increased demand, and the planned national income would quickly be translated into the actual national income."

Finally, interest rates need to be reduced in order to check the excess of savings and to transfer a part of the national income from the owners of capital to the wage earners and the farmers. In the last 5 or 6 years the general rate of interest has fallen considerably, but the process has not gone far enough. Every device that is within the reach of the Government should be employed to effect still further reductions. The goal should be a general rate of interest not in excess of 2 percent.

IV. IMMEDIATE GOVERNMENT POLICIES

While we are waiting for the adoption and effects of the remedies suggested above we should not forget that there are several millions of persons out of work now and that the situation in this respect is not going to cease this year or next year. Those millions of persons are human beings and they have moral claims upon the community. There are some indications that the community is becoming indifferent, if not hard-hearted. In the Catholic Charities Review, March 1940, the editor, Msgr. John O'Grady, has this to say:

"As one moves around the country he cannot fail to be impressed by the increased indifference toward relief of all kinds. In some places this indifference is appalling. People are no longer stirred by stories of hunger and starvation. One naturally keeps on asking, what is the reason for all this? Some say that the American people are tired of relief; others will tell you that it is a return to the old-time spirit of individualism. One, however, can hardly be satisfied with these answers and he begins to wonder if the attitude of the people does not represent a certain amount of helplessness: We have tried; we have done our best; there is nothing more we can do."

The only agency capable of fulfilling the obligations of the community to these unfortunate millions is the Federal Government. Hence, the W. P. A. should be continued and the appropriations for it should be increased. In his Budget message a few months ago, the President recommended an appropriation of $1,000,000,000 for the current year. This was only two-thirds of the amount spent last year but the President then expected that private industry would absorb the millions unprovided for in his Budget. We know now that private industry will be unable to fulfill this expectation and that unless the appropriation is increased, 800,000 unfortunates will be dropped from the W. P. A. rolls between now and July 1. Therefore, the new appropriation should not be $1,000,000,000 but at least one and one-half billions. Moreover, two or three billion dollars should be appropriated for a continuation of the P. W. A., to be expended on various public works but principally on low-cost houses. Finally, the subsidies to the farmers should be continued until farm prices have approached much more nearly to what is called parity.

The lower House of Congress pretends to be fearful about our large national debt. Some of its leaders frequently assert that under the present administration the Federal debt has been increased by twenty-one and one-half billion dollars. As a matter of fact, the actual increase is only fifteen billion, inasmuch as the Federal Government has proprietary interest in Government corporations to the amount of six and one-half billion dollars. At any rate, there is no need of increasing the national debt further in order to provide the increased appropriations suggested above for W. P. A. and P. W. A. The only thing necessary is to increase taxes.

Prof. Harold M. Groves, of the University of Wisconsin, a very high authority, points out that if the United States adopted the British rates, there would be available two or three times as much as is now collected by our taxes on incomes and inheritances. An incidental and very beneficial effect of such increased taxation would be a reduction in the amount of money saved and a transfer of money to those who would spend it.

If it be objected that this proposal would take from those who have and give to those who have not, the answer is, "Yes"; but the taking and transferring process would be done legally and ethically, not by crude confiscation. All taxation exemplifies this principle of taking from the "haves" and giving to the "have nots"; for those who are unable to pay any taxes receive police and fire protection and other Government services, to say nothing of relief and security against starvation. What is proposed here is merely an extension of the fiscal principle involved and an application of the moral principle which requires all members of the community to promote the common good and practice social justice according to their ability and opportunities. Speaking of the obligation of the state to deal with unemployment, Pope Pius XI said: "The wealthy classes must be induced to assume those burdens without which human society cannot be saved nor they themselves remain secure."

It is frequently objected that pump priming as exemplified in public works has not been successful, since we still have 10,000,000 persons unemployed. This is a very unfair statement. In 1933, when the pump priming began, there were between thirteen and fifteen millions out of work, as compared with 10,000,000 today; since 1932 the national income has been increased by 75 percent, and millions of Americans have been saved from starvation and utter degradation; moreover, the country is richer by billions of dollars on account of beneficial public works and institutions. These are solid, tangible results of W. P. A. and P. W. A. If the opponents of public spending were honest and logical, they would contend that the Federal Government should have spent nothing;

that it should have relied on private industry, private investment, and the magic of confidence to set in motion the automatic forces of recovery. Well, all those methods received a full and fair trial from the beginning of 1930 until March 1933, and we know how they worked. Those of us who reject as futile the investment and confidence methods now advocated by politicians, industrialists, and journalists should never let these critics forget the years 1930–33. We should compel them to show wherein their proposals differ from the methods which were tried with such disastrous results during those 3 years—those 3 years which are now unwept, unhonored, and unsung.

Public works can prime the pump in the sense that so long as they are continued they cause an increase in private business and private employment. The ratio, I believe, is two and one-half men employed in subsidiary private industries for every one engaged upon the public project. After the stimulus of public works is withdrawn, however, private industry cannot continue at the pace that it has artificially acquired. Even if the Government were to put into operation a program of public works so large that all the unemployed found either public or private jobs, private industry alone would not be able to continue this happy condition. Private industry would be unable to continue with full operation and full employment. The reason is to be found in the bad distribution, in the fact that the owners of capital still would receive more than they could spend and that labor would obtain less than it would like to spend. In other words, the industrial pump would not stay primed, unless capital received less and labor more than under the present distribution.

V. CONCLUSION

I sincerely believe that the methods advocated in the foregoing paragraphs are the only means by which we can end unemployment and remove this grave reproach upon our morality and intelligence. Even if all these methods should be adopted, progress would be slow because the difficulties are great. On the other hand, there is no alternative but futile and pitiful wishing. If we heed the objections to our program, nothing will be done. If we adopt this program, we shall make gradual progress, in the meantime taking decent care of the unemployed. The principal obstacle to the adoption of this program is a very old vice: it is simply avarice. Because of avarice, owners of capital do not like the idea of 2-percent interest; because of avarice, a small number of cattle owners in our Western States nearly wrecked Secretary Hull's reciprocal-trade program; because of avarice, the leaders of a few powerful labor unions join with building contractors to plunder the public and to render impossible housing for the poor; because of avarice, many employers are seeking to destroy the Federal minimum-wage law and the National Labor Relations Act; because of avarice every group thinks only of its own miserable little gains and neglects entirely the demands of the common good.

Mr. Thorkelson's Misuse and Abuse of the Congressional Record

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1940

Mr. SABATH. Mr. Speaker, I call the attention of the House to the misuse of the CONGRESSIONAL RECORD for the spreading of class prejudice and pro-Nazi ideas through the insertion of altogether too many pages of remarks by the gentleman from Montana [Mr. THORKELSON].

During the present Congress, up to today, the gentleman from Montana has had 420 columns, or 210 full pages of remarks, in the RECORD. This excessive and wholly uncalled for amount of space, at the minimum cost of $45 per page to the Government, has cost the taxpayers of the Nation $9,400—a rather large sum for the type of viewpoint the gentleman from Montana inserts regularly in the RECORD.

I might point out to him and to the House that if every one of the 435 Members had similarly abused the extension-of-remarks privilege—and every one of us would have as much right to do so as the gentleman, if we were so minded—the cost to the taxpayers would aggregate over $4,000,000.

This use of taxpayers' money would not be so serious in itself, if, through the use of parliamentary devices, the gentleman did not try to give the readers of his remarks the misleading impression that the many discourses that appear under his name were actually made on the floor, when in fact they were not.

What does the gentleman do with all these so-called speeches that are not made on the floor of the House but are inserted in the RECORD under leave to print? It might be interesting to the House to have this question answered.

My information is that the gentleman had 43 different inserts or speeches printed in pamphlet form between January 1939 and April 24, 1940, and their aggregate may reach close to 1,000,000 copies, and circulated under the gentleman's frank at the expense of American taxpayers. I wonder if he pays for the printing of the speeches or whether the expense of printing is borne by some of the organizations of questionable loyalty and patriotism for which he is fast gaining the reputation of serving as propagandist and publicity man in the House of Representatives?

COMES CLOSE TO UNFORGIVABLE MISREPRESENTATION

Mr. Speaker, lest the House forget something that it never should forget, much less condone, I wish to recall that it was the gentleman from Montana [Mr. THORKELSON] who had the audacity to place in the CONGRESSIONAL RECORD under leave to print one of the most damnable and amazing documents that ever found its way into the records of the American Congress.

I refer to a letter purporting to have been signed by the late Col. E. M. House, closest confidant and adviser of President Woodrow Wilson throughout the World War, to the Right Honorable David Lloyd George, then Prime Minister of England. In this letter Colonel House was put in the position of carrying on a conspiracy in the United States to actually restore the American Colonies to the dominion of the British Crown.

This monstrous and diabolical alleged secret state paper was placed in the RECORD by the gentleman from Montana on October 11 of last year. It was, of course, later proven to be spurious. The signature was shown to be a forgery. But although the Member from Montana was later forced to admit that he had no proof of its authenticity when he placed it in the RECORD under leave to print, the RECORD reveals that he at first tried his best to make it appear that the signature was indeed that of the world-renowned Col. E. M. House, the friend of Woodrow Wilson. When the document was proven false in every line, the gentleman from Montana finally had to have it expunged from the RECORD, but he did not do it very gracefully or with very good will, as the following extract from the RECORD of October 13, 1939, page 713, will, to his everlasting discredit, forever testify:

Mr. THOMASON. May I ask the gentleman if this is the late Col. Edward M. House, of Texas, and at one time the intimate of President Wilson?

Mr. THORKELSON. That is who it is supposed to be; yes.

Mr. THOMASON. Supposed to be? Does the gentleman have positive information that it is the same Colonel House?

Mr. THORKELSON. What does the gentleman mean by positive information?

Mr. THOMASON. I am anxious to know the authenticity of this letter.

Mr. THORKELSON. I think, if the gentleman will read the letter, if he will review the things that happened since the letter was written and what happened before the war, and if he will take other things into consideration, I think he will find that the letter is authentic in the manner it is written.

* * * * * * *

Mr. THOMASON. May I say that Colonel House is not here to defend himself, and I think a rank injustice may have been done a very distinguished citizen.

Mr. THORKELSON. It is not a rank injustice. I do not care if the man who wrote that letter came from Texas or anywhere else.

* * * * * * *

Mr. THOMASON. I do not know whether it is the genuine signature of Colonel House or not, but I do not hesitate for one minute in saying that I have very serious doubt about it.

Mr. THORKELSON. The fact remains that the history in that letter speaks for itself.

Mr. THOMASON. I want to know if Col. E. M. House signed this letter.

Mr. THORKELSON. I did not see Colonel House sign the letter, but the letter contains factual history which proves itself.

SIGNATURE PROVEN AN OUTRAGEOUS FORGERY

Let us go over this remarkable forged document that the Member from Montana placed in the RECORD and so evasively attempted to defend.

In the letter, dated at "British Consulate, New York City, June 10, 1919," Colonel House is made to write to Premier Lloyd George that no stone was being left unturned to restore the United States to the British Crown. For instance, Colonel House is made to say:

From the moment of my arrival here it was evident to me that such an Anglo-American alliance as would result in the return of the American Colonies to the dominion of the Crown could be brought about only with the consent of the dominant groups of the controlling clans.

* * * * * * *

We are replacing with the song America the scurrilous Star-Spangled Banner, which, after expurgating, we socially ostracized. America, which has the same air as God Save the King, is usually played and not sung, so, in effect, we are conferring on this Colony the imperial anthem.

* * * * * * *

We have spread everywhere the Boy Scout movement and placed the 1,000,000 American Boy Scouts under Sir Baden-Powell (an Englishman).

* * * * * * *

Members of the Roosevelt (Theodore), Lamont, and other first families hastened to volunteer for service under our flag.

* * * * * * *

A number of distinguished Americans, including President and Mrs. Wilson and the Presidential son-in-law, have all been very helpful, and all the official family, male and female, have been zealous, even where they have proved expensive.

* * * * * * *

We are at present engaged in a campaign to Americanize the schools to make obedient loyal little Britons out of the undisciplined native young.

* * * * * * *

With the active cooperation of the administration, our "American" defense societies, security leagues, protective associations, and other extralegal bodies enabled us to terrorize, sterilize, and standardize—in a word, "Americanize"—the minds of the people and their legislators, so that their conduct, and even their thoughts, conformed scrupulously to the common pattern we had laid down for them.

* * * * * * *

But I cannot let pass this opportunity to record our appreciation of the innumerable ways in which the loyalty of Mr. Gompers has been demonstrated. He checkmated strikes * * * he controlled the labor press * * * he has made organized labor here more imperial than is labor in England.

* * * * * * *

British born and trained prelates, divines, and pastors have been provided as popular preachers here in many of the leading churches.

We are arranging to augment the number of British professors in the various theological seminaries here.

Within 6 days after the insertion of the humbug and fake document by the gentleman from Montana it had been thoroughly discredited and exposed as pure and unadulterated forgery. On October 16 the gentleman from Texas [Mr. THOMASON] placed in the record a letter signed by Frances B. Denton, who had been for 45 years Colonel House's confidential secretary, in which she stated:

I can testify and will be very glad to do so at any time that the letter was never dictated by Colonel House, never signed by Colonel House, never authorized by Colonel House, and is entirely and altogether spurious, purporting as it does to be a letter of Colonel House.

But the fictitious and forged letter had been printed in the RECORD, and therefore broadcast throughout the United States. The damage had been done, thanks to the gentleman from Montana, to the memory of a great and distinguished and patriotic American citizen. Is it any wonder that now we ask the gentleman exactly what he intends to insert when he requests permission to extend his remarks in the RECORD?

SPEECH OF JOHN A. MARTIN STILL REMEMBERED

On October 20, 1939, the late Representative from Colorado, the Honorable John A. Martin, took the floor of the House, and delivered a castigation of the Member from Montana unlike anything that had ever been heard in this Hall. Said he, in part, on that memorable occasion:

Mr. Speaker, I have read with the utmost amazement the curious document inserted in the daily CONGRESSIONAL RECORD of October 11 by the Member from Montana [Mr. THORKELSON]. It must be the most scurrilous, the most reprehensible, the most un-American document ever printed within the two covers of the CONGRESSIONAL RECORD. It could only have been conceived by a mind poisoned against America and all its leaders and all its activities, and it could be credited by no man with sufficient knowledge and intelligence to occupy a seat in the American Congress, no matter by what fortuitous chance of politics elected.

I have read but one document in my lifetime which could compare with it in the impress of falsity, of spuriousness on every page, in every paragraph, in every sentence, in every line—the most damnable tissue of falsehood the human mind could conceive. The other document was an alleged oath of the Knights of Columbus, so manifestly absurd, so patently a malicious concoction, that to read it was to refute it. But, no doubt, when the occasion serves it will bob up again as it has in the past to inflame the minds of the ignorant and credulous against a great patriotic American organization which distinguished itself in the service of soldiers of all creeds in the World War.

Withdrawing such a defamatory and injurious document from the permanent RECORD does not suffice. What is written is written. It has been scattered to the ends of the earth in the daily RECORD. Its sponsor should be dealt with in such a manner as to visit the official condemnation of the House of Representatives upon him and it, not simply withdrawing it at his request, while still standing on his avowal of its truth.

I want to mention some of the illustrious American names and American institutions besmirched in this alleged proposal of a distinguished American to make this great Nation again a vassal of the British Crown, which is the whole purport of the document:

Woodrow Wilson, former President of the United States; William H. Taft, former President and former Chief Justice of the United States; the entire family of former President Theodore Roosevelt; former Attorney General George W. Wickersham; Gen. John J. Pershing, commander in chief of the American Expeditionary Forces in the World War, contemptuously referred to as "Sir" John Pershing; Gen. Tasker H. Bliss and Gen. Peyton March, distinguished American generals of the World War, referred to as "Sir" Tasker Bliss and "Sir" Peyton March; William Sims, distinguished admiral of the American Navy, listed as "Sir" William Sims; Samuel Gompers, founder of the American Federation of Labor, repeatedly referred to as a most effective tool of the British Government in lining up labor for the proposed colonization of America; Elihu Root, distinguished lawyer and outstanding American; President Eliot, of Harvard, and President Nicholas Murray Butler, of Columbia, alleged propagandists of British treason in America; Senator King; Franklin K. Lane, former Secretary of the Interior; William B. Wilson, first Secretary of Labor; Alfred Noyes, for 40 years head of the Associated Press, and owner of the Washington Star; Frederic Wile, distinguished writer; James M. Beck, a former distinguished Member of the House of Representatives; J. Pierpont Morgan, John D. Rockefeller, Cleveland Dodge, John Wanamaker, and numerous other leaders of American education, journalism, finance, industry, and public life; too many to mention.

No American institution is spared—the American Red Cross, the Boy Scout movement, the Young Men's Christian Association, the Young Women's Christian Association, the Carnegie Foundation, and many other educational and civic and religious and charitable bodies are smeared with treasonable activities in this infamous document. A painstaking effort to besmirch is obvious in every line. Its slime spreads with every paragraph. It leaves nothing American untouched or undefiled. America's illustrious dead are held up to the scorn and contumely of all patriotic Americans.

No; merely expunging such a document from the permanent RECORD will not undo the wrong or meet the ends of justice. It reaches out beyond the confines of the United States. It is an alleged exposé involving our relations with all of Latin America and with countries of Europe. It seeks to array the world against the United States as a venal tool of Britain. Do not tell me that any man in his right senses could have considered this an authentic document or could have sponsored its publication in the CONGRESSIONAL RECORD unless he was thoroughly saturated with the rancorous mind of its author and shared his hatreds.

This righteous indictment, Mr. Speaker, every word of it true, every word of it justified, uttered by one of the best and truest Americans that ever occupied a seat in this historic Chamber, coming back now as it does like an accusing voice from the grave, should become a heavy burden upon the conscience of the gentleman from Montana that he will not be able to throw off, evade, or escape to the last day of his life.

HITLERISM MUST NEVER BE PERMITTED TO OBTAIN A FOOTHOLD HERE

And now, Mr. Speaker, I hope this is the last time that I will have to dignify by an answer the scurrilous insertions of the gentleman from Montana [Mr. THORKELSON], carrying the mouthings of Pelley, Mayne, True, Wilson, McWilliams, Trevor, et al., professional pail vilifiers, poison-pen Nazi publicists, and defamers who for months have been carrying out the policy of the Hitler-Nazi regime in this country as has been done in Austria, Czechoslovakia, Danzig, the Polish Corridor, Poland, Denmark, Norway, Holland, Luxemburg, and Belgium, all to create resentment against the democratic countries of Europe.

Hitler's methods in all those countries were against every principle of decency, justice, and fair play. He resorted to every possible foul means, even to the bribing of citizens to betray their own countries and permit their invasion and destruction by German troops. Every one of the countries that he destroyed had leaned backward to be neutral. They all had peace pacts or treaties with Germany which Hitler had assured them guaranteed their peace and safety. If Hitler wins this war, which God forbid, no remaining free and independent country can ever feel safe. Any treaty with him would not be worth the paper it was written on.

Months ago on this floor I directed the attention of the House to alleged embezzlement on the part of high German officials, among whom were Goering, Hess, and others. I stated then their explanation that these moneys were obtained for propaganda purposes, was not more than half true; that what they really used the money for was to bribe and pay men to turn traitors to their own homeland.

They connivingly charged real patriotic organizations and patriotic men and women with communism to detract attention from their own subversize pro-Nazi activities. Their continuous attacks upon the international Jew and Jews in general shrewdly and unscrupulously is being used to a far-reaching extent because so far they have been able to succeed in obtaining the cooperation of the Silver Shirts, the unchristian front, and professional poison-pen slingers like Pelley, Mayne, McWilliams, and others. Unfortunately, I regret to say, the cooperation of the gentleman from Montana [Mr. THORKELSON] has been enlisted. He has filled the CONGRESSIONAL RECORD with their lying accusations to such an extent that a gentleman in the Chamber on the other side of the Capitol has introduced a bill to prohibit a continuation of such questionable practices in Congress.

Mr. Speaker, to familiarize those who might, due to lack of information and knowledge, know the source from whence these articles emanate, I have set forth to what extent the gentleman from Montana has been duped and used by these forces, because I cannot believe that these statements which he inserted were believed by him.

HITLER VIOLATES ALL RULES OF CIVILIZED WARFARE

Press reports in the last few days disclose that the Nazis have painted Dutch flags on their ships, that they have dressed their parachute troops in Dutch uniforms or disguised them as peasants, even as women, while still others have been found in the garb of friendly Nazi-Hollanders. I have never read of an instance in history when even the barbarians of old stooped so low in their warfare against an enemy. Hitler certainly has set a brand new code of "civilized" warfare. For instance, in the past it has been the custom for one nation to fight another only if it is at war with the other. But Hitler, under his code, invades and destroys other nations, all of them his best neighbors, whether he is at war with them or not; nations, in fact, with which his own were enjoying perfect peace. In the effete and humane past, even in declared and justified warfare, it has been held but humane and civilized for armed soldiers to confine themselves to killing enemy armed soldiers only. But under the Hitler code it is much different. He has his soldiers kill not only other soldiers with whom he is not at war, but goes a step further and has them blitzkrieg and bomb civilians and takes in women and children as well. No one will ever know how many women and children and babies have died already in this war, to say nothing of the thousands that have had their legs and arms blasted off, and their eyes shot out.

It is in the fear that the barrage of subversive propaganda that preceded and prepared the ground for the hideous destructive practices now existing in the European countries, that I am prompted to point out that the subject matter contained in the extension of remarks of the gentleman from Montana carry the self-same type of propaganda that Hitler used in Europe. Pray God that it does not have the same effect.

SUBVERSIVE PROPAGANDA IS AT HIGHEST FLOOD EVER KNOWN IN UNITED STATES

Within the last few days my attention has been called to several extensions of remarks in the CONGRESSIONAL RECORD which will certainly have the effect of creating fear and racial prejudice. Many of these statements or inserts appear to be a deliberate effort to instill in the minds of the American people a fear of Communistic activities. To me it is clear that it is done for the purpose of shielding the activities of representatives of Nazi and subversive organizations who are, as I have stated, shrewdly and connivingly utilizing the CONGRESSIONAL RECORD not only to create prejudice but, also, for the purpose of injuring and weakening organized labor.

I am satisfied in my own mind that many of these articles were written or inspired by Messrs. Pelley, Mayne, Steel, and their kind, who are highly paid and employed for their propaganda ingenuity by subversive organizations. If the American public were aware that some of these men have been convicted for conspiracy, and that others are on trial in New York on the charge of conspiracy to overthrow the Government, very little credence would be given to the half-truths and lies emanating from their pens. But, unfortunately, there are many well-meaning men and women in the United States who do not know that most of their attacks are untrue and without foundation. When I worked to obtain the passage of the first resolution to investigate these subversive organizations and a committee was appointed, headed by the gentleman from Massachusetts [Mr. MCCORMACK], and which committee did a fine service, and, later on, when I voted for the authorization of the Dies committee and large sums for its continuation, totaling $200,000, I was in hopes that such investigation would penetrate the activities of all organizations guilty of subversive and un-American activities. But, unfortunately, the gentleman from Texas [Mr. DIES] only superficially investigated the dangerous groups and devoted himself principally to attacking and investigating Government employees and labor organizations. He has missed a great opportunity to render a real service to America. He has failed to carry out the intent of Congress to investigate the real culprits working against American institutions, namely, the bunds, Silver Shirts, and unchristian front.

It was the work of the local authorities in Chicago that brought about the indictment and conviction of the persons who were charged with conspiracy. Again, in New York, it was the action of the Federal Bureau of Investigation, under the leadership of J. Edgar Hoover, that brought about indictments of persons charged with conspiracy. It was only a few days ago that Mr. Hoover's achievements were applauded in this House. Mr. Speaker, not only the men on trial, but those who in any way aided them, should be charged with treason, because evidence has already been produced to prove unmistakably their possession of guns, ammunition, and violent plans to overthrow our form of government.

GREATEST DANGER TO UNITED STATES IS FROM WITHIN

Only a few weeks ago the vile machinations of the Silver Shirts and other organizations came to light. But the leaders, officers, writers, and publicists of these organizations, shrewdly and designedly, in order to minimize their treasonable acts, unerringly write about the alleged dangers of communism on the one hand, and then on the other, with malicious and deliberately false statements, vilify and charge the Jewish people in one breath with controlling the capital of the Nation and then in the next breath charge them with being the agents of Stalin and communism. The sole object of all this hocus-pocus propaganda is in my opinion to camouflage their own questionable and un-American activities.

Mr. Speaker, I know that tolerant, sane, and intelligent persons are not led astray by this loathesome propaganda, but there are many uninformed or misinformed who are not

familiar with the plans and purposes of the conniving and shrewd conspirators and thus are led to believe them. It is to be regretted that some Members of Congress, who take the following oath—

I do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter—

Seem to fail to realize the duty they owe to the House and their responsibility to the country.

If there is any danger to our country from within, Mr. Speaker, it comes from those repulsive forces that I have mentioned and those misguided Nazi followers who are endeavoring to accomplish here, evidently, the same frightful results brought about by traitors and Nazi propagandists in Austria, Czechoslovakia, Poland, Finland, Norway, Belgium, and the Netherlands.

It was vividly pointed out to me the other day that what is being done to European countries may be done to the United States before long. I sincerely hope, however, that no degree of treachery will ever succeed in undermining the patriotism of our citizens. Contemplating the horrible disclosures of the methods of intrigue and espionage employed by the Nazis in the taking of the small, peace-loving countries on the other side of the Atlantic, I can only say that it is my fervent prayer and hope that our citizenry will awake to the dangers of the pro-Nazi propagandists who are now and have been for some time seeking to create discontent among our own people. To our younger generation do I especially appeal to ever be on the alert and guard against such false and un-American propaganda.

AN ANSWER FROM THE NONSECTARIAN ANTI-NAZI LEAGUE

In view of the many misstatements not founded on fact inserted by our colleague, the gentleman from Montana [Mr. THORKELSON], in answer to the Nonsectarian Anti-Nazi League, I have been requested to insert in the RECORD a letter to disprove his statements and, at the same time, set forth certain of his activities and apparent connections with the real subversive organizations which he has addressed in New York City, and cooperation with various men who are generally known for their reckless charges against the Jewish people under the cloak of branding them with communism. The letter, in part, follows:

On May 6, 1940, Congressman THORKELSON attempted to reply to the speech of Congressman SABATH (made May 2, 1940), in which Mr. SABATH cited the answer of the Nonsectarian Anti-Nazi League to Champion Human Rights to Mr. THORKELSON'S scurrilous attacks.

The word "reply" and not "answer" is used advisedly, for in the 11½ columns of the CONGRESSIONAL RECORD his diatribe consumes, he mentions the league only in passing; he just mentions, but does not answer a few of the many arguments advanced against him, and he devotes most of his time and space to a vitriolic, almost hysterical, attack on the Jews of Russia, Hungary, Germany, and the United States; attacking also the Catholic Committee for Human Rights.

We are concerned chiefly with the subversive activities of Nazi-inspired persons and organizations in the United States, and are interested mainly in those parts of his speech which deal with the Nonsectarian Anti-Nazi League and its activities. We will, therefore, answer those parts of his speech first.

In every court of justice, before a judge or jury can evaluate the evidence attested to by a witness, his reputation for veracity or prevarication (to use a respectable word for lying) must be established.

Let us apply this rule in our case.

Mr. THORKELSON states:

"The gentleman from Illinois next inserted over two columns of names of persons who are supposed to represent the sponsors of a paper called the Voice for Human Rights. This appears impressive. The writer, however, forgot to state that many of these sponsors have withdrawn their names because they found the Voice was edited by Jews who did not express the viewpoints of the sponsors, and for that reason these sponsors compelled the editor to make this retraction in the issue of April 1940."

What are the facts?

The editor of the Voice is Dr. Emanuel Chapman, a Catholic and an assistant professor at the Graduate School of Education of Fordham University, and there is not a single Jew among the members of the Catholic Committee for Human Rights.

To substantiate his claim that many sponsors of the Catholic committee have withdrawn because they found the Voice edited by Jews, Mr. THORKELSON prints 12 letters, apparently hoping that no one will read them and that everyone will accept his word for the statement that:

"It should be clear after reading these letters that the persons named as sponsors for this publication are not in accord with the views expressed in it, and this is perfectly proper and right, as there is no relationship between Christianity and Judaism."

But, if you do read these letters, you find that not in a single one of them is mentioned the fact that the correspondent withdraws because he found the Voice was edited by Jews, nor on account of finding that there is no relationship between Christianity and Judaism. For lack of a more suitable designation we will call it a pure misrepresentation.

In answer to our inquiry, addressed to the Voice, we have received the following reply:

"In response to your inquiry the Voice is published by the Committee of Catholics for Human Rights, whose membership includes more than 300 prominent American Catholics, both clerical and lay, all opposed, naturally, to anti-Semitism, anti-Catholicism, and all other forms of racial and religious bigotry.

"The Voice for Human Rights is the official organ of the committee," and its editorial board of seven consists of four priests and three Catholic laymen.

"Sincerely yours,

"EMANUAL CHAPMAN.
"Per T. DUNLEAVY."

We submit, gentlemen, in view of the barefaced "statements," by Mr. THORKELSON, how much credence should be given to any other statement made by the gentleman from Montana.

The first relevant remark concerning the Non-Sectarian Anti-Nazi League, which Mr. THORKELSON makes in this latest outburst, is in connection with his pet aversion—communism. In his previous three attacks on the league, Mr. THORKELSON accused this organization of being communistic. We quoted in full the resolution (unanimously adopted by 300 delegates representing 150 affiliated organizations of the Non-Sectarian Anti-Nazi League) in which the Communists are roundly condemned as "blood brothers" of the Nazis and common enemies of our democracy.

Of late there has been a tendency among the leaders of the bund, Christian Mobilizers and similar organizations preaching foreign "isms" to seek shelter behind the hood of the K. K. K. Their own ideas of totalitarianism, Hitlerism, nazi-ism, etc., are so palpable, un-American, that even your assurance on the pages of the CONGRESSIONAL RECORD that the Governments of Germany, Russia, and Italy are pure democracies, cannot cover the nature of their propaganda. These subversive groups have therefore attempted to mask their activities by joining the Klan as the organization whose claim of being native American, no one can dispute. We have proof that the German-American Bund offered thousands of its members to organizers of the Klan and on several occasions it was published and never denied that the leader of the Christian Mobilizers went to Atlanta, Ga., and either applied for membership or actually joined the Klan. That Klan cartoon, Mr. THORKELSON, was to show the trend of the subversive un-American organizations to hide themselves under the hood and nightgown of the Klan. May we take this opportunity of notifying your friends, through you, that their efforts to join the Klan will not succeed. To the best of our knowledge, officials of the Klan, at least in the Eastern States, consider the Nazi Bund, Christian Mobilizers, and Christian front, as foreign agents, preaching an alien doctrine inimical to our form of Government and, for the time being, want none of them. You may save your friends a lot of trouble and heartaches by transmitting this message to them.

In another of Mr. THORKELSON'S arguments against the league, he quotes from our answer:

"Perhaps you are not aware of the fact that our native Fascist groups, masquerading under patriotic or Christian names, are Nazi-inspired or Nazi-contrived. Permit us to bring to your attention excerpts from reports of their meetings."

And then adds:

"The letter then goes on and quotes from reports of the meetings of various organizations in which [neither?] I nor anyone else has particular interest. The purpose of these quotations, however, is clear, for the writer of the letter by implication attempts to slander me."

If this statement means anything, it means that Mr. THORKELSON denies any special interest in such organizations as the Christian Mobilizers.

Now, let's look at the record, and in this case it is the CONGRESSIONAL RECORD of the same date, Appendix, page 2707, in which Mr. THORKELSON prints his speech before the Christian Mobilizers, delivered on March 6, 1940, in New York.

He quotes:

"Mr. Chairman, ladies, and gentlemen, I am pleased to be here tonight, on the invitation of Mr. McWilliams, whom I recently had the pleasure of meeting in Washington. * * * Mr. McWilliams, from my observation, is one of those stanch Americans who believe in the principles of this Republic, and it is those principles, and the manner in which they are abused, that I shall discuss here tonight."

And do you know what Mr. McWilliams' principles of Americanism are, Mr. THORKELSON?

In our answer of May 2 we quoted some of the statements made by Mr. McWilliams. Let us refresh your memory:

On March 12, 1939, this "patriot" stated at a meeting in the Iroquois Hotel, New York: "We must hate, we must arouse the people, we must arouse the youth."

Do you agree with that Mr. THORKELSON?

At a meeting in Ridgewood March 28, 1940, McWilliams announced he was forming extermination squads to exterminate Jews when "the day" arrives. (Isn't this similar to the German "Der Tag"?) Do you agree with that, Mr. THORKELSON?

On October 16, 1939, at a Mobilizer meeting, McWilliams called our President "a murderous traitor." Do you agree with that, Mr. THORKELSON?

At a Mobilizer meeting held at Ebling's Casino on October 23, 1939, McWilliams said that "Mr. Hitler is the emancipator of mankind and that we need Hitler over here to clean things up." Do you agree with that, Mr. THORKELSON?

On October 30, 1939, at a meeting of the Christian Mobilizers, McWilliams said:

"It might be a good idea for the Mobilizers to take bedsheets and parade, carrying shotguns under the sheets."

Do you agree with that principle of Americanism, Mr. THORKELSON?

At a meeting held at New Ridgewood Hall, Brooklyn, April 4, 1940, McWilliams said:

"I am forming squads composed of the toughest elements I can find to hold meetings in Jewish districts and cause fights."

Do you agree with this policy, Mr. THORKELSON?

On November 29, 1939, at a bund meeting in Ebling's Casino, Mr. McWilliams said that he was ready to punch anyone in the nose who said that there was anything like one good Jew. Do you agree with that, Mr. THORKELSON?

In your own statement on page 5630 in the CONGRESSIONAL RECORD of May 6, 1940, you state:

"I realize that there are many Jews in the United States who are not internationalists and who are looked upon as being ordinary, plain American citizens."

May we apply for the position of referee when McWilliams criticizes you for stating there are many good Jews in the United States?

And this brings us to another one of your arguments of why the Non-Sectarian Anti-Nazi League needs its own investigation committee. We might not have known of these facts mentioned above and accepted your statements on their face value were it not for our investigation department getting full reports of these sayings and doings of your so-called patriotic friends.

You state:

"I don't know of another group that employs its own intelligence service and that conducts special courts for its own people. Americans are satisfied with our system of courts, so why should not the proponents of the Non-Sectarian Anti-Nazi League be also?"

This is a pure fabrication or a delusion on your part. Where have you seen, heard, or found out that the Non-Sectarian Anti-Nazi League has its own courts?

In the report of the McCormack committee to the Seventy-fourth Congress concerning the Nazi activities in the United States, he mentions that the Nazis maintain their "Uschla," a secret tribunal to try those Germans in the United States who do not submit to Nazi domination.

Are these anti-Semitic outbursts placed by you in the RECORD so that the people for whom you are acting can quote them and distribute them without themselves being legally responsible for the libelous statements contained in them?

In its issue of May 6, 1940, Social Justice magazine writes:

"The Non-Sectarian Anti-Nazi League to Champion Human Rights is an organization of Communists and Communist sympathizers who seek to discredit Father Coughlin and other real Americans opposed to communism.

"That was the assertion made recently in the House by Representative JACOB THORKELSON, of Montana."

If this statement would be written in the name of Social Justice, they might be legally responsible for calling the anti-Nazi league and its members Communists. But the assertion that this was stated by you in the House of Representatives is the shield behind which they hide themselves.

Is this the purpose of inserting your remarks in the CONGRESSIONAL RECORD?

In answer to a question by Congressman BLOOM, of New York:

"Did I understand the gentleman to say that he never heard of a Jew approving of his own faith?"

Mr. THORKELSON answers:

"I said I never heard a Jewish group proclaim its own faith."

How truthful this is can be seen from the fact that Mr. THORKELSON himself, on April 11, quoted the American Jewish Congress, the Jewish Labor Committee, and the B'nai B'rith, all organizations fighting subversive activities in the United States, all of them proclaiming that they are Jewish groups.

And has the gentleman from Montana heard of the Jewish Joint Distribution Committee and the United Jewish Appeal, which gave hundreds of thousands of dollars to committees helping Christian refugees, victims of Nazi Germany, and had but recently given $250,000 for Catholic and Protestant refugees? Has the gentleman from Montana ever heard about the Jewish federations and the Jewish welfare boards all over the United States?

How does this tally with your statement, Mr. THORKELSON: "I have never yet heard a Jewish group proclaim its own faith?" Have you no respect for the meaning of words?

NON-SECTARIAN ANTI-NAZI LEAGUE
TO CHAMPION HUMAN RIGHTS.

The Maine National Guard

EXTENSION OF REMARKS
OF
HON. RALPH O. BREWSTER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1940

ADDRESS OF HON. RALPH O. BREWSTER, OF MAINE

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a portion of my speech at the recognition dinner of Bangor Chamber of Commerce in honor of Maine National Guard at Bangor House, Thursday, March 28, 1940:

As recruiting officer for the Third Infantry of the Maine National Guard during the World War and as its first regimental adjutant under Col. Harry N. Bigelow, I have always been profoundly appreciative of the self-sacrificing service rendered by members of the National Guard in war and peace.

The old Third Infantry was highly honored when it was permitted to take over the designation and become custodian of the great traditions of the One Hundred and Third Infantry. Transferring later to the Field Artillery, I learned a little of the old-time rivalry between the different arms of our defense.

A visit to Plattsburg last summer to observe the modern style in infantry equipment with a gas mask, an automatic rifle, a baby tank, and a portable radio receiving set thrown in for good measure leaves one somewhat aghast.

The old argument between the different arms of the service as to which really counts the most begins to disappear as all branches become increasingly mechanized.

Mechanically minded youth are more and more required, and we may proudly recall the verdict of Henry Ford that New England was the greatest reservoir of mechanical talent the world had ever known.

The simple requirements of an assembly line do not suffice when a modern army is on the march.

Then a Yankee tinker is imperatively required. Finland and Russia have just revealed this difference in most impressive style.

In the machine shops of America will be trained the boys who in the future will be the backbone of our defense on land and sea and above all in the air.

The Bangor Chamber of Commerce is to be highly commended for this recognition dinner for the unselfish and patriotic service rendered by the members of the National Guard in Maine. Civic bodies everywhere may well make such an observance an annual event.

Loyalty to our country and its institutions is the dominating motive in the sacrifice of the boys who give so generously of their time to be prepared to serve their country or their community in any period of emergency.

Let Us Be Pro-American and Keep the United States Out of War

EXTENSION OF REMARKS
OF
HON. MARTIN L. SWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 17, 1940

RADIO ADDRESS BY HON. MARTIN L. SWEENEY, OF OHIO

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over a Nation-wide hook-up, Saturday, May

11, 1940, on the subject Let Us Be Pro-American and Keep the United States Out of War.

Ladies and gentlemen, during our Revolutionary War with Great Britain the Father of our Country, Gen. George Washington, on the eve of the Battle of Trenton, suspecting some of his men might betray his military plans, was reputed to have given the command, "Put none but Americans on guard tonight."

In the light of our present-day interest in international affairs, I believe George Washington's advice to be timely. Paid propagandists, through the medium of the radio, the pulpit, the motion-picture screen, and the stage, are daily endeavoring to embroil us once again in the blood business of Europe. Let us follow Washington's advice and "put none but Americans on guard tonight."

The war propaganda of today is uncanny in its parallel with that preceding our entrance into the last World War. Unless checked, we are following, step by step, the road that led us to war 23 years ago. Then we were told we ought to be pro-Ally to save the world for democracy. On all sides we are told today we must be pro-Ally to save the republican form of government established by George Washington and the founding fathers.

False and vicious stories of atrocities that never happened inflamed the passions of the American people to such extent that in good faith the Congress of the United States was driven to declare war. The Government was forced to mobilize approximately 4,757,240 Americans—our finest manhood. It seems but yesterday that these young American boys were marching down Market Street in San Francisco, marching down State Street in Chicago, marching down Broadway in New York City, marching down Main Street in every city, town, and hamlet. Remember the enthusiastic farewells from friends and relatives, the ticker-tape confetti, and the strains of military music as the boys marched away? We saw them to the ports of embarkation; we saw them packed like sardines on transports, to be convoyed across the stormy Atlantic to the battlefields of Europe. There, in the filth and horror of the trenches, our American boys took their stand.

America sent 2,747,882 boys to Europe in the last World War. Of these boys, 113,280, never came back. They were killed in action or died from wound and disease. There were 200,430 wounded in battle, many of whom are today in war veterans' hospitals. Many are without legs and arms, some are raving maniacs because of that horrible conflict. Others are sightless, the tapping of canes their only guide through halls and grounds of their hospital homes.

Practically all men returning from Europe after the armistice of November 1918 have suffered social and economic dislocations resulting from our participation in that "war to end all wars." Added to the loss of life is the tremendous expense of compensations, hospitalizations, and pensions. These veterans average 45 years of age, many of whom are unemployed because of the mass-production and highly industrialized system under which we operate. All this came about because we forgot the warning of George Washington to avoid entangling alliances with foreign powers.

Let us return to the sound and safe principles of America's first isolationist—George Washington—then the mistakes of 1917 will not be repeated. Today in many quarters of the United States the term "isolationist" is viewed with suspicion. Assert yourself pro-American today and certain interests characterize you as pro-German or pro-Communist.

We did not create these modern Napoleons. The philosophy of Hitler and Stalin, their cruel and ungodly treatment of minority groups, is repugnant to any decent American. Nor are we responsible for the imperialistic philosophy of the so-called synthetic democracies of Great Britain and France. Between them they hold in subjection almost one-fourth of the world's population and control practically one-third of the world's territory. Imperialism is the breeder of nazi-ism and communism.

To pull the chestnuts out of the fire for any imperialistic group is not our responsibility. There is no obligation on our part to destroy the dictators of Europe—they will destroy themselves. There are those who are concerned with the preservation or destruction of the Siegfried, Maginot, and the Mannerheim lines. But I say we have but one line to watch—the bread line of America. With 10 million unemployed, one-third of our population ill-fed, ill-clothed, and ill-housed, it is our duty to be concerned with our domestic affairs and not the international affairs of Europe.

We loaned to the Allies in the World War $14,000,000,000. There remains approximately $11,000,000,000 still due Uncle Sam, termed by these debtor nations "Uncle Shylock." Consistent efforts have been made to cancel war debts, but, thank God, the American public has remained determined not to cancel these debts.

Recently I accepted to act as vice chairman of the Make Europe Pay War Debts Committee, headed by United States Senator ERNEST LUNDEEN. Our committee agrees with the somewhat silent but great American President, Calvin Coolidge, who when pressed for a statement on the war-debts problem said, "They hired the money, didn't they?" We reply, "Yes; and we demand payment now."

We ask your support of the Reynolds-Randolph resolution now pending in Congress. This resolution advocates negotiations for part payment of the war debt the acquisition of the British islands in the Caribbean and British Honduras. The possession of these islands will strengthen our military and naval defense, not leaving our position in the Caribbean too exposed if the time should come when we would have to defend the Monroe Doctrine on this Western Continent.

Tomorrow is Mother's Day. From every pulpit will be offered a prayer for peace. We too implore the Almighty God to protect the United States from the insanity of war and to spare us a new group of Gold Star Mothers. The women of the country, through the exercise of the ballot, will keep us out of war. Their voice was silent in 1917 because they were disfranchised, but today they can speak forcefully on this question.

The people who were regimented in the last World War know its price. They know the restrictions of civil liberties when a formal declaration of war is passed by Congress. Two steps toward war have already been taken—that must be clear to every thinking American. The so-called social visit of the British King and Queen to America a year ago was an official visit to pave the way for lifting the arms embargo. Lifting the embargo was step No. 2. Two more steps remain—the repeal of the Johnson Act and the declaration of war.

Repeal of the Johnson Act denying credit to foreign nations in default of war debts is being urged by certain financial interests, and the war mongers of Europe. When this happens, then the declaration of war is inevitable, and boys, boys, American boys, once more will be led to slaughter.

The British propagandist, the Honorable Duff Cooper, former First Lord of the Admiralty, recently expressing the gratitude of his country to the United States for lifting the arms embargo said, "We are grateful for all this, we do not need your men"—and then he hesitated and said—"not yet."

As in the last World War, newspapers will be subsidized in the interest of the Allies. Again they will play a strong part in molding public opinion for one war group or the other in Europe. The distinguished American author, Quincy Howe, in his book "England Expects Every American To Do His Duty," summarizes the case for the isolationist foreign policy in these words:

"An isolationist foreign policy serves not only the interests of the American people but the interest of civilization, democracy, and progress throughout the world. It will deliver the very goods that the British network only promises.

"A self-sufficient America promoted Western civilization by preserving it in the one country where it has not gone into a decline. Furthermore, an isolated America will not uphold England's dead hand over one-quarter of the earth's surface. Other nations will have a chance to find their place in the sun. Nor will the British people stand to gain the least from a collapse of the British Empire.

"A self-sufficient America promotes democracy by preserving it in its country of origin. The moment the United States fights the war of aggression into which the British network is now forcing it—in the name of peace and democracy—it will establish a dictatorship on its own soil."

To be pro-American is to love the land of our birth or adoption and to defend it at all costs. To be pro-American is to be concerned with our own domestic affairs and not to assume the role of money lender and policeman for the entire world.

The next Congress may be a war Congress. Before it is too late, express your sentiments to those who represent you in the law-making body of the United States. Insist that they be real Americans; insist that the lives of American boys be not sacrificed to the interests of the munition makers and the international bankers.

Gen. Smedley Butler has very frankly characterized war as a racket. Henry Ford is reputed to have said, "If the world were rid of 50 individuals, there would be no more war." Modern warfare adopts a new technique in these so-called undeclared wars. Can anyone in this audience explain why despite our protest of neutrality—and I frankly say we are not neutral—why we loaned twenty-five million to China to fight Japan, and then sell our scrap iron to Japan to be processed into cannon to fight the Chinese? Can anyone tell me why we loaned $20,000,000 to Finland, and at the same time purchase Russian gold, and sell oil and gasoline to the Soviet Union to service their bombers to kill the Finns? Can anyone explain why the warring powers of Europe have agreed not to bomb each other's munition dumps? Can anyone explain why the Allies stood idly by and refused to go to the aid of bleeding Poland; stood by and saw the partition of Czechoslovakia, and the abject surrender of gallant Finland, without giving any one of these small nations material help?

It is all very well for the experts on international law to proclaim that we can remain neutral by selling war materials to the conflicting groups in these undeclared wars. But how can you explain to the plain people of the United States, who after all pay the cost of war and furnish the boys for cannon fodder? Explain the morality of the situation, even though technically it meets the requirement of international law.

We want your support of the Ludlow amendment to the Constitution, providing for a referendum by the people before we enter a contest in any foreign war.

Four million young men between the ages of 18 and 25 are unemployed, young men who are the sons and brothers of World War veterans. We want you to organize and be pro-American to protect the best interests of our country. To the parents of these youngsters we say organize now. It may be too late, and that fateful day may come when the telegram may come to your home from the War Department regretfully informing that your son

John was killed in battle today. One Unknown Soldier Memorial is more than enough for one generation to stand. Be pro-American. Follow Washington's admonition, "Put none but Americans on guard tonight."

How Accurate Are Public-Opinion Polls?

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

PAPER BY ABE BLANAR, GRADUATE STUDENT AT UNIVERSITY OF MISSOURI

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following paper by Abe Blanar:

With the 1940 Presidential election on the horizon, interest increases in the prognostication of the American Institute of Public Opinion. For 4 years the Gallup poll has predicted the outcome of elections and the division of opinion on public questions. Today it is widely accepted as a precise instrument by which public opinion can be measured. The same unstinting praise which was once showered on the Literary Digest poll is now lavished on the institute poll.

Political commentators recall with satisfaction how the Gallup poll came within 1 percent in predicting the outcome of the Dewey-Lehman contest. Gallup's sample showed 50.2 percent of the voters favored Lehman. On election day 50.7 percent of the major party votes were cast for Lehman. What the political commentators overlook is that sampling is an inductive process which has definite limits of error. These limits of error have been determined by mathematicians and are reproduced in Gallup's pamphlet, the Scientific Measurement of Public Opinion. In the Dewey-Lehman contest 2,000 ballots were used and an error of 3 percent could have been expected due to chance alone, so that Dr. Gallup, had he sampled again, might have obtained a sample of 47.2 percent for Lehman—a victory for Dewey. In 99 out of 100 samples which could have been taken, the percentages for Lehman could have fluctuated from 47.2 to 53.2 percent due to chance alone. Designation of the winner in this case was guesswork. With equal scientific exactness Gallup might have decided the election by drawing from two straws in a hat.

To those who are not acquainted with the intricacies of statistics, the case might be explained by analogy. A gun is mounted rigidly on a platform with its muzzle pointing toward the bull's-eye on a target a hundred yards distant. Due to defective workmanship, the expected error in the shots is 3 percent. If the first bullet chances to pierce the bull's-eye, does this justify the conclusion that the accuracy of the gun is now 100 percent?

Eight years ago, Dr. Claude E. Robinson, in his book, Straw Votes, admonished straw-poll investigators against assigning victory to any party where "the variation due to the crudeness of the straw-poll measurements" is sufficient to throw the balance in a close election. In such cases "designation of the winner is purely gratuitous and a matter of guesswork." That this standard of accuracy has been ignored by Gallup is surprising, since Dr. Robinson occupied an important position in the institute.

That the public has not become aware of the real error involved in the Gallup polls is hardly surprising, since the only attempts to check the accuracy of the institute's polls have been made by Mr. Gallup himself. To date, the errors in the institute's polls have not impaired its usefulness as a forecasting medium. But one must never forget that the Literary Digest was once successful, and errors which seemed unimportant in elections before 1936 spelled the downfall of the Literary Digest poll in 1936. The failure of the Literary Digest poll and the success of the Gallup poll in the same year is not a good criterion by which to judge the latter. Relatively one may be judged the more accurate. But the intrinsic merits of the institute poll may not be judged in this manner. For it, too, may have weaknesses whose seriousness will not become apparent until other conditions arise.

On the surface the Gallup poll appears to be extremely accurate. But a closer examination reveals that under other conditions than those prevailing in 1936 the Gallup poll might have failed. Thus, had the institute polled the electorate in 1916 with the same degree of accuracy as in 1936, it would have predicted the election of Hughes with 349 electoral votes against 182 for Wilson. Actually, Wilson received 277 electoral votes against 254 for Hughes. Because of the clear division of political opinion in 1936, errors in underpredicting the winner appear unimportant, but these same errors transposed to the situation of 1916 would have changed the position of 12 States, involving 95 electoral votes, and elected Hughes instead of Wilson. In the McKinley-Bryan elections of 1896 and 1900, whose historical importance is known to every schoolboy, Gallup would have predicted victory for Bryan. Thus, out of the 12 Presidential elections from 1896 to the present, Gallup would have predicted wrongly 3 times. That is to say, Gallup would have been in error 25 percent of the time, based on the historical experience of almost half a century. As will be shown later, his record in the congressional elections of 1938 does not inspire confidence.

Professional writers often retell one of Gallup's favorite stories with obvious astonishment. In this story an instructor draws a line on the blackboard. Each member of the class is asked to estimate the length of the line. The instructor then demonstrates that an average of all the guesses approximates the correct length. What these writers have not heard is the other side of the story. Elementary textbooks of statistics are replete with examples which show that this characteristic of the average, to balance errors, often imparts a misleading appearance of accuracy.

A classical example can be drawn from Gallup's statement of the error involved in the 1936 poll. Thus he writes in the New Science of Public Opinion Measurement that "President Roosevelt's victory in 1936 was forecast with an average State-by-State error of only 6 percentage points."

By the use of an average error the seriousness of the errors in each State was minimized. For 21 of the 48 States showed greater errors than 6 percent. Errors ranged from underpredictions of Democratic strength of 14 percent in Arizona, 13 percent in Minnesota, 11 percent in Wisconsin and Montana, to an overprediction of Democratic strength of 1 percent in Kentucky and Tennessee. In 46 States the institute underestimated the Democratic strength. That is, more Republican voters were represented in the Gallup poll than in the official election.

The use of an "average error" may be reduced to an absurdity by the following example: Suppose the official Democratic percentage for the State of Pennsylvania to be 72 percent, the forecasted percentage 47 percent. Subtract the forecasted percentage from the official percentage. An error of plus 25 percent results. Suppose the official Democratic percentage of Delaware to be 52 percent, the forecast 77 percent. Again, subtract the forecast from the official. An error of minus 25 percent results. Adding the two errors and dividing by 2, an average error of 0 results. By underestimating the percentage for Pennsylvania, 34 electoral votes are incorrectly placed, yet the average error is 0.

Dr. Robinson, in Straw Votes, demonstrates that the accuracy of a straw poll in a Presidential election is to be judged by the size of the errors in each State and their possible effect on predictions under different circumstances. Average errors, errors in predicting the popular percentage of a Presidential candidate, errors expressed as percentages of electoral votes are deceptive devices which minimize errors. Since a President is elected by electors in each State, the fundamental percentages in each State must be examined. Judged by this standard, the Gallup poll could fail 25 percent of the time.

In the pamphlet mentioned, Dr. Gallup writes that "42 of the 48 States were correctly placed, and only 3 (Maine, Vermont, and New Hampshire) listed as sure for Landon." To judge the accuracy of this statement one must go back to the last preelection forecast of the institute, that of November 1, 1936. At that time Dr. Gallup remarked:

"Because of the possibility of error, the institute does not attempt to predict how a group of 14 border-line States, including Pennsylvania, New Jersey, Ohio, Illinois, and Michigan, will vote on Tuesday. To do so would be to attempt to use a scientific instrument beyond its capacity for precision.

"As shown elsewhere in today's report, 3 are leaning Republican, 9 are leaning Democratic, and 2 show a tie vote between Roosevelt and Landon. Of the remaining States, outside the "close" group, the poll shows 31 sure for Roosevelt and 3 sure for Landon."

What a contrast is this prediction before the election of 31 sure States for Roosevelt with the statement after the election that "42 of the 48 States were correctly placed." By the use of the equivocal term "correctly placed," 204 electoral votes, appearing under the caption "Doubtful" before the election were transferred to a "correct" forecast after the election. And a scientific instrument which could not assign a home to 204 electoral orphans before the election was forgotten after the election. Even Dr. Robinson could not justify such a change. In his book, Straw Votes, only "sure Republican" and "sure Democratic" were considered correct forecasts. Specifically, he warned against assigning victory to any party where "the variation due to the crudeness of the straw-poll measurements" is sufficient to throw the balance in a close election.

At this juncture the thoughtful reader is likely to wonder what the record of the Gallup poll has been since 1936. In the New Science of Public Opinion Measurement, Dr. Gallup writes: "The most difficult and most successful preelection poll was that on the congressional election of November 1938, in which the institute's error percentagewise was less than 1 percent. And of the 435 congressional seats involved in the election, the institute called the division by parties with an error of only 8 seats."

Again Gallup's statement as to his accuracy is a bit exaggerated. The institute refrained from making predictions in individual contests on the ground that it was not "possible to make continuous and comprehensive surveys in every one of the country's 435 congressional districts." Instead it made forecasts for each of 6 sections.

In the east central section, consisting of Indiana, Illinois, Michigan, and Ohio, Gallup predicted a gain of 34 seats to the Republican Party. Actually only 26 seats were gained—an overprediction of 8 seats in one section alone. In the western section a gain of 2 seats was predicted for the Republicans. Republican strength was underestimated here, for in this section there was a gain of 8 seats, representing an error of 6 seats. In 2 sections alone 14 seats were incorrectly placed. By balancing overpredictions against underpredictions in different sections, the final result showed a net error of 8 seats. Had chance favored Gallup more, his errors might have balanced out to a net error of zero. Yet the change in congressional seats was not correctly reflected in the forecast for each section.

The statement that the institute made an error, percentagewise, of less than 1 percent must be taken cum grano salis. For the 435 congressional districts combined the Democratic percentage of major party vote was forecasted at 54 percent. Actually the Democratic Party received 53 percent. But the base on which these percentages are computed has no meaning. For Congressmen are still elected in each district and not by a national vote. Therefore the error ought to be measured in each district. Since no district forecasts were attempted, the section forecasts were checked. In the western section the predicted Democratic percentage was 61 percent, the official percentage was 53 percent. An error of 8 percent was made and 6 seats wrongly placed in this section. Other sections showed errors in both directions. When all 6 sections are taken together the balancing effect of errors leaves an average error of 1 percent. This was the "most difficult and most successful" of the Gallup polls.

Political writers often criticize the Literary Digest poll on the ground that it contained an income, sex, and age bias. These same writers overlook the fact that the Gallup poll of 1936 contained a distinct Republican bias in 46 of the 48 States.

According to the institute's analysis the underestimates of the Democratic strength in 46 States were probably due to a failure in timing. The November forecast was based on data collected 2 weeks earlier. From July 12, 1936, to November 1, 1936, there was an increasing sentiment toward Roosevelt, as evidenced by the larger percents shown for the Democratic Party in each succeeding poll from July 12 to November 1 for the Nation. The institute argues that had it made a survey closer to the election day the straw poll might have been more in harmony with the official poll.

The only quantitative evidence available to support this hypothesis is a series of percentages of the popular vote for President given by the institute. On June 7, before the nomination of Landon, President Roosevelt was assurred of reelection with 55.8 percent of the major party vote and a majority of the electoral votes. Two hundred and four thousand four hundred and fifty-one ballots were sent out. On July 12 only 105,000 ballots were sent out. Now Landon was named winner in the electoral college, and Roosevelt's popular percentage dropped to 51.8 percent. Thereafter increasing numbers of ballots were sent out and increasing percentages for the Democratic Party were in evidence. Polls were taken on July 12, August 9, August 23, September 6, September 20, October 4, October 18, and November 1. The number of ballots and the percentages recorded for President Roosevelt are presented here in chronological order: 105,000 ballots, 51.8 percent; 166,294 ballots, 52.4 percent; 166,004 ballots, 52.5 percent; 184,955 ballots, 52.6 percent; 210,017 ballots, 52.6 percent; 237,920 ballots, 53.2 percent; 274,273 ballots, 54 percent; 312,551 ballots, 55.7 percent. Are these percentages evidence of increasing sentiment toward Roosevelt or an attempt to create the appearance of a contest where one did not exist?

Of course, it is possible that increases in the size of the samples were not directly related to increases in the percentages recorded for Roosevelt. But it is also quite possible that the bias which existed in the Gallup poll was partly offset in the larger samples. Under the conditions prevailing after the nomination of Landon until election day, what appears as a rising sentiment for Roosevelt may have been a phenomenon of Gallup's sampling process. One must criticize the institute for not holding the size of its samples constant when comparisons are made from one time period to another.

Since a failure in "timing" is not an adequate explanation of the errors encountered in the 1936 Gallup poll, what is a reasonable explanation of these errors? Before the election of 1936 the institute laid the weakness of the Literary Digest poll to an age, income, and sex bias. This bias resulted from the fact that telephone directories and passenger-car registrations were used as a source of mailing lists to voters. Surprisingly enough, the same bias was present in the Gallup poll.

Both the Literary Digest and the Gallup poll underestimated the strength of the Democratic Party. Only in Tennessee and Kentucky did the Gallup poll overpredict the Democratic percentage. And the Literary Digest forecasted almost exactly the percentage for North Carolina. While the Literary Digest errors were approximately two and a half times as large as the Gallup errors, the variation in the size of these errors was similar for the same States. Thus, both polls showed a large error for California. The Literary Digest underestimated the Democratic percentage by 22 percent; Gallup underestimated the Democratic percentage by 9 percent. In Arkansas the Literary Digest underestimated the Democratic percentage by 8 percent; Gallup underestimated the Democratic percentage by 1 percent. Nor are these isolated cases. For in States where the factors which lead to an income, sex, and age bias in the Literary Digest poll were present sufficiently to produce large errors, the Gallup poll also showed large errors. In States where these factors were less prominent both polls showed small errors.

The extent of this agreement between the size of errors for the 48 States can be measured by the Pearsonian coefficient of correlation. This coefficient measures the degree of association between two variables. It varies from 0, showing no association, to 1, showing complete agreement. The correlation coefficient for the Gallup and Literary Digest errors in the 1936 election is 0.8. This agreement is sufficient to leave no doubt that the bias responsible for the Literary Digest errors was also present in the Gallup poll.

The presence of this bias could have been anticipated, for the institute also drew names from telephone directories and passenger-car registrations in composing the list for the mailed ballots. Like the Literary Digest, it suffered from the large percentage of rejections by Democratic voters. Approximately 80 percent of the electorate polled failed to respond to the mailed ballots. Among the 20 percent who responded, Republican voters were represented in greater proportion than in the official election.

That the surveys of Fortune have not shared in the criticisms directed toward the institute poll is no accident, since Elmo Roper has remained aloof from political contests since 1936. By restricting himself to opinion polls, whose accuracy often cannot be determined empirically, Mr. Roper has been able to make predictions which seem above and beyond criticism.

Quite often one hears that Fortune came within a fraction of 1 percent in predicting the popular percentage for Roosevelt in 1936. Again, one must be reminded of the standard of accuracy established by Dr. Robinson 8 years ago, and earlier by Dr. Fabian Franklin, that the accuracy of a straw poll in a Presidential election is to be judged by the extent to which it correctly foreshadows the division of opinion in each State. The Literary Digest came within a half of 1 percent in predicting Roosevelt's popular vote in 1932, yet errors in the States ranged as high as 16 percent. Errors in terms of popular votes are very misleading and involve the same fallacy as that demonstrated in the case of the "average error."

Why did Fortune fail to publish the State percentages? Why, indeed, were surveys made in this all-important election for President, by seven sections in the country when State percentages were required? By making section surveys, errors in individual States were canceled off even though these States were not of equal importance in the electoral college. Encouraged by this strategy of electing the President by sections, it is no wonder that Mr. Gallup chose to predict the change of congressional seats in 1938 by sections also.

If these polls wish to lay claim to scientific principles of accuracy, why do they not publish all the significant data? The size of the samples in each survey is varied according to the whims of the investigator. Why is not the size of the sample published with the results of each survey so the adequacy of the sample may be judged? Why is not some consistent practice followed in computing the errors with relation to the significant percentages? Predictions in a Presidential election should be shown for each State. After the election these State percentages should be published alongside the official percentages. In a congressional election the published comparisons should involve percentages for each district. In each case the size of the sample should appear. Can Fortune and the American Institute of Public Opinion live up to these objective standards of accuracy?

The Clan-Na-Gael, Inc., Expresses Views on National Affairs

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

RESOLUTION ADOPTED APRIL 21, 1940

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by The Clan-Na-Gael, Inc., of Greater Boston, at the twenty-fourth anniversary of the Easter Week martyrs, and expressing the views of this patriotic organization on the subject of the war debts, the St. Lawrence waterways treaty, and other matters important to our neutrality toward belligerent nations now engaged in the European war.

Whereas the Clan-Na-Gael, for three-quarters of a century, has played a most important part in the preservation of the principles

upon which our beloved country—the United States of America—was founded, and has ever stood firm and unwavering in defense of the God-given right of the Irish Nation to absolute freedom, financing every movement of Irish patriots down to glorious Easter Week, 1916, cooperating in every way consistent with our American citizenship, and raising upward of $6,000,000 in the bond drive for the perpetuation of the Irish Republic, as proclaimed by Padraic Pearse and his immortal associates; and

Whereas the ideals of the Easter Week martyrs are perpetual and undying, typifying as they do the moral supremacy of right over might, and illustrating the fallacy of brute force in strong and imperialistic nations attempting to crush the national spirit of their materially weaker neighbors—ideals which have ever actuated the members of the Clan-Na-Gael in their devotion to principles rather than to individuals, and which have kept the name of our organization synonymous with loyalty to the United States of America and devotion to Irish republicanism; and

Whereas the contribution of men and women of Irish blood to the establishment of the United States of America is immeasurable, as so appropriately expressed by the grandson of Martha Washington, George Washington Parke Custis, in 1828: "And why is this imposing appeal made to our sympathies? It is an appeal from that very Ireland whose generous sons, alike in our day of gloom and of our glory, shared in our misfortunes and our success; who, with undaunted courage breasted the storm which, once threatening to overwhelm us, howled with fearful and desolating fury through this now happy land; who, with aspirations deep and fervent for our cause, whether under the walls of the Castle of Dublin, in the shock of our liberty's battles, or in the feeble expiring accents of famine and misery, amidst the horrors of the prison ships, cried from their hearts, 'God save America.' Tell me not of the aid which we received from another European nation in the struggle for independence; that aid was most, nay, all, essential to our ultimate success; but, remember, years of the conflict had rolled away. Of the operatives in war—I mean the soldier—up to the coming of the French, Ireland had furnished in the ratio of 100 for 1 of any foreign nation whatever.

"Then honored be the old good service of the Sons of Erin, in the War of Independence. Let the shamrock be entwined with the laurels of the revolution, and truth and justice, guiding the pen of history, inscribe on the tablets of America's remembrance 'Eternal Gratitude to Irishmen' "; Therefore be it

Resolved by the Clan-Na-Gael, Inc., of Greater Boston, meeting at the Hotel Touraine in Boston, Mass., on April 21, 1940, to commemorate the twenty-fourth anniversary of the Easter Week martyrs of 1916, that we reaffirm our loyalty and devotion to our beloved country, the United States of America, and pledge our lives, our fortunes, and our sacred honor to the perpetuation of the undying principles upon which our Republic was founded, ever guarding against assaults upon our system of constitutional government and ever watchful against propaganda which tends to weaken the determination of patriotic Americans to abide by the injunctions of Washington and of Jefferson to avoid entangling foreign alliances; and be it further

Resolved, That the Clan-Na-Gael, Inc., of Greater Boston, pledges itself to work diligently in the cause of strict neutrality for the United States of America in the present wars of Europe and of Asia, both declared and undeclared, viewing with alarm as we do, the concerted efforts being made by propagandists to enlist the sympathies of the American people to the side of the so-called democracies or to the side of the so-called totalitarian powers; we recognize the dangerous trend of the present administration at Washington in the bias observable in every dealing with the warring nations; we recognize the danger to our neutrality in the spoken words of officials of our Government, headed by the President, and echoed by diplomatic agents, which well might be interpreted as a subtle pledge of the manpower of our Nation in foreign wars: Therefore, we unhesitatingly commend to the Congress of the United States the immediate desirability of an impartial investigation to ascertain whether there have been any unconstitutional and secret commitments entered into by agents of our Government with any foreign government or governments, whatsoever; and be it further

Resolved, That the Clan-Na-Gael, Inc., of Greater Boston, pledges itself to work diligently in the cause of an adequate national defense as the best method of keeping American manpower out of foreign wars. We protest against the release of airplanes of late American design to any foreign power whatsoever as contrary to the best interests of the American people in that such action tends to weaken our national defenses. We protest against the present tendency toward making the United States of America a service of supplies and an active arsenal for any foreign belligerent powers. We recognize the danger of depleting our own natural resources, such as petroleum and its products, iron, copper, and other essential metals, and lumber and other products of our lands, as being contrary to an adequate national defense. We recognize the danger to an adequate national defense of any internationalization of our boundaries; and as a protection to American security we demand of our governmental officials that no understanding, agreement, or treaty be entered into which will in any way jeopardize the right of our independent action in border matters, whether by land, air, bridge, or water; and we specifically protest against the proposed St. Lawrence Waterways Treaty as a partnership agreement with the Dominion of Canada, which has deliberately chosen to become a belligerent in the wars of Europe rather than an active force for peace in the Western Hemisphere; and be it further

Resolved, That the Clan-Na-Gael, Inc., of Greater Boston, pledges itself to work diligently in the cause of American patriotic nationalism. We appreciate the fact that every American must recognize that the founding fathers left Europe to escape the hatreds, the bitterness and the strife of the Eastern Hemisphere and that all who have come after them have sought a haven of refuge and peace and security under our form of constitutional government. We recognize that the wars of the Eastern Hemisphere are neither moral nor righteous and are purely part and parcel of the ungodly power politics as played by the rulers of nations with imperialistic designs. We recognize the danger to American independence and security of any extension of credit to warring nations whether by individuals or by governmental agencies and we are sensible of the huge indebtedness of belligerents to us both for war loans and for post-war advances, debts long now in shameful default while the debtor powers are expending huge sums for armaments and munitions of war. From our experience in the World War of a quarter of a century ago we recognize the absolute futility of American participation in the embroilments of Europe and of Asia and we demand of the Congress of the United States that proper legislation be at once enacted to protect the youth of our country from being conscripted for service in any foreign wars. As a protection to American security in the Western Hemisphere, we demand of our governmental officials that the strictest neutrality be observed toward the Dominion of Canada as a belligerent power and that immediate proper measures be taken with the Government of Denmark for the acquisition by the United States of the territory of Greenland, by purchase or otherwise. We demand of our said officials that immediate proper action be taken toward dispossession of belligerent foreign powers of their insular territories in the Caribbean Sea and the near Atlantic Ocean and their territories on the mainland of Central and South America and the acquisition of such territories by the United States, with partial liquidation of war debts as a recompense. We demand of our said officials that immediate proper measures be taken for the attachment of all funds and credits now within the territorial limits of the United States of all warring nations who are in default of their indebtedness to this Government; and be it further

Resolved, That the Clan-na-Gael, Inc., of Greater Boston, stands squarely with our national organization in support of the right of the Irish Nation, as an entity, to a free and republican form of government; we deny the right of the British Government, moral, legal, or ethical, to sovereignty over any part of Ireland; we decry the hypocrisy of the British Government in its pseudo defense of the rights of small nations as against aggressors while it enforces partition in Ireland and holds in subjection millions of people throughout the world by force of might alone; we accept the principle enunciated by the President of the United States in his statement of April 13, 1940, namely, "If civilization is to survive, the rights of the smaller nations to independence, to their territorial integrity, and to the unimpeded opportunity for self-government must be respected by their more powerful neighbors," but we deplore such utterances as meaningless platitudes unless the principle is applied to all small nations held in bondage whether by the so-called totalitarian powers or by the so-called democracies and unless and until the entire Irish Nation is included in that category. We invite all impartial observers to join with us in extolling the virtues of the martyrs of Easter week, 1916, Padraic H. Pearse, Thomas J. Clarke, Sean MacDermott, Thomas McDonagh, Eamonn Ceannt, Joseph Mary Plunkett, James Connolly, and their associates, men who willingly made the supreme sacrifice not alone that their own beloved country, the Republic of Ireland, might be free but that the world might appreciate and recognize the futility of barbaric warfare and the hypocrisy of the rule of might over right. They died martyrs on the altar of freedom, and their memory shall ever be kept fresh in the minds and the hearts and the souls of the Clan-na-Gael until that day when British perfidy shall be replaced by true justice and when the epitaph of Emmet may be truly written and when wars shall cease and when men and women of good will and of all nations may live in amity in accordance with the teachings of the Prince of Peace.

Local Gasoline Filling Station Operators Should Not Have To Pay Additional Tax

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

STATEMENT BY HON. MARTIN F. SMITH BEFORE THE WAYS AND MEANS COMMITTEE

Mr. SMITH of Washington. Mr. Speaker, on May 10, 1940, I testified before the Ways and Means Committee in opposition to an amendment proposed to H. R. 1 which would impose an additional tax on the operators of gasoline filling stations. I pointed out to the committee reasons and arguments why, in my opinion, it would be unjust and unreasonable to assess a further tax upon these citizens who render a very useful and necessary public service. They already pay a personal-property tax and those who own their property also pay a real-estate tax. In my State of Washington the gasoline tax is 5 cents per gallon. I made the following statement before the Ways and Means Committee:

Mr. SMITH of Washington. Mr. Chairman and gentlemen of the committee, I deeply appreciate this allotment of time in which to present for your consideration the reasons for my opposition to the amendment pending to H. R. 1, which would eliminate the present exemption and provide a direct tax on gasoline filling station operators. I am strongly of the opinion that in all justice and fairness the exemption should be retained and there should be no further tax assessed against these citizens, who are rendering a very useful and necessary public service. We should bear in mind the fact that they already pay a personal-property tax on their pumps and equipment; in cases where they own their property they also pay a real-estate tax, and in the State of Washington the gasoline tax is 5 cents per gallon.

It seems to me that the service-station operator is in a different category from the ordinary merchant and storekeeper who carries a large stock of goods and merchandise. These gasoline filling stations located along our roads and highways are a great convenience to the public, as well as those situated on the street corners in our towns and cities. The only reason at all why they carry any merchandise, small and limited as their stock usually is, is to render a service and accommodation to the driving and traveling public who have need of the articles sold and to whom it is many times a great convenience to be able to obtain them at a service station along the route.

The small quantity of articles which the service-station operator offers for sale is only a part of the service which he renders to the public. It is supplemental to the free service of furnishing water, wiping your windshield, and generally performing those little acts of courtesy and helpfulness which mean so much to the automobile driver. His profit is derived almost exclusively from the sale of gasoline and oil.

He also performs a separate and distinct service to the Government of the United States by cooperating in the collection of the gasoline tax and thereby renders an important valuable service to the Internal Revenue Department. There is certainly wide and vast difference between his activity, as we have briefly described it, and that of the general vendor of goods, wares, and merchandise, and I maintain that he should be treated differently. He should not be required to pay the same tax as those engaged in an entirely different field of business and operations. It would be most unjust and unfair to impose this additional tax burden upon him.

I contend that the service-station operator is working at an occupation, not engaged in a business as it is generally understood and defined, and that if you tax him the same as the proprietor and corporation operating a store, you are interfering with his right to make a living at his individual job, for that is all it is. He is working at an occupation or job, rendering and performing personal, individual service.

Mr. Chairman, I urge that your committee give this matter your usual thorough and sympathetic consideration, and when you do I feel confident that you will view it the same as I and our other colleagues do. I will conclude by reading an editorial from the Chrisitan Science Monitor, March 18, 1940, being one of a series of editorials which they publish once per week, and entitled "This Week's Appreciation." It pays a finer tribute to the filling-station operators than I can express, and sets forth some of the truths and facts which I have been endeavoring to express. It reads as follows:

"THIS WEEK'S APPRECIATION

"To thousands of filling-station attendants throughout the country, who cheerfully render such kindnesses to motorists as cleaning the windshield, checking the tires, and filling the radiator, whether or not the customer buys anything. Recently, on a stormy, freezing night, an acquaintance of ours drove into a filling station, explained apologetically that the gasoline tank was full, and asked if the sleet could be scraped from the windshield. 'Glad to do it,' smiled the attendant, who had just left a warm stove inside.

"The other day the family car, thoroughly bespattered with mud, went to a filling station for servicing and repairs. It came back shiny and clean. The sluggish door latches were newly oiled. There was no extra charge. Such small things help to oil the wheels of human affairs. They bring the satisfaction which comes to oneself and to others through making the daily task an opportunity for unselfish service."

Funds for National Defense

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

Mr. BOREN. Mr. Speaker, if patriotism is ever to be manifested, it should be now.

Every American knows that this Nation must be diligent and prompt to strengthen and modernize our national defenses.

The security of America demands speed and teamwork in meeting this problem.

Yesterday the President of the United States outlined a program for steps for full preparedness for national defense. I feel that every American worthy of the name is 100 percent in accord with what President Roosevelt said in this Chamber yesterday. America is united in its determination to be prepared against any eventuality. I am convinced that every real American is willing to do his part in developing a national-defense program that will be an absolute guaranty for the security of America against any possibility of aggression.

Yesterday, after the President's message, everyone speaking on the floor of the House, in the Halls, and in the cloak rooms were unanimous in saying, "The President is right; it must be done." The question of most Congressmen was, "Shall we raise the debt limit or shall we vote new taxes?"

Mr. Speaker, I am offering here today a bill which answers that question; a bill which will give every patriotic American an opportunity to participate in the defense of his country and will provide the aid and support for President Roosevelt in the objectives indicated in his message and in the program which we universally approve and support.

I do not want anybody to tell me this cannot be done. It can be done. The American people will respond quickly and generously.

I hope that what I am offering here will be brought fully to the attention of the American public. I feel certain that if it is brought to the attention of the public, that your mail and mine will quickly bring pledges that will fulfill the requests of the bill and more.

The Congress Fails the Farmer Again

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

Mr. LEMKE. Mr. Speaker, the mills of Congress grind exceedingly slow. This is especially true of this session of Congress. There seems to be an atmosphere of hesitancy—a sort of collective desire to do as little as possible. Individually Members are still alert and alive, but collectively they seem to be passing through the last stage of sleeping sickness. I do not believe that collectively you could wake them up even with one of Mr. Barlow's high-explosive bombs.

Shocked and bewildered over the European war brutality and insanity, Congress and the administration have been drifting along. Not sure as to whether our first line of defense was the solution of our domestic problems or again sending our sons to foreign battlefields. Not sure whether our own peace is a blessing or a curse. Not sure whether we should enter the European conflict or build up our own national defense by looking after the welfare of our own people.

Harassed and misinformed by an international banking clique, the war profiteers, the radio propagandists, the theater, and the metropolitan press, on one side, and the mothers and fathers, together with the sons who do the fighting and dying in war, on the other side, the administration and Congress have forgotten all about the real American problems—the agricultural and unemployment problems.

We are all sorry for the innocent small nations whose territories are again being invaded and made the battlefields of the insane, war-mad brutes of larger nations. While we would like to see all the crimson leaders of aggression go to the place where it never gets cold, yet we must not forget that our first duty is at home—to the American people.

Let us not repeat the mistake of 1917. We cannot better the conditions in Europe. There are no angels among the leaders of the belligerent nations that started this war. Truth and justice are utter strangers to them all. If we permit ourselves to be propagandized into this war, it will be the rock upon which our Republic will perish. We, too, will emerge with a dictator.

Our forefathers left Europe because of intolerance, because of religious and racial hatreds. Let us remain true to their ideals. We cannot police Europe. We have plenty to do to build our own Nation great and strong. Charity begins at home. Let us take care of our own people. Let us preserve peace on the Western Hemisphere. In doing this Congress will best serve the ends of civilization.

In this predicament Congress is about to adjourn, nothing much accomplished, nothing worth while attempted. Of course, we will appropriate relief funds, but we will do nothing to make the unemployed again self-sustaining. We will also appropriate $212,000,000 for parity payments on 5 out of 50 agricultural products—wheat, cotton, corn, rice, and tobacco. This amount will fall far short from paying parity on even these 5 products. Congress will do nothing for the other 45 products, including dairy, the largest single farm industry.

This $212,000,000 will be just a drop in the bucket. It will not give the farmer parity. That statement is a fraud and a deception. To give to the farmers 100-percent parity on all of their products would require $7,500,000,000. Of course, the Treasury could not stand that. If Congress had passed the Massingale cost-of-production—the 100-percent parity—bill, then we would not need any appropriation.

This bill applies to all agricultural products that annually enter into interstate commerce in excess of $10,000,000. It would fix 100-percent parity, as a minimum price, on that part of such products domestically consumed. It would increase the farmers' annual income by $7,500,000,000.

Since every dollar of farm cash income increases the national income by $7.55, therefore, it would increase the national income by $56,625,000,000. That would be prosperity by plenty and not starvation by scarcity—by the curtailment and the destruction of agricultural wealth.

When this bill becomes a law there will be no further need for farm subsidies. There will be no further need for any army of Federal employees to regulate the daily lives of the farmers. Prosperity and security for agriculture means prosperity for labor and business as well. When this bill becomes a law the Government will no longer have to bail out the farmer—then the farmer will bail out the Government.

However, if Congress still wants to do something real during the closing days of this session, then let it pass H. R. 8748—the Wheeler-Jones farm-debt adjustment bill. This bill would authorize the Farm Credit Administration to compromise the old seed loans. These never will and never can be paid. A business concern charges off uncollectible debts. These farmers bought the seed to feed the Nation. Climatic conditions have been against them. Why should the Government be silly enough to spend money to collect that which cannot be collected?

This bill would bring the interest rate down to 3 percent on all farm indebtedness. During the discussion of this bill we heard a great deal about soft credit and soft money. Of course, these expressions are just repeated parrotlike by those who know nothing about money or its functions. These individuals do not know that the difference between soft money, soft credit, and hard money, hard credit is the same as the difference between a soft-boiled egg and a hard-boiled egg. If you get the egg, you can live. If you do not, you may starve.

This bill also provides for the refinancing of farm mortgages where the debt exceeds the value of the farm. It gives the owner an equal chance to get his farm back on the same terms that it would be sold to a stranger. Common decency compels us to agree with that provision. Why not give the owner a new start in life rather than to experiment with a new one? Let us salvage what is left of agriculture rather than wreck it completely.

Then, there is the unconstituional hog-processing tax. The evidence shows conclusively that the farmer paid this tax in lower prices. But Congress has not yet had the decency to pay back this tax illegally and fraudulently extracted from the hog producers. Oh, yes; we paid back all other unconstitutional taxes to the railroads, to the processors, to the packers, and to the cotton and tobacco growers; but the plea for the hog-producing farmer has been consistently ignored. They say the amount is too large. Query—if one steals enough, does that make it legal?

Congress failed the farmer again when it extended the reciprocal trade agreement laws. While this question was up for debate we heard a great deal about logrolling, but I prefer that the Members of Congress representing the people of different sections of our country—different industries—roll logs in order to get justice for all sections and for all industries in the making of a tariff law than to have the Secretary of State, who believes that it is necessary to preserve Christianity and peace, sell our farmer and laborer in foreign market places.

I prefer logrolling to horse trading with foreign diplomats. This especially since our State Department is now and always has been the poorest horse trader of them all. It generally trades off two or three good young colts and gets an old, worthless nag in exchange. This in the name of peace and Christianity. When did it become necessary for this Nation to buy or bribe other nations' Christianity or peace? Such a doctrine is not only lunacy but an insult to our intelligence and our dignity.

During the 5 years that this reciprocal trade agreement law has been in effect we imported $6,189,997,000 worth of agri-

cultural products and substitutes from foreign nations. Again, that is the foreign valuation. The domestic valuation would be $12,379,994,000—equal to a check of $2,063 for every one of our 6,000,000 farm families.

During the same 5 years we imported 2,335,273 head of cattle and 758,466,496 pounds of meat and meat products. This was equivalent to another 1,896,166 head of cattle—making the total importation of meat equivalent to 4,235,439 head of cattle in 5 years. These our own people should have raised, not foreigners.

Foreign nations owe us $32,000,000,000 now—$14,000,000,000 due our Government. One of these nations boasts that it never broke a promise, but we have $4,500,000,000 of its broken promises in the United States Treasury. Let the State Department collect that $14,000,000,000 before it sells our domestic market or extends further credit to nations of this class.

When we get tired of figures, then let us fortify ourselves by using our common horse sense, with pepper and salt added. Why should we insist upon trading with foreign nations just for the sake of trading? Why should we be foolish enough to loan more money to foreign nations—money with which they promise to buy our goods but do not? Our experience tells us that in the end these nations will have both our goods and our money. Then the taxpayers will have to foot the bill.

This administration has been in power for over 7 years. It was pledged to get agriculture out of the "red." It was pledged to solve the unemployment problem. Yet in those 7 years more than one farmer out of every five lost his farm by mortgage foreclosure, judgment, forced or tax sale. The average farmer who still owns his farm is deeper in debt than he was in 1932. We are aware that the farm indebtedness has been reduced; but how was that reduction brought about? It was brought about by mortgage foreclosure, judgment, forced or tax sale—by evicting innocent men, women, and children from their farm homes.

Likewise the unemployment problem is still unsolved. There are as many unemployed now as in 1932. Every courthouse is still a poorhouse. This problem never will be solved until the agricultural problem is solved first, because industry and employment are directly dependent upon the success of agriculture.

As a result of this unemployment, hundreds of thousands of industrial workers have also lost their homes. Here the Government, through the Home Owners' Loan Corporation, has been the principal offender in taking away homes. In place of shedding all our tears for the oppressed in Europe, let us shed a few for our own unfortunates who have been so cruelly and so brutally evicted from their homes because of misplaced confidence in the Home Owners' Loan Corporation.

We are pro-United States. We are more interested in the 130,000,000 men, women, and children of our Nation than in Great Britain, France, Germany, Italy, Japan, and Russia combined. We sympathize with Czechoslovakia, Poland, Finland, Norway, Denmark, Ethiopia, China, Holland, and Belgium—we sympathize with the persecuted and oppressed everywhere—but, I repeat, charity begins at home. Our first duty is to our own people. There is plenty of misery and suffering in our own country.

Under our Constitution you and I and all of us are "We, the people." We are 48 States—but one Nation. This Government, created by men of iron with nerves of steel—born amidst the privations and sufferings of Valley Forge—is ours. It does not belong to any clique or clan. It does not belong to any official or set of officials in Washington. These are all but our servants.

We must never permit our patriotism to be dimmed or divided because of religious or racial differences. Tolerance and forebearance is our watchword. We shall continue to extend the hand of good fellowship to all. We shall not permit the religious or racial hatreds of Europe to be transplanted to our shores. We are through forever with foreign entanglements. We will not again permit ourselves to be engulfed by the war-mad insanity of Europe.

We are aware that the itch exists on the part of some individuals to again embroil us in this European madness. These individuals will not be in the front-line trenches saying "come" to our sons. They will stay at home and again wrap the flag of glory around themselves and shout "go." They will again attempt to monopolize the patriotism of this Nation that is common to us all. Their patriotism is only skin deep. They are pro-anything if there is a profit in it, although that profit be stained with the blood, the tears, and the agony of an agonized world.

Survey of Natural Resources of the Antarctic Region

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

LETTERS FROM THE STATE DEPARTMENT AND THE NAVY DEPARTMENT

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters from the State Department and the Navy Department concerning the Government's expedition to the Antarctic to investigate natural resources:

DEPARTMENT OF STATE,
Washington, March 26, 1940.

The Honorable A. WILLIS ROBERTSON,
House of Representatives.

MY DEAR MR. ROBERTSON: I have received your letter of March 8, 1940, in which you request my opinion of the value of the acquisition of territory in the Antarctic and the period of time, presumably of actual occupation, which would be required under international law as a necessary condition to such an acquisition. You have also expressed an interest in the reasons for the formation of the United States Antarctic Service and the connection therewith of Rear Admiral Richard E. Byrd, United States Navy (retired), for whom I share your high opinion.

The activities and explorations in the Antarctic of the Government and citizens of the United States date back considerably more than a century. They include the discoveries of Capt. Nathaniel B. Palmer in the 1820's and of numerous other American whalers and sealers during the next half century or more; the historic cruise of the United States Exploring Expedition, a Government mission under the command of Lt. Charles Wilkes, United States Navy; and the important geographical discoveries and accumulation of scientific data made in recent years by Admiral Byrd, Mr. Lincoln Ellsworth, and their associates.

Since the beginning of this century there has been evidenced on the part of many foreign governments a very increasing interest in the Antarctic for scientific, economic, and political reasons. The list of scientific results of the many expeditions, both American and foreign, which have studied the south polar regions in the past 30 years, is an impressive one. It includes observations which have been of definite importance in the development of our knowledge of radio transmission, meteorology, astronomy, aviation, cosmic rays, terrestrial magnetism, geology, and other branches of science. The primary source of economic wealth so far has been the whaling industry which recently has yielded some $30,000,000 a year from the Antarctic whaling grounds. Low-grade coal is known to exist in very large quantities and preliminary geological surveys have indicated the presence of various kinds of mineral deposits on the Antarctic continent.

Until the early years of the present century interest in the Antarctic was chiefly scientific and economic. In the past 25 years, however, there has been a marked increase in political activity relating to those regions with the present result that 290 degrees of the coast line of the Antarctic continent and the greater portion of the hinterland have been claimed as possessions of Great Britain, Australia, New Zealand, France, and Norway, and unofficial or semi-official claims have been advanced by Germany and Japan.

Many of these claims include areas which have never been explored and in which there has been little or no activity by nationals of the nation claiming sovereignty over them. Others include areas which have been discovered or explored by American citizens and which have been claimed for the United States, though no official recognition has as yet been given to such claims. Because of the

general disregard of accepted principles of international law regarding the establishment of sovereignty over newly discovered territory, and in the absence of any special principles or international agreement controlling sovereignty in the Polar regions, the United States Government has never recognized any of the above-mentioned claims and has formally reserved such rights as it or its citizens might possess in the Antarctic.

The importance increasingly being attached by foreign governments to the acquisition of territory in the Antarctic has in recent years led the Department of State, in the normal course of its duties, to a study of the rights which this Government might possess in the South Polar area and consideration of the steps which should be taken to protect such rights. It was concluded that as a matter of ordinary prudence it would be inadvisable to take any positive action toward the assertion of United States sovereignty claims in the Antarctic pending an examination on the spot of the value of the areas to which the United States might possess the basis of a claim. A further consideration was the desirability under international law of some form of occupation of the areas mentioned as a condition incident to the exercise of sovereignty over them should it be determined that such action was in the best interests of this country.

These conclusions were approved by the President, who also suggested that this Department seek the practical advice of Admiral Byrd and of Mr. Lincoln Ellsworth in view of their outstanding knowledge of the Antarctic regions. After conferences with representatives of the State, War, Navy, and Interior Departments and with the Coast Guard, Admiral Byrd's opinion was requested as to the feasibility of an official investigation of those areas in which the United States might be interested. Admiral Byrd expressed his approval of the project and generously offered to place his services and his vessel, the *Bear of Oakland*, at the disposal of the Government, should they be required. So far as I am aware, it was not until his opinion was requested in January 1939 that Admiral Byrd was informed of the proposed expedition. Mr. Ellsworth's absence in the Antarctic made it impossible to consult with him at the time, but a conference with him was held upon his return to the United States. He also expressed his approval.

I believe that you are familiar with the subsequent developments resulting in an appropriation by the Congress of funds for the investigation and survey of the natural resources of the land and sea areas of the Antarctic regions; the formation of the United States Antarctic Service; and the President's appointment of Admiral Byrd as commanding officer. For your convenience I am enclosing a copy of the instructions issued to Admiral Byrd by the President on November 25, 1939.

Members of the Antarctic Service are now in the south polar regions and have established two bases from which it is planned to undertake the work for which funds have been provided by the Congress. Although no specific period of occupation is required by international law as a condition to the acquisition of sovereignty over unclaimed territory, it would not, in my opinion, be in the best interests of the Government to discontinue the operation of the bases already established, until, at least, the present survey is completed and the data accumulated on the basis of which a sound opinion can be formed as to the value of the areas now being investigated. The brevity of the Antarctic summer, the only practicable season for active field work, makes it unlikely that the work of the Antarctic Service can be completed within a single year.

Sincerely yours,

CORDELL HULL.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
March 13, 1940.

MY DEAR MR. ROBERTSON: Your letter of March 8 regarding Read Admiral Richard E. Byrd, United States Navy (retired), is acknowledged.

Rear Admiral Byrd was designated commanding officer of the United States Antarctic Service by the President of the United States on July 7, 1939. On the same date the President formed the executive committee of the United States Antarctic Service for the purpose of organizing, directing, and coordinating the conduct of the Antarctic Service. This committee comprises the following members:

Mr. Hugh S. Cumming, Jr., Department of State; Rear Admiral Russell R. Waesche, United States Coast Guard, Treasury Department; Capt. Charles C. Hartigan, United States Navy, Navy Department; Dr. Ernest H. Gruening, Department of the Interior.

This undertaking is a Federal project, made at the expense of the Government, and is not a private enterprise. It is strictly a Government undertaking operating under the specific instructions issued by the President, which instructions have been published in the hearings held by the House Appropriations Committee on the Interior Department appropriations. Rear Admiral Byrd has been ordered to active duty in order that he might properly perform the duties of commanding officer of the Antarctic Service. His Navy pay during the duration of this duty is that which he receives on the retired list.

In compliance with the expressed wishes of the President, the Navy Department has cooperated fully in the organization of the Antarctic Service. Naval personnel have been assigned to duty with the Antarctic Service and considerable equipment has been furnished by the Navy, as well as by other departments of the Government. In addition to this equipage, testimony given before the House Appropriations Committee indicates that Rear Admiral Byrd has made available to the Antarctic Service material, equipment, and appurtenances valued at $225,000, which was provided at no cost to the Government.

An extensive scientific program has been adopted for investigation, but the principal items of interest to the public and the Navy are:

(a) Geographical: The delineation of the continental coast line in the South Pacific Ocean and other areas surveyed. Location of harbors, anchorages, etc.

(b) Hydrographic: Sonic soundings in all waters navigated. Physical properties of waters and collection of bottom samples. Survey of Pactolus Bank off Cape Horn, South America.

(c) Magnetism: Observations of declination, inclination, and total intensity of earth's magnetic field.

(d) Aurora and cosmic ray: Effect of intensity upon radio transmission and reception.

(e) Meteorology: Synoptic observations with Chilean and Argentine observatories for determination of meteorology of southern Atlantic and Pacific Oceans; upper air observations with relation to aircraft operations.

(f) Glaciology: Location of icebergs and field ice, and structure thereof.

(g) Seismology: Determination of epicenters of earthquakes and earth tremors, and their relation to oceanography.

(h) Geology: Investigation of possible oil or shale deposits as potential fuel reserves.

(i) Radio: Observations held on high and low frequencies with naval stations. Study of the Kennelly-Heaviside layer, effect of magnetic disturbances on communications. Development of radio apparatus to meet severe conditions.

(j) Aviation: Aircraft operation in low temperatures; effect on metals and lubricants. Aerial mapping under severe climatic conditions. Training of aviation personnel. Development of polar flying clothing and equipment.

(k) Medical: Effect of living conditions upon metabolism of men; physiologic and psychologic changes of men. Bacteriological investigations. Dietary studies at camps and determination of calorific values of rations.

Although the above investigations are of the greatest interest to the Navy, it is recognized that many of the other investigations are of intense interest to other Government agencies.

The Navy Department is acting as a distributing agency for the release of press, still photos, and motion pictures to newspapers and agencies. The communications of the Antarctic Service are an integral part of the Naval Communication System.

The Navy Department has no information of any contracts entered into by Rear Admiral Byrd with private agencies by which he would acquire financial profit.

Sincerely,

———,
Assistant Secretary of the Navy.

Hon. A. WILLIS ROBERTSON,
United States House of Representatives.

A Commission to Survey the National Defense Requirements and Resources of the United States

REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 17, 1940

Mr. VAN ZANDT. Mr. Speaker, the solemn admonition of the President of the United States that we as a Nation must take stock of the needs of our national defense was uttered when he addressed the Congress, May 16, in these words:

> The clear fact is that the American people must recast their thinking about national protection.

This was a frank admission from the lips of the Commander in Chief of the armed forces of the United States that streamlining our national defense is the paramount question of the hour.

As a student of national defense it requires no effort on my part to see eye to eye with the Chief Executive on this momentous problem.

Firmly convinced that streamlining our national defense was an absolute necessity for the preservation of the future welfare and security of this Nation, it was my privilege to introduce on January 10, 1940, House Joint Resolution No. 417 which provided for the establishment of a National Defense Commission for the purpose of surveying the national defense resources, and requirements of the United States, including

the advisability of adopting a permanent progressive national defense policy, the establishment of a Department of National Defense, a National Defense Planning Board, and for other purposes.

This resolution was not offered in a spirit of criticism. On the contrary it was prompted by my desire to provide the American people with a comprehensive picture of what area we as a Nation must be expected to defend, and the type of defense necessary to cope with modern military methods.

A study of the resolution which follows should convince anyone of the justification for the establishment of the Commission which will result in the formation of a Department of National Defense with Under Secretaries for Army, Navy, and Air. This will accomplish among our defense forces:

1. Coordination.
2. Efficiency.
3. Economy.

With these objectives reached the American people will enjoy adequacy of its national defense system through a long range planning policy.

Joint resolution (H. J. Res. 417) providing for the establishment of a National Defense Commission for the purpose of surveying the national-defense resources and requirements of the United States, including the advisability of adopting a permanent, progressive national-defense policy, the establishment of a Department of National Defense, a National Defense Planning Board, and for other purposes

Resolved, etc., That to provide for "the common defense," to promote the "general welfare," and to insure "domestic tranquillity" in the United States of America there is hereby established a commission to be known as the National Defense Commission (hereinafter referred to as the "Commission").

The Commission shall be composed of five Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives, and five Members of the Senate, to be appointed by the President of the Senate. The Commission also shall include among its members the Secretary of State, the Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of Commerce, and the Administrator of Veterans' Affairs, any of whom in the event of their inability to serve are hereby authorized and directed to each appoint a representative to serve as members of the Commission.

The Commission is hereby authorized and directed to select and appoint as members of the Commission one member each to represent the interests of agriculture, labor, business, industry, and finance. The Commission is hereby authorized and directed to select and appoint as members two Army officers and two Naval officers, not on the active lists of the Regular Military Establishment, two aviators with at least 10 years of experience in aeronautics, and two women recognized for their mercies in wartime.

The Chairman of the Commission established under this joint resolution shall be chosen by the members thereof.

SEC. 2. That for the purpose of obtaining information necessary for legislation the Commission hereby is authorized and directed to conduct a comprehensive survey and study of the national defense, including the following:

1. The advisability of completely revising the National Defense Act in the light of events in Europe and Asia and the need for legislation to establish a peacetime defensive system, based upon the national objectives of the United States, which can be rapidly expanded into a wartime defensive system, which will carry out the national objectives of the United States.

2. The advisability of establishing a Department of National Defense, under which the armed forces of the United States would be combined and coordinated to provide for a more adequate national defense in any emergency.

3. The practicability under a Department of National Defense of promoting and accomplishing among all branches of the armed forces (a) coordination of effort and efficiency, (b) savings in purchases of military and naval matériel, (c) unified responsibility, and (d) elimination of duplication of effort and conflict of authority.

4. The advisability of establishing a National Defense Planning Board to formulate a long-range national-defense policy that has sufficient flexibility to meet any changes required by developments and maintain an orderly, progressive program.

5. The advisability of expanding and speeding the naval program and to examine the necessity for what is known as a "two-ocean navy."

6. The advisability of further expansion of the air forces of the Army and Navy, the number and type of planes required, and a coordinated program and policy for training personnel and cooperation between Army and naval air operations.

7. The advisability of granting Government subsidies to commercial air lines, requiring their transport planes to be convertible bombers and specifying that their pilots be commissioned in the Reserve Corps of the Army and Navy.

8. The advisability of perfecting a comprehensive program for rapidly mobilizing industry and commercial shipping into a defensive force.

9. The advisability of supplementing "educational orders" by providing an adequate "liquid fund" to be expended under the direction of the Secretary of National Defense for the encouragement of inventions, research, experiment, and development of arms, munitions, and implements of war.

10. The advisability of determining the interests and responsibilities of the United States under the Monroe Doctrine, the Declaration of Panama, and the pledges made in the name of the United States by the Chief Executive to defend Canada in the event of an armed attack by any other power.

11. The advisability of determining the interests and responsibilities of the United States in the Philippines if and when that Commonwealth becomes independent in 1946.

12. The advisability of formulating a definite military and naval program in keeping with the announced policy of the United States in the Orient and the possessions of the United States from the Aleutian Islands to the Samoan Islands.

13. The advisability of acquiring territory in the Atlantic Ocean and the Caribbean Sea which might serve as enemy bases.

SEC. 3. That the members of the Commission shall receive no compensation for their services but shall be paid their actual and necessary traveling, hotel, and other expenses incurred in the discharge of their duties.

SEC. 4. That there is hereby authorized to be appropriated the sum of $100,000 to defray the necessary expenses of the Commission. The chairman shall be authorized to appoint, with the approval of the Commission, such assistants and subordinates as he deems necessary to the conduct of the survey.

SEC. 5. That the Commission shall submit preliminary reports to Congress from time to time, if deemed advisable by the Commission, and shall submit a final report and recommendations to the Congress on or before January 3, 1941.

SEC. 6. That the Commission, or any subcommittee thereof, shall be authorized to sit and act during the present Congress at such times and places within the United States, whether or not the Senate and House are sitting, have recessed, or have adjourned, to hold such hearings, to require the attendance of such witnesses and the production of such books, papers, and documents, and to take such testimony as it deems necessary. Subpenas may be issued under the signature of the chairman of the Commission or any member designated by him, and may be served by any person designated by such chairman or member. The chairman of the Commission or any member thereof may administer oaths to witnesses. Every person who, having been summoned as a witness by authority of said Commission, or any subcommittee thereof, willfully makes default, or who, having appeared, refuses to answer any questions pertinent to the matter herein authorized, shall be held to the penalties provided by section 102 of the Revised Statutes of the United States, as amended (U. S. C., 1934 ed., title 2, sec. 192).

The Vital Importance of Continuing Our National Program of Fostering Transportation on Our Inland Waterways

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

Mr. WHITE of Idaho. Mr. Speaker, in considering the importance of water transportation in our national development and the relation of our waterways to domestic commerce, it is apparent that the constructive policy that has been followed by the Congress and the Federal Government in improving the waterways and fostering water transportation has contributed in a large measure to our national advancement and business prosperity. Particularly was this evident during the early period of our national growth, when the advent of the cotton gin and the cheap production of the staple cotton, with easy transportation on the network of slow-moving southern streams utilized in moving cotton to our seaports, gave America an advantage in the markets of the world and quickly placed the United States in a prominent commercial position, with the result that many of the Nation's great commercial centers owe their supremacy to their location on our arterial waterways. Omitting our seaports, we might mention Pittsburgh, St. Louis, Kansas City, Chicago, New Orleans, and Portland, Oreg. A casual

inspection of the map of our country will verify this statement.

The greatest example of national prosperity resulting from the use of water transportation is found in Europe where Holland, with little in the way of resources except farm land and waterways, has grown to be one of the wealthiest countries per capita in the family of nations. With no timber, no mineral, with little besides farm land and a comprehensive canal system which has been utilized for transportation, Holland has attained a degree of national prosperity that many nations naturally endowed with great resources of timber and minerals have failed to reach.

In recognition of the importance of water transportation in our national economy, a comprehensive program early undertaken has been consistently followed in improving the eastern rivers, but until recently the great river system west of the Rocky Mountains has been receiving little attention.

In studying plans for the future development of our national program, we find that the remaining great unused resources of our country lie tributary to the Columbia River. The bulk of this material is in Government ownership. The vast timber stands on the Snake, the Salmon, the Clearwater, and the Clarks Fork, all tributaries to the Columbia, are embraced in our national forests. Billions of feet of lumber and pulp timber in the national forests in Oregon, Idaho, and Montana are dependent for a market on cheap water transportation to the eastern sections of our country. Vast potential water power in these streams is dependent for development on the utilization of this timber and the production and shipment of the undeveloped metal and nonmetallic minerals that the Government experts have found to exist in great abundance in the areas tributary to this great western waterway.

If we are to continue our program of national development, the Columbia and the Snake Rivers must be opened for water transportation. Our first objective should be to improve the Columbia and the Snake Rivers to the confluence of the Snake and the Clearwater Rivers at Lewiston, Idaho, which will provide the low-cost transportation necessary for the utilization of the vast resources in Oregon, Idaho, and western Montana.

Taking advantage of the highwater stages of the Columbia and the Snake Rivers, the people in this section have already initiated boat transportation to Lewiston, Idaho, and are now moving in petroleum products and shipping out wheat at a substantial saving in transportation costs.

Mr. Speaker, in considering the ultimate benefits to be gained by the Government itself in utilizing Government-owned timber, and the benefits to business throughout the country by providing low cost water transportation on our rivers, in particular the Columbia River system, it is apparent that our legislative policy should foster this type of transportation and reject any legislative proposals that may hinder this development.

This view is expressed by an eminent authority and former member of the Interstate Commerce Commission, in a letter discussing the provisions of the Transportation Act and its effect on the national economy. The recent action of the House in recommitting this measure to the Interstate and Foreign Commerce Committee was done with my vote and support.

Mr. Campbell's letter is herewith submitted for consideration and insertion in the RECORD.

JOHNSTON B. CAMPBELL,
Spokane, Wash., May 1, 1940.

Hon. COMPTON I. WHITE,
Congressman for State of Idaho, Washington, D. C.

MY DEAR CONGRESSMAN: I am much interested in the Transportation Act of 1940, known as conference report S. 2009, in which it is proposed to take over jurisdiction to the Interstate Commerce Commission of certain types of water transportation.

In my opinion, it is unwise at this time to take jurisdiction of the water carriers.

It is, of course, a well-known fact that transportation on our rivers was rendered "innocuous," in the language of Commissioner Lane, of the Interstate Commerce Commission, by competition of the railroads, and that there was no opportunity to develop water transportation until after the passage of the Transportation Act of 1920. That during that period of time the further development of water transportation has been relatively slow, and it has not reached the status of carriers to such an extent as it can withstand competition of railroads if its rates and practices are to be regulated by the Interstate Commerce Commission.

It is true that the conference report exempts certain forms of water transportation, notably that of the Great Lakes; and it is rather difficult for me to understand why the Great Lakes should be exempted and transportation on the Columbia River be taken over.

I also note that certain bulk transportation on the Columbia River is exempted, but that the transportation of other commodities is in its infancy, and an opportunity should be given to develop that transportation before being put under the control of the Commission.

I also note that while the railroads are required to make joint rates with water carriers joint rates are not required by the waterways for trucks. I think that is very vital; and if joint rates are made by railroads, joint rates should also be required by trucks, for it is quite difficult to build up water transportation on the Columbia River without the aid of trucks to haul the commodities away from the river points.

I sincerely trust that you will find your way clear to oppose the passage of this law so far as it pertains to water transportation.

I sincerely hope that I may be able in the near future to see you and personally pay my respects to you.

With very kind and sincere regards, I am,

Yours truly,

JOHNSTON B. CAMPBELL.

Against Evils Attempting to Destroy Civilization

EXTENSION OF REMARKS
OF
HON. FOSTER STEARNS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 17, 1940

AN EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Christian Science Monitor of May 16, 1940]

AN EDITORIAL LETTER TO THE READERS OF THE CHRISTIAN SCIENCE MONITOR

It is out of hearts full of compassion for the peoples of all nations in the present great world crisis that those charged with the editing of the Christian Science Monitor are speaking through this editorial letter to the members of its wide subscriber and reader family in every country. Some of you have written that you do not feel a newspaper founded out of a great love for all humanity should "take sides" in the conflict. However, it is that very love for humanity which compels this newspaper to take sides, not against any nation or group of nations, in and of themselves, but against the evils which are attempting to destroy the very basis of civilization.

The issues have become far bigger than any question of colonies or of righting the injustices of the Versailles Treaty. There is at stake the right to live the Christianity upon which men's lives must be based, else they perish. The challenge to Christianity is being made on more than one front, but in this period it appears to be receiving its chief impetus by an attempt to overthrow the Nazarene's love-inspiring doctrines through the forceful application of hatred-breeding Nazi dogmas. For the brotherhood of man is openly scorned.

Worship of person and state are given precedence over worship of God. The rights of peoples and nations to freedom of speech, religion, and self-government are denied. Unjustified, unprovoked attacks have been made on innocent countries and peoples, and their morale weakened through instigated treachery.

That, briefly, is the situation as the Christian Science Monitor recognizes it, and it feels its readers must be kept alert to these dangers, and not be misguided by well-meaning but mistaken arguments that, in order to be just, they and this newspaper must be impartial and aloof. The greatest justice that can be accorded the German people is to see clearly that their present course of action is harming themselves most of all. And then firmly, with compassion and love, we should do everything possible to help free all peoples from the prevailing evils.

The Christian Science Monitor has worked for years to further a loving attitude toward the German people. It recognized the serious plight of Germany after the World War, and it repeatedly has emphasized the necessity of rectifying the injustices of the Versailles Treaty. It cannot, however, uphold or endorse the methods

which have been employed to achieve that end, and it must vigorously oppose the crimes against civilization being committed under the guise of justice-seeking.

It is understandable, from a purely human basis, how an unhappy people, believing they have been mistreated and held down by others, might come to idolize one who would appear to be leading them out of their distress. And how, blinded through false loyalty, they might be unable to see whither they were being led, unable to recognize the difference between patriotic zeal and mad, destructive ambition.

It unquestionably is the right of all peoples and of every nation to have "living room" and an abundance of the necessities of life. However, an attempt to acquire these by aggressive force or by wresting them from weaker nations is, to the enlightened thought of today, a return to the barbaric methods of the darker ages. It is true there are few nations in whose historic pages there are not acts of conquest which would not stand the modern searchlight of truth, but down through the years the majority of them have been attaining, though slowly, a higher moral position, and that progress cannot be retarded by what the German people today feel is their necessity. There is only one right way for any country to seek to supply the needs of its people—by following the injunction of the Wayshower, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Seeking the kingdom of God, wherein is expressed spiritual right, brotherly love, unselfishness, honesty, fair dealing, truthfulness, is the exact opposite of trying to build up an exalted material state based on material might, hatred, personal domination, persecution, fear, and tyranny. And of what avail is mere space as "living room," when the lives of a nation's people are choked with fear, oppression, and lack of individual liberty? Living room but no life of their own to live. The greatest man the world ever has known often had no place wherein to lay his head, but his life was the freest, richest, and most bountiful of all lives.

The avowed purpose of making a nation one of the greatest in the world naturally appeals to its people, but what really constitutes the greatness of a nation? It is not mere military might nor material possessions. It is chiefly the mental quality and moral state of its people. Germany can again be a great nation in the true sense of the word, but to save itself it must awake! It must recheck its course and aline itself with God's government, which operates solely through the brotherhood of man. And not only Germany but all nations must awaken and yield to this divine government, for there are few without some share of responsibility for the plight of the world today.

In the meantime, much as it deplores war, the Christian Science Monitor realizes that at this moment the Allies have no choice but to defend themselves and friendly smaller nations by military force, and that in so doing they are upholding the democratic rights of people everywhere. In their treatment of the war situation, our editors are seeking earnestly to be guided so that this newspaper may do its part in the establishment of a better world. Its founder, Mary Baker Eddy, has said (message for 1900, p. 10):

"Certain elements in human nature would undermine the civic, social, and religious rights and laws of nations and peoples, striking at liberty, human rights, and self-government. * * * History shows that error repeats itself until it is exterminated. Surely the wisdom of our forefathers is not added but subtracted from whatever sways the scepter of self and pelf over individuals, weak provinces, or peoples. Here our hope anchors in God who reigns."

It is these "elements in human nature" which this newspaper is attempting to lay bare. They must be seen as evils, but rendered powerless in thought by the realization that they are no part of the man made in God's image and likeness and have no place in a universe created by God. The need is for men to learn more of the true nature of God's universe, and approach a more spiritual basis for thinking and acting in everyday life. It is only thus that lasting peace can be brought about. Here the hope of the Christian Science Monitor, too, "anchors in God," for it knows that He does reign.

Veterans' Legislation Necessary

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

LETTER FROM GEN. FRANK T. HINES

Mr. D'ALESANDRO. Mr. Speaker, I wish to congratulate this House on the passage of the World War widows' and orphans' bill and the veterans' preference bill. As an humble Member of Congress, I was happy to cast my support for these measures.

There is a crying need for a veterans' hospital in the State of Maryland. At the present time there are over 500 veterans in Maryland who have made application for treatment in general hospitals, and who cannot be cared for because there are no beds available. In this connection I wish to quote a letter I received from Brig. Gen. Frank T. Hines, Chairman of the Federal Board of Hospitalization:

FEDERAL BOARD OF HOSPITALIZATION,
Washington, D. C., May 14, 1940.

Hon. THOMAS D'ALESANDRO, Jr.,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: In the program of future construction for the Veterans' Administration for accomplishment from year to year within the period of the next 10 years, recommended by the Federal Board of Hospitalization to the President and approved in principle by the President on May 9, there is included a new Veterans' Administration general facility of 300 beds for the Maryland area.

Immediate consultation is contemplated with the Director of the Bureau of the Budget to determine upon how funds may best be made available to undertake necessary preliminary work, such as the selection of site and preparation of plans.

Very truly yours,

FRANK T. HINES, *Chairman.*

I join with the other members of the Maryland delegation in the sincere hope that funds may be made available for the carrying out of this program to an immediate conclusion.

Deportation of Alien Communists

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

Mr. LELAND M. FORD. Mr. Speaker, I have read with some surprise the remarks of my colleague the gentleman from New York [Mr. DICKSTEIN], and chairman of the Immigration and Naturalization Committee, in the RECORD of May 14, all in connection with my bill, No. 8310, which is a bill to authorize deportation for any person who while in the United States is or has been, by his word or acts, sympathetic with, associated with, or affiliated with or sought the support of Communists in the United States or elsewhere.

In the first place, the bill was not properly reported in the RECORD in this respect, that it should read that "any alien shall be deported in the manner provided by law." The word "hereinafter" appearing on the third line of page 1 of the bill was requested to be stricken out, and it was agreed to.

The gentleman from New York has stated that the word "Communist" is not defined and asks, among his other questions, "What is a Communist?" I do not think there is any question at all but that every thinking person in the United States knows what a Communist is and knows what they stand for, and I think the word applies particularly to three things, as follows:

First. A real member of the Communist Party has pledged his allegiance to a foreign country and has as one of his concepts the destruction of the republican form of government as it is now set up and as we know it in this country; that this allegiance goes so far as to qualify him to bear arms for a foreign country and against our own country. I do not believe that any political party should be permitted to be organized in this country that has as its foundation any such concept as the destruction not only of this Government but of organized business as set up in this country.

Second. With reference to the right of a party to organize, become recognized, and exist in this country, my view is that it has such a right, providing it does not go so far as to become treasonable. That it would work to the destruction of our Government by direct or indirect action or by force or by violence. The Communist Party stands for all of these things.

It is part of their doctrine that there is no limit at which they will stop to accomplish their end. The best proof of this is Russia, where some 12,000,000 people were murdered. What freedom or consideration under any bill of rights did these murdered people in Russia have?

That brings me to a third consideration. The Communist Party has no right to go so far that it interferes with the individual liberty or freedom of our people. I would define the right of individual liberty as freedom to do that which one wishes to do, providing that it does not infringe upon or interfere with the rights or freedom of others. The communistic doctrine would certainly interfere with my right or individual liberty to ever have a republican form of government, as it is established, and my freedom under the Bill of Rights. The advocates of communistic doctrines may hide behind many technical reasons, false premises, and false arguments, which prove to be absolutely impractical, for when their doctrines are reduced to a practical operation it does away with all individual liberty and freedom; and the practice, as shown by results, is that it sets up the most despotic, dictatorial type of government ever known. I am surprised that my colleague, who has been on this committee so long, should not have this same practical view.

Some persons might attack this bill on the grounds of intolerance, but it is my opinion that this attack would have absolutely no foundation, because there are many things in this country that we do not tolerate because they no not inure to the benefit of the greatest number. We do not tolerate murder, robbery, assault, and many other crimes that might be named, because they go against the interests of society. Then, therefore, why should we tolerate a treasonable doctrine that preaches destruction of all law in this country and the destruction of the Government itself? I say it is time that we became intolerant of those things that would destroy us.

The questions are asked:

What is sympathy with the Communists or Communist organization?

What does it mean to associate with Communists or communistic organizations?

What do you mean by support?

How does one use support?

What is a Communist?

What is good order of a community?

What is happiness of a community?

What is a local community?

Does a strike interfere with good order or happiness of a community?

What are established democratic, economic, or domestic relations?

Can it possibly be true that my colleague does not know the answers to these questions? I can hardly believe this. I believe that with his experience, his knowledge, his long service record on this Immigration Committee, he knows the technical answers to these questions and he also knows the practical answers to these questions.

He should also know that if this communistic doctrine were ever permitted to prevail in the United States of America, all religion would be wiped out; all business would be wiped out; every single union would be wiped out, as they all were under its operation in Russia.

I am glad, however, that this only expresses the opinion of the chairman of the Immigration and Naturalization Committee, for I believe, when the evidence is taken, that the majority of the members will report out this bill, and I am somewhat surprised that the chairman would make this record in view of the fact that his committee have not fully and finally discussed this bill and taken a vote thereon.

Is it possible that the chairman feels that this bill will come out of committee and that he seeks to fight it even before it is ever brought upon the floor?

My worthy colleague says that the committee is very sympathetic to the proposed legislation, and I believe he has himself stated that he is sympathetic to it, but when he runs in the arguments of the Trotzkyites and the others he has mentioned in his questions he is drawing a red herring across the trail. He heard me state before the committee that I had no pride of authorship in this bill; that I would welcome and would seek constructive amendments that would carry out the word and spirit of this bill.

I have been watching this situation for years, and for the last 10 or 12 years every bill of this type that has sought to restrict or control this doctrine or preachment of the destruction of the United States of America has been talked to death, buried in committee, or become so entangled with questions that a lawyer might say were incompetent, irrelevant, or immaterial; that it has never passed; but, on the other hand, every time a bill of such type has been killed those who have killed it have always made the statement that they had better ideas, but in the long run these ideas have never been carried out; nor have they brought out a bill that would do the very thing that this bill seeks to do. It appears to me that it has been a game of hide-and-seek, of stalling, and goes so far as to actually protect these subversive, destructive, minority communistic interests.

This bill is not retroactive and I have much good legal opinion to that effect. The chairman of this committee heard me make the statement—and I believe it is true—that in qualifying an individual to find out what he actually is his background must necessarily be gone into; and the reason that this bill states that any alien who has been or who has associated with, or who by his action in the past has indicated his position, or who by his sympathies has indicated what his real feelings are, all contribute to qualify him and to tell what he actually is. Certainly one cannot have a preconceived idea as to what a man's future thoughts might be, and this part of the bill is in there for the specific purpose to determine what he actually is. Is there any other way by which one may be judged? This bill will serve to provide practical proof of what a man is. I have implicit confidence in the courts of our United States to carry out justice under the provisions of this bill, and to qualify a man, as to whether he may or may not be deported.

The chairman further heard me say that in the Landis decision, wherein Bridges was whitewashed, but not exonerated, Landis hid behind the excuse that we could not deport any of these undesirable aliens for his communistic sympathies and belief, and this bill therefore was drawn for that specific purpose. If he has read the RECORD, he will find wherein the Assembly of the State of California and the senate of the State of California adopted their resolutions Nos. 11 and 23, and asked that a specific bill be passed to cover this particular point, as there was not, at the present time, any law that would take these Communists. If this law is passed, these undesirable aliens may be deported, as it will have the effect of amending the immigration laws as shown in the United States Department of Labor, Immigration, and Naturalization Service laws, rules, and regulations of January 1, 1930, as amended, up to and including December 31, 1936. Harry Bridges has violated every single one of these, as shown on pages 33 and 34. This section states as follows:

> Exclusion and expulsion of anarchists and similar classes (aliens opposed to, or disbelieving in, organized forms of government; aliens believing in, advising, etc., overthrow by force or violence of the United States Government or all forms of law, unlawful assaulting or killing of any Government officers, unlawful damage, etc., to property, or sabotage; aliens writing, publishing, etc., written or printed matter advising, etc., opposition to organized forms of Government, overthrow by force or violence of United States Government or all forms of law, unlawful assaulting or killing of Government officers, unlawful damage, etc., to property, or sabotage; aliens members of or affiliated with organization, etc., writing, etc., written, or printed matter described herein). (Title 8, sec. 137, U. S. C. A.)

My worthy colleague has questioned the words "affiliated with" and has asked questions in connection with my bill, when, as a matter of fact, this very wording, or terminology, is in the law which is active and in effect now. He must

realize that in interpreting the laws of the country, our courts have been able to determine what an "accomplice" of murder is, and I would liken this terminology to the terminology under which our courts have been able to make satisfactory determination as to what an accomplice is. This section gives clearly, definitely, and positively what are termed "societies," "groups," "organizations," and those who advocate or teach opposition to all organized government; goes into the matter of unlawful damage, injury, destruction of property, and sabotage; goes into the giving, lending, or promising of money or anything of value for the advising, advocacy, or teaching of the above doctrine, both as to individuals and as to organizations, societies, or groups of any such character as above.

It was stated that this bill did not provide a penalty.

The penalty is already provided in that section wherein it states that any alien who at any time after entering the United States is found to have been at the time of entry, or has become thereafter, a member of one of the classes of aliens enumerated above, and it provides further, that any such alien shall, upon the warrant of the Secretary of Labor, be taken into custody or deported in the manner provided in the Immigration Act of February 5, 1917. It provides further that the provisions of this section shall be applicable to the classes of aliens mentioned in this act, irrespective of the time of their entry.

Why, now, does this chairman state to you that the provisions in my bill are unconstitutional, when he already has on the books in the laws that directly affect his own Immigration and Naturalization Committee, and are written specifically for that committee, the same provisions? This does not square out. It appears to me that this chairman does not want this bill passed. This worthy chairman ought to know the difference between criminal and civil procedure. This is entirely a civil procedure, and the United States Government or any sovereign government has a right to deport any of these undesirable aliens under this procedure.

Do not let a red herring be drawn across the trail with reference to this bill by letting someone interpret it to mean that it applies to all aliens. It does not. This bill does not apply to those decent, reasonable, outstanding aliens who would make fine citizens of this country, but deals only with the undesirable alien who comes into this country with the very sinister and subversive idea of destroying what we have here, and who would remake it in accordance with European standards. The penalty in this bill is extremely generous. If these same undesirable aliens would go into the countries from which they came and attempt to preach any such destructive doctrine, they would be immediately executed. Therefore I say that the provisions of this bill are generous.

The situation with respect to this subversive activity, including sabotage and some of the preachments that are being made in this country, has grown to an alarming degree to those who really think and have the welfare of this country at heart. I am going to ask the chairman a few questions:

How far are you going to permit the "boring from within" and the placement of so-called cells in the Government and in positions where they can do us damage in time of stress?

How far are you going to permit this to interfere with the business operation of our merchant marine, our national defense?

What would sabotage do to us in our national defenses if we actually needed them in the manner in which some foreign countries have needed them in the immediate past? Does he advocate that we sit idly by and permit these things to take place, that we sit idly by and permit this Government to be destroyed and taken over by foreign powers?

If there ever was a case parallel to the occasion when Nero "fiddled while Rome burned," this looks to me to be a parallel case in this country. It is my opinion that such committees as the Committee on Immigration and Naturalization, when they have in their power such items as these, are just as much a line of national defense as is our Army, our Navy, or our airplane defense. If we are destroyed in this manner, we are just as surely destroyed as if our Army were defeated, our Navy sunk, and our air defense annihilated. I challenge this committee on this point, and I ask that they do their duty in the protection of this country, and I am quite sure that the majority of this committee is certainly going to do this.

There has been much said, and many bills introduced, much discussion, much logrolling, but after the smoke all clears away nothing has been done, and I ask this committee to do something, to get this bill out and do it immediately, in order that this country may be properly defended from all sides, before it is too late, and before we have paid the penalty that some European countries have paid.

We Need the Whole Team

EXTENSION OF REMARKS

OF

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. SCHAFER of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing today in the Washington Daily News:

[From the Washington Daily News of May 17, 1940]

The President asks $1,182,000,000 for defense, in addition to the two billions already ticketed for that purpose.

Congress shows every intention of voting the money, and we think it should do so, with all possible haste. Republican leaders on Capitol Hill have laid aside partisanship and are cooperating with the Democrats, which is what they should do in times like these.

But Congress will not have done its duty if it merely votes the money and then goes home, which seems to be what the President has in mind. To be sure, he promised to call Congress back into special session if the national defense requires it. "The Congress and the Chief Executive," he said, "constitute a team where the defense of the land is concerned."

For the congressional part of the team to sit on the bench while the Chief Executive carries the ball without interference—that is not what this emergency demands.

"I know that our trained officers and men know more about fighting and the weapons and equipment needed for fighting than any of us laymen; and I have confidence in them."

So have we all.

Yet if our experience in the last war and observation of the struggle now raging have taught us anything, it is that modern war is not merely a contest of officers and men in the field. It is even more a conflict of economic and industrial systems. It is no longer enough to "get there fustest with the mostest men." The side that wins is the one which can also "get there fustest with the mostest and bestest weapons"—and which can count on the largest continuing volume of the same.

Mr. Roosevelt spoke dramatically of the hours of flying time from possible enemy bases to our shores. But his admirals and generals are still dealing in months and years required to get deliveries on their orders. They have muddled with this procurement problem year after year, unable to spend the money as fast as Congress appropriates it. Is there any reason to believe that the problem will be solved by merely doubling the appropriations to be handled by the same men and the same methods?

No. The situation clearly calls for a change. The President and his admirals and generals need the help of men who know the methods of industry—who know how to turn the cranks of this country's great mass-production machines, and how to convert blueprints into actual weapons coming off the assembly lines.

Call it a defense industries board—call it whatever you wish—so long as it has men who know how to get the job done; "economic royalists," perhaps, a little while ago, but today men who should be drafted into the country's service because they have industrial brains.

No one who heard Mr. Roosevelt's speech yesterday could fail to sense the wartime atmosphere, the feeling that we are in an emergency which demands sacrifice from every man—and, from every man, the President as well as others, the willingness to lay aside past prejudices and work together until the last unit of our economic system has been mobilized to make our country strong.

Congress has rallied to the Chief Executive's leadership, but Congress should not go home until it has also taken steps to rally the forces of private industry, from which our weapons and means of defense must be drawn.

We entered the last war with a national debt of $1,000,000,000. We came out owing more than 25 billions.

Now, we face the threat of a more terrible conflict with a Budget 11 years out of balance and a debt nearing 45 billions.

Is this generation so decadent that, not having yet paid for the last war, it wants to pass on new costs of self-defense to posterity, on the theory that those to come will have no social problems or defenses of their own to burden them?

We think not.

But the President yesterday said not a word about how to raise the extra billion for defense. He is reported to believe that responsibility belongs to Congress.

And indeed it does.

The legislative branch has the constitutional power to appropriate, and the obligation to tax.

Congress should not go home until it has met that responsibility. And the courageous way to meet it is by a direct tax on the incomes of the largest possible number of citizens—from each according to his ability to pay.

To defend our country we ask young men to enlist in a service where, if war comes, they may have to risk their lives at the controls and guns of airplanes, and tanks, and ships of war. Shall we spare the pocketbooks of those who would stay at home—just because they vote?

The Food-Stamp Plan

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 17, 1940

EDITORIAL FROM THE PUYALLUP (WASH.) PRESS

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial from the Puyallup Press, of Puyallup, Wash., of April 25, 1940, dealing with the subject of surplus agricultural products and extolling the food-stamp plan as a sound and practical means of disposing of such surplus farm produce. I believe the editorial is a trenchant expression of sentiment generally entertained by sober and thoughtful people throughout the United States.

The article is as follows:

[From the Puyallup (Wash.) Press of April 25, 1940]

THE ANSWER TO SURPLUSES

An ever-widening market for farmers is being created through the increasing participation in the food-stamp plan. About 2,000,000 needy persons are now taking part in eating needed surplus foods that have accumulated through lack of buying power. It is anticipated that by July 1 from three to four million persons will be taking part in the plan's dual effort to broaden the domestic market for farm surpluses and improve the diet of the undernourished of our country.

The farmers represent one-fourth of our population—yet have only 11 percent of the national income. Obviously, the farmers' market has been curtailed, and for several reasons. Increased efficiency in agricultural production, coupled with loss of our export markets, has greatly increased the need of a wider domestic market for the farmers. Meanwhile lack of ability to buy many needed so-called surplus foods on the part of millions of our people has narrowed rather than widened this market. Recent studies indicate that nearly two-thirds of the families in this country have been living on an average monthly income of $69, and some 22,000,000 people are receiving one form or another of public aid.

Because the food-stamp plan is making it possible for the farmers to sell profitably more produce in the cities, they are enabled, in turn, to buy more of the industrial goods they need from the cities. This increased business activity in the cities tends toward reemployment, and men with jobs further increase consumption.

Ways and means must be found—and the food-stamp plan is one of them—to make it possible for those who want work to get it. Full reemployment is the ultimate goal and answer to the challenge of underconsumption and resultant surpluses of both farm and city goods needed in this country. The unsatisfied wants of two-thirds of our people comprise the greatest new market that has ever loomed before our farmers and businessmen. Reemployment and increased mass buying power is the answer to underconsumption and farm surpluses in America.

Reestablish P. W. A. by Adopting Voorhis Amendment

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 17, 1940

Mr. VOORHIS of California. Mr. Speaker, I heartily agree with those who have spoken of the values of a P. W. A. program. I have believed always that a program of the P. W. A. type should be part of our attack on unemployment. I shall offer the following amendment at the end of the so-called relief bill when it is read for amendment:

Amendment by Mr. VOORHIS of California: Page 33, line 7, add a new title as follows:

"TITLE II

"SECTION 1. There is hereby appropriated to the Public Works Administration, out of any money in the Treasury not otherwise appropriated, the sum of $500,000,000 and the Commissioner of Public Works (in this section called the Commissioner) is hereby authorized, with the approval of the President, to make loans from this fund to States, Territories, possessions, or political subdivisions, or any instrumentalities or agencies thereof (in this section called public bodies), to finance or aid in financing projects which will provide new employment; (b) to organizations created pursuant to law or under the authority of any public body to operate without profit (in this section called nonprofit organizations), to finance or aid in financing projects (including any and all constituent parts thereof) which will produce new employment, will be devoted to public use, and are within any one of the following classes: Hospitals, health centers, clinics, colleges, schools, recreational facilities, or facilities for the handling and storage of farm products; and (c) to public bodies and nonprofit organizations for the temporary operation and maintenance of projects for such period as the Commissioner shall deem necessary for the security of any obligations acquired hereunder.

"SEC. 2. Every such loan shall be evidenced by an obligation or obligations, general or special, of the public body or nonprofit organization to which made, shall bear interest upon the unpaid principal at the rate of 1 percent per annum, shall be secured in such manner as the Commissioner shall determine to be necessary reasonably to assure repayment of the loan, and shall be repayable at one time or from time to time within a period not to exceed (1) 50 years from the first advancement of funds thereunder or (2) the anticipated period of usefulness of the project for which such loan is made, whichever is less, as determined by the Commissioner prior to such first advancement.

"SEC. 3. In carrying out the provisions of this title the Commissioner is authorized—

"(a) To prescribe, from time to time, terms and conditions not inconsistent with the provisions of this section.

"(b) To sell any bonds, securities, or other obligations acquired hereunder, or any security therefor.

"(c) To accept (1) in exchange and substitution for any bonds, securities, or other obligations of the same or any other public body or nonprofit organization, whether of the same or longer maturities or otherwise differing, which, in the determination of the Commissioner, are more desirable than those so acquired; and (2) in exchange and substitution for any bonds, securities, or other obligations acquired hereunder, any other security, which in the determination of the Commissioner is more desirable than that so acquired.

"(d) To authorize expenditures for contract stenographic reporting services; supplies and equipment; purchase and exchange of law books, books of reference, directories, periodicals, newspapers, and press clippings; travel expenses, including the expense of attendance at meetings when specifically authorized; rental at the seat of government and elsewhere; purchase, operation, and maintenance of motor-propelled passenger-carrying vehicles; printing and binding; and such other expenses as he may determine necessary to the accomplishment of the objectives of this title.

"(e) The Commissioner is authorized, without regard to the civil-service laws and the Classification Act of 1923, as amended, to appoint and fix the compensation of such executive and administrative assistants, a general counsel and such other attorneys, and such experts, special consultants, and regional supervisors, and subject to the provisions of the civil-service laws and the Classification Act of 1923, as amended, to appoint such other employees as he may deem necessary as a regular staff to carry out the purposes of this title, and to prescribe their authorities, duties, responsibilities, and tenure: *Provided*, That if the Commissioner shall, within 6 months after the date of the approval of this act, certify to the United States Civil Service Commission that any employee of the Public Works Administration has rendered satisfactory services for at least 6 months prior to the date of approval of this act and is to be assigned to the regular staff of the Administration, and such employee shall, within 6 months after such certification, pass such appropriate

noncompetitive tests of fitness as the Civil Service Commission may prescribe, such employee shall thereupon acquire the same status as if certified after examination by the Civil Service Commission.

"SEC. 4. The Commissioner shall require (a) that all workmen, laborers, and mechanics employed in the construction of any project financed hereunder shall be paid without subsequent deduction or rebate on any account not less than the wages determined by the Commissioner, or in accordance with local law, to be the wages prevailing for the corresponding classes of workmen, laborers, and mechanics employed on projects of a character similar to the work in the locality where the project is to be situated; and (b) that no workman, laborer, or mechanic employed in the construction of any such project shall be compelled to work a greater number of hours per week than the applicable maximum established by the Fair Labor Standards Act of 1938, or be compensated at a rate less than the applicable minimum-wage rate established by said act, whether or not the employment of such workman, laborer, or mechanic is subject to the provision of said act.

"SEC. 5. The Public Works Administration in the Federal Works Agency is hereby continued, and all provisions of law existing on the date of enactment hereof relating to limitations of time for the continuance of the Public Works Administration, and the receipt of applications, are hereby repealed. The Commissioner shall act under the direction and supervision of the Federal Works Administrator.

"SEC. 6. Not to exceed $10,000,000 of the fund shall be available for administrative expenses in carrying out the provisions of this title during the fiscal year ending June 30, 1941."

Construction Work Done by W. P. A. Does Not Compete With Private Construction Contractors

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

Mr. GEYER of California. Mr. Speaker, the W. P. A. policy governing eligibility of projects to be operated on the W. P. A. construction program is stated as follows in the Guide to Project Eligibility, operating procedure No. G–1, sections 12 and 13:

The work or service to be undertaken as a project shall not result in (a) the displacement of personnel regularly employed by the sponsor, or by some other public authority or agency, or (b) prevent the employment of persons who would otherwise be employed by the sponsor, or by some other public authority or agency. The project to be prosecuted shall furnish work which is additional to that provided for under the normal budget of the sponsor. In all cases where the proposed work might appear to displace or prevent the employment of personnel who would otherwise be employed by the sponsor, the justification for the project shall be clearly established.

No current maintenance work may be prosecuted under any project. This is construed to mean any work which is customarily carried out by the regular employees of a public agency. The absence of a proper maintenance or clerical force in the employ of such an agency does not, however, justify the execution of the work by the Work Projects Administration if it is of a type which is ordinarily done by a regular maintenance of clerical force.

Since every application for construction projects submitted to Washington contains information showing that this work is in addition to work the sponsor or other public bodies would normally do, the volume of public construction work done by the W. P. A. that would have been done by municipalities through private contracts without W. P. A. funds is, without doubt, negligible in terms of the total volume of private construction work. Furthermore, the W. P. A. does not undertake work which displaces personnel regularly employed by the sponsor or other public authority or would prevent the employment of persons who would otherwise be employed by the sponsor or other public agencies. These specific regulations operate to prevent W. P. A. doing construction work in competition with private construction contractors.

An example of the type of construction work done by W. P. A. is given by Mayor Tobin, of Boston, on pages 270 and 271 of the hearings before the Committee on Appropriations, United States Senate, Seventy-sixth Congress, on House Joint Resolution 326. In discussing a project which he proposed to sponsor, Mayor Tobin made the following statement:

The only building construction at the present time I have in mind is there is a possibility we may take a lot of flat lands that the city is going to take for taxes—about $125,000 is owed to us for taxes. It is of no value as it is at the present time. Under ordinary circumstances the city would not have the land. If it does come to us, the chances are I will build a roadway across it and build a bathhouse and make a beach out of it. And as the result we will have to build a bathhouse.

Now, that bathhouse would never be built if it were not for this depression. We are not depriving the contractors of work, because a contractor would never have had an opportunity to bid on the building of that bathhouse building, because the bathhouse building would not have been built, would not have been considered, if we did not have the depression we have at the present time.

A comparison of the volume of public construction work done by private contract during the period 1925 to 1929 and 1936 to 1939 does not indicate that W. P. A. construction is taking business from the private construction contractors. Figures obtained from the Department of Commerce and presented to the House Committee on Appropriations by the Associated General Contractors of America, Inc., show that in the boom period, 1925 through 1929, public-contract construction averaged $2,292,000,000 a year. During the 3 years, 1936 to 1939, when W. P. A. was in operation, public-contract construction averaged $2,168,000,000.

These figures show that the volume of public-contract construction in recent years has approximated the level attained in the late twenties; this has been largely through expansion of the Federal public-works program. In addition to this volume of public works, the W. P. A. program has been operated by the Federal Government for the unemployed on the relief rolls.

A public-work program prosecuted by the contract system does not provide jobs for the unemployed who are on relief. Not only is the cost per worker from three to four times as high under the private-contract system as on the W. P. A. program but also private contractors draw only a small proportion of their workers from the relief rolls. Colonel Harrington, Commissioner of Work Projects, testified to the Senate Committee on Appropirations of the Seventy-sixth Congress—House Joint Resolution 326, page 37—to that effect in the following statement:

Even in 1936, when the most strenuous efforts were made to force contractors to employ such persons, they employed less than one-third of their force from persons in need of relief. House Joint Resolution 326 in another section of the bill (p. 33, line 14, sec. 201, item (d)) explicitly recognizes this condition by providing that only 25 percent of the labor employed on these projects must come from relief rolls and then only if in the opinion of the Commissioner of Public Works such labor is available. I doubt that even this limited requirement is workable.

Contractors who prosecute the work received as a result of competitive bidding use every labor-saving device possible. They do not employ the older workers. They operate only when weather conditions are favorable; and the necessity for bidding on and awarding contracts prevents rapid expansion of the program to meet emergencies or contraction when emergencies cease to exist. In contrast, the W. P. A. secures at least 95 percent of its workers from the relief rolls, operates when seasonal conditions are not favorable to private-control operations, and expands or curtails the program rapidly as the need exists. On both programs materials, supplies, and equipment are secured from private concerns.

Additional work is made for private contractors by the W. P. A. through cooperating with the United States Housing Authority and the Federal Housing Administration in the promotion of low-cost housing. Under W. P. A. regulations, projects for actual construction work on houses to be built on low-cost housing programs are not eligible for operation; but projects for housing surveys; demolition of structures; clearing; draining and grading of sites; construction of public facilities such as streets, curbs, gutters, and sidewalks; and work on publicly owned transmission lines are eligible for operation provided such work will enable the marginal prospective home owner to acquire a home which would be denied him if it were necessary to include the cost of street and utility improvements in the price of the house.

Prosecuting projects which makes construction programs such as low-cost housing and other public developments possible indirectly creates work for, rather than takes work away from, private enterprise.

W. P. A. regulations provide, in accordance with section 1, subsection (e) of the E. R. A. Act of 1939, that equipment required for operation of W. P. A. projects be purchased only when the desired type and quantity cannot be rented at a reasonable rate. This policy of renting equipment wherever possible creates a source of income that private owners of equipment would not otherwise receive. A study made by the Work Projects Administration showed that for the 2 weeks ending November 19, 1938, a total of 76,379 units of equipment were rented from private owners. The rental of 38,206 units of this total was paid from Federal funds and the remainder from sponsors' funds.

The private construction contractors who allege that W. P. A. construction work is in competition with their activities urge that Government withdraw from construction work prosecuted through force-account methods and provide funds for such construction work for prosecution by private contractors. In complaining of competition they are simply taking the position that Government construction by force account is a potential market for their services; they are out to get this market, if possible. In this attempt they are, in effect, recommending that the dole be substituted for the work program as a means of providing for the majority of the unemployed on relief. Their position is made clear by the testimony of their representative before the House Appropriations subcommittee holding hearings on the 1941 relief bill who recommended: That W. P. A. operations be limited to activities of a nonpermanent nature; that the unemployed who could not be placed on W. P. A. projects be put in the Army; that the unemployed who did not want to go in the Army be put on the dole; and that recognition be given the principle that the W. P. A. program be replaced with a public-works program prosecuted under private contracts. Such proposals as these ignore the primary objective of the W. P. A. program—that of giving work on useful public projects to the unemployed who are in need.

Victory for the Allies Is Held To Be the Only Assurance Against Invasion of the United States

EXTENSION OF REMARKS

OF

HON. COLGATE W. DARDEN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

LETTER FROM J. H. COFER

Mr. DARDEN of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to the editor of the Virginian-Pilot and published recently in that paper:

EDITOR, VIRGINIAN-PILOT:

I have always argued that we should have joined the League of Nations at the beginning, and if we had done so, conditions in Europe would not be as they are today. America didn't win the World War; we only stopped it pending the formation of a League of Nations, which we were to join. Woodrow Wilson would never have stopped fighting if he had thought our country would not support him in his fight for a League of Nations. Mr. Wilson knew that a League without our membership would not bring peace. America supported him fully in war, but after the armistice we betrayed him and defeated the best plan ever offered for peace, and finally killed him, for he actually sacrificed his life for what he knew would come as near giving definite peace as anything could. Germany played her trump cards to keep the United States out of the League, believing if she could do so, that she would have nothing to fear from Europe. How true this is proving to be!

The Allies have been slow in preparing, and America failed to do what should have been done at the proper time, which undoubtedly would have saved the inhuman slaughter now going on in Europe. We made a colossal mistake in not joining the League. Why did we fight if we were not to be a party to peace? Our joining could not have made matters worse than they have come to be, and millions of people believe that our joining would have prevented the present conditions.

Now the explosion has come, don't let's fool ourselves and think we are safe because the great Atlantic Ocean separates us. We were 3,000 miles from Europe in 1917, but today, with the advent of fast boats and swift planes, we are less than 1,000 miles away by comparison, and don't be misled by some who say we can't be invaded. Germany has designs on America, and is already stirring up trouble for us in Mexico, and through many sources is carrying on propaganda and spy work right among us. We know it, and yet we are slow to act. The important thing for our country to do immediately is to give the Allies every known assistance and day and night prepare ourselves for the fray that will overtake us if the Allies lose.

At this critical time it behooves every man and woman in America to forget politics and party, throw aside all selfishness, and fully support Mr. Roosevelt in the heroic struggle now on, and in which the United States must play an important part. Our one purpose now must be to stop the war before it reaches our shores, even if we again have to fight with the Allies in Europe. Allied victory is the only certain means of preventing invasion of our country.

J. H. COFER.

NORFOLK, *April 15, 1940.*

Benefits of a Democracy

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

ARTICLE BY MISS LORNA BRENNAN

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Benefits of a Democracy," which is a prize essay written by Miss Lorna Brennan, a talented girl student of the Kirkland High School, Kirkland, Wash. I am proud to present this article as an evidence of precocity, intellectual attainment, and high-minded patriotism as exhibited by the high-school students of my district.

The character and content of the essay reveal, likewise, that the instructors and teachers of the public schools in my State are admirably adapted to the work in which they are engaged, and inculcate in their pupils a sound appreciation of the benefits of democracy. It is a splendid thing when boys and girls in our high schools understand and speak reverently of democracy and all which it brings to us and all which it entails.

The article is as follows:

[From the East Side Journal, Kirkland, Wash., of April 25, 1940]

BENEFITS OF A DEMOCRACY

(EDITOR'S NOTE.—The following essay entitled "Benefits of Democracy," was written by Lorna Brennan, Kirkland high-school student, and was awarded second place in the East Side contest sponsored by the Veterans of Foreign Wars in Bellevue. Because it is an article well worth reading and remembering, we are printing it in full in the column below.)

Because one of the fundamental bases of American democracy is the love of liberty and a nonrestricted freedom in regard to press, religion, and speech, it is reasonably safe to say that the American people would never accept an "ism" government.

Our rights and privileges aren't merely the result of customs built up over a period of time by weakening the powers of the Central Government, rather these independent privileges are specifically granted to us by the Bill of Rights in the United States Constitution.

Perhaps if we enumerate and discuss the Bill of Rights we can obtain a clearer idea of the civil rights that have been handed down from generation to generation in the United States. Freedom of religion, speech, press, right of assembly and petition heads the list of rights. This privilege is by far our foremost one, and most "ism" governments would regard it as a dangerous threat to their practices because the people would feel free to take advantage of such a privilege.

We have the right to bear arms. Certainly an advantage such as this wouldn't be granted with wholehearted enthusiasm by an "ism" government or a country that doesn't believe in democracy.

In the United States the right to search a person's house must be authorized by a warrant with a guarantee that the warrant is authentic. In an "ism" country this right seems to be the government's. Your house would be the victim of storm troopers if the government thought you had anything in your possession that was either of detriment or beneficial to them.

We in the democratic countries have that very important privilege of trial by jury.

In an undemocratic country where "isms" are in force you would be subject to cruelty or would be deported to a concentration camp until you learned your lesson. Probably if the government was prejudiced against you you would find yourself in a precarious position. The government could take the trial in their own hands and dispose of you in a way that would make them feel justified.

We in America enjoy our civil rights to the fullest. People in despotic countries do not have even the minimum pleasure out of rights that we do. There is a restriction on what they do or say in regard to government affairs. Freedom of the press is not only unheard of, but it doesn't exist. Editors find it necessary to be extremely careful in their editorials and news articles that would even hint of criticism toward the government. In various despotic countries businessmen no longer handle their own transactions or affairs; the farmer has no choice as to the crop he will raise or the animal he will breed; and laboring conditions are at the lowest wage scale in history. In the United States we are fortunate in having a government that loans money to the farmers and a government that is generous enough to purchase their surplus products and in turn give it to the person who is on relief and in need of aid.

Democracy upholds the right of private ownership of property. Communism and socialism set up a goal to be reached. Because there exists a classless society, this goal can only be attained by revolutionary action by the proletarian, which results, of course, from liquidating classes and societies of peoples.

Politics are the main concern of every nation. It forms the backbone of the country. Democratic nations work by the system of representation. Each group within the state is free to organize. Democracy restricts the powers of a state over its citizens.

In communism the political system is made up of a committee working through the industries. Socialism is much the same as communism, with only slight difference in their political tactics.

Coming back to democracy, there are two types—pure and representation. In pure democracies the questions of public policy are settled by mass meetings of men. This would be called democracy carried out through the medium of assembly.

Representation democracy is a system by which elected officers can be recalled if they fail to live up to the people's expectations or prove unable to represent them in a manner they desire.

Democracy is freedom. Freedom of enjoyment and movement. We in America accept democracy as a matter of course.

The benefits of democracy mean to me representing the youth of today and a part of the Government tomorrow, that I may turn out in a different kind of uniform after my school day is done to participate in a sport and not in a military exhibition; that I may dance to a swing orchestra and not march stiffly to a military band; that I may eat as my stomach dictates to me rather than a list that rations my food allowance; and that I may speak my mind, give my interpretation of the Government without fear of my life.

Democracy is my freedom, my life, and my future. Democracy is a goal to be reached, an ideal to be realized, and the aim of every American today.

New Deal Costlier Than War

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

ARTICLE FROM THE SAVANNAH (GA.) NEWS

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the News (Independent Democrat), of Savannah, Ga.:

[From the Savannah (Ga.) News of April 28, 1940]

NEW DEAL COSTLIER THAN WAR

Great Britain is preparing to use $14,583 a minute to carry on the war. This spending at the rate of more than $2,000,000 a day, announced by Sir John Simon, Chancelor of the Exchequer, outstrips the World War. It is astounding and lamentable that there must be such a waste for destructive purposes. However, the people of the United States may look at those figures, make a home comparison, and utter some lamentations on their own shores.

During the past 8 years the United States has not been involved in any war. Nevertheless, President Roosevelt's administration has been spending at a greater rate than the British war expense. The Roosevelt outlay of the people's money has been at the rate of $15,607 a minute every minute of the year. During President Roosevelt's two terms in the White House the Federal receipts have been $40,000,000,000, but the New Dealers, through the borrowing plan, have handed out more than sixty-five and one-half billions. All the administrations from Washington to the New Deal show an aggregate of $112,000,000,000.

It is well enough to shudder at England's war costs, if we save a few shivers for contemplation of peacetime waste of this country's most profligate regime. The British cannot get rid of their problem soon. Americans will have their chance at the polls in November.

The Higher Sportsmanship in Politics

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

RADIO ADDRESS BY HON. T. V. SMITH, OF ILLINOIS

Mr. DEMPSEY. Mr. Speaker, I have the honor to extend my remarks by submitting an address delivered last evening by my colleague from Illinois, Hon. T. V. SMITH, on the Hatch Act.

We must not let the anguish of war keep us from normal domestic improvements. I want to talk to you tonight about the Hatch bill, a grand chance we now have at betterment in our politics.

Politics has been called the great American game, and a game it is in one sense of the term. It requires two parties, at least, and a sense of sportsmanship between them. At least, it requires sportsmanship. Sportsmanship: That's what has saved the Constitution for continued service to our day; that's what makes the two-party system work with us, though it break down elsewhere. America lasts only so long as this spirit of sportsmanship continues.

TWO KINDS OF SPORTSMANSHIP

But there are two kinds of sportsmanship—the lower and the higher. The lower we have always had; the higher we are slowly attaining. Of this higher sort I want particularly to speak, but only after a word as to the lower sportsmanship.

THE LOWER SPORTSMANSHIP

The lower sportsmanship is to lose one's case with good humor after fighting with all one's might for a cause. Even this kind of sportsmanship is unknown to dictators. They take the kingdom of power by violence because they cannot stand to see others win in peace. The temptation to bully proves for some politicians also a strain too great for democratic stamina. Poor sports may seem to submit to an election but behind the scenes be buying votes or bullying employees. That is higher than dictators but lower than decency.

It is a form of political sportsmanship, any losing of one's case without violence. The higher sportsmanship, however, has to do not with losing but with the manner of winning. The American people were spoiled against poor sportsmanship and prepared for higher sportsmanship in the very beginning of the Republic.

Two great men, who in many countries then and now would have cut each other's throats, taught us how to remain democratic through thick and thin. These men were Alexander Hamilton and Thomas Jefferson. How hard they fought, how bitterly at times they hated each other. Each had his day of success, but neither would ever have harmed a hair of the other's head. Each loved his country, and each was man enough to see his country's need of the other. Their common country, this America of ours, became great enough from the beginning thus to harbor enemies, to stomach opposition, and to turn party contradiction to patriotic purposes. Hamilton and Jefferson taught us by example that in the American way of life, opposition is a standard form of cooperation. It was the greatest possible lesson they had to teach, or we had to learn.

THE HIGHER SPORTSMANSHIP

It is this lesson taught by both Jefferson and Hamilton which is forgotten by those whose conduct made necessary the first Hatch Act, and now makes necessary this second Hatch bill already passed by the Senate. Opponents of this bill forget that the American theory is that both great political parties are equally indispensable. As early America could not afford to be without either Hamilton or Jefferson, so the country today cannot afford to be without either of the parties they founded.

If equally indispensable, each party must, of course, be afforded equal opportunity to live and to win elections. The Hatch measure, first and last, seeks only to protect equality of opportunity for the party out of power by preventing the party in power from using

public money for partisan effect. It is rotten sportsmanship as it is sordid citizenship to compromise this equality of opportunity for the party out of power. Everyone knows, who has reflected upon the matter for a moment, that the party in power has already the advantage, simply because it is in power. I know, for instance, that I start with an advantage over any man who runs against me as Congressman at Large in Illinois. So with every man in office. The party in power has the public eye; it can catch the public ear; it thus has free publicity to begin with. This natural advantage should surely make incumbents ashamed to snatch also advantages artificial and unsportsmanlike.

It is this kind of dishonest advantage which the Sheppard committee reported certain States to have taken of the W. P. A. in 1936. It is this kind of unsportsmanlike advantage which Senator HATCH wishes to stop. His first bill outlawed this advantage in all strictly Federal jobs. But there are several hundred thousand jobs in the States, paid for in whole or in part by Federal money; and it is holders of these jobs which the present Hatch bill proposes to sterilize of political poison. Poor sports never understand how a party in power could voluntarily surrender advantages to the opposing party. But politicians are mostly good sports, and sportsmen hate unfair advantage.

So it happens that Senator HATCH, a Democrat, proposes this legislation. So it happens that Senator BARKLEY, Democratic floor leader in the Senate, saw it through. So it happens that Representative DEMPSEY, a Democrat, furthers this legislation in the House of Representatives. So it happens that I, a Democrat, am this moment urging you to support this effort at fair play, though I alone of Illinois House Democrats voted for the first Hatch Act. So it happens that President Roosevelt has joined other Democratic Party leaders in publicly recommending this display of good sportsmanship. Of course, we Democrats want to win the election, but we do not want to win the dirty way. We want to win it the way that will keep elections worth winning. That's what I mean by the higher sportsmanship in politics—so to win, or lose, as to keep the game ageing.

In a two-party system, for the party in power to use jobs publicly paid for to prosper its private advantage is clearly outrageous; for we have not then really a two-party system at all, but in essence a totalitarian one. It's like a game of chess in which you take all the titled pieces and leave to your opponent only the lowly pawns. This practice would ruin any game and this practice is clearly pernicious to the game of politics. The Hatch Act so brands it and proposes to outlaw it accordingly. Good taste and a sense of sportsmanship ought to prevent such practice. Long ago President Jefferson, the good sportsman in politics, issued an order saying that a public official should not under him "attempt to influence the votes of others nor take any part in the business of electioneering, that being deemed inconsistent with the spirit of the Constitution and his duties to it."

That is the whole case for the Hatch Act, stated and ordered by Thomas Jefferson. I admit it unfortunate that we must legislate what good sportsmanship should dictate; but bad taste cannot be allowed to prevail below a certain level. Those who are boors in freedom must have their freedom curtailed so that the freedom of others may be safeguarded. The Hatch proposal simply defines as pernicious and forbids as contrary to law this thing which Jefferson correctly described as "inconsistent with the spirit of the Constitution." Those who, with Jefferson, say this should be done, but, against Jefferson, say it should not be done by the Federal Government are making public spectacles of themselves. Such a cult of complacency is today accursed. It is indeed the very States that have most outraged good taste and honest citizenship, as my colleague DEMPSEY pointed out on this network a week ago tonight, these very ones it is who now shout States' rights, and continue to perpetuate States' wrongs. The Federal Government exists, among other reasons, for this very reason: To prevent States' rights from becoming national wrongs.

LEEWAY UNDER OUR BASIC LAW

What needs to be done should be done by whatever agency can do it most effectively. That's the division of labor that has actually prevailed between the States and the Nation, and it is the principle that was intended to regulate the leeway left by our fathers under the not too definite separation of powers. James Madison, the cautious, made this absolutely clear. Said he: "If * * * the people should in the future, become more partial to the Federal than to the State governments, the change can only result from such manifest and irresistible proofs of better administration, as will overcome all their antecedent propensities, and in that case the people ought not surely to be precluded from giving most of their confidence, where they may discover it most due."

That is the whole story against the cult Jeremiahs of States' rights. That's the story of every advance in national power from handling Federal relief centrally to the setting up of the Federal Bureau of Investigation. Starting with jealous States who broke up the Confederation and almost ruined prospects for any America at all, we have moved cautiously but surely for the establishment of a national power adequate to deal with whatever ought to be done but is not being done, and we have moved along the groove marked by Madison's powerful words—through "manifest and irresistible proofs of better administration." Those who say politics ought not to be purified are perhaps entitled to respect; for they frankly set against our democratic system an older competitor, the aristocratic or autocratic way of life. But those who say that politics ought to be purified but insist that nobody shall do the purging save the poor sports themselves—such puerile preachers of perniciousness may be left to the pomposity of their own pusillanimous preachment.

A LAW EASY TO ENFORCE

The Hatch Act is dead right. That is its great advantage. But it has another advantage: It will require little Federal power to enforce it. It is one of those fortunate things which, born of good sportsmanship, will enlist sportsmanship to make it effective. In the enforcement of any law one good sport is worth a hundred policemen. With the partisan use of public money (for political jobholders) declared pernicious, the party out of power will so publicize prospective perniciousness as to minimize its actual perpetration. I have seen the principle already working in this way in Illinois. It is a happy case of virtue paying its own way when such a law becomes largely self-enforcing.

There is, moreover, poetic justice, as well as good sense, in leaving to the United States Civil Service Commission, as the Hatch bill does, the initial judgment as to who has been guilty of the practices defined as pernicious. (Of course, the courts have the last say here, as elsewhere.) It is poetic justice because the law itself points to a day, I hope not distant, when the higher sportsmanship will require us to forego the advantage of patronage altogether in partisan struggles for political place. That means the coming of real civil service. Meantime, the justice is not merely poetic in its promise but substantial in its effect. The Civil Service Commission has long experience in handling just this thing, for it is our standard agency to save the most fortunate Federal workers from political domination and to prevent them in turn from officially influencing political outcomes. The Hatch bill only requires of Federal employees still out from under civil service the rules they will obey when they presently come under civil service. Let us regard it, then, as but the schoolmaster to bring all Federal employment to the merit basis. The Hatch bill can stop corruption; civil service alone can furnish correction. The two should advance together, the House now passing the Hatch bill sent over by the Senate, and the Senate now passing the Ramspeck civil-service bill sent over by the House.

It is in the light of these considerations that we join tonight in expecting the House Judiciary Committee to report out the Hatch bill; or, that failing, in working to discharge the committee so as to bring the bill to a vote through petition. Of the 218 signatures required for this, we have already 148. In tragic days we work here, and thus undramatically, to make democracy worthy of the sacrifices elsewhere required to save it. We work to preserve the lower sportsmanship of losing graciously, and to create in our citizenry the higher sportsmanship of winning justly.

Consumers and Chain-Store Taxation

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

ARTICLE BY PROF. LOUIS BADER

Mr. HART. Mr. Speaker, under leave to extend my remarks, I include herewith an article entitled "Consumers and Chain-Store Taxation," from the December 1939 issue of the Journal of Retailing, a publication of New York University. The article was written by a distinguished economist, Prof. Louis Bader, who is also one of my constituents and a professor at New York University. Professor Bader has published many other articles dealing with the science of economics, upon some aspects of which he is regarded as among the very highest authorities. The article follows:

CONSUMERS AND CHAIN-STORE TAXATION

(By Louis Bader)

(A public policy proposed but not yet crystallized into legislation is hanging fire in the Federal legislature. It is a proposed heavy tax on chain stores. The following pages contain a report on the reaction of consumers to this proposed public policy.)

Legislation involving public policies in a democracy usually results from the pressures exerted by interested groups. While this has, probably, always been true, it has been especially pronounced during the past decade with its plethora of Federal and State laws of interest to various groups of businessmen. Since much of such legislation affects the public generally, it would seem to be the part of wisdom for legislators to discover how their constituents regard laws which are proposed, particularly when sponsored by a small group.

ANTICHAIN LEGISLATION

Since 1930 successful efforts have been made in various States to pass laws taxing chain stores in varying amounts. These laws were passed not so much to raise revenue as to handicap chain

stores, which are regarded by many small store owners as a form of competition they cannot successfully counteract through their own initiative. Such tax laws, however, have not been passed in all States and in most cases the taxes were not heavy enough to have the desired effect.

Independent and small store owners have leaned even more heavily on the Government for aid in fighting the competition they faced. Since 1930, particularly, we have seen public policies established in rapid succession, such as State fair and unfair trade laws and the Federal Robinson-Patman and Miller-Tydings Acts. Even all these laws were not enough: Chain stores still continue in business and apparently successfully.[1]

A new Federal law has been proposed, commonly referred to as the Patman chain-store tax bill. The bill if passed would place a multiple tax on chain stores; i. e., a graduated tax varying from a very small tax on a small number of stores to $1,000 on each store where the number in the chain exceeds 500. In addition, this tax is multiplied by the number of States in which the chain may have stores located. The tax would be so large in the case of the leading chain-store companies that when in full effect there would be no possibility of their survival.

ATTITUDE OF THE PUBLIC

This country existed before the advent of the chain store and it would continue to exist if the chain store were forced out of business, but the chain-store development is thought by some students of marketing to be one of the worth-while contributions by businessmen to greater efficiency in the distribution of goods. If this is the case, it would seem appropriate to find out from the public at large what their ideas are on the chain store and its continuance in our economic system.

Apparently not much has been done along these lines. In the February 1939 issue of Fortune, a survey initiated by that publication was reported. How extensive in number is not indicated, although its surveys are purported to be conducted on the basis of sampling adequate for the entire country. Its results are as follows:

Fortune survey on chain-store taxation

	Housekeepers	Executives	Nonfarm proprietors	Students
	Percent	*Percent*	*Percent*	*Percent*
Let alone	52.2	52.8	32.3	35.0
Tax extra	32.4	39.0	47.0	50.0
Put out of business	4.8	4.3	14.1	.....
Don't know	10.6	3.9	6.6	15.0

Even if the number interviewed was adequate as a sample, the number of categories is small for a country so varied in its activities and population as ours. A more complete and comprehensive study should be made.

NEW YORK UNIVERSITY STUDY

As a contribution to this field, a small study was undertaken at New York University.[2] Under the author's direction, a number of students in marketing undertook to interview as large a number of people as they could. The people interviewed, more than 3,600, lived in New York City or in one of its suburbs. They were selected at random and asked to fill out a questionnaire in the presence of the interviewer. The questionnaire was a black-and-white proposition—the voter had to decide either for or against the chain store. A number of those interviewed could not make such a clean-cut decision. Some were for taxation, but not heavy enough to put the stores out of business. Some were not in favor of either encouraging or discouraging further growth but favored permitting the chains to remain as they now are. The nonvoters shown in the tables represent largely this group. Others voted to encourage further growth, but naturally, that is, as the result of their efficiency, not with the aid of the Government. On the whole, however, those interviewed voted in clean-cut fashion and the results would seem to be their opinions at the moment.

TABLE I.—*Reaction of metropolitan New Yorkers to chain-store taxation*

	For tax		Against tax		Favor discouraging further chain-store growth		Favor encouraging further chain-store growth		Not voting
	Number	Percent	Number	Percent	Number	Percent	Number	Percent	Percent
City voters	1,127	45.5	1,355	54.5	1,406	56.6	999	40.2	3.2
Suburban voters	399	36.0	715	64.0	516	46.3	596	53.5	.2
Total	1,526	42.4	2,070	57.6	1,922	53.4	1,595	44.3	2.3

Since it was not possible to work out scientifically a sample which could be regarded as representative of metropolitan New York, each reader will necessarily make his reservations about the results. However, these results plus others now available and still others which may become available, when added together, may yield data sufficiently accurate to be accepted as a guide to a policy worth following.[3]

CITY PEOPLE VERSUS SUBURBANITES

The results of this study are presented in two tables. No. I is an over-all presentation of those living in the city and suburbs and then combined in a total. No. II breaks down this table into a number of classifications which are believed to be representative of the people and variety of activities in and around New York. The number may not be adequate, but, when considered along with the Fortune survey, a pattern may be noticeable.

Table I would suggest that city people are less favorably inclined toward chain stores than those living in suburbs. Many more of them favor heavy taxation than suburbanites, while a substantial majority of the city people favor discouraging further growth. The suburbanites not only are by a large majority against heavy taxation, but a majority also favors encouraging further growth. When the two are combined we get a large majority against a heavy tax, and a somewhat smaller group that favors discouraging further growth.

REACTIONS OF DIFFERENT GROUPS

Table II is most interesting, for it shows the reaction of people by different categories and can easily give rise to considerable speculation. For example, women vote quite differently from men. They vote much more heavily against putting chain stores out of business, and they give only a small majority in favor of discouraging further growth. The break-down by single and married women yields slightly different results, while the break-down by housewives yields the most positive results in favor of chain stores.

The whole group of men gives only a small majority against heavy taxation and a much larger majority against encouraging further growth. On the other hand, single men seem to be more favorably inclined toward the chains than married men. Why should married men be so strongly against chains when the housewives are even more strongly for them? A clue is to be found in some of the remarks made to the reviewers. The housewives facing the necessity of stretching the family purse think they can buy more for their money in the chain stores, while the married men having the job of filling the purse think the chains prevent them from doing so; the chains take away some of their opportunities of making a living.

TABLE II.—*Reaction to proposed chain-store taxation by various classifications*

Classification	Favor heavy tax		Do not favor tax		Nonvoters, percent	Favor discouraging further growth		Favor encouraging further growth		Nonvoters, percent
	Number	Percent	Number	Percent		Number	Percent	Number	Percent	
Women	570	36.6	970	62.3	1.1	800	51.4	714	45.8	2.8
Men	938	46.5	1,068	53.0	.5	1,154	57.2	817	40.5	2.3
Single people	604	39.0	933	60.0	1.0	889	57.3	622	40.1	2.6

MAJORITY OPPOSED TO FURTHER GROWTH

As to the taxing and putting of chain stores out of business, the pattern of this study is similar to that of the Fortune survey. Most of the votes were cast against heavy taxation and putting them out of business, but the study opens new ground on the question of further growth. A majority is against it, and that is true of nearly all the different categories. This would suggest that, even if the proposed taxation is killed for the time being, the chain-store companies are not on safe ground. Skillful propaganda could probably win over a number sufficient to give a majority in favor of heavy taxation, and under our form of government that majority might force through the legislatures the measures necessary to tax chain stores out of business.[4] This would undoubtedly be difficult to do, because against this the chain stores now have a majority in their favor and they can take the necessary steps to keep this majority with them and thus prevent the formation of such a public policy. The chains can do this not only by propaganda but by the con-

[2] In the winter of 1939.

[3] The report of the Opinion Research Corporation covering a study undertaken at the request of Sears, Roebuck & Co. showed 45 percent of those interviewed as favoring a tax on chain stores (the New York Times, November 22, 1939).

[4] The National Association of Retail Druggists announced in their publication, issue of November 16, the beginning of a petition campaign in behalf of the Patman chain-store-tax bill. The possibility of a successful campaign by this organization is suggested by their activity in connection with the passing of the Miller-Tydings Act and the various State fair-trade acts throughout the country.

tinuance of a low-price policy, good merchandise, clean stores, and the introduction of a measure of personal attention to customers, all of which numerous studies indicate are the basis of successful retailing.[5]

The Herndon-Weik Collection of Original Lincoln Manuscripts, Documents, and Other Papers

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 17, 1940

AN ARTICLE BY EMANUEL HERTZ WITH QUOTATIONS FROM THE LATE ALBERT J. BEVERIDGE

Mr. GEARHART. Mr. Speaker, in view of the recent revival of interest in the character and personality of the martyred Lincoln, as revealed during the past year in films, plays, and the written word, and in order to further the effort to bring Lincoln into every American home, it is but proper that public attention should be called to the papers which were collected and preserved for succeeding generations by his last partner in the practice of the law, the late William H. Herndon.

For a great many years both before and after the assassination, Herndon devoted himself to the collection and preservation of the facts and circumstances surrounding and revealing the life and philosophy of the Civil War President, facts and circumstances which would some day assist in re-creating in the minds of the American people the great man with whom it was his privilege to have lived in close association for upward of 20 years.

The mass of papers which compose the Herndon-Weik collection have been recently carefully examined and studied by one of the greatest authorities on the subject of Lincoln of our day and generation, Mr. Emanuel Hertz, of New York City.

Because I am quite certain that Mr. Hertz's comments will be found not only interesting but highly illuminating, I ask the consent of the membership of this body to include certain extracts of his findings in the CONGRESSIONAL RECORD of this day's proceedings. Of special significance is the appraisal of the Herndon papers by former United States Senator Albert Beveridge which is quoted in Mr. Hertz's essay. So far as I have been informed, Senator Beveridge and Emanuel Hertz are the only two men who have read the papers of the Herndon collection in their entirety.

The unanimous consent of the membership having been indicated, Mr. Hertz's article follows:

THE HERNDON-WEIK COLLECTION OF ORIGINAL LINCOLN MANUSCRIPTS, DOCUMENTS, AND OTHER PAPERS

(By Emanuel Hertz)

WITH SOME EXTRACTS FROM "LINCOLN AS HIS PARTNER (HERNDON) KNEW HIM"

(By Albert J. Beveridge)

By a strange combination of circumstances, as we reached the one hundred and twenty-fifth anniversary of the birth of Abraham Lincoln there was made available for the first time the most important collection of unused Lincoln material in existence. The time has at last arrived when, in dealing with Lincoln, the man, the lawyer, and the President, nothing should be taken for granted, nothing be assumed or conjectured. Facts based upon historical data and original and official documents alone must be considered. And here we have them in the vast collection gathered for almost half a century by William H. Herndon, and supplemented by Jesse W. Weik.

"Here is the most important item in this entire collection," said Herndon, as he pointed to a small leather-covered notebook about 6 by 4 inches in size, the two covers being fastened together with a brass clasp. "In its pages you will find * * * all the ammunition Mr. Lincoln saw fit to gather in preparation for his battle with Stephen A. Douglas." He then explains that as the contest of 1858 was approaching, Mr. Lincoln took this book, originally a blank book which had been used by himself and his partner to keep track of citations of cases, and proceeded to paste in its pages newspaper clippings, tables of statistics, and other data bearing on the great and absorbing questions of the day, and with a few sentences scribbled here and there. "When this little storehouse of political information was filled," observed Herndon, "Mr. Lincoln fastened the clasp, placed the book in his coat pocket, there to repose during the campaign and to be drawn upon whenever the exigencies of debate required it."

The book contains about 185 clippings; the first item in the book was the second paragraph of the Declaration of Independence. Lower down on the same page we find a paragraph from a speech by Henry Clay: "I repeat it, sir, I never can and never will and no earthly power will make me look directly or indirectly, to spread slavery over territory where it does not exist. Never while reason holds her seat in my brain—never while my heart sends the vital fluid through my veins—never."

Next, Lincoln inserted a portion of the opening of his speech before the Republican State convention, wherein he gave utterance to the doctrine that "A house divided against itself cannot stand."

It seems strange that neither Herndon nor Weik have anything to say about a second notebook, made by Lincoln, equally, if not more important, and more scientifically prepared than the Douglas debate notebook—the little notebook he prepared on the subject of slavery. The subject of slavery was ever with Lincoln; it haunted him and perplexed him at all times, from the moment in his youth when he came in contact with the dread subject. This notebook contains about the same number of newspaper clippings and excerpts as does the Douglas book. But this is indexed, so that he was instantly able to find and quote the proper thing on almost any phase of the slavery problem. This little book was smaller than the Douglas book, but was of more permanent importance, as the problem was vaster. This gem of Lincoln strategy and preparedness has, up to this moment, been overlooked by all, and is here presented to public notice for the first time. Note the care with which he prepared the index as well as the dates and sources of each newspaper extract; this was Lincoln's method of making statements which could not be challenged on the score of truth or accuracy. No wonder Douglas repeatedly complained that he would rather face the whole United States Senate than Lincoln alone. No one in the Senate made such meticulous preparation as did Lincoln.

There follow 11 Lincoln letters to Delahey—by all odds the most questionable of all appointments made by Lincoln—based upon an early friendship, and one to which Lincoln remained loyal to the end, in spite of severe and not altogether unjustified criticism. Their importance becomes evident. Next we have Seven Hundred and Fifty-eight Legal Documents—pleadings in law and equity, contracts, deeds, mortgages, agreements, orders, decisions, briefs, trial memoranda entirely in Lincoln's handwriting, a few printed briefs, and a number of surveys. Some of these show the early use of printed legal forms in Lincoln's office, none of which have ever been heretofore seen.

An examination of these legal documents demonstrates beyond a doubt that for a young lawyer who had just entered upon the practice of law, he had a great many more cases in 1833–34 than many leaders of the bar in Illinois or New York had in a similar period of the beginning of their practice; and they were of such importance that if proper charges had been made he would have become prosperous, and the legends about his extreme poverty and about "the poor country lawyer" would never have originated.

If there be a question as to what sort of lawyer Lincoln was, or what sort of practice he had, as was said of Sir Christopher Wren's monument, "Circumspice," look through these 758 and more documents and determine for yourself. That has not been done—that must be done, unless we are to be satisfied with a caricature—a travesty upon his legal accomplishments. We are perpetually confronted with the one criminal case—the Armstrong case—because it appeals to the imagination. But if Lincoln's true measure as a lawyer is to be taken, we must examine these, in conjunction with what has not been stolen from the courts and what has been printed, and then we will appreciate how it came about that he was able to solve the greater constitutional and international legal problems with which he was confronted during his administration. There was no miracle nor accident about his success in their solution. He was adequately prepared and seasoned to solve these greater problems, as he solved the simpler cases at the bar.

There follow about 350 letters, documents, and monographs of William H. Herndon. A great many people who were interested in Lincoln's early life, in his youth, in his numerous courtships—of Anne Rutledge, Mary Owens, Sarah Rickard, Mary Todd, and others—in his work in the legal profession, in his reading, in his speeches and how he prepared them, in his habits, in his married life, in his children, in his relations to his neighbors, in his contacts with the members of the bar and with the judges before whom he practiced his profession, and the members of the legislature with whom he served, in his congressional campaign and his term in the House of Representatives in Washington—would ask Herndon about all these matters and would ask no other person. To all of these questions Herndon painstakingly replied in writing, and retained

[5] A most recent study indicating this was made by the author last year with the aid of some marketing students. See the Journal of Marketing, July 1939, Reaction of Consumers and Independent Stores Owners to Recent Price Legislation. In this latter study, the majority of consumers indicate a preference for price, convenient location, and personal attention.

the original drafts of his replies. These letters are written on one page, on a square sheet of paper, and most of them on as many as 6, 8, 10, or 20 pages. In some cases there are 15 or 20 pages of foolscap paper, all written carefully and painstakingly by Herndon. A great many of them are written to Jesse W. Weik, Herndon's collaborator, in the preparation of the Life of Lincoln which was being published by Belford, Clark & Co. in 1889.

These Herndon letters and documents will forever be the original source, the only source of true information of Lincoln's life in his law practice in his home town and on the circuit. There never was a more devoted partner or friend than was Herndon, and, in spite of all hostile criticism which has been hurled at Herndon's head, these 350 documents will forever exonerate and acquit Herndon of any and all charges of unfairness, partiality, or hostility to Lincoln, and will stamp him as the best and the only reliable historian of Lincoln during that period of his life—Lincoln's Boswell, par excellence. Yet, astounding as the statement seems, the biography of Lincoln in Herndon's own words has not to this very day been printed. It has been locked up these 50 years.

It has been the habit of a great many authors to state that they have examined this, the Herndon-Weik Collection, and have based some of their statements and conclusions upon documents contained therein. These claims are negatived by the actual evidence of the failure to mention as many as a thousand of these important items. The greater part of the collection was never seen, and certainly never reprinted; and, I dare say, was never read by anybody in its entirety. Aside from two pages of the Douglas debate notebook and the title page of the book on arithmetic, comparatively little of importance was used either by Weik or any other author.

In addition to these letters there are about 50 documents in Herndon's handwriting which concern different phases of Lincoln's life. There are other statements in Herndon's writing, consisting of interviews in the form of affidavits by different people who knew Lincoln in life—David Davis, who rarely wrote or spoke of what he knew of Lincoln; Joseph Gillespie, James H. Matheny, Sarah Bush Lincoln, Grigsby, 24 letters and statements by Dennis Hanks and 5 by his brother John; E. B. Washburne, Norman B. Judd, John Wentworth, Jesse K. Dubois, William H. Bissell, Richard Yates, John L. Scripps, John B. Helm, Samuel Haycraft, Joshua F. Speed, John T. Stuart, Hannah Armstrong, John McNamar, William Jayne, Henry C. Whitney, Leonard Swett, Ninian W. Edwards, John H. Littlefield, Jesse W. Fell, R. J. Oglesby, Lawrence Weldon, F. B. Carpenter, O. B. Ficklin, Charles S. Zane, Stephen T. Logan, Pascal B. Enos, Mentor Graham, Rebecca Herndon, Archer G. Herndon, Elliott B. Herndon, J. Rowan Herndon, James A. Herndon, Joseph Medill, Lyman Trumbull, and a great number of others who knew and lived with Lincoln at various times down to 1861 and who, but for Herndon's persistence, would never have reduced to writing what they knew about Lincoln. There can be no gainsaying the enthusiasm with which this man hunted for and gathered every shred of available source material. No detail, however trivial, was permitted to escape him, but he found it and followed it up at the earliest possible moment after Lincoln had been laid to rest. He was deeply absorbed in the work of gathering all the material available to supplement his own vast storehouse of information gained during a lifetime, during which he wrote down in his own handwriting all that he knew and all that he could ascertain from others. From 1865 to the end of his days he was the one repository of Lincoln's history, and gave of himself cheerfully and freely to all who asked or inquired. He stalks throughout the vast storehouse of Lincoln literature, which has been built upon foundations based upon what he is quoted as having said or written.

A long series of letters describe Herndon's agony and his annoyance at the performance of Belford, Clark & Co., the publishers of his great Life of Lincoln—great in spite of the publishers and their unknown editor who took it upon himself to enforce his will on Weik. Herndon was old, and weak, and poor, and could not at that time of life battle for his ideas.

By a strange irony of fate, therefore, Herndon has never been able to spread before the world in printed form the result of his life's work and of the researches into the many phases of Lncoln's life, except for the meager accounts and extracts taken by Weik, "sicklied o'er by the pale cast of thought" of the unknown censor in the office of the publishers, who was the final and unreasonable arbiter as to what was, and what was not, to be included in the book; Herndon, who never met his tormentor, had to be content with Weik's efforts to salvage as much as possible, and, judging from the complaining letters of Herndon, Weik accomplished very little. Herndon was not more fortunate with the way Ward H. Lamon and Chauncey Black treated his researches and his writings about Lincoln. In other words, the Herndon documents—fortunately preserved—are yet to be printed, if justice is to be done to Herndon as well as to Lincoln.

Herndon's opinion as to the value of Nicolay and Hay's work is of the utmost importance. He showed conclusively that they were controlled and restricted in their work. Like the colossal painting exhibited some years ago, The Pantheon de la Guerre, which depicted the features and figures of rulers, soldiers, generalissimos, admirals, and statesmen, thousands of important figures, without pointing out one leader, one ruler, one protagonist—so Nicolay and Hay's panorama of the Civil War showed a vast number of leaders, of soldiers, of sailors, of legislators, most of them of small significance, and, incidentally, of Lincoln as well.

Herndon gave a lifetime to portray one man in this vast record, which has not yet been given to the world in its entirety, nor in the words of Herndon. Herndon was a man of one idea, one ambition, and that was to portray and picture and document Lincoln for all time to come, as he knew him and as he was. He was indirectly chosen by Lincoln for this task. He was his last partner, and by Lincoln's wish was to remain the last partner. He was more than a partner; he was a friend, he was his assistant, his representative, his spokesman, his contact man with the leaders in the East. He was his representative in Springfield when Lincoln was away. Lincoln never doubted the honesty, ability, and learning of Herndon. Immediately after the assassination Herndon began to supplement his own recollections of Lincoln by a compilation of additional material. He then visited every scene of Lincoln's life previous to his election to the Presidency; examined acquaintances; took their statements in writing; secured letters and other documents of value.

To those who have had the opportunity to follow the story of Herndon's work, it is plain that Herndon was not in his relations to Lincoln the subordinate character he leaves us to suppose he was. He contributed decidedly to form the mind of Lincoln and to mold his career. But for Herndon, the Lincoln of 1860–65 would not have emerged from the dingy law office at Springfield, precisely what he was, nor would his history up to that period ever have been precisely told.

The remaining 1,250 lots in the collection consist of 105 letters by Horace White, the reporter of the Lincoln-Douglas debate, from members of Lincoln's Cabinet, from Governors, United States Senators, Congressmen, judges before whom he practiced or who knew Lincoln, and from the many lawyers and practitioners with whom he appeared and with whom he practiced, all of whom had reached a time of life when they could calmly reflect upon the achievements and accomplishments of the great war President, both as a lawyer and legislator and as Chief Executive, and who were enabled to give an impartial estimate and recital of those facts which came to their attention and of events which they had witnessed. A complete file of letters from Chauncey F. Black explains how Lamon's Life of Lincoln came to be written, but clearly confirms that all of Lamon's data came from Herndon.

So that, if a complete, unbiased, and accurate life of Lincoln is to be written, this vast storehouse of information, garnered from the four corners of Lincoln's world, covering his childhood, his boyhood, his early manhood, his life in Kentucky, Indiana, and Illinois, his life in the courts of Illinois, in the Federal courts, in Congress, and on the circuit, up to his departure from Springfield in February 1861, will have to be consulted and arranged and printed in full, so that the testimony of the host of witnesses who made up the generation of legislators, judges, lawyers, newspapermen, friends, soldiers, and his officeholders will have to be compared, coordinated, and examined in order to paint the entire canvas of that generation, beginning with 1809 and closing with February 10, 1861, upon which day Lincoln started for Washington to assume the duties of sixteenth President of the United States. So much of what has been written rests upon speculation and surmise that it is indeed refreshing to see these documents, which definitely set at rest many an invention, especially the statements about Lincoln and liquor—did he or did he not drink—just what did Lincoln do on the day of his first election, which has been written up repeatedly in great detail, but, unfortunately, does not conform with the facts; how did he receive the news of his first nomination; had he anything to do with the nomination of Johnson for the Vice Presidency; Lincoln and patronage; Lincoln and Lamon; just how did he intervene between the judge who did not know how to charge the jury and the jury who persisted in asking questions; just why was the first engagement with Mary Todd broken off; what was the actual reason; and a score of other questions which have never been accurately or adequately answered.

I cannot conclude this chapter without quoting from a paper written by the late Senator Albert J. Beveridge, entitled, "Lincoln As His Partner Knew Him," which stands out in a class by itself among all appraisals of this invaluable collection.

"I do not, at the moment, recall another case in history where, immediately after the death of a great personage, the facts of his personal life were collected so carefully, thoroughly, and impartially by a lifelong friend and intimate professional associate, as the facts about Lincoln were gathered by William H. Herndon. Almost from boyhood Herndon had been an idolater of Lincoln; and for 17 years the two men were partners in the practice of the law. So Herndon saw more of Lincoln and heard more from Lincoln's lips than any other human being, excepting only Lincoln's wife.

"Almost at once after the assassination, Herndon began to collect material relating to his hero. He wrote to everybody who ever knew Lincoln or his parents—everything about Lincoln is covered up to 1860. Herndon's industry and persistence in this are astonishing; and, while a man of little academic training, he shows that nature had given him the distinctively scholar's mind. In his letters he asked questions upon every conceivable point. For instance, what variety of trees were in the Indiana forest where Lincoln's boyhood was spent? Was there underbrush, and if so, was it thick or scanty? What animals abounded, what fruits grew in the woods, what food did the settlers eat, and how was it prepared? What songs did they sing, religious, political, and general? What clothes did they wear, and how were the materials made? What was the stature, color of eyes and hair, complexion, probable weight, manners, habits, speech, and disposition of everybody—of Thomas Lincoln, of Nancy Hanks,

of Ann Rutledge, of Menter Graham, of James McNamar, of Mary Owen, and so on, from the beginning to the end?

"Some questions were not answered clearly, and Herndon wrote again and again, until the smallest detail was made plain. Often, as in the case of Sarah Rickard, he would have to write several times before he got any answer at all. But he stuck to it. Most of those who had known Lincoln as boy and young man had scattered far and wide over the United States. No matter, Herndon traced them. Those whom he could reach personally, he interviewed, and immediately wrote out notes of what they said. I have read in the original manuscript these transcripts; they show on their face that they were written by a trained lawyer, skilled in the taking of depositions and the making of notes of statements by witnesses. I have read, too, the original letters to Herndon in answer to his inquiries, and also Herndon's own letters about Lincoln, as well as his entire manuscript on the subject. Everywhere it is obvious that Herndon is intent on telling the truth himself and on getting the truth from those who could give personal, first-hand information.

"Moreover, Herndon personally visited every foot of ground that Lincoln ever trod. He went to Kentucky, to Indiana; and he had been to New Salem many times when Lincoln lived there, and afterward. More than once he had gone with Lincoln in his circuit riding; and he knew intimately the lawyers and judges with whom Lincoln spent all his professional life outside the office of Lincoln & Herndon, where, of course, the junior partner was in closer contact with his senior than anybody else possibly could have been.

"Herndon was 47 years of age when Lincoln was murdered. For 14 years after that event, he kept up his Lincoln researches, delivering several lectures on phases of Lincoln's life, practicing law, and keeping up a large general correspondence.

"Perhaps it is not unworthy of note that it was to Herndon, and not to Lincoln, that for years before his nomination for the Presidency such men as Parker, Sumner, Seward, Phillips, Greeley, and Garrison wrote. To be sure, the youthful and ardent Herndon always began the correspondence; yet, even so, it was to him and not to his partner that these brilliant men, molders of the public opinion of the time, looked for reports of conditions in Illinois. It is extremely curious that, judging from their letters to Herndon, these leaders seemed not to have realized that Lincoln amounted to anything during that period.

"In 1879 Herndon met Jesse W. Weik, of Greencastle. * * * Young Weik soon gave up Government service and devoted himself exclusively to continuing with Herndon, under the direction of the older man, the work which Herndon had been doing since the spring of 1865. With all the data which Herndon had accumulated to guide him and with the benefit of Herndon's suggestions, Weik again went to all the places Herndon had visited 20 years earlier, as well as many other places—and went again and again. Most of the lawyers, judges, and other people who knew Lincoln were still living, many of them not yet old men and women. Weik met all of them; and after Herndon's death continued his acquaintance and correspondence with them.

"But, in addition to the Herndon data, upon which Mr. Weik's book is largely based, the author uses a large amount of material which he himself has been gathering for many years, all of which is first-hand information; and nobody ever has accused or ever will accuse Jesse W. Weik of untruthfulness, unworthy motives, or, above all, animosity toward Lincoln. I can give testimony on these points myself, for I have known Mr. Weik since my college days in Greencastle, Ind. Nobody ever questioned his veracity, and his lifelong adoration of Lincoln has in it something of fanaticism; yet the truthfulness of the man would not permit the perversion or suppression of any fact in what he writes about his idol. Mr. Weik learned his lesson in accuracy from the bitter castigation of his friend Herndon, and so he makes sure of his authority for every statement. In most cases he had his informants write out what they had to say; in others, Weik himself made extensive notes at the time; in still others, original letters are quoted.

"Mr. Weik did almost as much corresponding about Lincoln as did Herndon himself, if not more; and many of the letters he received are most illuminating. I have read all of them in the original manuscript. These, together with the large number of Herndon's letters to Weik and the extensive Herndon manuscript, constitute material of unusual value; while some of the letters, notably those of Horace White to Weik, are good examples of literary and scholarly criticism."

It required real courage on the part of Herndon to criticize the work of Nicolay and Hay, and their so-called definitive biography of Abraham Lincoln. Herndon, with deadly accuracy, shows that the sentiment of the authors is very much against their showing Lincoln as he was. "They are aiming," he says, "first, to do a superb piece of literary work; second, to make the story with the classes as against the masses. It will result in delineating the real Lincoln about as well as does a wax figure in the museum."

"I finished reading the December number of the Century. * * * If that article is a sample of what is to come, I make a prediction that the whole thing will fall stillborn—dead. * * * Are Nicolay and Hay going to suppress the story of Anne Rutledge, the finest story in Lincoln's life?" * * * (December 5, 1886.)

For a long time the 10 volumes of Nicolay and Hay had become the last word on almost every phase of Lincoln's life. Their pronouncements became sacrosanct, and to question any statement contained in those volumes was heresy. It is here that Herndon's criticisms are of the utmost importance, as they are supported by facts. Here are a series of statements by Herndon which are fatal to the claims of perfection for Nicolay and Hay's work.

"Have you read the January number of The Century? If you have, you will see that Nicolay and Hay have suppressed many facts—material facts of Lincoln's life, and among them are Lincoln's genealogy, paternity, the description of Nancy Hanks, old Thomas Lincoln, the Anne Rutledge story. Lincoln's religion, Lincoln's spells of morbidity, the facts of Lincoln's misery with Mary Todd, Lincoln's backdown on the night that he and Mary Todd were to be married, etc. I do not say that they did not mention some of these things in a roundabout way, but I do say that the kernel—'nib,' or point of things has been purposely suppressed. Nicolay and Hay do know the facts fully, as I am informed on good authority. * * * Nicolay and Hay handle things with silken gloves and a camel-hair pencil. They do not write with an iron pen. * * *

"I used to tell Lincoln in my mild way in 1858–60 this, 'Lincoln, you must take an advanced step if you wish to be successful in your hopes and your ambitions.' I thought he was too conservative at that time. He moved and won" (January 2, 1887).

"I understand that The Nation is giving the boys a considerable lashing. The editor sees, as all men and women see, that the boys are covering up things, evading sharp facts, suppressing important things—facts and events in Abraham's young life. Some of the finest episodes in Lincoln's young life are omitted or evaded or swallowed up in words. Read in Nicolay and Hay's Lincoln's Courtship with Miss Todd and What Became of It, and then tell me if the boys got the real facts of that sad, troubled event. * * * It is important to all persons who read the articles spoken of that something is kept back—facts smothered by many, many words. They are writing the life of Lincoln under the surveillance of Bob Lincoln. Nicolay and Hay, in my opinion, are afraid of Bob. He gives them materials and they in turn play hush. This is my opinion, and is worth no more than an honest opinion" (January 22, 1887).

It is almost impossible to understand the veneration in which men like Nicolay and Hay held Lincoln without going through everything that these men have written about him.

Perhaps one of the finest estimates of Lincoln by John Hay is to be found in a letter written to Herndon, which summarizes Lincoln's life in the White House, and which concludes with the famous paragraph: "No great man was ever modest. It was his intellectual arrogance and unconscious assumption of superiority that men like Chase and Sumner never could forgive. I believe that Lincoln is well understood by the people; but there is a patent-leather kid-glove set who know no more of him than an owl does of a comet blazing into its blinking eyes. Their estimates of him are in many cases disgraceful exhibitions of ignorance and prejudice. Their effeminate natures shrink instinctively from the contact of a great reality like Lincoln's character. I consider Lincoln's republicanism incarnate—with all its faults and all its virtues. As, in spite of some rudeness, republicanism is the sole hope of a sick world, so Lincoln, with all his foibles, is the greatest character since Christ."

In spite of all, it is not intended to charge Hay with ulterior motives. He simply idolized Lincoln and loved Robert. He did want to please his friend—to the extent of omitting anything which Robert desired left unsaid.

We cannot therefore wonder in coming to write the life of Lincoln, in conjunction with the other hero worshipper, Nicolay, that they would under no condition insert anything into that biography which could be construed as criticism or faultfinding.

I found in some of Hay's letters a declared purpose to make it agreeable to Robert Lincoln, even if he (Hay) thought differently. In Hay's letter to Robert Lincoln (January 27, 1884), requesting Robert Lincoln to look over the chapters embracing the first 40 years of his father's life, he says:

"I need not tell you that every line has been written in a spirit of reverence and regard. Still, you may find here and there words and sentences which do not suit you. I write now to request that you will read, with pencil in your hand, and strike out everything to which you object. I will adopt your view in all cases, whether I agree with you or not."

In his letter to Robert Lincoln on January 6, 1886, Hay writes:

"I was very sorry to see by a letter you wrote to Nicolay that you were still not satisfied with my assurance that I would make these first chapters all right. Even before you read them I had struck out of my own copy here nearly everything that you objected to and had written Nicolay to make the changes in his; * * * since then I have gone over the whole thing and will again, reading every line so far as possible from your point of view, and I don't think there is a word left in that would displease you. But, of course, before final publication, I shall give you another hack at it with plenary blue-pencil powers."

To Henry Adams, Hay writes, August 4, 1889:

"I only wonder at the merciful Providence which keeps my critics away from the weak joints in my armor. Laws-a-mercy; if I had the criticizing of that book, what a skinning I could give it. I can't amend it, but I could éreinter it—I would break its back de la belle manière."

In his letter of March 5, 1888, he says: "I thank you for the corrections, all of which I have, of course, adopted."

These letters appeared after the death of John Hay—in his diary—"printed but not published," and distributed among friends of the Hay family only. Clara Hay did not anticipate how, by her devotion to her great husband in publishing his private diaries and letters, she demonstrated the reliability of Herndon's criticisms of her husband's magnum opus.

It was charged repeatedly by those who condemned Herndon for his lectures and his contributions to the life of Lincoln that what he did say was prompted by Herndon's hatred of Lincoln, for not being considered by Lincoln for some prominent office with the administration. Herndon anticipated such a charge, and long ago acquitted Lincoln of lack of gratitude for all that Herndon did for and was to Lincoln.

"You will please find an original dispatch from Mr. Lincoln to me offering me some office—I think a judge of the cotton cases in the South. Possibly you will find a letter from Abraham Lincoln to me." A great deal has been said about resentment at being ignored by Lincoln, having actuated Herndon in his so-called strictures on Lincoln. The above is but one of the instances where Lincoln attempted to appoint Herndon to office. It was the very first thing Lincoln thought of, after his election. He asked Herndon to go to Washington and become a member of the administration, but Herndon refused. He told Lincoln that he was content with the office of State banking commissioner, which he then held, and that if he could be reappointed to the same position he would be satisfied. Lincoln immediately proceeded to Governor Yates and made sure of Herndon's reappointment. There is certainly nothing to the charge of Herndon feeling resentment toward Lincoln on that score. (December 1, 1886.)

Herndon tells us what books Lincoln read and studied:

"I once had an excellent library. Mr. Lincoln had access to such books as I had and frequently read parts of the volumes. * * * I used to read him passages from the books that struck me as eloquent and poetical, philosophic, and the like. * * * Let me give you the kind of books which Lincoln had access to and sometimes peeped into. I had all the following books; i. e., the writers of the works, their names, and the books. They are as follows: Emerson, Carlyle, Parker, McNaught, Strauss, Monnel, Bucher, Feurbach, Buckle, Spencer, Darwin, Draper, Lecky, Lewes, Renan, Kant, Fichte, and others. I took the Westminster Review.

"If I had any influence with Lincoln at all, it was along the line of the good. * * * Possibly I have helped the world a little in my own way—hope so. I shall never state fully or otherwise what I did for Lincoln. I shall never do this in writing" (December 29, 1885).

"I never heard him abuse anybody, nor did I ever, except once or twice, hear him eulogize anyone. He talked of no one on the stump, because he was aware of his own lowly origin. His motto in this particular was, 'Those who live in glass houses should not throw stones.' Mr. Lincoln loved such books as Jack Downing, Phoenixiana, and Petroleum V. Nasby. He was a terribly gloomy man, and yet he loved mirth because it gave vent to his gloom and his melancholy. I have heard him say that 'if it were not for these stories (jokes, jests), I should die; they give vent—are the vents of my moods and gloom.' If you were in your office and wished to read something of interest; if you said much, that much would suggest to him a story that he had heard on the circuit or down in Egypt, the lower part of the State. The thing once suggested, there would be an end of your reading. Close the book, you must—you couldn't help it. He would tell one story and that would suggest another, and so the day would roll by, pleasant or unpleasant to you—he had no hold-up in that particular. Tell his stories, he would; and read, you couldn't. Pleasant to you or not, the mill would grind" (November 17, 1885).

Aside from Herndon, and particularly as to the life of Lincoln in the courts, there is none more authoritative than Judge David Davis, before whom he tried a great many of his cases and with whom he constantly traveled the circuit.[1] The judge refused to give information to anyone. As he says in his letter of January 14, 1866, to Herndon:

"It pains me to refuse you any reasonable requests, but I have been written to over and over again to furnish my views about Mr. Lincoln, and have universally declined to give them—I could not give them to you and be consistent—I have no objection in person to talk the whole matter over with you, and hope to do so when I see you. I have always understood that Mr. Lincoln's Emancipation Proclamation was his own conception. That he announced to his Cabinet that he intended to issue it and that he would hear suggestions about verbal criticisms, etc.—it is mean to try to deprive him of the glory of that."

As Herndon did not hesitate to travel, he immediately made it his business to see Judge Davis and procure an 18-page statement from him as to his opinions of Lincoln in the various contacts of a long professional life in the 14 counties which made up the eighth circuit. And he knew Lincoln from 1837 until he finally placed him in the White House by the superb management of the convention work which brought about the nomination.

Herndon prepared a statement which covers all Judge Davis knew about Lincoln from the year 1837 to the very end of his life. He refers to a great number of Lincoln's famous cases and the manner in which Lincoln conducted them. He dwells on his ability as a lawyer; and from the statement made it seems that Herndon spent 2 full days with Judge Davis, viz, September 19 and 20, 1866, extracting from that bulky statesman and jurist everything which he, Herndon, thought would complete the picture of his famous partner.

[1] Lincoln in 1862 appointed Davis to the Supreme Court of the United States, and in 1865, Judge Davis was made administrator of Lincoln's estate.

One of the many instances which shows the attachment of Lincoln to his parents appears in the case of McKibben against Hart, tried in Coles County, Ill., in 1845. This was a suit for slander. Mr. Lincoln recovered a judgment of $50 for his client, of which amount the latter assigned $35 to Lincoln for his fee, which Lincoln in turn left with the clerk of the court to be turned over to his father, old Thomas Lincoln, whose receipt, signed by his stepson, John D. Johnston, is preserved in the records of the court. So we see that not only was his stepmother remembered but his father as well.

It is said by some of the biographers of Lincoln that he "never drank a drop of liquor in his life," and that he never chewed tobacco nor smoked a cigar or pipe. It is not true that Lincoln "never drank a drop of liquor in his life." It is true that he never smoked or chewed tobacco. Mr. Lincoln did sometimes take a horn. He played ball on the day of his nomination in Chicago in 1860 with the boys, or the day before that, and did drink beer two or three times that day and during the game for pleasure. He was nervous then, excited at that particular time, and drank to steady his nerves. Lincoln has been often heard to say, "I never drink much and am entitled to no credit therefor, because I hate the stuff."

A friend once asked Lincoln, "Don't you like liquor, Lincoln?" To which Lincoln replied, "No; it is unpleasant to me and always makes me feel flabby and undone." Lincoln had a low or slow circulation of the blood, and hence had not much wear and tear of the tissues of the body, and hence no very strong thirst or appetite for stimulative drinks—nor the tonics.

He had a good but moderate appetite for food, and was satisfied with almost anything that would satisfy hunger—anything with which to "fill up." * * * Lincoln had a good appetite and good digestion, ate mechanically, never asking why such a thing was not on the table, nor why it was on, if so. He never complained of bad food, nor praised the good. I, on the circuit, have sat down with Lincoln a thousand times, it may be, at the table, and he never made any fuss about the food on the table. He ate and went about his business, though the food was "cussed bad," as 8 out of 10 at the table would say. Some would swear at it and others would laugh at their misfortune in not getting "goodies."

Lincoln did drink when he thought that it would do him good. He was never seen under the influence of liquor more than once or twice in his younger days, when it (liquor) was quite in universal use.

"Lincoln was a riddle and a puzzle sometimes. He loved best the vegetable world generally, though his food was of a mixed kind; he loved a good hot cup of coffee; and specially did he love apples. He would wrap his forefinger of his right hand and his thumb around the equatorial part of the apple and commence eating it at the blossom end, never using a knife to cut or peel the apple. I have seen him read and study his case, and the law of it, intently while eating his apple. His table at home generally was economized to the smallest amount. He never dared as a general thing to invite his friends to his house. Mrs. Lincoln was a very stingy woman and yet she would occasionally have parties. Lincoln himself had none of the avarice of the 'get', and yet he had a tinge of it in the 'keep.' He was not generous in money matters unless he had some view in end. Mrs. Lincoln was the cause of his poor tables. She economized here to swell otherwise—poor, unfortunate woman."

Herndon probably gives the most plausible explanation of the tragic event of Lincoln's failure to appear at the appointed time for the marriage to Mary Todd. And here the method employed by Herndon is typical of how he gathered all the facts and information to complete the picture. He interviewed all the people concerned or who had any knowledge on the subject, supplemented such facts by his own knowledge and by the information he gathered from a life-long contact with Lincoln, and then gives his conclusion. No other biographer has prepared such a powerful analysis of that event, which had a life-lasting influence on this remarkable couple, as is contained in Herndon's chapter on this phase, which has set so many biographers guessing and speculating.

And so, on the one hundred and twenty-fifth anniversary of his birth, we are on the threshold of being able to write a definitive life of Lincoln. We are now able to present him to his countrymen and to the world as he was. We may now compile a full list of his spoken and written words—in order that all may be able to read, not only what was said of him, but what he himself wrote down in ever-living words—in order that future generations may truly judge him by his own words, and in part, at least, atone for the agony which was his, during the years when he was the most libelled and maligned man of his age—in order that we, and those who come after us, may see him as he emerges from the ordeal of fire of the written and spoken anathema which was his portion for almost an entire lifetime.

Thanks to Billy Herndon—Herndon, the young office boy, the young partner of the great man—Herndon, Lincoln's Boswell for 25 years—the man of one idea, of one all-absorbing ambition—to leave a true portrait of Lincoln, his hero, to posterity.

As Lincoln appeared for the last time in the law office and gathered a bundle of papers before leaving, he told Herndon their partnership would go on, their shingle remain in its place—"If I live I am coming back and will resume practice as if nothing had ever happened."

It may now be truly said that the partnership was never dissolved; it remained "Lincoln & Herndon." "Billy" Herndon waited 30 years to rejoin his partner.

Billy Herndon was faithful to the end—this prototype of the "enemy of the people" among Lincoln's biographers—by those who thought they knew Lincoln better than the faithful Herndon.

But they knew him not.

Protest W. P. A. Wage Reduction

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 17, 1940

RESOLUTION BY IRON RIVER BUSINESSMEN'S ASSOCIATION

Mr. HOOK. Mr. Speaker, under leave to extend my remarks, I include herewith a resolution passed by the Iron River Businessmen's Association. I subscribe to the principle propounded but feel that rate should be higher than requested in this resolution:

The following resolution was introduced by Claude Jorgensen, who moved its adoption, and supported by Ray Zerbel:

Whereas the Work Projects Administration has reduced the hours per month of workers on W. P. A. projects and limited their wage to a total of $39.60 per month while it is $44.40 per month in surrounding counties, on the theory that there is no city in Iron County having a population of 5,000 or more; and

Whereas there is in fact a metropolitan area known as the Iron River district, comprising the villages of Mineral Hills, Caspian, and Gaastra, and cities of Iron River and Stambaugh, having a population of 10,136, and whose boundaries and dwellings are contiguous, and which are only separated into these municipalities for tax purposes peculiar to a mining district; and

Whereas, due to the severe climate conditions which prevail in the Upper Peninsula of Michigan, the wage rate of $39.60 is not sufficient and our county relief authorities have found it necessary to suplement this wage with direct relief, to the extent that if this condition continues Iron County's extra appropriation for relief purposes will be exhausted long before the end of the year, and we are informed there are no other funds available for relief purposes; and

Whereas the cost of living in the surrounding counties in the Upper Peninsula of Michigan is exactly similar to that of Iron County, the present W. P. A. wage scale is a direct discrimination against this county.

Now, therefore, in consideration of the above premises, the Iron River Businessmen's Association, of Iron River, Mich., does hereby urge the various governing bodies of the above-mentioned municipalities to approve this resolution and present the same to the Iron County Board of Supervisors and the Work Projects Administration, requesting them to take such steps as they shall deem necessary and expedient to bring to the attention and consideration of the Work Projects Administration the plight of Iron County and to obtain a wage-scale classification for Iron County as a county having a single municipality of 5,000 persons or more; and be it further

Resolved, That a copy of this resolution, together with the approval of the governing bodies of the above-mentioned municipalities be presented to the following, by the secretary of this association:

The Board of Supervisors of Iron County, Mich.

Abner E. Larned, State W. P. A. administrator, Lansing, Mich.

F. S. Benjamin, district manager, W. P. A., Marquette, Mich.

Senators ARTHUR H. VANDENBERG and PRENTISS M. BROWN and Congressman FRANK E. HOOK.

The undersigned municipalities, by their governing bodies, hereby heartily endorse and approve the above resolution of the Iron River Businessmen's Association, of Iron River, Mich.

Dated this 10th day of May, A. D. 1940.

Air Defense of America

EXTENSION OF REMARKS
OF
HON. HENRIK SHIPSTEAD
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY COLONEL LINDBERGH

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered last evening by Col. Charles A. Lindbergh on the subject of air defense and other aspects of the national defense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 20, 1940]

COMPLETE TEXT OF LINDBERGH'S RADIO ADDRESS

Following is the text of Col. Charles A. Lindbergh's radio address last night:

"In time of war and confusion it is essential for our people to have a clear understanding of the elements upon which our national safety depends. Aviation has now become one of these elements, and it is about the air defense of America that I speak to you tonight.

"The power of aviation has been greatly underrated in the past. Now we must be careful not to overrate this power in the excitement of reaction. Air strength depends more upon the establishment of intelligent and consistent policies than upon the sudden construction of huge numbers of airplanes.

"Even here in America it is difficult to think clearly amidst the conflict of facts and headlines, the contradictory advice of columnists, the claims and counterclaims of propaganda, and the blind selfishness of party politics. The conservative who scoffed at aviation yesterday has become the radical who says that tomorrow we will be invaded by European aircraft.

"Let us reexamine the position of America in the air. New discoveries and developments affect nations in different ways. In Europe aviation has affected England adversely and Germany advantageously. One nation may have a psychology and topography which promotes the development of aviation, while another finds itself entirely unadjusted to the tempo of the air.

"UNITED STATES IN FORTUNATE POSITION

"Judged by aeronautical standards, we in the United States are in a singularly fortunate position. Our people have natural ability in the design, construction, and operation of aircraft. Our highly organized industry, our widely separated centers of population, our elimination of formalities in interstate travel, all contribute to the development of American aviation. From the standpoint of defense, we still have two great oceans between us and the warring armies of Europe and Asia.

"In fact, there is hardly a natural element contributing to air strength and impregnability that we do not now possess. Aviation is for us an asset. It adds to our national safety. With a firm and clear-cut policy, we can build an air defense for America that will stand above these shifting sands of war.

"But until we have decided upon a definite policy of defense the mere construction of large numbers of aircraft will not be adequate for our national safety. In fact, without a strong policy of defense, we will not even know what types of planes to build. The speed and range of our fighting planes must depend upon the bases available for their use.

"If we are to defend the United States alone, then we must construct numerous air bases along the Mexican and Canadian borders. Such a plan would require numbers of small bombers and pursuit planes, and eventually it would leave us as vulnerable to air attack as the nations of Europe are today. On the other hand, if we are to defend the entire Western Hemisphere, we need long-range bombers capable of attacking a hostile fleet a thousand miles or more at sea. But there is little use discussing types and numbers until a defense policy is established.

"OTHER NATIONS MUST AID

"This brings us to an issue which must sooner or later be faced. An adequate air defense of the Western Hemisphere necessitates the cooperation of the other nations of this hemisphere. Our military aircraft must have access to their bases. Their foreign policy must have some relationship to ours. We cannot hold this hemisphere free from foreign war if nations which lie within it declare war on foreign powers.

"Let us not be confused by this talk of invasion by European aircraft. The air defense of America is as simple as the attack is difficult when the true facts are faced. We are in danger of war today not because European people have attempted to interfere with the internal affairs of America, but because American people have attempted to interfere with the internal affairs of Europe.

"It is true that bombing planes can be built with sufficient range to cross the Atlantic and return. They can be built either in America or Europe. Aeronautical engineers have known this for many years. But the cost is high, the target large, and the military effectiveness small. Such planes do not exist today in any air force. A foreign power could not conquer us by dropping bombs in this country unless the bombing were accompanied by an invading army. And an invading army requires thousands of small bombers and pursuit planes; it would have little use for huge trans-Atlantic aircraft.

"No; the advantage lies with us, for great armies must still cross oceans by ship. Only relatively small forces can be transported by air today, and over distances of a few hundred miles at most. This has great significance in Europe, but it is not an element that we have to contend with in America.

"Such a danger can come, in any predictable future, only through division and war among our own peoples. As long as American nations work together, as long as we maintain reasonable defense forces, there will be no invasion by foreign aircraft. And no foreign navy will dare to approach within bombing range of our coasts.

"SEES INTERNAL DANGER

"Our danger in America is an internal danger. We need not fear a foreign invasion unless American peoples bring it on through their own quarreling and meddling with affairs abroad. Our eyes should not search beyond the horizon for problems which lie at our feet. The greatest lesson we can draw from Europe today is that national strength must be built within a nation itself and cannot be achieved by limiting the strength of others.

"What of the unforeseen developments of a science? Rocket propulsion? New forms of energy? New methods of destruction? No generation can entirely safeguard the future for those that follow. They must meet their own problems as those problems arise. The greatest inheritance we can pass on to our children is a reasonable solution of the problems that confront us in our time—a strong nation, a lack of debt, a solid American character free from the entanglements of the Old World.

"Let us guard America today as our forefathers guarded it in the past. They won this country from Europe with a handful of Revolutionary soldiers. We certainly can hold it now with a population of 130,000,000 people. If we cannot, we are unworthy to have it.

"But the course we have been following in recent months leads to neither strength nor friendship nor peace. It will leave us hated by victor and vanquished alike, regardless of which way the tide of battle turns. One side will claim that we aided its enemies; the other, that we did not help enough.

"To be successful in modern warfare a nation must prepare many years before the fighting starts. If anyone doubts that, let him turn his eyes to Europe. Years ago we decided to stay out of foreign wars. We based our military policy on that decision. We must not waver now that the crisis is at hand. There is no longer time for us to enter this war successfully. The result of vacillating policies lies clearly before us in the chaos of Europe today.

"STOP CHATTER, HE SAYS

"Let us turn again to America's traditional role—that of building and guarding our own destiny. We need a greater air force, a greater Army, and a greater Navy; they have been inadequate for many years. Let us form with our neighboring nations a clear-cut and definite policy of American defense. But, above all, let us stop this hysterical chatter of calamity and invasion that has been running rife these last few days. It is not befitting to the people who built this Nation.

"That the world is facing a new era is beyond question. Our mission is to make it a better era. But, regardless of which side wins this war, there is no reason, aside from our own actions, to prevent a continuation of peaceful relationships between American and the countries of Europe. If we desire peace, we need only stop asking for war. No one wishes to attack us, and no one is in a position to do so.

"The only reason that we are in danger of becoming involved in this war is because there are powerful elements in America who desire us to take part. They represent a small minority of the American people, but they control much of the machinery of influence and propaganda. They seize every opportunity to push us closer to the edge.

"It is time for the underlying character of this country to rise and assert itself, to strike down these elements of personal profit and foreign interest. This underlying character of America is our true defense. Until it awakes and takes the reins in hand once more the production of airplanes, cannon, and battleships is of secondary importance. Let us turn our eyes to our own Nation. We cannot aid others until we have first placed our own country in a position of spiritual and material leadership and strength."

America's Neutrality

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESSES BY COL. CHARLES A. LINDBERGH

Mr. LUNDEEN. Mr. President, may I be permitted the honor to place in the CONGRESSIONAL RECORD two able addresses of the most distinguished aviator of all time—Col. Charles A. Lindbergh—delivered on September 16 and October 14, 1939—and may we who take our places on the ramparts of the Nation in this hour of world trial keep cool and exercise the good American common sense so clearly shown by our loved and greatly admired colonel.

We thank God for the Lindberghs, father and son—the immortal Congressman Charles A. Lindbergh, the invincible and intrepid Col. Charles A. Lindbergh.

So long as America follows their crystal-clear policies of patriotism we need have no fears for our ship of state.

Let me say further I am glad Senators now strive to place the words of the great Lindberghs in the RECORD, and I now note that several Senators are seeking to place in the RECORD the great speech of Colonel Lindbergh, made May 19, 1940. It was truly a great speech.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

[From the Washington Star of September 16, 1939]

TEXT OF LINDBERGH'S ADDRESS ON NEUTRALITY

The text of Col. Charles A. Lindbergh's radio address last night follows:

"In times of great emergency men of the same belief must gather together for mutual council and action. If they fail to do this, all that they stand for will be lost. I speak tonight to those people in the United States of America who feel that the destiny of this country does not call for our involvement in European wars.

"We must band together to prevent the loss of more American lives in these internal struggles of Europe. We must keep foreign propaganda from pushing our country blindly into another war. Modern war with all its consequences is too tragic and too devastating to be approached from anything but a purely American standpoint. We should never enter a war unless it is absolutely essential to the future welfare of our Nation.

"This country was colonized by men and women from Europe. The hatreds, the persecutions, the intrigues they left behind gave them courage to cross the Atlantic Ocean to a new land. They preferred the wilderness and the Indians to the problems of Europe. They weighed the cost of freedom from those problems, and they paid the price. In this country they eventually found a means of living peacefully together—the same nationalities that are fighting abroad today. The quarrels of Europe faded out from American life as generations passed. Instead of wars between the English, French, and Germans, it became a struggle of the New World for freedom from the old—a struggle for the right of America to find her own destiny. The colonization of this country grew from European troubles, and our freedom sprang from European war, for we won independence from England while she was fighting France.

"WASHINGTON SAW DANGER

"No one foresaw the danger ahead of us more clearly than George Washington. He solemnly warned the people of America against becoming entangled in European alliances. For over 100 years his advice was followed. We established the Monroe Doctrine for America. We let other nations fight among themselves. Then, in 1917, we entered a European war. This time we were on England's side, and so were France and Russia. Friends and enemies reverse as decades pass—as political doctrines rise and fall.

"The Great War ended before our full force had reached the field. We escaped with the loss of relatively few soldiers. We measured our dead in thousands, Europe measured hers in millions. Europe has not yet recovered from the effects of this war, and she has already entered another. A generation has passed since the armistice of 1918, but even in America we are still paying for our part in

that victory—and we will continue to pay for another generation. European countries were both unable and unwilling to pay their debts to us.

"Now that war has broken out again we in America have a decision to make on which the destiny of our Nation depends. We must decide whether or not we intend to become forever involved in this age-old struggle between the nations of Europe. Let us not delude ourselves. If we enter the quarrels of Europe during war we must stay in them in time of peace as well. It is madness to send our soldiers to be killed, as we did in the last war, if we turn the course of peace over to the greed, the fear, and the intrigue of European nations. We must either keep out of European wars entirely or stay in European affairs permanently.

"NO DEFENSE AGAINST INVASION

"In making our decision this point should be clear: These wars in Europe are not wars in which our civilization is defending itself against some Asiatic intruder. There is no Genghis Kahn or Xerxes marching against our western nations. This is not a question of banding together to defend the white race against foreign invasion. This is simply one more of those age-old quarrels within our own family of nations—a quarrel arising from the errors of the last war—from the failure of the victors of that war to follow a consistent policy either of fairness or of force.

"Arbitrary boundaries can only be maintained by strength of arms. The Treaty of Versailles either had to be revised as time passed or England and France, to be successful, had to keep Germany weak by force. Neither policy was followed. Europe wavered back and forth between the two. As a result, another war has begun, a war which is likely to be far more prostrating than the last, a war which will again kill off the youth of Europe, a war which may even lead to the end of our western civilization.

"We must not permit our sentiment, our pity, or our personal feelings of sympathy to obscure the issue to affect our children's lives. We must be as impersonal as a surgeon with his knife. Let us make no mistake about the cost of entering this war. If we take part successfully, we must throw the resources of our entire Nation into the conflict. Munitions alone will not be enough. We cannot count on victory merely by shipping abroad several thousand airplanes and cannon. We are likely to lose a million men, possibly several million—the best of American youth. We will be staggering under the burden of recovery during the rest of our lives. And our children will be fortunate if they see the end in their lives, even if by some unlikely chance we do not pass on another Polish Corridor to them. Democracy itself may not survive. If we enter fighting for democracy abroad, we may end by losing it at home.

"LITTLE TO BE GAINED

"America has little to gain by taking part in another European war. We must not be misguided by this foreign propaganda to the effect that our frontiers lie in Europe. One need only glance at a map to see where our true frontiers lie. What more could we ask than the Atlantic Ocean on the east and the Pacific on the west? No; our interests in Europe need not be from the standpoint of defense. Our own natural frontiers are enough for that. If we extend them to the center of Europe we might as well extend them around the earth. An ocean is a formidable barrier even for modern aircraft. Our safety does not lie in fighting European wars. It lies in our internal strength, in the character of the American people, and of American institutions. As long as we maintain an Army, a Navy and an air force worthy of the name, as long as America does not decay within, we need fear no invasion of this country.

"Again I address those among you who agree with this stand. Our future and our children's future depends upon the action we take. It is essential to think clearly and to act quickly in the days which are to come. We will be deluged with propaganda, both foreign and domestic—some obvious, some insidious. Much of our news is already colored. Every incident and every accident will be seized upon to influence us. And in a modern war there are bound to be plenty of both. We must not only inquire about the writer and the speaker—about his personal interests and his nationality, but we must ask who owns and who influences the newspaper, the news picture, and the radio station. If our people know the truth, if they are fully and accurately informed, if they are not misled by propaganda, this country is not likely to enter the war now going on in Europe.

"HOPE LIES IN AMERICA

"And if Europe is again prostrated by war, as she has been so often in the past, then the greatest hope for our western civilization lies in America. By staying out of war ourselves we may even bring peace to Europe more quickly. Let us look to our own defenses and to our own character. If we attend to them we have no need to fear what happens elsewhere. If we do not attend to them nothing can save us.

"If war brings more Dark Ages to Europe we can better preserve those things which we love and which we mourn the passing of in Europe today by preserving them here, by strengthening them here, rather than by hurling ourselves thoughtlessly to their defense over there and thus destroying all in the conflagration. The German genius for science and organization, the English genius for government and commerce, the French genius for living and the understanding of life—they must not go down here as well as on the other side. Here in America they can be blended to form the greatest genius of all.

"The gift of civilized life must still be carried on. It is more important than the sympathies, the friendships, the desires of any single generation. This is the test before America now. This is the challenge—to carry on western civilization."

[From the Washington Star of October 14, 1939]

TEXT OF LINDBERGH NEUTRALITY SPEECH—FOUR-POINT SUGGESTION INCLUDES BAN ON SALE OF OFFENSIVE WEAPONS

Here is the text of Col. Charles A. Lindbergh's address last night on the arms-embargo issue:

"Tonight, I speak again to the people of this country who are opposed to the United States entering the war which is now going on in Europe. We are faced with the need of deciding on a policy of American neutrality. The future of our Nation and of our civilization rests upon the wisdom and foresight we use.

"Much as peace is to be desired, we should realize that behind a successful policy of neutrality must stand a policy of war. It is essential to define clearly those principles and circumstances for which a nation will fight. Let us give no one the impression that America's love for peace means that she is afraid of war, or that we are not fully capable and willing to defend all that is vital to us. National life and influence depend upon national strength, both in character and in arms. A neutrality built on pacifism alone will eventually fail.

"LINE MUST FIRST BE DRAWN BETWEEN NEUTRALITY AND WAR

"Before we can intelligently enact regulations for the control of our armaments, our credit, and our ships, we must draw a sharp dividing line between neutrality and war; there must be no gradual encroachment on the defense of our Nation. Up to this line we may adjust our affairs to gain the advantages of peace, but beyond it must lie all the armed might of America, coiled in readiness to spring if once this bond is cut.

"Let us make clear to all countries where this line lies. It must be both within our intent and our capabilities. There must be no question of trading or bluff in this hemisphere. Let us give no promises we cannot keep—make no meaningless assurances to an Ethiopia, a Czechoslovakia, or a Poland. The policy we decide upon should be as clear-cut as our shore lines, and as easily defended as our continent.

"This Western Hemisphere is our domain. It is our right to trade freely within it. From Alaska to Labrador, from the Hawaiian Islands to Bermuda, from Canada to South America, we must allow no invading army to set foot. These are the outposts of the United States. They form the essential outline of our geographical defense. We must be ready to wage war with all the resources of our Nation if they are ever seriously threatened.

"Their defense is the mission of our Army, our Navy, and our Air Corps—the minimum requirement of our military strength. Around these places should lie our line between neutrality and war. Let there be no compromise about our right to defend or trade within this area. If it is challenged by any nation, the answer must be war. Our policy of neutrality should have this as its foundation.

"QUESTIONS RIGHT OF CANADIANS TO INVOLVE HEMISPHERE IN WAR

"We must protect our sister American nations from foreign invasion, both for their welfare and our own. But, in turn, they have a duty to us. They should not place us in the position of having to defend them in America while they engage in wars abroad. Can we rightfully permit any country in America to give bases to foreign warships, or to send its army abroad to fight while it remains secure in our protection at home? We desire the utmost friendship with the people of Canada. If their country is ever attacked, our Navy will be defending their seas, our soldiers will fight on their battlefields, our flyers will die in their skies. But have they the right to draw this hemisphere into European war simply because they prefer the Crown of England to American independence?

"Sooner or later we must demand the freedom of this continent and its surrounding islands from the dictates of European power. American history clearly indicates this need. As long as European powers maintain their influence in our hemisphere, we are likely to find ourselves involved in their troubles. And they will lose no opportunity to involve us.

"Our Congress is now assembled to decide upon the best policy for this country to maintain during the war which is going on in Europe. The legislation under discussion involves three major issues—the embargo of arms, the restriction of shipping, and the allowance of credit. The action we take in regard to these issues will be an important indication to ourselves, and to the nations of Europe, whether or not we are likely to enter the conflict eventually as we did in the last war. The entire world is watching us. The action we take in America may either stop or precipitate this war.

"Let us take up these issues, one at a time, and examine them. First, the the embargo of arms. It is argued that the repeal of this embargo would assist democracy in Europe, that it would let us make a profit for ourselves from the sale of munitions abroad and, at the same time, help to build up our own arms industry.

"HELPING HAND TO GERMANY WOULD HAVE FORESTALLED WAR

"I do not believe that repealing the arms embargo would assist democracy in Europe because I do not believe this is a war for democracy. (This is a war over the balance of power in Europe—a war brought about by the desire for strength on the part of

Germany and the fear of strength on the part of England and France. The more munitions the armies obtain, the longer the war goes on and the more devastated Europe becomes, the less hope there is for democracy. That is a lesson we should have learned from our participation in the last war. If democratic principles had been applied in Europe after that war, if the 'democracies' of Europe had been willing to make some sacrifice to help democracy in Europe while it was fighting for its life, if England and France had offered a hand to the struggling republic of Germany, there would be no war today.

"If we repeal the arms embargo with the idea of assisting one of the warring sides to overcome the other, then why mislead ourselves by talk of neutrality? Those who advance this argument should admit openly that repeal is a step toward war. The next step would be the extension of credit and the next would be the sending of American troops.

"To those who argue that we could make a profit and build up our own industry by selling munitions abroad, I reply that we in America have not yet reached a point where we wish to capitalize on the destruction and death of war. I do not believe that the material welfare of this country needs, or that our spiritual welfare could withstand, such a policy. If our industry depends upon a commerce of arms for its strength, then our industrial system should be changed.

"It is impossible for me to understand how America can contribute to civilization and humanity by sending offensive instruments of destruction to European battlefields. This would not only implicate us in the war, but it would also make us partly responsible for its devastation. The fallacy of helping to defend a political ideology, even through it be somewhat similar to our own, was clearly demonstrated to us in the last war. Through our help that war was won, but neither the democracy nor the justice for which we fought grew in the peace that followed our victory.

"RACIAL STRENGTH VITAL, POLITICS A LUXURY

"Our bond with Europe is a bond of race and not of political ideology. We had to fight a European army to establish democracy in this country. It is the European race we must preserve; political progress will follow. Racial strength is vital—politics, a luxury. If the white race is ever seriously threatened, it may then be time for us to take our part in its protection, to fight side by side with the English, French, and Germans, but not with one against the other for our mutual destruction.

"Let us not dissipate our strength, or help Europe to dissipate hers, in these wars of politics and possession. For the benefit of western civilization, we should continue our embargo on offensive armaments. As far as purely defensive arms are concerned, I, for one, am in favor of supplying European countries with as much as we can spare of the material that falls within this category.

"There are technicians who will argue that offensive and defensive arms cannot be separated completely. That is true; but it is no more difficult to make a list of defensive weapons than it is to separate munitions of war from semimanufactured articles, and we are faced with that problem today. No one says that we should sell opium because it is difficult to make a list of narcotics. I would as soon see our country traffic in opium as in bombs.

"WILLING TO SEE UNITED STATES GUNS BRING DOWN BOMBERS

"I do not want to see American bombers dropping bombs which will kill and mutilate European children, even if they are not flown by American pilots. But I am perfectly willing to see American antiaircraft guns shooting American shells at invading bombers over any European country. And I believe that most of you who are listening tonight will agree with me.

"The second major issue for which we must create a policy concerns the restrictions to be placed on our shipping. Naval blockades have long been accepted as an element of warfare.

"In modern naval blockades and warfare, torpedoes will be fired and bombs dropped on probabilities rather than on certainties of identification. The only safe course for neutral shipping at this time is to stay away from the warring countries and dangerous waters of Europe.

"The third issue to be decided relates to the extension of credit.

"Here again we may draw from our experience in the last war. After that war was over we found ourselves in the position of having financed a large portion of the expenditures of European countries. And when the time came to pay us back, these countries simply refused to do so. They not only refused to pay the wartime loans we made, but they refused to pay back what we loaned them after the war was over.

"EUROPE FEELS INSULTED IF ASKED TO REPAY

"As is so frequently the case, we found that loaning money eventually created animosity instead of gratitude. European countries felt insulted when we asked to be repaid. They called us 'Uncle Shylock.' They were horror struck at the idea of turning over to us any of their islands in America to compensate for their debts, or for our help in winning their war. They seized all the German colonies and carved up Europe to suit their fancy. These were the 'fruits of war.' They took our money and they took our soldiers. But there was not the offer of one Caribbean island in return for the debts they 'could not afford to pay.'

"The extension of credit to a belligerent country is a long step toward war, and it would leave us close to the edge. If American industry loans money to a belligerent country, many interests will feel that it is more important for that country to win than for our own to avoid the war. It is unfortunate but true that there are interests in America who would rather lose American lives than their own dollars. We should give them no opportunity.

"WOULD ADOPT FOUR-POINT PLAN CONTRIBUTING TO CIVILIZATION

"I believe that we should adopt as our program of American neutrality, as our contribution to western civilization, the following policy:

"1. An embargo on offensive weapons and munitions.

"2. The unrestricted sale of purely defensive armaments.

"3. The prohibition of American shipping from the belligerent countries of Europe and their danger zones.

"4. The refusal of credit to belligerent nations or their agents.

"Whether or not this program is adopted depends upon the support of those of us who believe in it. The United States of America is a democracy. The policy of our country is still controlled by our people. It is time for us to take action. There has never been a greater test for the democratic principle of government."

Colonel Lindbergh and Propaganda

EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ARTICLE BY DOROTHY THOMPSON

Mr. BYRNES. Mr. President, I ask that immediately following the insertion of addresses by Colonel Lindbergh which have been ordered placed in the RECORD, there also be printed in the RECORD an article by Dorothy Thompson, in her column On the Record, the article being entitled "Colonel Lindbergh and Propaganda."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of September 20, 1939]

COLONEL LINDBERGH AND PROPAGANDA

(By Dorothy Thompson)

That Colonel Lindbergh should passionately wish to keep this country out of war is not surprising, but his speech in the debate over the arms embargo is. It is surprising and disquieting. The arguments he advances are not those of Senator BORAH or Senator VANDENBERG. They are much more subtle, for what Colonel Lindbergh clearly implied in his talk over three networks last Friday was that unless this country is prepared to go into war with the full force of all of its manpower and resources, the Nazis will win it, and, this being the case, it is better not to offend them in any way. Sentiment, pity, or personal sympathies ought not, he said, to influence our cold judgment of realities. "We must be as impersonal as a surgeon's knife."

Colonel Lindbergh's whole argument deserves the most searching analysis, and there is not space in this particular column to consider it in detail. We shall do that later. But this column would like to take up one challenge in Colonel Lindbergh's speech and accept the invitation to one inquiry.

That is his warning to inquire about the personal interests of every speaker. "We must learn to look behind every article we read and every speech we hear. We must not only inquire about the writer and speaker—about his personal interests and his nationality—but we must ask who owns and influences the newspaper, the news picture, and the radio station."

LINDBERGH'S STAY IN EUROPE STRESSED

Since the colonel thus raises the question, it seems pertinent to inquire into the personal predilections of Colonel Lindbergh himself. For Colonel Lindbergh, who counsels complete withdrawal from the affairs of Europe, has not himself practiced such withdrawal. From September 1935 until April 1939, except for a brief Christmas visit home in 1937, Colonel Lindbergh lived in Europe, and during that time he played a considerable role in European political affairs and exercised a certain influence over European policies.

It is, therefore—and since he recommends such inquiry—important to ask what his viewpoint and influence were.

When Colonel Lindbergh left this country in 1935 he did not believe that the United States or its institutions were the hope of the world.

He had performed a daring and, up to that time, unique exploit designed for and inevitably attended by vast publicity, which made him a center of the news. He felt himself persecuted by

the press and developed a hatred and suspicion of the press which became an obsession and which is reflected in his Friday speech. He had been the victim of a tragic and outrageous crime committed against his child by an alien illegally in this country. In this tragedy all America wept for him and for his wife with those sentiments of pity and personal sympathy which are characteristic of all human beings so long as they retain their humanity.

CONSIDERED DROPPING OF UNITED STATES CITIZENSHIP

But when Colonel Lindbergh left this country and went to England he was so full of contempt for American institutions that he discussed with his English friends the possibility of relinquishing his American citizenship and becoming a British subject. In this he was discouraged by his English friends, who felt that Americans would regard the change of citizenship as an affront, and told him that his natural resentment would not be welcomed by England.

While abroad Colonel Lindbergh traveled extensively on the Continent, studying the air services of the various powers. In July 1936 he received a medal from the aero club of Nazi Germany, presented at a meeting where he first met General Goering.

At the time the Nazi press paid him warm tribute, and in September 1937 the same inspired press touted him as a potential President of the United States.

In October 1937 he attended the Munich air conference, went from there to Berlin, and returned to England. He was back in the United States for Christmas in 1937, returning to England in March 1938.

In April 1938, still pursuing his intention to remain abroad, he bought the French island of Illiec. The arrangements for this purchase were made by Colonel Lindbergh's most intimate friend, Dr. Alexis Carrel, the Franco-American scientist. Dr. Carrel is a distinguished scientist. He also was considered the official philosopher of the French Fascist Party, led by Doriot, until the dissolution of that party by the outbreak of the war.

STATEMENT HELPED "APPEASEMENT" GROUP

In May 1938 occurred the luncheon at the home of Lady Astor at which Colonel Lindbergh expressed his very high opinion of the German air force and of Nazi organization in general, making reports which were welcome to the group working for "appeasement" with Germany—the group which was then dominant in the British Cabinet.

He also deprecated the Russian air force and his remarks were encouraging to those who were denouncing any collaboration between the western powers and the Soviet Union.

In August 1938 the colonel made his tour of Warsaw, Moscow, Kiev, Prague, and Paris. In October of the same year he left Paris for Berlin and made a tour of Germany, including the airplane factories, where he was reported to have been given every access to information.

On October 19, 1938, he was given the second highest German decoration—the Service Cross of the Order of the German Eagle with star. It was presented by General Goering, who hung it about his neck "in the name of the Fuehrer."

In November of the same year he was the subject of an attack in Everybody's Magazine, published in London, which recommended that in the interests of everybody Colonel Lindbergh should return to the United States.

INTENDED TO RENT A HOME IN BERLIN

During the same month it was announced that he intended to rent an apartment in Berlin and settle down there to study aeronautics.

The report of his intention came only a few weeks after the whole world had been shocked by the cynical breaking of the Munich Pact by Germany and coincided with the outbreak of the most ruthless and heartless pogrom which the western world has seen in centuries.

Men, women, and little children were routed out of their homes, thousands of men were thrown into concentration camps, a blanket fine of more than half a billion marks was imposed upon a whole community. Jewish businesses were looted, synagogues were set on fire, thousands of German citizens risked their lives in the Nazi Reich to give aid to the wretched victims of an organized atrocity, hundreds sent letters abroad to plead that the action was not favored by the German people, and protests arose all over the civilized world.

In this country men of all parties and creeds—the President, Mr. Hoover, Mr. Dewey—protested. But Colonel Lindbergh did not protest.

Apartments and villas were then available in Berlin because so many had been forcibly evacuated. But the colonel's idea of settling in Germany provoked much adverse comment, and he abandoned the idea of a German residence and removed to an apartment in Paris.

On January 7, 1939, he reported to the United States on German aviation. He sailed for this country last April. His Friday speech is his first public utterance on American political affairs.

FASCIST TENDENCY IS WELL KNOWN

Colonel Lindbergh's inclination toward fascism is well known to his friends. "Pity, sentiment, and personal sympathy" play little role in his life. On the other hand, he has a passion for mechanics and a tendency to judge the world and society purely from a technical and mechanical standpoint. The humanities, which are at the very center and core of the democratic idea, do not interest him, and he is completely indifferent to political philosophy.

A man who has never spared himself physically, but has taken upon himself the most grueling training, keeping himself awake and without food for days, he has the utmost contempt for physical weakness. Cruelty does not affront him. He is himself a cruel practical joker.

He also is a national hero, and because this country loves its heroes, the press, which Colonel Lindbergh hates, has behaved very chivalrously toward Colonel Lindbergh's ideas.

But since he, himself, has warned that all who speak in the present situation should have their personal interests inquired into, he cannot object to an inquiry into his own biases. And his are not the predilections of the majority of Americans or of democracies anywhere.

National Defense

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

EDITORIAL COMMENT ON COLONEL LINDBERGH'S ADDRESS

Mr. BARKLEY. Mr. President, last evening Col. Charles A. Lindbergh delivered an address over the radio on the subject of our national defense. I do not wish to discuss the address at this time, but I have here an editorial from the New York Times of today which does discuss it, and I ask unanimous consent that the editorial be printed in the CONGRESSIONAL RECORD.

I also have an editorial from the Washington Star of this afternoon entitled "Counsel of Disaster," in which the address of Colonel Lindbergh is discussed. I ask unanimous consent that this editorial also be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 20, 1940]

COLONEL LINDBERGH'S BROADCAST

In his radio broadcast last night Colonel Lindbergh advised the American people to "stop this hysterical chatter of calamity and invasion that has been running rife these last few days." Let us put to one side the question of invasion—since Colonel Lindbergh himself believes that the country needs "a greater air force, a greater Army, and a greater Navy," which is all that the advocates of more adequate national defense have themselves been saying. Let us consider instead "this hysterical chatter of calamity" that also annoys him. The "hysterical chatter" is the talk now heard on every side that the democracies of France and Great Britain stand in imminent danger of defeat by Germany.

Colonel Lindbergh is a peculiar young man if he can contemplate this possibility in any other light than as a calamity for the American people. He is an ignorant young man if he trusts his own premise that it makes no difference to us whether we are deprived of the historic defense of British sea power in the Atlantic Ocean. He is a blind young man if he really believes that we can live on terms of equal peace and happiness "regardless of which side wins this war" in Europe.

Colonel Lindbergh remains a great flier.

[From the Washington Evening Star of May 20, 1940]

COUNSEL OF DISASTER

In an address which can only be described as remarkable for the inconsistency and confusion of its thought, Col. Charles A. Lindbergh has told the people of America that we are in no danger of war and that we will not become involved in war unless we seek it out ourselves.

With an assurance implying a factual knowledge which he cannot have, Colonel Lindbergh says categorically and without any qualification that "no one wishes to attack us." In the same breath he says that we "need a greater air force, a greater Army, and a greater Navy." The self-contradiction presented here is interesting. Since it is not to be supposed that Colonel Lindbergh has access to information concerning the plans of possible aggressors, he is giving dogmatic expression merely to a personal opinion when he says that no one wishes to attack us and that no one is in a position to do so. But if that is the case, or if he really believes it to be the case, why, then, should he urge the

building up of our armed forces? For what reason would he spend money on additional arms if he does not believe there is any danger of an attack upon us?

The colonel also advances as a novel proposal the thought that we ought to decide what we are going to defend before we think about building a defensive air force. If our defense is to be confined to the United States, he says, we shall have to build one type of air force; if we are to defend the Western Hemisphere planes of different types will be needed. That, coming from one who does not shrink from advising the Nation as to the course it should follow in this critical time, is an amazing proposition.

President Roosevelt and other high officials have stated time and again that it is our intention to defend the Western Hemisphere. Fleet and land maneuvers have been carried out with that objective in mind. From no responsible quarter has there come the slightest suggestion that we should confine our planning to a defense of the United States alone. To do so would be the sheerest folly and no one knows that better than Colonel Lindbergh, for he acknowledged that any attempt to defend only the United States "eventually would leave us as vulnerable to air attack as the nations of Europe are today."

Colonel Lindbergh stands alone in his uncertainty as to what our defense policy is. It is a doubt which exists in his mind and nowhere else. But that does not soften the harsh fact that in advancing the suggestion that we do not have a definite policy in this respect he is doing a disservice to the country. If accepted by the people at their face value, his remarks could only serve to shake public confidence in the administration at a time when unity is a paramount necessity.

Any and all suggestions that it is to our interest to aid the Allies in their struggle against Germany are rejected outright by Colonel Lindbergh as being the machinations of unidentified "powerful elements" in America seeking to serve their own selfish purposes. Once again he holds forth personal opinion disguised as fact, without any supporting evidence.

The President, with ready access to sources of information that are denied to Colonel Lindbergh, has stated in effect that France and Britain are fighting our battle and that they must be kept fighting at least until we can prepare ourselves. That will require precious time—a year or more at best—but the colonel counsels delay.

His advice invites disaster, as is evidenced by the fate which has befallen half a dozen stricken nations in Europe, and the American people should have little difficulty in choosing between the course advocated by the President and that which Colonel Lindbergh, a good airplane pilot, would follow.

Europe's War and America's Security

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY MAJ. GEN. WILLIAM C. RIVERS

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered on May 18, 1940, by Maj. Gen. William C. Rivers, United States Army, retired, on the subject Europe's War and America's Security.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Preparedness is necessary for our security. Our Army, Navy, and air-force officers are keenly observing the war in Europe in order to see what technical lessons in armament and organization have been developed. I write this address before having the opportunity of hearing the address of President Roosevelt to Congress on the subject of national defense.

One clear lesson from the fighting in Norway is the greater power of the air bomber over naval vessels of war. This increased capacity of airplanes to damage or sink warships is greatest in the narrow seas. But our air fleets on the two coasts will be more valuable to aid in keeping any enemy at a distance from our coasts.

Britain's reverses in Norway showed the great need in Britain for a Cabinet Minister of Defense; one Cabinet officer to devote all his time to personal inspection of the progress made by and to the control of the three armed services. Coordination is not control. Coordination means suggestions, advice, compromise, and delay. A war council is a policy-making body. A committee or council is not an effective executive body. For us the need is crucial for a single Cabinet Minister of Defense. There appears to be at present confusion of thought in Congress about airplanes and several other defense matters. This is largely due to the absence of a Cabinet Minister of Defense. Such a defense minister would have been spending his whole time in personal inspections and studies of these defense matters. His mature and disinterested advice would be at the service of Congress. Congress often studies these matters through the slow process of hearings and investigations.

I am confident that the gentlemen in Congress will study the matter of defense—and the other critical subjects they are to face now—in a calm manner. As to our being drawn into the war in Europe, or, for that matter, into the war in eastern Asia—I see no reason for our entering either of these conflicts. My judgment is that Germany hopes to march toward the southeast—through Europe and to the Dardanelles, Syria, Iraq, and Persia. Germany's present war is an effort to destroy the large battle fleets of Great Britain and France. These fleets would prevent Germany from marching to the east through southeastern Europe. Suppose that I am mistaken as to Germany's intentions. I do not see how even a Germany victorious in Europe can attack the United States or make an attack in force against a South American country. Germany would be too exhausted. Suppose that I am again in error as to Germany being exhausted. A victorious Germany would have no battle fleet—not to mention the loss of so many of her merchant ships—for an expedition to South America.

Every one recognizes that the security of the Panama Canal is vital to our defense. Also that we must be prepared with armed forces sufficient to aid any country in Central or South America which may be attacked by a European power. Vigilance is needed to detect any attempt of a foreign power to set up a base for airplanes in North American or in South American regions.

I believe we should control the seas from the mid-Atlantic Ocean westward to the mid-Pacific; that we should continue the erection of the fortified air bases authorized in the Aleutian Islands and on Johnson, Palmyra, and Midway Islands—all in the eastern part of the Pacific Ocean. This is in accord with Admiral Leahy's definition of our defense line running, he said, from the Aleutians to Hawaii and then to Samoa and on to the Canal at Panama. After many years' continuous residence in the Far East, it is my conviction that Guam—away out in the western part of the Pacific and 3,000 miles west of our base at Hawaii—is indefensible against an attack, even if the colossal sum such as the proposed $250,000,000 were spent on it.

We have discharged our moral obligations to the Filipinos—well and nobly discharged these obligations. They all earnestly desire the independence we promised to them. Japan will not annex the Philippines, with great armies of Russia so near Japan at the north. We cannot aid any country in South America if our fleet is kept alert watching far-off Guam and the more-distant Philippines.

Now, in conclusion, a word on the latest grand war scare. About 50 percent of the rubber used in the United States and about the same percentage of our tin come originally from Netherlands East Indies. We buy the tin from people—in Europe mostly—who have smelters for refining tin. The rubber comes from agents who have imported it from those Dutch islands. But we can readily send—or the purchasing agents can readily send—out to Java by way of the Atlantic Ocean.

America, Remain Out of War

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

STATEMENT BY REAR ADMIRAL HARRY E. YARNELL

Mr. SHIPSTEAD. Mr. President, I also ask unanimous consent to have printed in the RECORD an Associated Press dispatch from Newport, R. I., dated May 18, 1940, containing a statement of Rear Admiral Harry E. Yarnell, United States Navy, retired, urging that the United States keep out of the European war.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

YARNELL INSISTS UNITED STATES STAY OUT OF WAR IF 1918 IS REPEATED—PLANE ATTACK POSSIBILITY REMOTE FOR SOME TIME TO COME, HE ASSERTS

NEWPORT, R. I., May 18.—Rear Admiral Harry E. Yarnell, United States Navy, retired, declared today that America should keep out of war until she is assured that her men and money "will be spent to a far better end than in 1918."

"The people of this country," he said in a prepared address before the graduating class of the Naval War College, "are still painfully aware of the result of the last World War, when we sent 2,000,000 men abroad and spent thirty or more billions of dollars to make the world safe for democracy; then at the end witnessed

a relapse of the high ideals and a resumption of the old selfish, nationalistic policies that planted the seeds of future war.

"Why should we spend our blood and treasure, until there is assurance that they will be spent to a far better end than in 1918?

"Do not enter the war to assist any nation," he admonished, "until that nation unreservedly pledges itself to support a treaty of peace that will be fair to all and will be of some value in discouraging in the future the use of war as an instrument of national policy."

In the event, however, the United States should reach the end of its endurance, Admiral Yarnell said, the war should be made "purely a naval war," and no troops should be sent beyond the limits of the continental United States.

"The Atlantic Ocean still remains a large body of water and the probability of plane attack from overseas on this country will remain remote for some time to come," he asserted. "Command of the sea is and will remain the primary factor in our plan of national defense and as long as we have it we are safe from successful enemy invasion.

"Bear firmly in mind that seapower defeated Napoleon and it will be seapower today and tomorrow that will prevent another dictator who lacks it from acquiring domination."

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE BALTIMORE SUN

Mr. BARKLEY. Mr. President, I have here an editorial from the Baltimore Sun of today entitled "Our Defenses," in which the Baltimore Sun goes exhaustively into the subject of our defense. I ask that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of Monday, May 20, 1940]

OUR DEFENSES—WHY THE THREAT TO THE ALLIES REQUIRES PROMPT ACTION TO STRENGTHEN OUR LINES

Probably nothing short of the specter of destruction or surrender of the British Navy could make the American people tell themselves the full truth about the great value to us of this Navy over many years of our history.

Students of our foreign relations have understood clearly that the British Navy, as the instrument of a friendly British Government, has made maintenance of the Monroe Doctrine a simple and inexpensive dogma of our foreign policy. It is a half century since the controversy over Venezuela, and in that we were more aggressive than the British. Students of foreign affairs have also understood clearly that, so long as the British Navy was intact, the Atlantic was for us a relatively secure area. Looking toward the Atlantic, isolationists and international cooperationists could join in the early twenties under Mr. Borah's leadership in insisting upon naval disarmament. Students of foreign affairs also have understood clearly that so long as the British Navy was intact there was restraint upon disorder in vast stretches of the Pacific Ocean, and trade routes vital to our economy were protected.

All of that was well known to students of foreign relations, and was frequently discussed, but it made little impression upon the national consciousness. It was one of those familiar things of which men can remain unaware precisely because of familiarity. Our old-time isolationists, for example, never admitted the fact into their minds. They were, therefore, able to be violently anti-British at the same time that, in general, they stood for disarmament. They were able to hate a nation which was a bulwark of the kind of world in which we preferred to live, while doing nothing to provide substitute protection for the United States if the British Empire and the British Navy disappeared from a world in which international order had not been secured.

So indifferent to the facts was the American public mind, so susceptible was the American mind to the arguments of the old-time isolationists, that public men who knew better were forced into silence. It was not that they were cowardly before the public attitude and the effectiveness of the old-time isolationists. They simply recognized, first, the futility of a campaign in the opposite direction; and, second, the danger that such a campaign would do more harm than good.

To understand this, one has only to stop long enough to think that it would have been politically impossible for Mr. Roosevelt to have made the speech last September that he made last week, when he called for a billion-dollar emergency arms program. Intelligent men knew last September—they knew long before last September—that our future would be secure were Britain and France to be secure against Germany, and our future would not be secure were Britain and France to fall. But a hard campaign of education was necessary even to enact such legislation as would preserve enough of the ancient principles of American neutrality to permit Britain and France to buy supplies in our markets, with their own cash, and to move the supplies from our shores in their own bottoms.

If Mr. Roosevelt, last September, had proposed a billion-dollar arms program to protect us in the event of German victory, the only result would have been the riddling of his program by the isolationists with charges that he sought to intervene in the war on the side of Britain. The danger that we see now was apparent in September. The danger of a knockout blow to the Allies had been written 10,000 times. But the national mind remained complacent and the isolationists' arguments remained potent and compelling.

Meantime, our military and naval people were caught in the same circumstances.

They knew that all the measures which were directed to an organization of the nations of the world for the preservation of law and order had failed. Some of the most distinguished of the military and naval people had earnestly supported these measures. Most professional soldiers and sailors had been dubious of projects for world order. In any event, they all knew that failure had overtaken such measures. And, in that failure, they knew the importance to the security of this country of the British Empire and the British Navy and the importance of guarding, in our own arms, against the danger that the British Empire and the British Navy would fall—a danger which had been advertised to the world in successful aggressions in Europe, Asia, and Africa. But their voices were feeble because, like the intelligent men in public life, they had to combat national complacency and national susceptibility to the argument of the isolationists, many of whom were as firmly opposed to armaments as they were to any assumption of responsibility for world order.

The military and naval people also thought, of course, that if worse came to worse, there would probably be time. They knew that, all measures for international law and order having failed, the defeat of the British Empire and the destruction or surrender of the British Navy would place us in danger. But most of them apparently felt that defeat could not come so quickly and so completely as to make danger imminent. They underestimated German power in that respect.

We needed close before our eyes the specter of destruction or surrender of the British Navy to banish national complacency and to make us realize the hollowness of the old-time isolationists' argument that "our boys" would be eternally safe so long as we looked across neither ocean. We have got close before our eyes now this specter of the British Navy destroyed or surrendered. And we are awake. Yesterday, Mr. Mark S. Watson, in the first of the articles he will write from Washington on our problems of defense and our materials of defense, showed plainly that responsible men in Washington are alive to our situation. And the news from the country shows that the people are becoming alive to it.

We know now that, should the British Navy be destroyed or surrendered, protection of Canada, Mexico, and South America, under the Monroe Doctrine, will not be a simple matter of strong words. We know that protection of the Panama Canal will not be the concern solely of a few soldiers, a few sailors, and a few airmen. We know that the use and disposition of British and French and Dutch islands, within easy flying distance of our coasts, will not be limited in interest to well-to-do Americans with a taste for exotic spots as places of holiday. We know that the protection of our shores and approaches and of the lands of neighbors for whom we have assumed responsibility calls for stern, hard measures of defense, and that we are no longer able to take our own time.

Washington has gone to work, with the administration supported by the spokesmen of the opposition. But it must be said over and over again that it is not enough for Washington itself to go to work. Washington must unify the spirit of the Nation. Washington must lead in unifying the economy of the Nation, upon which we rest for the swift production of materials of defense—for the doing quickly of tasks long neglected. Industry and labor must be marshaled and set to work in full energy. Here is one of the principal tasks before Mr. Roosevelt. He should move at once to effect this unity and to release this energy.
